This is the moment of the convention which I, personally have been looking forward to for many years. I am going to introduce a representative of the Government of France who will bestow upon this division an honor which we are proud to say we earned.

The fact that it is awarded at such a late date is even stronger proof of its justification.

On behalf of all the men who fought and died in that wonderful country that is France, I wish to thank the Government of France for this great honor which they have so generously and eagerly decided to award the 30th Infantry Division.

I believe that this decoration is more than a recognition of the work of our Division in World War II. It is in truth a living symbol of the vitality of the warm and deep-rooted relations that have always existed between the United States and France. It is my great pleasure to present—officially representing His Excellency, Herve Alphand, the Ambassador of France—the Minister of France, M. Robert Valeur.

SPEECH GIVEN BY ROBERT VALEUR, MINISTER PLENIPOTENTIARY, EMBASSY OF FRANCE, CONFERRING OF THE CROIX DE GUERRE UPON THE 30TH UNITED STATES INFANTRY DIVISION, HOTEL SHERATON-PARK, WASHINGTON, D. C., JULY 11, 1958

I am pleased to announce to you, on behalf of the Ambassador of France to the United States that, by decision No. 38 of July 7, 1958, the Minister of the Armies of of the French Republic has conferred the Croix de Guerre with palm upon the 30th United States Infantry Division for its meritorious conduct in the Battle of France during the Second World War; with the following citation:

"The 30th Infantry Division has played an outstanding role in the liberation of France in 1944.

"Formed from National Guard units from North Carolina, South Carolina, Georgia, and Tennessee, the 'Old Hickory' Division was called into Federal service in 1940. It was commanded by Maj. Gen. Leland S. Hobbs, now retired.

"Arriving in England in February 1944, and landing at Omaha Beach, in France on D plus 9, the division first saw combat as a unit on July 7, when it made a two pronged assault crossing of the Vire River and the Vire et Taute Canal, the opening blow in the drive to capture St. Lo. After almost 2 weeks of heavy fighting in the hedgerow terrain of Normandy, where advances were made from one tiny field to another, the division contributed handsomely to the eventual capture of St. Lo.

"Designated to take part in the initial ground phase of Operation COBRA, the massive breakthrough maneuver launched west of St. Lo, the 30th Division captured Hebecrevon after a bitter fight and swept the west bank of the Vire River for a distance of more than 7 miles. The breakthrough had been achieved.

"Rapid advance for the 30th Division came to an end when it met the powerful 2d Panzer Division defending Tessy-sur-Vire. Four days of hard struggle ensued. At the end, the 30th was in possession of that strategic crossing point over the Vire River.

"Replacing another division on August 6, the 30th took over positions in Mortain preparatory to continuing the rapid advance of the breakout. Before the troops of the 30th had settled into their new positions, the Germans, shortly after midnight, launched their first full scale counterattack since the Allied invasion of Normandy. Attempting to retake Avranches and thus arrest the American breakout, the

Germans sent three panzer divisions in an attack through Mortain.

"Surprise and the momentum of the initial thrust carried the Germans well into the 30th Division rear areas. A battalion of the 120th Infantry Regiment, ensconced on the strategic height of Hill 317, was encircled and isolated. The force of the blow threatened not only to overrun and destroy the 30th Division but also to nullify the results of the American breakout.

"Between August 7 and 12, in defensive action not exceded in bitterness during any phase of the European campaign, the 30th Division, though outflanked and threatened with complete encirclement, stood and fought. The tenacity of the surrounded battalion on Hill 317 is a superb example of battlefield courage and indomitable will, characteristic of the entire division effort. Mainly through the magnificent fighting of the 30th Division, the German counterattack was turned back.

"Moving by truck to Dreux on August 19, the Thirtieth attacked on the following day and, in 6 days, cleared 30 miles along the Eure River to help eliminate the remaining German pocket of resistance west of the Seine River.

"The Thirtieth crossed the Seine and helped extend the bridgehead already established at Mantes-Gassicourt. In 3 days, by August 29, the German defenses there were cracked, and a situation suitable for mobile warfare existed. During the last 2 days in August, the Thirtieth drove forward 11 and 15 miles, and it was obvious that the time had arrived for rapid motorized pursuant of the retreating enemy.

"With an objective more than 100 miles away, the town of Tournai across the Belgian border, the 30th Division started on a wild advance late on September 1. Less than 30 hours later, the division was on its objective, after having met and subdued pockets of resistance along the way.

"This puts an end to the operations of the 30th Division in the battle of France although this unit continued its magnificent fight through Belgium, across the Rhine, and into the Elbe River.

"In the course of this magnificent campaign, the 30th Division suffered more than 26,000 casualties. It captured more than 50,000 prisoners. Its members received 6 Congressional Medals of Honor and 65 Distinguished Service Crosses. As a unit, the division earned 8 distinguished citations and 2 Belgian Fourrageres. Its 3 infantry regiments earned the Croix de Guerre. Now the Croix de Guerre with Palm is being conferred upon the division as a unit in recognition for the outstanding part it played in the liberation of France.

"Twice within a generation, the United States has come to the help of France in her hour of need. Twice American boys have come to our distant land to free it from a cruel foe. Twice American boys have fought heroically and shed a generous blood on our soil.

"In conferring its highest military distinction upon the 30th United States Infantry Division, the Government of the Republic of France wishes to express the heartfelt gratitude of the French nation to the American Nation which are forever linked for the triumph of the cause of freedom.

"Ever since the signing of the historic Treaty of Alliance and Amity of 1778, France and the United States have been closely linked in war and in peace, because of the faith they so ardently share in this ideal of freedom.

"It is this common ideal which explains why, beyond momentary difficulties and obvious differences in their ways of life, there is a profound affinity between the French and the American peoples, which are just as dedicated today to the triumph of freedom as they were 180 years ago, in the glorious times of the American and of the French Revolution."

Antitrust Restraints Essential in Sports

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert my statement before the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary, on H. R. 10378 and S. 4070, Thursday, July 24, 1958. The statement follows:

STATEMENT OF REPRESENTATIVE EMANUEL CELLER, OF NEW YORK, BEFORE THE SUBCOMMITTEE ON ANTITRUST AND MONOPOLY OF THE SENATE COMMITTEE ON THE JUDICIARY ON H. R. 10378 AND S. 4070, THURSDAY, JULY 24, 1958

Mr. Chairman and members of the committee, I welcome this opportunity to testify on the organized team sports bills, H. R. 10378 and S. 4070.

It is unfortunate that Congress, during these parlous times, must give its attention to special legislation for organized professional team sports. I am sure you will all agree that many of the other domestic and international issues that now confront Congress overshadow these sports bills.

The Supreme Court's decisions on professional sports, however, call for Congress to take some action. In the first place, the Supreme Court has rendered contradictory decisions on the application of the antitrust laws to the business of presenting professional team sports exhibitions. Further, in both the baseball and football cases, the Supreme Court suggested that Congress clarify its intent on the relationship of the antitrust laws to these businesses.

There is another reason that requires this subcommittee to make a careful and penetrating examination into the issues involved in these bills. Both S. 4070 and H. R. 10378, as it passed the House, represent a new departure in Federal legislation dealing with interstate commerce. These bills repudiate the antitrust policies that have been the cornerstone of our Federal interstate commerce legislation.

These bills contain a novel approach to the discharge of Congress' responsibility. Customarily, controversial practices that affect interstate commerce are subject to the antitrust laws and are resolved in the forum of the Federal courts. If in special circumstances we grant exemption to an industry from the antitrust laws, in the past we have vested responsibility in some Government official or body to supervise the affairs of the exempted industry. These bills, however, in complete disregard of our custom and experience, would vest unfettered control over the interstate business of professional team sports exhibitions in the hands of a small number of private club owners. Unlike any other business in the United States, the club owners would not be responsible to any kind of governmental authority for the essential parts of their business operations. We should proceed with the utmost caution on such a course.

Mr. Chairman, I will not take the time of the subcommittee to analyze the various Supreme Court's sports decisions, or to describe the general nature of these sports enterprises. I would like, however, to supplement my statement by inserting in the RECORD at this time a copy of House Report No. 1720, of the Committee on the Judiciary, entitled "The Applicability of Antitrust Laws to Organized Professional Team Sports." On pages 2 through 7, this report sets forth these matters in detail. It is clear that these sports are substantial businesses in interstate commerce.

The Antitrust Subcommittee of the House Committee on the Judiciary on two occasions has conducted extensive investigations into the business of organized professional team sports. In both of these investigations the subcommittee concluded that these sports should have special treatment under the antitrust laws. Both times the committee concluded that there should be application of the rule of reason so that team sports would be neither completely exempt from, nor tally subject to, the antitrust laws.

The subcommittee's 1952 report, which resulted from its study of business practices in organized baseball, concentrated on the operations of baseball's reserve-clause system. On page 231, the subcommittee unanimously concluded:

"A statute granting a reasonably limited exemption for the reserve clause would avoid the principal objections to either a blanket immunity or a flat condemnation of organized baseball's reserve rules. For this reason the subcommittee has carefully considered the wisdom of recommending the enactment of broadly phrased legislation intended to accomplish this objective. Such a bill would state in general terms that the antitrust laws shall not apply to reasonable rules and regulations which promote competition among baseball clubs, even though they restrain competition for players' services—as does the reserve clause—provided that such rules guarantee players a reasonable opportunity to advance in their profession and to be paid at a rate commensurate with their ability. This type of legislation would lay down a rule of reason for baseball. It would give no protection to activities designed to thwart geographic realinement of major league franchises, or to arbitrary blacklisting of players in the course of a 'war' against an independent league. On the other hand, the reasonable and necessary utilization of the reserve clause would be protected against successful antitrust attack."

In 1957, after the Radovich case, the subcommittee studied carefully the organization and practices of baseball, football, basketball, and hockey. On the basis of this study, the Antitrust Subcommittee concluded that special application of the antitrust rule of reason was justified, so as to exempt those activities that were reasonably necessary for continuation of the sports. The Judiciary Committee agreed with this conclusion. The bill recommended by the Judiciary Committee accommodated the national antitrust policy to the public interest in assuring that the team sports continue.

The bill recommended by the Judiciary Committee made it clear that the Sherman, Clayton, and Federal Trade Commission Acts apply to the four named team sports, but provides that certain activities in these sports, that might otherwise be held to violate the antitrust laws are to be permitted if reasonably necessary for continuation of the sport.

The Judiciary Committee bill declared that certain activities, because they are reasonably necessary to the achievement of the objectives considered fundamental to continued public presentation of professional sports contests, would not violate the antitrust laws. These basic objectives were (1) the equalization of competitive playing strengths; (2) the right to operate within specified geographic areas, which would in-

clude (3) reasonable regulation of telecasting and other broadcasting of sports contests; and (4) the preservation of public confidence in the honesty in sports contests.

The Judiciary Committee bill's exemptions from the antitrust laws would have included, if reasonable and necessary to the continuation of the sport:

1. Baseball and football's reserve clause recognition systems, football's player draft, the farm systems, and the draft and waiver rules;

2. Territorial restrictions and such regulation of TV and radio broadcasts as are needed to preserve these territories;

3. The creation of the office of a commissioner, with authority to take action as needed to protect the honesty of sports contests;

4. Such agreements and rules among the teams involved as necessary to continue the sport.

It is unfortunate that the House of Representatives rejected the "reasonably necessary" test and adopted the bill which was substituted for the Judiciary Committee's bill. Without the "reasonably necessary" test, complete exemption from the antitrust laws is given for nearly all parts of organized sports business.

The opponents to the Judiciary Committee's bill contended that unless complete antitrust exemption is given to the club owners, even for unreasonable actions, the courts would be flooded with a multitude of antitrust suits. This argument has no merit.

Football, basketball, and hockey now all are subject fully to the antitrust laws. There has been no great multitude of antitrust suits in these sports. There has been no harassment by litigation.

It is commonplace for businessmen to raise the specter of litigation when amendments to the antitrust laws are considered. This is the time-honored argument when any effort is made to curtail the abuses of the powerful. The same arguments were made when the Sherman Act was originally considered.

These arguments were not persuasive then and should not be persuasive now. Application of the antitrust laws has not resulted in unjustified litigation. No industry has been destroyed by application of the antitrust laws.

Baseball's club owners use this argument to mask the real reason they were opposed to the Judiciary Committee's bill. The real reason is that they want to be free to continue to be unreasonable in the way they manage baseball's business.

You will note that the bill recommended by the Judiciary Committee was phrased in general terms. This accords with the wise practice of drafting antitrust legislation so that the law will be flexible and thus be able to meet changing circumstaices and new industry practices. It would be self-defeating, I think, to attempt to enact a code which would specify in detail the particular sports activities that would be exempted from the antitrust laws and those specific activities which would remain subject to the law.

It is far preferable for Congress in sports legislation to enact general antitrust guides and standards which the courts can apply. Congress must permit as much flexibility in the management of these businesses as is consistent with the public interest in assuring continuation of the sports contests.

I would like now to turn to H. R. 10378, as amended by the House of Representatives, and Senator HENNING's identical bill, S. 4070. The effects of these bills may be summarized as follows:

1. Complete exemption from the antitrust laws for all essential aspects of the business or organized team sport exhibitions is granted. The bill is a repudiation of the antitrust laws and the policies they represent.

2. Under the bill only minor operations in the sports exhibition business, such as the sale or lease of ball parks and the operation of peanut and other concessions, would be subject to the antitrust laws.

3. Club owners could arbitrarily and unfairly restrain trade for purposes totally unrelated to continued presentation of sports contests. Club owners, for example, could agree: (a) not to recognize any players' association; (b) that no more than one team could be located in any metropolitan area, regardless of size; or that some areas of the country would never qualify for major league ball; (c) that the same interests could own or control two or more clubs. This is the present situation in the hockey league.

4. Although restraints on a citizen's right to pursue his trade or profession historically have been prohibited, players will be deprived of any disinterested forum in which they can secure redress for their grievances. The bill ousts the courts entirely and no objective arbiter is substituted. The bargaining position of players, and the players' representatives, is destroyed by the bill.

5. The bill permits the club owners to be absolutely free, with no restraint on their actions. The public interest in the continued availability to the public of sports contests, therefore, is not protected. There is no reason for antitrust exemption other than to protect the public interest in the continuation of the sport.

6. Club owners would be free to boycott and to take other reprisals against former players no longer in the organized sport, or against business interests not directly engaged in the organized sport. Sports commissioners could blacklist, boycott, and censor sports announcers and commentators on TV and radio broadcasts and newscasts. In this connection, I would point out football's constitution and bylaws already provide, in article X, which was adopted in 1957:

"SECTION 1. Any contract entered into by any club for telecasting or broadcasting its games shall be subject to the conditions that—

"(a) The sponsor, the contract itself, the broadcasters who telecast or broadcast such games, and men who do the color; also any person or persons who do a pre-game and/or post-game show from inside the park, must have written approval of the commissioner of the National Football League. * * *

"(b) Any broadcaster may be removed by the commissioner for conduct considered by the commissioner as detrimental to the National Football League or professional football."

The commissioner, of course, has virtually unlimited power to determine what, in his judgment is detrimental to the National Football League, or to professional football.

7. Almost the entire United States could be blacked out from telecasts of major-league baseball games, whether or not the blackout is needed to protect minor-league territories. In addition, the major leagues could blackout United States free television in order that they could charge for games on pay-TV or on closed circuit TV.

I understand that the subcommittee has already given considerable attention to the serious impact the bill could have on radio and television broadcasts of sports contests. At the present time, no sport, not even baseball, has any antitrust exemption for restraints on radio or television broadcasting. Personally, I have great reservations about the necessity for any special antitrust treatment for sports with respect to radio or television.

It seems clear, however, that in baseball the major league television broadcasts constitute a threat to the minor leagues. Accordingly, even though an other industry was involved, the Judiciary Committee's report on H. R. 10378 stated, on page 9, that the "reasonably necessary" test "* * * will permit reasonable arrangements in baseball between the major and minor leagues to protect the territorial markets of the minor leagues from penetration by radio and television broadcasts of the major leagues. These arrangements, of course, may include only those restraints which are reasonably necessary to assure continuation of the sport."

Without the "reasonably necessary" test, which was recommended by the Judiciary Committee, however, the club owners may take any action they desire, no matter how unreasonable. That the club owners may take unreasonable action in the television field is apparent from the proposal that the Department of Justice already has refused to approve. Under the 75-mile rule sought by organized baseball, approximately two-thirds of the United States and almost 90 percent of the United States population could be blacked out from television broadcasts of major league games.

It should be borne in mind that baseball proposes to black out major league games even if the affected minor league is not actually playing a game. Under the day and date rule, major league games would be blacked out in the afternoon even though the minor league team was not going to play until night. Clearly it is unreasonable to deprive the public of the right to see a broadcast of major league games to this extent.

In his testimony on July 16, Baseball Commissioner Ford Frick told you that enactment of these bills would not result in such a TV blackout. He says the owners would not act unreasonably in this regard. He may be right. It is quite possible that the major league owners' greed for money, even at the risk of destroying the minors, cannot be controlled by the Commissioner, even if these bills become law.

Ford Frick's own statement shows that money, not the welfare of the minor leagues, determines the club owner's actions in the TV question. Mr. Frick stated in this regard:

"There will be as much broadcasting and telecasting as the proper protection of gate receipts of other clubs will permit, because the major league clubs need the revenues from broadcasting and telecasting to stay in business."

Another aspect of restrictions on radio and television broadcasting that should be noted, is the fact that the right to exclusive territories would carry with it the right to control competition from radio and television broadcasts in that territory. If the subcommittee determines that no regulation of broadcasting or telecasting should be permitted, it will be necessary to do more than strike out clause 4 on page 2 of the bills. In addition, a specific exception will have to be added in clause 3 to eliminate the right to control telecasts and broadcasts within the specified areas.

I hope that the subcommittee will not conclude that this bill would be accepted if something were done to "clean up" the radio and television situation. There is no justification for Congress to grant a complete antitrust exemption for the internal operations of these organized sports businesses.

It should be borne in mind that the office of the commissioner cannot be relied upon to protect the public, the players or the sport. The commissioner is paid by, and his office is controlled by, the club owners. Their interests are the interests he protects.

Ford Frick, for example, cannot control the baseball owners. He admitted it to the committee. With respect to bonus payments for players by the major league teams, he said: "It's absolutely haywire, downright crazy." Still he does nothing to clean up the situation. His office is too frail a reed for us to rely upon.

Business practices that have developed over the years in these sports, involving the

reserve clause, the territorial rights of the clubs, and the creation and operation of the Office of the Commissioner, contain opportunities for grave abuses. Congress cannot delegate control over these business practices entirely to private parties.

In order to make this clear on your record, I shall spend the balance of my time in an examination of the club owners' abuses in these sports, particularly in organized baseball.

COURT DECISIONS

The Supreme Court has never ruled upon the legality of the business practices that are employed in any of these team sports. All that the Supreme Court has ever done is to decide that the business of professional baseball was not in interstate commerce while the business of professional football was in interstate commerce and, therefore, subject to the antitrust laws.

Over the years, however, lower courts have had an opportunity to examine the organization and practices of professional baseball. In each instance, the Court has been severely critical of what it found.

Gardella case

In the Gardella case in 1949 the Court of Appeals for the Second Circuit reversed the trial court and held (2 to 1) that the business of baseball was in interstate commerce. Judge Frank there stated (172 Fed. 2d 402, 409) that he would overrule the 1922 Federal Baseball case because "* * * we have here a monopoly which, in its effect on ballplayers like the plaintiff possess characteristics shockingly repugnant to moral principles that, at least since the War Between the States, have been basic in America, as shown by the 13th amendment to the Constitution, condemning 'involuntary servitude,' and by subsequent congressional enactments on that subject."

Chase case

In 1914, Judge Bissell, in a New York Supreme Court decision, found that baseball was not in interstate commerce and therefore not subject to the Sherman Act. Judge Bissell, however, remarked upon the way the owners of professional baseball clubs operated their business, in the following words:

"There is no difference in principle between the system of servitude built up by the operation of this national agreement, which * * * provides for the purchase, sale, barter, and exchange of the services of baseball players—skilled laborers—without their consent, and the system of peonage brought into the United States from Mexico and thereafter existing for a time within the Territory of New Mexico. * * * The system created by 'organized baseball' in recent years presents the questions of the establishment of a scheme by which the personal freedom, the right to contract for their labor wherever they will, of 10,000 skilled laborers, is placed under the dominion of a benevolent despotism through the operations of the monopoly established by the national agreement." (*American League Baseball Club* v. *Chase* (149 N. Y. S. 6, 19 (1914).)

Surely statements such as these from objective and dispassionate jurists must give us pause. The business with which we are dealing commonly engages in trade restraints which have long since been outlawed in every other American commercial area. We cannot close our eyes to the facts. We cannot give total immunity from the antitrust laws to the owners of these business enterprises. There is nothing to justify the grant by Congress of absolute authority to the club owners to operate their businesses (unlike any other businessman in the United States) under no legal restraints whatsoever.

Business practices

The reserve clause recognition system among the owners—where every member of the sport agrees that one club will be given the exclusive right to the services of a particular player—frequently has been used as a bargaining weapon to keep down player salaries.

Ty Cobb case

In the 82d Congress, the Antitrust Subcommittee conducted an intensive investigation into business practices of professional baseball. Ty Cobb, one of the truly greats of baseball, testified at those hearings, and told about abuse of the reserve clause system as early as 1914. Ty Cobb described to the committee the threats he received from the owners of the Detroit Tigers when he asked for more money.

In 1912 Ty Cobb had earned a salary of $9,000. In that season he led the American League in batting for the sixth consecutive year and so asked for an increase in salary to $15,000. Mr. Navin, the owner of the Detroit Tigers, finally gave Ty Cobb the following ultimatum: "You will play with Detroit, otherwise you will never play in organized baseball." (H. Rept. No. 2002, 82d Cong., 2d sess., Organized Baseball, p. 217.)

Only a threat of congressional investigation at that time on the ground that the reserve clause "looks like peonage" forced the Tigers to come to terms with Ty Cobb. Public opinion may be relied upon to help out an exceptional player when he has been threatened by the owner; however, public opinion cannot be relied upon to protect the rights of the average player from the greed of the men who own their contracts.

Mickey Owens case

The record of the Antitrust Subcommittee is replete with instances where baseball club owners have abused their powers. Group boycotts by the owners are customary where a player has been suspended by the commissioner for violations of the rules handed down by the owners. These boycotts are employed against players even after they have left organized baseball and have entered another line of business. Agreements exist whereby, stadiums and ball parks are denied even for exhibition game purposes. No player in organized baseball can appear in such an exhibition game on penalty of being blacklisted himself. Whatever may be the justification for discipline within the organized team sports, certainly there can be no condonation of organized group boycotts against persons no longer within the organized sport. However, that is the situation that now exists in organized professional baseball and will continue unless some responsibility is fixed upon baseball club owners by removal of their antitrust exemption.

Disregard for public

The history of baseball is replete with instances of arbitrary refusal on the part of the club owners to authorize the creation of new major league teams or the transfer of major league teams to new markets. Only recently, after extensive criticism in the press and in Congress, has organized baseball made any effort to reflect the population changes in the growth of the United States. Even now the adjustment made in major league baseball has been to take major league teams from the east coast and put them on the west coast rather than to create new major league teams or another major league.

Yankee monopoly of New York

Baseball's present lack of responsibility under the antitrust laws is reflected in the situation where, by agreement, organized baseball has given to the Yankees the exclusive right to the New York City market. Unless the Yankees consent, no replacement can come to New York to take the place of the Dodgers and the Giants. Surely such an agreement was unreasonable. Nonetheless it can be perpetuated if baseball's total exemption from the antitrust laws is continued.

In conclusion, I would say this. It would be better, in my view, to have no sports legislation whatsoever, even though the Supreme Court has rendered contradictory decisions, than to enact these bills your committee is considering. Our antitrust policies should not be repudiated in this manner. Complete antitrust exemption should demand a much more persuasive justification than these club owners have thus far been able to show.

Eighty-fifth Congress Approves Code of Ethics for Government Service

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1958

Mr. BENNETT of Florida. Mr. Speaker. The 85th Congress, in putting its official approval on a code of ethics for Government service, has taken a constructive forward step in a difficult field. The final approval by the Senate was on July 11, 1958. Although this is but an expression of the opinion of Congress, it may still be not the least of the acts of this Congress. The code reads as follows:

CODE OF ETHICS FOR GOVERNMENT SERVICE

Any person in Government service should:

1. Put loyalty to the highest moral principles and to country above loyalty to persons, party, or Government department.

2. Uphold the Constitution, laws, and legal regulations of the United States and of all governments therein and never be a party to their evasion.

3. Give a full day's labor for a full day's pay; giving to the performance of his duties his earnest effort and best thought.

4. Seek to find and employ more efficient and economical ways of getting tasks accomplished.

5. Never discriminate unfairly by the dispensing of special favors or privileges to anyone, whether for remuneration or not; and never accept, for himself or his family, favors or benefits under circumstances which might be construed by reasonable persons as influencing the performance of his governmental duties.

6. Make no private promises of any kind binding upon the duties of office, since a Government employee has no private word which can be binding on public duty.

7. Engage in no business with the Government, either directly or indirectly, which is inconsistent with the conscientious performance of his governmental duties.

8. Never use any information coming to him confidentially in the performance of governmental duties as a means for making private profit.

9. Expose corruption wherever discovered.

10. Uphold these principles, ever conscious that public office is a public trust.

The report of the Senate Post Office and Civil Service Committee reads as follows:

The Committee on Post Office and Civil Service, to whom was referred the concurrent resolution (H. Con. Res. 175) setting forth as the sense of Congress a Code of Ethics for Government Service, having considered the same, report favorably thereon without amendment and recommend that the concurrent resolution do pass.

PURPOSE

The purpose of this resolution is to set forth in a readily understood but meaning-

ful manner basic standards of conduct as a guide to all who are privileged to be a part of the Government service. The word "guide" is used advisedly. The resolution creates no new law; imposes no penalties; identifies no new type of crime; and establishes no legal restraints on anyone. It does, however, etch out a charter of conduct against which those in public service may measure their own actions and upon which they may be judged by those whom they serve.

The original framers of this resolution, together with all those who now support its adoption, do not contend for a moment that it will wash all evil from the soul of the Government or the individuals therein. They do believe strongly, however, that it can do no harm and has great possibility of doing much good.

At the very least it may serve to encourage the thoughtless to be more thoughtful. It may cause caution instead of carelessness. It may add strength to the weak and refortify those who are strong.

Additionally, it may serve to spearhead other steps that will encourage or require greater fidelity to public trust and at the same time put a brake on those who contribute to thoughtless or deliberate derelictions in an effort to obtain special favor or personal gain.

COVERAGE

The committee understands and intends that this resolution apply to every servant of the public whether he be the President, a Member of Congress, a lifelong career employee, or an employee engaged only on a temporary basis to expedite the movement of mail during the Christmas rush.

The committee does not subscribe to or could it support any code of principles that applied only to some and not to others. It believes there is no room in a great democracy such as ours for any set of double standards.

In that framework, the committee unanimously approved the resolution as providing a needed yardstick for the use of all who serve in the Federal service and for the use of those being served with which to measure and judge the propriety of official and personal conduct of every public official and employee—whether elected or appointed—and without regard to the position held or the duties performed.

INDIVIDUAL VIEWS OF SENATORS RICHARD L. NEUBERGER AND JOSEPH S. CLARK, JR.

We strongly support and commend the code of ethics provided in this bill. A meaningful code is long overdue. It should serve as a guide for the executive and legislative branches alike, and for policymaking officials as well as their subordinates.

Precepts of this kind frequently can serve as a standard and an inspiration to good conduct and sound behavior.

At the same time, we desire to stress that this code alone is not enough. After all, it is a statement of principles which is without specific enforcement provisions.

We believe that, in the long run, there will be required definite and explicit conflict-of-interest statutes which will govern the executive and the legislative branches with respect to gifts, disclosure of outside income, and other matters. We also suggest far more stringent regulation of political campaign contributions and similar matters, and consideration of such reforms in this field as originally were proposed by President Theodore Roosevelt and others long ago.

In advancing these views, we criticize no individuals or party or group. All in public life face such problems equally. Many innocent people of high personal ethics have been embarrassed and perplexed by situations that arise so frequently under existing conditions. We trust, therefore, that the present laudable code of governmental ethics will be reinforced in the early future by reforms of greater stringency and efficacy.

The report of the House Committee on Post Office and Civil Service is as follows:

The Committee on Post Office and Civil Service, to whom was referred the concurrent resolution (H. Con. Res. 175), proposing a code of ethics for Government service, having considered the same, report favorably thereon without amendment and recommend that the concurrent resolution do pass.

STATEMENT

House Concurrent Resolution 175 is essentially a declaration of fundamental principles of conduct that should be observed by all persons in the public service. It spells out in clear and straightforward language long-recognized concepts of the high obligations and responsibilities, as well as the rights and privileges, attendant upon service for our Government. It reaffirms the traditional standard—that those holding public office are not owners of authority but agents of public purpose—concerning which there can be no disagreement, and to which all Federal employees unquestionably should adhere. It is not a mandate. It creates no new crime or penalty. Nor does it impose any positive legal requirement for specific acts or omissions.

The code of ethics provided by this resolution has the strong support of organized labor. It has the unqualified endorsement of the Government Employees' Council, AFL-CIO, and other representatives of Federal employee unions. The Civil Service Commission, which is the central personnel authority for the Federal Government, has reported its full agreement with the purpose and nature of the resolution. The Department of Justice has concurred in this view. The Comptroller General of the United States, the independent authority established by the Congress to watch over expenditures of public funds, has stated that such a code of ethics will be useful in placing Government personnel on notice of what actually is expected of them and, in addition, giving notice to those dealing with Government personnel as to just what such personnel may and may not do in the performance of their public duties. This unanimity of opinion extends largely to the Congress, and some 30 Members of Congress have introduced similar resolutions in the past few years.

The committee emphasizes that this resolution in no way reflects on the integrity or the efficiency of the great body of Federal employees. The vast majority of men and women in our Government are conscientious, able, loyal, and honest public servants—above criticism in their official conduct. Their personal and official actions are guided by ethical standards as high and strict as the letter and spirit of any code that could be written into law. These men and women will welcome the adoption, in this code of ethics, of an affirmation of their own high standards. It will strengthen their hand in guiding and correcting any tendency toward cynicism of the high trust associated with public service, or deviation from proper conduct, that is bound to occur among some few in a Government as great and complex as the Government of the United States. A strong and unwavering policy, known to all both in and out of Government, is the best protection against lowering of ethical standards in the day-to-day performance of official duties by our more than 2 million Federal officers and employees.

In the judgment of the committee, the effectiveness of this resolution lies in simplicity and directness of its language. It does not pretend or purport to create new or unfamiliar standards. It is a concise restatement—as a part of the laws under which the Federal Government operates—of the principles of conduct in the public service which always have been expected by the American people.

This and earlier proposed resolutions have been given careful and extensive consideration by the Post Office and Civil Service Committee over the past several years. A number of committee suggestions and recommendations for clarification and improvement have been incorporated in House Concurrent Resolution 175. All points of difference, and all questions of policy, with respect to the language of the resolution have been resolved. The committee knows of no objection whatever to the resolution in its present form.

There will be no additional cost as a result of approval of this resolution.

The favorable reports of the United States Civil Service Commission and the Comptroller General of the United States on House Concurrent Resoltuions 5 and 43, 85th Congress (similar to H. Con. Res. 175), follow:

CIVIL SERVICE COMMISSION,
Washington, D. C., April 26, 1957.

Hon. TOM MURRAY,
Chairman, Committee on Post Office and Civil Service, House of Representatives, Washington, D. C.

DEAR MR. MURRAY: This is in reply to your letters of January 17, 1957, asking for the Commission's views on House Concurrent Resolutions 5 and 43, introduced by Congressman BENNETT and Congresswoman ST. GEORGE, respectively, setting forth a code of ethics to be adhered to by all Government employees, including officeholders.

The subject of ethics and morality of Federal employees is vitally important to a free government. While public employee morality has improved tremendously in this country in the past 75 years, this is an area where perfection will never be reached. The executive branch is very conscious that constant emphasis must be given to the basic thought that those holding public office, as servants of the public, are not owners of authority but agents of public purpose. It is possible that a code of ethics to which Federal employees can look as a guide to conduct would help to reemphasize the importance of this subject and contribute to a further improvement of public standards. The Commission, therefore, is in full agreement with the general purpose and the nature of the resolutions.

House Concurrent Resolution 43 is identical with the resolutions introduced by Congressman BENNETT and Congresswoman ST. GEORGE in previous Congresses. House Concurrent Resolution 5 contains the amended language which was worked out by a subcommittee, chaired by Congressman RHODES, of the House Post Office and Civil Service Committee, after their hearings on March 26, 1956. These amendments took into account a number of technical suggestions made by the Commission.

Congressman BENNETT on February 21, 1957, sent us a marked copy of House Concurrent Resolution 5 containing several further changes of wording as shown in the enclosure.

The Commission is in full agreement with the general purpose and nature of House Concurrent Resolution 5 and House Concurrent Resolution 43 and fully endorses House Concurrent Resolution 5. The editorial revisions proposed by Congressman BENNETT appear desirable.

The Bureau of the Budget has advised us that it has no objection to the submission of this report.

By direction of the Commission:
Sincerely yours,

HARRIS ELLSWORTH,
Chairman.

COMPTROLLER GENERAL
OF THE UNITED STATES,
Washington, February 6, 1957.

Hon. TOM MURRAY,
Chairman, Committee on Post Office and Civil Service, House of Representatives, Washington, D. C.

DEAR MR. CHAIRMAN: Your letter dated January 17, 1957, and undated letter, both acknowledged on January 18, 1957, transmitted House Concurrent Resolution 5 and House Concurrent Resolution 43, respectively, for a report thereon by our Office. This Office is in agreement with the purpose of these resolutions and regards House Concurrent Resolution 5 as the preferable of the two.

House Concurrent Resolution 5 and House Concurrent Resolution 43 are similar in that both resolutions would establish a code of ethics in the Government service which, in the sense of the Congress, should be adhered to by Government officials and employees including officeholders. However, House Concurrent Resolution 5 embodies certain changes in language which were suggested by the Civil Service Commission and developed in the hearings before your committee upon consideration of House Concurrent Resolution 2 and House Concurrent Resolution 17, both of the 84th Congress; and we regard the changes as desirable modifications.

Concerning the need for the establishment of a code of ethics for persons in the Government service, we believe that the large majority of all Government personnel need no reminder such as the suggested code of ethics to guide their activities, official or personal, being already possessed of moral standards of conduct as strict in letter and spirit as the proposed code of ethics. However, we recognize that in our complex Government it is impossible always to exclude from employment every person of unscrupulous character who may be cynical of the high trust associated with Government service. Any suggested course of conduct as is contemplated in the proposed code of ethics probably would have little or no deterrent value as to such persons.

We feel that the best protection to the public against questionable activities of Government officials is constant and unwavering vigilance by those charged with the administration of the departments and agencies. In recent years many of the executive departments and agencies have provided, through appropriate regulations, codes of conduct to be followed by their officers and employees. Many of the regulations and codes are more comprehensive and strict than the code proposed in the current resolutions and provide suitable penalties for violations thereof. We believe such codes of ethics are useful because they place Government personnel on notice of what actually is expected of them and in addition they provide notice to those dealing with Government officials as to just what the official may or may not do in the performance of his duties.

Accordingly, we favor the adoption of the current resolutions notwithstanding that many Government departments and agencies have regulations governing the conduct of their employees. Such a code, while without the status of a mandate, would have a salutary effect and should provide a basis and incentive for the promulgation of more definitive regulations by all Government departments and agencies on the matter of ethical conduct of their officials and employees, thus emphasizing to all concerned the interest of the Congress in this matter.

Enclosed for your information is a copy of Comptroller General's Order No. 4.25 governing the conduct of the officers and employees of the General Accounting Office.

Sincerely yours,

Comptroller General of the United States.

Food Field Reporter and Grocery News a Nationwide Marketing Newspaper of the Food and Grocery Industry Opposed H. R. 9521

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 21, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the RECORD an editorial appearing in Food Field Reporter of July 21, 1958. Food Field Reporter is a nationwide trade paper of the food and grocery industry. The editorial sets forth the carefully thought out opposition of the editors of that publication to H. R. 9521, a bill to eliminate the requirement of the food, drug, and cosmetics law that fresh produce be labeled to show use of postharvest pesticide chemicals.

I hope all will read this editorial and will come to understand the real danger of passing legislation like H. R. 9521.

The first danger most easily apparent is that there is a substantial increase in the burden on the Food and Drug Administration, with resultant increased danger to the consuming public.

The second danger which the editorial points out under the heading "Take It Easy, Boys" is that passage of unwise legislation may lead to much more severe and restrictive legislation on this food and drug subject in the future, possible some of which will even be definitely anti-industry.

The editorial follows:

TAKE IT EASY, BOYS

There seems little reason to doubt that the fresh fruit and vegetable industry has amassed enough political strength to push through Congress the Haley bill (H. R. 9521) to eliminate the present Food and Drug Administration rule that fresh produce (including retail displays) be labeled or placarded to show use of postharvest fungicides.

In our opinion, however, there is ample reason to doubt the wisdom of using this strength to accomplish what the produce men want.

The question at issue here, it seems to us, is whether an important segment of the food industry should use its political strength to crush a vital right of its ultimate customers—the housewives and families of the Nation. This right is simple and fundamental—the right to know what one is buying to eat. It is a right which has long been accepted as a basic part of our country's food laws, both National and State.

During hearings before the Health and Science Subcommittee of the House Interstate and Foreign Commerce Committee industry representatives argued that no harm could come to consumers if they are not told that some of the fresh produce they buy has been chemically treated. It was argued that the Miller pesticide amendment afforded protection and that, in any event, no one could understand the chemical names used on placards.

Neither of these arguments is good enough. The Miller amendment is designed only to see that harmful quantities of pesticide residues are not present on produce. It does nothing to inform consumers of what might be there. And there is every reason why consumers should be so informed, even granting they don't know what the additive is. There are many reasons why consumers want to know what is in or on their food, including medical and religious reasons.

We doubt whether the produce industry realizes the extent of concern around the country about the Nation's food supply. This concern is the result of increasing publicity, some legitimate and some of the sensational food faddist crackpot variety. But it would be a grave mistake for the produce industry or any other branch of the food industry to write off this concern as coming only from the lunatic fringe. There is too much evidence that many normal, intelligent Americans don't want their food supply tampered with in any way.

If the produce men are successful in their fight it is wholly possible that eventually the exemption will bring on far more severe regulations at some future time. This could come about through granting of similar exemptions to other branches of the industry for processed foods. These branches certainly are as much entitled to withhold vital information from consumers as the produce field. If the movement snowballs it could easily arouse public opinion to the point where legislation more restrictive than that now on the books would be adopted by Congress.

The Mideast Situation Belongs in the United Nations

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. DONOHUE. Mr. Speaker, it may or may not be an unforunate matter that the President's best wisdom has ordered our troops into Lebanon, but it is useless to argue about that now. Our clear patriotic course now is to go along with the President in a demonstration of unity, while permanent solution of the problem is sought within the United Nations. We can thus, at least, try to prevent any additional triumphs of Soviet propaganda.

We may be certain that the Russians will make the most of our entrance into Lebanon and try to convince the rest of the world that it is an imperialist gesture toward war and not, as it is truly meant to be, an attempt to promote peace.

In my opinion, it is most essential that we make every effort to counteract the Russian propaganda, and it would appear that the best way to do so is to pursue a solution through the United Nations. It is vitally important that we show the world that we will not reject even the germ of an idea or a proposal that could help the cause of peace. It is also vitally important in this propaganda battle, I think, not to abruptly reject any Soviet suggestion for solution, even though we feel that their motives are false and hypocritical.

We have been on the losing end of too many propaganda battles with the Russians in the past, and it is imperative that the prestige of the United States be salvaged in this complex Lebanon and Mideast situation. The forum in which that can be accomplished is the United Nations, and I most earnestly hope that the President will insist that any nego-

tiations be conducted within that international organization, originated for the purpose.

Meanwhile, let us pray divine guidance for the President in this historical hour while we remain united behind him.

Graduate Education Expansion Programs in the Proposed National Education Defense Act of 1958

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. METCALF. Mr. Speaker, in the interest of national security, especially during these tense times of international turmoil, the provision in the proposed National Defense Education Act for the expansion of the Nation's graduate education programs is of unprecedented significance to the American educational system. The urgency of our need dictates that we provide more adequately for the staffing of our institutions of higher education.

This need for assistance to graduate education programs existed long before the stark realization of sputnik's challenge and the resultant widespread recognition of America's educational shortcomings. In fact, many of these educational deficiencies had already been analyzed by the President's Committee on Education Beyond the High School and presented in their second report to the President last July. I was especially impressed by the foresight of the Committee members when, in their consideration of graduate education, they affirmed that—

At the present more than 225,000 ful-time and part-time instructional staff members serve in 1,900 colleges and universities, of which over 1,300 grant at least one kind of degree.

A number of variables, including the speed with which enrollments rise, student-teacher ratios and the rate of faculty turnover, will affect the total needs for college teachers in the next several years. Taking conservative estimates with respect to these variables, somewhere between 180,000 and 270,000 new college teachers must be recruited in a dozen years—between 15,000 and 22,500 annually. Less conservative assumptions would indicate a considerably higher need.

The graduate schools, source of the most advanced education for college teachers, are currently awarding about 9,000 doctoral degrees annually. Into teaching go probably no more than 5,000 of these candidates, a considerable proportion of whom are already engaged in teaching before receiving their doctorates. The cumulative deficit at the doctoral level is an alarming prospect.

About half of the new college teachers now come from other sources than graduate schools. One source is high-school faculties. But since the quality of college education is heavily dependent upon strong secondary schools, this is robbing Peter to pay Paul.

Further aggravating the problem is the aging of the population of college teachers, more than 35 percent of whom are already 45 or over, and the relatively small pool from which to recruit. The 24- to 45-age group in our population is already relatively small. Because of the low birth rate of the depression years this group will actually decrease in the next decade, just when the student population is reaching new heights. Faculty reduction by death and retirement appears likely to accelerate at a time when the student population is increasing from the present 3 million to an estimated 6 million.

The President's Committee further reported:

Important areas of knowledge such as the fields of classical learning, history, literature, philosophy, the social studies and theoretical science have their principal, if not unique, sponsorship in the universities and colleges. Salaries in these fields are not so affected by outside demand as in the professional and technological fields.

Yet we dare not concentrate on certain fields of serious present shortage in the competitive market, to the exclusion of other fields, for we must look forward to long-range progress in all fields of knowledge. Indeed, in a society with increasing technological bias it becomes increasingly important that high talent be attracted into research and teaching in the social studies, the humanities, and pure science.

More evidence of the need to assist in programs for graduate expansion to provide for the staffing of the Nation's colleges and universities was presented during the recent house hearings on scholarship and loan programs when Dr. Lawrence Derthick, United States Commissioner of Education, testified that:

Attention has been called repeatedly to the critical shortage of first-rate teachers in this country today. The need is great at all levels of education, and it is becoming increasingly pressing in the institutions of higher education. The colleges and universities will soon be flooded with students far beyond their present numbers, and they will therefore require greatly increased numbers of teachers.

It will take more of an effort to find and train these teachers than is generally realized because today the graduate schools of our universities award annually somewhat less than 9,000 doctoral degrees. This degree represents the desired and standard preparation for teaching in college. It is to be hoped that in the years ahead more students will receive it, but present trends are not reassuring. The output has been almost at a standstill for a number of years.

Here I want to say a word about the qualifications of new full-time college teachers. Recent studies indicate a deterioration in these qualifications. For example, in 1953–54, 40 percent of all college teachers held doctoral degrees, but in this same year only 31 percent of the new college teachers had such degrees. Three years later the latter figure had dropped to 23 percent, which represents a serious loss indeed.

In the same statement, Dr. Derthick emphasized the need to improve college-level teaching in certain essential fields. Dr. Derthick said:

The quality of new full-time college teachers is uneven as between the different subject-matter fields. The deterioration is felt more severely in fields with which the Nation is now much concerned—physical science, mathematics, and engineering. In these the percentages of new full-time college teachers with the doctorate declined in 3 years by 18 percent, 40 percent, and 30 percent, respectively.

Many of the graduate schools have few students because the schools do not have the resources to instruct larger numbers. Graduate education is costly. It requires extensive and costly library and laboratory facilities. The direction of graduate students is largely on an individual basis, which means that the ratio of teachers to students is necessarily high. Moreover, many graduate students have families for whom living accommodations must be made available. This heavy cost limits the number of universities that can offer acceptable opportunities for graduate study.

Consequently, today there are only some 163 institutions out of a national total of 1,856 that confer doctoral degrees based on graduate instruction. Sixty-nine of these are under public control and 94 are under private control. In the year 1955–56, 60 institutions each conferred fewer than 10 doctoral degrees, and 103 conferred 10 or more. Only a few—27 to be exact—awarded more than 100 such degrees. It appears, therefore, that a considerable potential exists for increasing the output of our graduate schools.

The extreme importance of the role of the Federal Government in aiding the expansion of graduate education through a program of fellowships was supported by the testimony of Dr. Philip Coombs, director of the Ford Foundation's Fund for the Advancement of Education, when he stated before the subcommittee:

I believe the Federal Government can do more than it is now doing to assist in this direction without in any sense taking over control of education.

First, higher education in the United States today is seriously threatened by an erosion of quality. This erosion is already taking place, due in no small measure to inadequate economic resources and to the inefficient use of those resources. The decline of educational quality, which we can ill afford at this point in history, can only be averted if our colleges and universities are better financed, if they succeed in getting a larger share of the Nation's finest manpower for teaching, and if they make the most efficient use of that manpower and other resources.

It seems to me that there are two factors here. The first and most basic is that our economy, our society as a whole, is up against an overall shortage of high ability manpower, not only in science and engineering, but in other fields as well. This not because we have a smaller supply than we used to have but, rather, because the dynamic growth of our economy has created a much greater demand than ever.

The second factor is that teaching is at an increasing competitive disadvantage in bidding for its share of this limited supply of well-educated manpower. We have allowed economic rewards for teaching to deteriorate in relation to the rewards for other occupations. We have allowed the prestige of teaching, apart from the economic rewards, to deteriorate relative to other fields demanding the same quality of manpower.

To correct the situation, it seems to me, we must move in two directions. First, we must do everything we can to expand the overall supply of highly trained manpower. This we can only do through strengthening education, and it is a slow process. We cannot perform miracles in a year or two, but we must start promptly toward this long-run goal.

Secondly, we must put teaching in a stronger competitive position, partly by raising salaries substantially, but also by utilizing good teachers as effectively as we can, thereby making the supply go further. We must make teaching much more attractive, not merely in financial rewards but in the challenge of the work itself, so that our ablest young people will enter the field in large numbers.

The urgency of this need for a program of graduate felowships was also stressed by Dr. Charles C. Cole, Jr., of Columbia University who urged on behalf of the Association for Higher Education that:

> Congress * * * provide Federal funds for the support of a program of fellowships for 5,000-graduate students the first year of its operation.
>
> We also urge that students granted scholarships and fellowships under any new Federal program that may be enacted be left completely free to choose their own subject-matter fields of study and occupational objectives in the recognized institutions they choose to attend, without any limitations imposed by their acceptance of such scholarships or fellowships.

The value of Federal assistance for the expansion of graduate education programs was again underscored by the testimony of Dr. John Tyler Caldwell, representative of the American Association of Land-Grant Colleges and State Universities and the State Universities Association and president of the University of Arkansas, when he noted that:

> Most of the proposals before Congress involve increasing the supply of students, while the primary need of our colleges and universities is for help with which to make it possible to educate the students now enrolled and to be enrolled, whether measures to increase this number are adopted or not.
>
> This is not to say that there is no place for scholarship and loan programs and we do not wish to be categorical on that, but we do say that if we want to talk about quality education we have to talk about more than increasing the supply of students in the colleges and universities.
>
> I just say that we often debate in this country now the either-or of quantity and mass education as against quality. Certainly we need to do both; that is, we need to educate all the people and we need to provide quality education at every level.
>
> I cannot speak too strongly in support of these measures to provide graduate fellowships.
>
> Baccalaureate-degree graduates, particularly in sicence, engineering, and mathematics, have many immediate and well-paying offers of employment in industry. The alternative road to a doctoral degree and qualification for high-level basic and applied research and teaching is long and the financial problems serious, particularly at the normal time of marriage and establishment of a family. Adequate fellowship help is essential.

The vital need for this program was outlined more fully in Dr. Caldwell's prepared statement for the subcommittee in which he asserts:

> The provision of additional and substantial graduate fellowships is essential in both the long and short run. It will have an early impact on our supply of highly qualified personnel. Baccalaureate-degree graduates, particularly in science, engineering, and mathematics, have many immediate and well-paying offers of employment in industry. The alternative road to a doctoral degree and qualification for high-level basic and applied research and teaching is long and the financial problems serious, particularly at the normal time of marriage and establishment of a family. Adequate fellowship help is essential.
>
> We need to strengthen and expand graduate schools through the Nation and one very practical way to do it is to give aid to qualified graduate schools and to award some fellowships through the graduate schools.

The House Committee on Education and Labor report on the proposed National Defense Education Act—House Report 2157—points to this same necessity for a fellowship program:

> One great need of the Nation is to increase the number of highly trained persons produced by the graduate schools of our universities. There is a special need to increase the number of graduates who will teach in the colleges and universities since today the number of persons with the degree of doctor of philosophy (the standard degree for college teachers) who enter teaching is decreasing. For example, a recent study found that among 829 colleges and universities in 1956 a total of 1,196 teaching positions remained unfilled. In 1953–54, 40 percent of all college teachers held doctoral degrees, but in this same year only 31 percent of new college teachers had such degrees. Three years later the latter figure had dropped to 23 percent, which represented a serious loss.
>
> Only some 160 institutions of higher education confer earned doctoral degrees. About 60 confer fewer than 10 degrees each and between 25 and 30 award more than 100 each. Thus, about 75 institutions conferring between 10 and 100 degrees provide a considerable potential for increasing the output of graduate doctoral degrees. With some financial assistance to these institutions and financial aid to graduate students, graduate education will be materially expanded.

A majority of the full House Committee on Education and Labor concurred with the testimony presented to the subcommittee, thus decisively substantiating the demand for Federal assistance in this area. As the committee reported:

> The expressed aim of the program is, in addition, to further the objective of increasing the facilities available in the Nation for the graduate training of college or university level teachers and of promoting a wider geographical distribution of such facilities throughout the Nation.

The program would provide for the award of 1,000 fellowships for the first year and 1,500 for each of the 3 succeeding years. Fellowships can be retained for 2 years following the initial year of award.

Fellowship holders will receive a stipend of $2,000 for the first academic year of study following the baccalaureate degree, $2,200 for the second such year and $2,400 for the third such year. An additional amount of $400 for each such year will be awarded for each dependent of the fellowship holder.

Fellowships are to be awarded by the graduate schools of universities following approval of the Commissioner of Education based upon a finding that the graduate program of the university has been expanded or is a new program. On the basis of such finding, the Commissioner shall pay to the institution the sum of not less than $500 or not more than $2,500 per academic year which is determined by the Commissioner to constitute that portion of the cost of a new graduate program or the expansion of an existing graduate program which is reasonably attributable to each fellowship authorized to be awarded by the approved institution.

Holders of fellowships will be required to maintain satisfactory academic standing and to devote essentially full time to study or research in the field in which the fellowship is awarded. Fellowship holders will not be permitted to engage in gainful employment other than part-time employment by the institution in teaching, research, or similar activity.

I believe that the report of the President's Committee on Education Beyond the High School and the facts presented to the House subcommittee by prominent leaders in the field of education constitute more than ample evidence of a role to be fulfilled by the Federal Government in the expansion of graduate education programs in the United States. The National Defense Education Act of 1958 under the provisions of title VI would establish this vital Federal assistance.

Defense Reorganization for Essential Military Unity

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. DONOHUE. Mr. Speaker, in the near future we will be called upon to exercise our responsibility of enacting legislation essentially needed to provide military unity and restrain the unhappy rivalries existing among the separate branches of our armed services.

We can each have sincere and conscientious differences as to the precise legislative provisions to accomplish the desired objective. For instance, some of us very earnestly feel that the right of the individual services to come directly to Congress with complaints and recommendations should be preserved, while others do not so feel. Some of us may disagree as to the retention of congressional veto power over changes in combat functions within the services, but few of us will disagree that, in time of war or imminent hostilities, the President's power should be unlimited.

Despite any differences that Members may have about the measure to be presented, the bill, in my opinion, does provide some substantially forward steps. It is designed to give the Defense Secretary clear power to assign weapons to services of his choice and to centralize research and development under a single director. The power of unified commanders over all forces under them ought to be, and is, spelled out to prevent conflicts of authority among and between rival service commanders.

It is our clear duty to conscientiously attempt the enactment of a measure that will remove, so far as reasonably possible, the disastrous jealousies that admittedly exist among the services, and that will provide for the centralization of research and development under one director, in order to stop the appalling waste of

the taxpayers' money due to the duplication of efforts and absurd competition among the services in this vital field of Russian challenge.

In our exhortations for unity among the armed services, it is encumbent upon us to show an example of unity here, to restore the confidence of the American people in the Congress and in the military forces. Let us resolve our differences and patriotically provide a bill that will do the job.

Shrinking Playgrounds

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1958

Mr. ULLMAN. Mr. Speaker, I read with great interest in the July 24 issue of the Washington Star Sylvia Porter's column which contained some very enlightening data concerning the present state of our recreational resources.

I believe it will be of equal interest to my colleagues. Under leave to extend my remarks in the RECORD, I include the following:

SHRINKING PLAYGROUNDS
(By Sylvia Porter)

You go to the public beaches along the Atlantic coast and the crowds of people are actually frightening. You go to a National or State park for a family picnic and you find that all the good spots had been snatched up before 10 a. m. You go to what you recall as a charming, out-of-the-way lake and you discover that the boat traffic on the water is almost as bad as the car traffic on the road.

Our National Park Service system was designed to handle 25 million visitors a year.

Last year 59 million visited our national parks; this year millions more will be swarming around and the system figures that by 1966, 80 million will be jamming into the parks.

The United States Forest Service had 6 million visitors in 1926.

In 1956 the total of visitors was nearly 53 million and the Service estimates the increase in the number of visitors between 1926 and 1968 will be close to 1,400 percent.

In 1946 the State parks chalked up 92 million visits.

In 1957 the State parks recorded 216 million visits.

The Army engineer recreation areas reported 16 million visitors in 1950. They reported 80 million visitors in 1957.

INVENTORY PLANNED

The facilities of the national parks and national forests already are strained to the breaking point and Congressional Quarterly flatly states, the concern of all who know the facts is that "as a Nation, we are running out of adequate outdoor recreation areas to play in."

A few weeks ago Congress passed a bill providing for the first national inventory of the country's outdoor recreation resources.

Under the legislation a bipartisan 15-member Presidential commission, including 8 Members from the Senate and House, will be set up to make an inventory of all land and water areas in the Nation usable for recreation. The inventory will be by States and regions and private as well as public land will be included in the survey. The commission also will study what European nations—particularly Switzerland and Sweden—have done to meet their needs for recreation.

The deadline for the commission's report is September 1, 1961.

You don't need me to give you proof on what is happening to the outdoor recreation areas of the Nation. But you well might ask, "Why?"

TWO MAJOR REASONS

A first great reason for the appalling deterioration is that so many more millions are going in for outdoor recreation of every type.

Increased leisure time, the trend toward longer vacations, longer weekends, and more frequent vacations are a vital part of the picture.

The second great reason is that the number of outdoor playgrounds has been declining steadily.

As Congressional Quarterly rather poignantly puts it, nearly all adults remember a quiet swimming hole or picnic area we visited as children. Now on that spot is likely to be a new housing development or a new industrial factory or a Federal Government installation.

Both the quantity and quality of outdoor recreation resources and opportunities are in a steady and alarming decrease, the House Interior and Insular Affairs Committee reported earlier this year.

We are extravagantly and wantonly dissipating resources which are essential to our social and economic welfare. The waste must be stopped. Hopefully, the unprecedented inventory just authorized marks the beginning of a turn in the shocking trend.

Scripps-Howard Editor in Chief Jogs American Readers With Stimulating Article on Meaning of Struggle With Soviet

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mrs. BOLTON. Mr. Speaker, believing that my colleagues will want to read the stimulating views of Walker Stone, editor in chief of the Scripps-Howard newspapers, who recently returned from extensive travel in Russia, I ask unanimous consent to extend my remarks and include his article from the Cleveland Press of July 22, 1958:

SAYS UNITED STATES CAN LIVE WITH REDS, BUT NOT PEACEFULLY
(By Walker Stone)

If we don't get off our big fat comforts, we're going to be stomped into the ground.

Events in Iraq and Lebanon illuminate the struggle in which the West has taken a stand to halt the spread of gangsterism and world power gained by assassination and subversion

Whatever happens in the Near East will not end the struggle. It will continue through the lifetime of all who read this—since Americans and others who have known freedom will not supinely yield to slavery.

To prepare ourselves for the great test of strength we cannot avoid, we must rid ourselves of two myths now prevalent in America.

One is the myth of peaceful coexistence. We must try, of course, to coexist with the Russians. They are a powerful nation of 200 million, occupying a sixth of the earth's habitable area. But we have to get over the wishful thought that they are going to be easier to live with, no matter whether the top ruler is Lenin, Trotsky, Stalin, Khrushchev, or whoever.

Peaceful coexistence, in the sense we understand it, implies a trust in which we might relax and pursue our pleasures. The Communist system, which pervades everything Russian, rules that out.

The primary aim of communism—at once a religion and a political and economic philosophy—is frankly world dominion and complete mastery over the lives and minds of men.

The other myth we must get rid of is that we can survive against this Soviet plot without toil and sacrifice.

It is easy for an American newspaperman, after traveling in the Soviet Union, to stress the hard life and low living standards of the people. But that would give a dangerously false impression of their dynamic energy, their state of mind and their power to produce in competition against us.

Living standard comparisons never are printed in Russia and wouldn't be believed if they were.

The average Russian's diet of bread and potato soup, borscht with cabbage and an occasional chunk of meat would not satisfy an American accustomed to culinary variety and abundance. But what the Russian eats suits his taste and provides him with the calories he needs to maintain health and vigor.

In the city he may live in one room with his family, and share the kitchen and bath with other families. If he lives in the country he may have no indoor plumbing at all—probably never has seen such luxury.

Similar Spartan standards did not diminish the survival of American pioneers. Only half a century ago, they lived in one-room sod houses with dirt floors and ate what they could grub from barren plains.

These privations toughened our pioneers who had one advantage in common with the average Russian of today. They didn't know they were underprivileged.

They worked hard and had faith in the future. Though the Russian is an automaton, he feels he is a part of a collective society, and that next year, and the next, things will be better.

He does not compare his lot with American or other western standards of which he knows nothing. His comparison is with what he had under the czars or more likely, during the earlier days of the revolution.

A westener coming into Moscow may be impressed by the absence of Brooks Bros. suits and modish dresses. He had better be impressed by the absence of patched clothes, so prevalent only a few years ago.

And he had better be impressed less by the continuing shabbiness of the people than by the hustle and purposefulness of their stride—a people on the make and on the go, a people hurrying to their date with destiny.

Praises FHA in Appraisal of Home

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. WIDNALL. Mr. Speaker, it has been my experience in Congress, and I suppose the same would hold true for

other Members, that for the hundreds of criticisms received of a Government agency you will only receive 1 or 2 commendatory letters. Recently, I was informed of a letter that had been received by Mr. Thomas Barringer, of the Federal Housing Administration, located in Washington. The letter, from Mrs. Malcolm S. Morse, of 1 Denfield Court, Rockville, Md., relates the very favorable experience that her family had in purchasing a home subject to FHA appraisal. Through the protection of that appraisal her family was saved from the purchase of a house that had defects, not apparent at first, and that would have been costly to have repaired. This letter gives further evidence of the fine job that the FHA is doing in fairly appraising the value of homes in a way that promotes buyer confidence and purchase for value received.

The letter follows:

ROCKVILLE, MD., *July 8, 1958.*

Mr. THOMAS BARRINGER,
Director FHA,
Washington, D. C.

DEAR MR. BARRINGER: We want to take this opportunity to tell you what a blessing we have found the FHA appraisal.

Ours is a family with six children and somewhat limited funds, as you might expect. We had purchased a house on Oakridge Avenue, Chevy Chase, at $23,000, subject to FHA appraisal. We loved the house and thought it was well worth the amount asked.

The FHA appraisal came in as $19,000 and you can well imagine that we were quite shocked. However, using this figure as a real warning that the house might not be worth $23,000, my husband made a very thorough investigation. He found many things that he had not noticed before, and realized that the house has many defects that obviously made it worth only the $19,000 figure used by the FHA. However, without the FHA appraisal, we would have suffered a real loss and would have incurred considerable expense after moving in.

Although the real estate agents would have the prospective buyer think otherwise, we have since found that the FHA appraisal is remarkably accurate. In our own house, the appraiser came within $100 of the actual cost, and we have since been advised that their appraisals have been used as the actual sale price; and the purchaser has enormous protection thereby.

Because of our faith in the FHA appraisal and this experience, we will buy nothing without this insurance. Many, many thanks for this wonderful service you provide us with.

Very sincerely,

TRUDY MORSE
(MRS. MALCOLM S.)

Schedule of Open Office Hours in the 10th District of North Carolina

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. JONAS. Mr. Speaker, I believe most people will agree that the first duty of a Congressman is to be present at the Capitol whenever Congress is in session so as to be able to vote on legislation that comes up for consideration. Another important duty of a Congressman is to participate in committee work in an effort to assist in framing sound legislation for consideration of the House.

My experience has been that the duties of a Congressman do not end with adjournment of Congress. I have found that being a Congressman is a full-time job. Whenever Congress is in session, a Congressman should be in Washington at his post of duty. And when Congress is in recess, he should spend most of his time in the district affording his constituents an opportunity to confer with him personally about legislative matters and personal problems.

It has been my practice to schedule, as soon as Congress adjourns each year, a series of open office hours in each of the counties of the 10th district. I plan to continue that practice this year. Subject to change if Congress has not adjourned, I am today announcing that I will be present and available for conferences and discussions with any and all constituents who wish to see me about any matter of interest to them, between the hours of 10 a. m. and 4 p. m., at the following places:

Lincolnton, August 23, at my own office in Lincolnton.

Charlotte, August 25, at No. 239, Post Office Building.

Bakersville, August 26, at Mitchell County Courthouse.

Newland, August 27, at Avery County Courthouse.

Hickory, August 28, at Hickory City Hall.

Morganton, August 29, at Burke County Courthouse.

Newton, August 30, at Catawba County Courthouse.

Special appointments are not necessary. Every citizen is invited, irrespective of political affiliation. Past experience indicates these conferences can be helpful. It is really surprising how beneficial it can be when a citizen and his Congressman sit down face to face and discuss matters of mutual interest.

Later on I intend to extend these open office hours, as I have done ever year since I have been in Congress, to the various towns and local communities in the district. Public announcement will be made of the times and places of these additional grassroots conferences.

The Flag Law—And Its Problems—By Chairman Clarence E. Harper, American Legion, Illinois

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, June 14, 1958

Mr. LIBONATI. Mr. Speaker, after my introduction of H. R. 12044 I sought the advice of the distinguished veteran comrade Clarence E. Harper, chairman of the ceremonials commission of the State of Illinois, who is one of the best-informed experts on flag etiquette in Legion circles. He also holds the distinguished honor of membership on the national trophies, awards, and ceremonials committee. His close association with my dear brother Elliodor, chairman of the Americanism committee of the State of Illinois American Legion in this phase of Legion activity, resulted in many practical changes that contributed to the greater dignity and patriotic emphasis in flag ceremonies and related interpretation of flag presentments.

And so I am pleased to include Chairman Clarence Harper's informative letter as follows:

THE AMERICAN LEGION,
DEPARTMENT OF ILLINOIS,
CEREMONIALS COMMISSION,
July 19, 1958.

Hon. ROLAND V. LIBONATI,
United States Congressman,
House Building, Washington, D. C.

DEAR CONGRESSMAN LIBONATI: I was very happy to have the opportunity to talk with you at our Cook County Council Fourth of July show.

It was especially gratifying to know that there is a bill before Congress to consider approval of the revisions and additions to Public Law 829, 77th Congress, which we commonly call the flag law.

The American Legion has, for a number of years, tried to get these changes approved either by Presidential proclamation or by an act of Congress.

As you know, I have been very much involved in the publicizing of flag etiquette in the Department of Illinois.

Elliodor and I were closely associated in publicizing flag etiquette, not only throughout the American Legion but with civilian groups. The highlight of our activities was the Flag Day observance which we held annually at Congress Plaza and Michigan Avenue.

The section of Public Law 829, 77th Congress, with which we have had the greatest confusion is paragraph (K) of section 3, which describes the position of the flag, when displayed from a staff in a church or a public auditorium.

The portion of this which leads to the greatest amount of confusion are the words that are bracketed in the following quotation from paragraph (K):

"When displayed from a staff in a church or public auditorium, if it is displayed in the chancel of a church, or on the speaker's platform in a public auditorium, the flag should occupy the position of honor and be placed at the clergyman's or speaker's right as he faces the congregation or audience. Any other flag so displayed in the chancel or on the platform should be placed at the clergyman's or speaker's left as he faces the congregation or audience. [But when the flag is displayed from a staff in a church or public auditorium elsewhere than in the chancel or on the platform it shall be placed in the position of honor at the right of the congregation or audience as they face the chancel or platform. Any other flag so displayed should be placed on the left of the congregation or audience as they face the chancel or platform]."

Gridley Adams, who was founder and director-general of the United States Flag Foundation and chairman of national flag code committee, which represented 112 patriotic and fraternal societies, and who was also coemender of the Federal Flag Code (Public Law 829), states in his booklet entitled "So Proudly We Hail" the following comment in connection with paragraph (K) of section 3:

"NOTE.—This rule has caused more inquiries than all other flag letters put together; so many persons have read this literally. The apparent error in the above rule is in its stating 'elsewhere than in the chancel or on the platform' without saying that if there is no room in chancel or platform for a staffed flag to stand and must therefore be placed on the floor in line (the 'military right of line') with those in chancel or on platform who are facing persons in front who are facing them, then that is strictly in accordance with the spirit of Public Law 829. Being the symbol of our Government the flag outranks us all. (It is never dipped to a living person; not even a President.) Therefore, no man ever stands on the flag's own right, except a color guard with a rifle over his shoulder. Thus the congregation or audience should always see the flag of those in chancel or on platform at their left. If the audience is a demimilitary body and brings with them their own United States flag it is placed at the extreme right hand end of the front row of such body. (In Episcopal churches the chancel is a part of the congregation; therefore the United States flag is properly placed back of the altar rail, and at the right of the altar, or host, and which faces the minister and choir boys who, upon singing the glorias, always face toward the altar. (In the complete 48-page book this is gone into in greater detail.) A bill has just been introduced in the Congress to so amend this rule K as to preclude any misunderstanding."

As you may remember, the national executive committee of the American Legion, at their meeting of May 5–7, 1947, approved this interpretation of Public Law 829:

"The national colors and post flag, when in position, shall be in position at either side and just in advance of the commander's station; the national colors on the right of the commander, the post colors on his left when facing the audience, even though the commander is on a platform and the flags (colors) are posted on the ground level."

This is the exact wording as it is given on page 74 of the 1957 edition of the manual of ceremonies.

I believe you know that it is common practice for the Chicago office of the American Legion to refer all interpretations of flag etiquette to me. This was done at the request of Elliodor many years ago. As a consequence, I have had questions asked of me and the most frequently quoted question is the proper position of the American flag at a church service or meeting, when there is no chancel or platform. When I give the American Legion interpretation, most individuals, especially if they are not Legionnaires, will question my answer and, in many instances, will insist that I am incorrect.

When the individual posing the question is an American Legionnaire, I reply that "a good Legionnaire will observe the interpretation approved by our national executive committee."

It has been my experience that the general public looks up to the American Legion as an authority on flag etiquette. Under the circumstances, it is important that our replies for information on flag eitquette are authoritative.

You can render the American Legion and any others who are interested in flag etiquette an excellent service if you can get approval of the suggested amendments or additions to Public Law 829, 77th Congress.

Cordial regards and good wishes.

Sincerely yours,

CLARENCE E. HARPER,
Member, National Trophies, Awards, and Ceremonials Committee.

And So With Krebiozen—"A Truth Once Established by Proof Neither Gains Face by the Consent of All Scholars Nor Loses Certainty Because of the General Dissent" (Ibid-II, 15)

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. LIBONATI. Mr. Speaker, the distinguished professor of physiology at the University of Illinois has every reason to be exhuberant over the Sloan-Kittering Institute for Cancer Research report in its experiments conducted through the use of krebiozen, a new drug. This controversial matter was presented in 2 articles listed in the CONGRESSIONAL RECORD issues of May 29, 1958, page A4957, Krebiozen, a Treatment for the Cancer Patient› A Plea for a Fair Evaluation; and June 12, 1958, page A5370, Krebiozen Report.

Perhaps the light of reason will now influence the American Medical Association through its officials to permit a "lead kindly light" research approach to determine the scientific evaluation of krebiozen in cancer study.

The world's greatest newspaper, the Chicago Daily Tribune, has been in the forefront in reporting the recent developments as to the research study of krebiozen as a biological active substance and in a recent article reported as follows:

IVY CONTENDS REPORT BACKS CANCER DRUG—SHOWS KREBIOZEN CAN BE USEFUL

Dr. Andrew C. Ivy, leading proponent of krebiozen, claimed Tuesday that a report of the Sloan-Kettering Institute for Cancer Research, as far as it goes, supports his contention that the disputed drug is useful against cancer.

"An understanding of this report," Ivy wrote the American Cancer Society, "emphasizes anew the importance of facilitating * * * the double-blind controlled study recommended to your society in February by the Krebiozen Research Foundation.

"CONFIRMS OUR THEORY

"The Sloan-Kettering report, as far as it goes, confirms in detail the theory on which krebiozen was produced, and provides additional evidence showing why our contention that krebiozen is therapeutically active in some cancer patients should be correct."

The Sloan-Kettering report was an account of researches the institute conducted on cancer and was not the result of an investigation of krebiozen.

There were indications last month that the society's therapy committee then examining Ivy's proposal, would reject it as not providing an objective test. But it also was expected that in rejecting it the committee would outline a proposal which it could approve.

BACKS DRUG 7 YEARS

Ivy has claimed since March 1951 that krebiozen—discovered by a Serbian-born physician Dr. Stevan Durovic—is an agent with merit for the treatment of cancer. The fact that on October 22, 1951, the Journal of the American Medical Association stated that tests of krebiozen fail to confirm its beneficial effects did not shake his confidence in his judgment, and in Tuesday's letter he repeated what he said 7 years ago, that krebiozen may prove to be a key to the cure and perhaps the prevention of cancer.

Ivy, head of the department of clinical sciences at the University of Illinois, noted in his letter that the Sloan-Kettering report stated: "There is reason now to believe that natural defenses against cancer exist. It has proved possible, by manipulating and enhancing these defenses, to cure laboratory animals with some types of transplanted cancer."

TELLS OF RESEARCH

His own researches, Ivy wrote, led him in 1956 to state: "Since the start of the krebiozen investigation, and especially since 1951, we have been gratified to note the growing interest in the problem of the mechanisms concerned in providing the body with a natural resistance to cancer and how this resistance may be increased."

"It is further stated in the Sloan-Kettering report," Ivy continued, "that 'different types of cancer may stimulate a common cancer resistance factor, or that different kinds of cancer have something in common that stimulates bodily resistance.'

"I should like to emphasize the great responsibility which now confronts the American Cancer Society. It is and has been my considered and sincere conviction that krebiozen represents the only presently available fruit of this new understanding of the problem of cancer to which the Sloan-Kettering researchers are contributing so outstandingly."

The Cross Florida Barge Canal Now Approved by Army Engineers as Economically Justified in Addition to Defense Values

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mr. BENNETT of Florida. Mr. Speaker, the Cross Florida Barge Canal has been authorized by Congress on the basis of its defense values, without relying upon economic considerations. This was done in 1942—Public Law 675, 77th Congress. The defense values have increased in the ensuing years, and are greater now than they have ever been. I have been this week informed by the United States Army engineers that the project is justified on economic considerations, this being the result of a recent study by the engineers. The letter received reads as follows:

JULY 23, 1958.

Hon. CHARLES E. BENNETT,
House of Representatives,
Washington, D.C.

DEAR MR. BENNETT: Knowing of your interest in the Cross Florida Barge Canal, I wish to inform you of the results of an economic restudy of the project which has recently been completed.

As you may recall, the project was authorized in 1942 by Public Law 675, 77th Congress, as a high level lock barge canal from the St. Johns River across Florida to the Gulf of Mexico, in accordance with plans set forth in a letter of the Chief of Engineers dated June 12, 1942, and later printed in House Document No. 109, 79th Congress. The project provides for a channel 107 miles long, 12 feet deep and at least 150 feet wide, with 5 locks. The Federal cost is currently estimated to be $164,600,000 and the non-Federal cost is estimated to be $5,500,000.

Congress appropriated funds for an economic restudy of the project in the Public Works Appropriation Act for fiscal year 1956. This restudy has now been completed by the District Engineer at Jacksonville and the Division Engineer at Atlanta.

The Chief of Engineers finds that the project is economically justified with a ratio of benefits to costs of 1.05 to 1, based on the prospective peacetime use of the canal over its economic life. Consideration also has been given to the views of proponents of this canal as to its usefulness to national defense in time of war. During World War II, many cargo ships and tankers were lost off the coast of Florida due to enemy action. Many of the cargoes that were lost would, and could, have been moved by barge or small freighter had the barge canal been in existence at that time. The savings in lives, ships, and valuable and critical cargoes would have been great. However, the national defense values of civil waterway projects are not susceptible of monetary evaluation under present conditions. Accordingly, no monetary benefit was assigned in this restudy to any national defense value of the Cross Florida Barge Canal project.

The Chief of Engineers has reviewed the findings of the reporting officers and concludes that the project should again become a part of the Corps' active backlog of authorized civil-works projects.

Sincerely yours,

J. L. PERSON,
Brigadier General, United States Army, Assistant Chief of Engineers for Civil Works.

Mr. Speaker, I am also happy to include at this point an important report to the Ship Canal Authority of the State of Florida, this being made by Hon. Henry H. Buckman, an outstanding engineer. The report shows the absolute necessity for the early construction of this canal, based upon only one aspect of its defense value—the necessary movement of oil in time of war. This report reads as follows:

JUNE 1, 1958.

To: Read Adm. R. M. Fortson (United States Navy, retired), managing director the Ship Canal Authority of the State of Florida.

From: Henry H. Buckman, engineering counsel.

Subject: The position of the United States with respect to the war time supply of petroleum for the Atlantic seaboard area, and its relation to the completion of the Intracoastal Waterway from Trenton, N. J., to the Mexican border by the construction of the authorized Cross-Florida Barge Canal.

The position: (a) Normal annual petroleum requirements of the above area have increased since the beginning of World War II from 561,370,000 barrels of 1,211,869,000 barrels in 1957, or more than double.

(b) The entire United States petroleum supply in a future World War must be assumed to originate in the United States or contiguous land areas.

(c) Presently existing overland petroleum transport facilities can transport to the Atlantic seaboard area less than half the minimum deliveries which will be required.

(d) Either (1) additional overland facilities must be provided, or (2) the greater part of the supply for the Atlantic seaboard area must move, if that proves possible, by the open sea in the face of enemy action and with the resultant draft on available tankers and naval escort resources, plus losses.

Thesis: The completion of the Intracoastal Waterway is fully justified by the single fact that it affords the most expedient and by far the most economical solution of the problem presented by the position as stated above.

TABLE 1.—*Sources*

All data in this memorandum are derived from official sources. These include:

The Department of the Interior, Oil and Gas Division.

The Department of the Interior, Bureau of Mines.

The Petroleum Administration for War, records.

The Interstate Commerce Commission.

TABLE 2.—*Estimated total minimum wartime petroleum deliveries required by the Atlantic seaboard area, and portion deliverable by presently existing overland facilities*

	Barrels per year
(A) Actual 1957 deliveries (from U. S. Bureau of Mines):	
Via ocean tanker:	
Imports:	
Crude	240,000,000
Products	194,544,000
From United States gulf ports (crude and products)	689,823,000
From California (residuals, lubricants and others)	979,000
Total by ocean tanker	1,125,346,000
Via pipelines	64,584,000
Via Great Lakes tankers (estimated from 1956)	1,407,000
Via inland waterway barges Ohio River as far as Pittsburgh area) (estimated from 2d quarter, 1956)	21,633,000
Via tank car (estimate from 2d quarter, 1957)	4,272,000
Total 1957 deliveries to area	1,217,242,000
Less shipments from area by pipelines	5,373,000
Net 1957 input to area	1,211,869,000
(B) Adjustment of foregoing total to meet wartime requirements: [1]	
Basis: Percentage increase in last full combat year of World War II over last previous peacetime year (1941), equals approximately 11 percent	133,306,000
Total estimated minimum wartime deliveries required	1,345,175,000
(C) Delivery capacity of presently existing overland facilities (see table 3):	
1. By pipelines	358,240,000
2. By tank car	264,303,000
3. By existing inland navigation channels	46,587,000
Total	669,130,000
(D) Estimated minimum wartime deliveries to the Atlantic seaboard area which must move by ocean tanker or by additional overland facilities yet to be provided	[2] 676,045,000

[1] Total deliveries to Atlantic seaboard area in last prewar year (1941) were 561,370,000 barrels. In the last full combat year (1944), after rationing, deliveries had increased to 624,880,000 barrels, or about 11 percent.

[2] Slightly more than 50 percent of the minimum required deliveries. Note that this 50 percent is more than 6 times the deliveries by ocean tanker in 1944 by which time the Navy was able to afford supposedly adequate escort and when tanker supply was increasing. This failure to use ocean tanker transport was due either to inability or to a preference for the overland routes. Either assumption affords striking support for the thesis.

TABLE 3.—*Capacities of presently existing overland facilities for delivering petroleum to the Atlantic seaboard area*

(A) Existing liquid pipelines plus the so-called Big Inch line assumed to be converted to liquids: [1]	Barrels per year
1. Big Inch	117,705,000
2. Little Big Inch	82,855,000
3. Plantation lines	91,250,000
4. Ohio lines (into W. Pa.)	32,850,000
5. Southeastern	14,600,000
6. Laurel	18,980,000
Total pipeline capacity	358,240,000
(B) Existing tank car capacity [2]	264,303,000
(C) By existing inland waterways to western fringe of area (table 4)	46,287,000
Combined total capacity of all existing overland facilities	669,130,000

[1] Capacities of the Big Inch and Little Big Inch lines are derived from the records of the Petroleum Administration for War. Capacities of the other lines are furnished by the Department of the Interior, Oil and Gas Division.

In addition to the liquid lines there exist certain lines carrying gas, including the so-called Big Inch (24-inch dia.). It is claimed by certain of those engaged in pipeline transport that, in time of war, these gaslines could be converted to liquid transport and would prove adequate inasmuch as, with any given pipe cross section, more B. t. u. may be moved in liquid than in gaseous form. While such conversion is theoretically possible, it is practicably not generally achievable. Municipalities and industry in the areas now geared to gaseous fuel supplied by these gaslines could not be generally readjusted to liquid fuel in time of war without disastrous effect on the war effort. This claim of the feasibility of such conversion appears to be prompted by an unwillingness to see competing forms of transport developed. The conversion of the Big Inch from gas to liquids, assumed in the above tabulation, has been chosen to represent an optimistic maximum practicable conversion of the gaslines to liquids during wartime.

[2] The estimate of tank car capacity is derived thus: Maximum performance of the rail carriers in any one year of World War II (1943) was 310,945,000 barrels. The ICC advises that there are today 15 percent less tank cars than in 1943. Hence by deducting 15 percent from 310,945,000 barrels, the figure 264,303,000 barrels is obtained, representing the maximum annual capacity of the rail carriers that may be reasonably expected.

TABLE 4.—*Maximum annual petroleum deliveries to Atlantic seaboard area during World War II, actual 1957 deliveries, and estimated minimum required deliveries in a future war*

Facility	Maximum annual movement in period 1942-44, inclusive (barrels per year) [1]	Year	Percent [2]	1957 (barrels per year) [3]	Percent [2]	Estimated minimum for future war (barrels per year) [4]	Percent [2]
Tank cars	310,945,000	1943	61	4,272,000	0.3	264,303,000	20
Pipelines	267,485,000	[6] 1945	40	64,584,000	5.0	356,240,000	27
Barges and lake tankers [5]	46,587,000	1944	7	23,040,000	2.0	[5] 46,587,000	3
Total overland	524,268,000	1944	84	91,896,000	8.0	669,130,000	50
Ocean tankers	142,573,000	1942	32	1,125,346,000	92.0	[7] 676,045,000	50
Total movements	624,947,000	1944	100	1,217,242,000	100.0	1,345,175,000	100

[1] Records of the Petroleum Administration for War.
[2] Percentage of total annual movements in period indicated.
[3] U. S. Bureau of Mines, Monthly Petroleum Reports.
[4] Based on PAW records, and data furnished by U. S. Bureau of Mines and the Interstate Commerce Commission.
[5] This assumes that the Intracoastal Waterway remains uncompleted and that barge movement is limited to presently existing Mississippi Valley channels which permit delivery (via the Ohio River) only to the western fringe of the Atlantic seaboard area, i. e., the Pittsburgh area. The limitations on this movement are inherent, i. e., the absence of a connecting barge channel with the east coast, and the relatively short navigation season in the lakes area.
[6] The year 1945 is taken in the case of pipelines because it was not until that year that the full performance of both the Big Inch and the Little Big Inch lines could be measured.
[7] This assumes that movement by ocean tankers is the only recourse, and that such movement is practicable in the face of the newer, high-speed and atomic-powered and atomic-weaponed submarines. The assumption is a violent one, inasmuch as the amount of petroleum indicated is 6 times that moved in 1944 when the Navy was able to afford supposedly adequate escort, and when tanker supply was on the increase.

TABLE 5.—*Comparative cost estimates of 3 alternative solutions of the problem of supplying petroleum to the United States Atlantic seaboard in time of war*

1. By completion of the Intracoastal Waterway from Trenton, N. J., to the Mexican border by construction of the authorized Cross-Florida Barge Canal at an estimated cost of	$ 175,000,000
2. By the construction of 6 Big Inch pipelines at a present-day cost of $195,000,000 each, or a total of	1,170,000,000
3. By naval escort of ocean tankers (if available) at an indeterminate cost in losses of escort vessels and tankers with cargoes and personnel. Estimated on the basis of United States and British tanker losses during World War II, the total dollar cost of losses in such a supply line in a 3-year war would exceed	2,000,000,000

The Golden Out-of-Order Plan in Operation

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. ROOSEVELT. Mr. Speaker, Mr. Harry Golden's solutions to some of the problems of the South are not unknown, I know, to many of my colleagues. As editor and publisher of the Carolina Israelite, Mr. Golden has his own unique forum for the presentation of such schemes as his out-of-order plan. This, some might remember, consists of hanging an out-of-order sign on a segregated public facility marked "colored." We are told what happens then in the following excerpt from the May-June Carolina Israelite, which I include in the RECORD under leave to extend my remarks for the amusement of those with a sense of humor:

One of the great retail chainstores has put the Golden out-of-order plan into operation and with considerable success. They placed an out-or-order sign on the "white" drinking fountain in most of their stores in the upper South. Within 6 weeks everybody was drinking the "colored" water without any bad effects, physical or emotional; and all the signs came off, "out of order," "white," and "colored." There is a problem, however. In most of these stores they made this experiment in the basement, and naturally they could not put an out-of-order sign simultaneously on the other floors. The whole idea would have been given away and made matters worse. I understand they intend to stagger the out-of-order signs from now on. They'll put them up on the second and fourth floors and then double back to the main and third floors. This thing has to be done—gradually.

You throw a tiny pebble into a stream and you never really know the extent of the ripples.

In a seminar on education in Tennessee I suggested to the Negro parents to make sure that their children study French immediately upon entering high school. We know of course, that there is no vertical segregation, but if the vertical Negro suddenly begins to talk French, he can even sit down without creating any serious emotion among the whites. I had a fellow try this out on the cashier's line at the A. & P. store. He suddenly asked the cashier about some product in French, and the white folks ahead of him acutally broke ranks to give him priority.

Of course there could be too much of a good thing. If the Negroes of the South follow my suggestion it is possible that within 20 years they'll all be talking French; it would no longer be a novelty. But by that time there may not be need for any more Golden plans.

The Highway Bill

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. JOHNSON of Texas. Mr. President, there is an article in the New York Times of this morning which demonstrates conclusively the wisdom of Congress in passing the highway bill. Congress early this year saw the need to move. There were highways that needed to be built. There were men that needed to be put to work.

We passed a bill. And this morning it was announced that the volume of construction contracts awarded for the Interstate Highway System last month was almost double that of the month before.

Mr. President, this is Congress at its finest. This is the kind of action that gives people confidence in their Government.

I ask unanimous consent that this article be printed in the Appendix of the RECORD as part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONTRACTS UP 50 PERCENT FOR ROAD BUILDING—JUNE AWARDS $195 MILLION—$133 MILLION ALSO GIVEN IN HIGHWAY AID BY UNITED STATES

WASHINGTON, July 24.—The volume of contracts awarded for the Interstate Highway System last month was almost double that of the month before, the Bureau of Public Roads reported today.

June contract awards amounted to $195 million, covering 369 miles, compared to $105 million in May, for 215 miles.

In addition, the Bureau reported $133 million of contract awards for 1,998 miles of Federal-aid primary and secondary highways and their urban extensions.

A spurt in highway building in recent months has been a factor in keeping construction activity strong, helping to offset the cutback in expansion of industrial facilities.

This year's Federal highway legislation, made liberal in the name of combating recession, included a special $400 million Federal-aid fund.

The Bureau reported that under this program, as of June 30, construction was under way on 358 miles. The estimated cost of this mileage is $24,700,000, of which $16,600,000 is Federal funds.

Interstate highway construction underway on June 30 totaled 3,167 miles, estimated to cost $1,740,000,000. On the lesser roads—primary, secondary, and urban—construction was underway on 23,330 miles, estimated to cost $2,220,000,000.

Other economic reports of the day showed department store sales continuing to exceed last year's levels, and railroad freight business staging a revival from lower levels in early July.

The Federal Reserve Board reported that department store sales last week were 2 percent greater than in the same week last year. Sales were improved in 7 of the 12 Federal Reserve districts.

Department store business has been better than a year ago for a number of weeks, but for the 6½ months since January 1 it trails last year by 2 percent. Only the New York district has shown an improvement over last year, and that only 1 percent.

The Association of American Railroads reported that freight car loadings last week had totaled 381,817 cars, which was 18.5 percent greater than the week before. Loadings continued to be substantially below year-ago levels, however. Last week's figure was 21.7 percent lower than the same week last year.

Attorney Meyer "Duke" Kaufman, World War I Veteran, Dies at 71 Years

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. LIBONATI. Mr. Speaker, the Chicago members of the Illinois delegation from the Chicago area know that a good samaritan died the other day, Tuesday. No one seemed to care much except his immediate family and the press boys, police, and the legal fraternity around the police courts building in Chicago. He was the courtroom battler of another generation—fighting for the rights of the poor at the bar of justice where real justice must be held inviolate, the poor man's supreme court—the municipal court—where the very roots of the elemental law, in its application creates respect and instills confidence in the citizen, alien or newcomer in our American institutions.

Duke, as he was called, was a fiery orator and respected for his knowledge o fthe law—with or without fee he put forth every effort to win his cause. He spent his life in defending the poor and unfortunate members of our society in the criminal courts—certainly, it is not a financially remunerative field of law; but in the end, at last there is a self-satisfaction of having done a great service for the weak, disillusioned, and forgotten members of society, who needed an understanding friend to battle for their liberty and protect their rights.

As a young lawyer, I watched this seasoned veteran unfold his defense with masterful technique. He was a true lawyer of the old school both in forensics and knowledge. I learned a great deal from him, and know that a peerless legal light for the defense has entered the shadows. God will be good to him because he served those who needed him most, and had less to give. Charity is the greatest virtue of life—and Duke was the personification of the greatest of all virtues.

Our heartfelt condolences to his dear widow, Ann, and his four sisters and brother who can be proud of his career. He served man well and leaves a blessed memory for his friends to remember—with prayers.

Knowledge: Our Strongest Weapon

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by Mr. Henry Kaiser, Jr., at the annual conference of the American Library Association, held in San Francisco on July 15, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

KNOWLEDGE: OUR STRONGEST WEAPON

Good afternoon, friends. It is an honor to have been asked to share some of my thoughts with so distinguished and wonderful an audience. The cause you pursue is the furtherance of knowledge and truth among our fellow men. I don't think there is a greater cause anywhere. Without knowledge we are in darkness. Without truth we are slaves.

Two months ago, on May 12, to be exact, I was passing in a car along a street in Oakland, very near our Kaiser company headquarters. We stopped for a moment at an intersection, and I happened to glance out of the window, where I caught sight of the afternoon newspapers. Their headlines contained the announcement that a library of ours had been burned in Beirut. "United States Library Burned," that's what the newspaper said. Well, friends, it's an old story, isn't it? As our car moved on past that intersection, and into the flow of traffic, I reflected that I had just seen history repeat itself, not for the first time, nor the thirtieth, but for the millionth or twice that.

And it set me to thinking, as I am sure it would you, that people are very aware of the power of ideas; and if these ideas do not agree with them, or threaten their security as despots or tyrants, they will be greater objects of fear than a dozen atom bombs or the appearance of a thousand soldiers in the streets.

The American library at Beirut was burned not because it contained books or pamphlets but because it contained ideas. Book burning has gone on ever since books were written. But call it by its real name—idea burning—and you see both the futility of the deed itself and the strength of that which can never be burned.

We are in a world which is making noises like it was going to crack right down the center with the strain of two conflicting ideas. To save this world and ourselves from destruction we will have to make use of the strongest weapon we have, the weapon of knowledge.

We must arm ourselves with knowledge. We must grow up to ourselves and the promise of this great country. We must better understand the meaning of liberty, what it means to be a free individual.

I don't know whether or not we really understand these things. We've come to accept them, and we sloganize about them. But then we sloganize about a great many things. Slogans are convenient. You can hang your hat on them, along with all the thinking that's supposed to go on underneath. But when it comes to democracy and freedom these things you have to know, and not just you and I but our young people, too, and our very young. And we have to know them as well as Franklin and Jefferson knew them, which is to know them as live things and not as words in a book.

How much of our knowledge is in our hearts instead of on our tongues? How much do we really reflect on the life about us? How much do we really value that system of government which can operate freely in Washington, and freely in the 48 States, and freely, at the same time, through every county, city, township, and hamlet of this Nation?

To know these things, to really know and to love them, is to be strong in that knowledge. For you cannot know these things in this way without effort.

You people are the guardians of a wonderful institution—the American library. On a library's shelves what do you find? Why, books, of course. And pamphlets, you say. And magazines.

No, what you find there is something like this:

"We have got as far as we have because we produced a certain kind of human being. That human being is, first of all, a fellow with his eye on the future and not on the past. He likes to go off on his own and start something. This fellow has emerged out of the concept of equality—which means every person has a right to a break."

Dorothy Thompson said that.

And a little further along, on the shelves of this same library, you might find this:

"The man who regards his own life and that of his fellow creatures as meaningless is not merely unfortunate but almost disqualified for life."

The writer? Albert Einstein.

A library is not just a storehouse of knowledge. It is an arsenal of truth, a living and vital part of a free society.

And yet how little we know.

I have said, in the title of my talk, that knowledge is our strongest weapon. I believe it is. I believe that our survival will depend upon how much we know and how wisely we use what we know to defend ourselves.

The other day a group of Russian journalists were passing through San Francisco.

"We are most impressed," one of them said, "by the very great interest here in Russian youth. Everywhere we go there are questions about our young people and our students. But, judging from the questions asked, Americans know very little about Russian life. That, we think, is too bad."

I think it is, to, and I would like to ask, Why don't we?

True, the Soviet Union hasn't made it very easy for us to know them, but on the other hand how easy have we made it for ourselves? I think we have to be fearful of erecting an Iron Curtain of our own in this country. We have to fear becoming what might be called "intellectual isolationists," out of the apprehension that our youth, if brought into contact with Soviet ideas, might fall in love with those ideas. I think our young people are more intelligent than that. They are not babes in arms, and we had better stop wrapping them in swaddling clothes and feeding them by a single formula if we want the America of the future to be guided by men and women whose decisions are based on sober knowledge rather than superstition and bias.

Communism, or any similar "ism" is as hateful to me as it is to you. But I think we have to dig beneath it, and understand its roots, before we can hope to nullify the poison of its leaves and branches.

A short time ago I asked a librarian friend of mine this question: "What are the Russians doing with their libraries?"

He answered: "A great deal, I suspect, only it's rather difficult to find out just exactly what. The moment you start asking questions about Russia, people are ready to call you a Communist."

We had better disabuse ourselves of this practice; for believe me, friends, what we don't know can hurt us and hurt us deeply.

Right now we are very busy trying to "keep up with the Khrushchevs," putting great stress on science, technology, the teaching of physics in our junior and senior high schools, and the like.

But science is only a part of knowledge; and America will survive, in the long run, not on the kind of chemicals she produces in her laboratories but on the kind of men she produces on Main Street and on Capitol Hill—men of vision and resolve.

I think we have to develop in our young people a greater love of the humanities as well, a keener interest in literature, history, and government, a deepr awareness of the problems and destinies of other races and nations.

Our wonderful exchange should be trebled, even quadrupled, over what they are now. Our political-science courses should be brought down from the universities into the high schools, along with more intensive work on languages and comparative history. Our students should know something about England, China, India—yes—and about Russia. They should read her history under the Czars and under Lenin and Stalin. And they should know something about the different religions of this world, because to know a people's religion is to know why they act as they do.

The American Library Association can play a great role in all of this. For what I am suggesting is not just an educational revival in America but an educational coming of age.

We cannot afford to be half educated. We cannot afford to do things halfway. We must turn everything to our use, and waste nothing.

It reminds me of a story they tell about Henry Ford. Ford once specified that a shipments of engine parts, should be delivered in wooden crates, of a certain size. These wooden crates, he further directed, should be held together by screws, rather than nails. He even wrote down the exact size of the screws he wanted, and the exact place they should fit into the boxes. And all this for just ordinary, everyday shipping crates, mind you.

Well, the manufacturers of the engine parts grumbled, but they agreed to the conditions. If Ford wanted to make a lot of fuss about shipping crates, well, that was the privilege of an eccentric genius. They would play along with him.

Came delivery day and revelation. For lo, and behold, the sides of those wooden shipping crates turned out to be exactly the size of the floorboards, of Henry's model T's. With each screw hole correctly spaced and drilled, the boards were ready to be slipped right into place. Henry Ford's whimsy had been the work of a genius, all right, but hardly an eccentric one.

Waste nothing. Let us use our minds, every corner of them.

And who can tell but that our efforts might one day lead us to peace rather than war? Certain it is, that if we allow ignorance to prevail, any hope of peace must be put aside forever.

For ignorance is weakness, and the weak die.

As William Randolph Hearst put it: "Whatever begins to be tranquil is gobbled up by something that is not tranquil."

Ignorance breeds tranquillity.

In the Kaiser companies—say Kaiser Aluminum, Kaiser Steel, or Willys Motors—we try to study every move our competitors are making, just as they study us. We get to know our competitors. We analyze their products—their selling techniques. If instead of doing this, we tried to pretend our competitors did not exist—our markets would soon be taken away from us and we would be through.

Russia is there. China is there. And Russia and China are not going to grow weaker, but stronger. Their youth are being educated—drilled, if you like—and they are learning about us. They are going to know us better than we know them, unless we get busy and put aside our comic books, and our pulp novels, and our easy reading habits—and go to work.

And I mean we are going to have to work hard, not only to acquire knowledge but to bring knowledge to others—and to cultivate a ground in which knowledge can flourish.

And I think in connection with this, that libraries must look upon themselves not as storehouses, but as town halls, where opinions can be exchanged between individuals and groups, as well as between readers and authors; where more and more adult classes may be held, in the evenings, on weekends, during that leisure time we are so hotly pursuing; where youth groups can be organized for after school and evening symposiums; where films may be shown; where great music may be heard; where leading authorities the world over, may be invited to speak before, and participate in, open discussion groups.

It is not enough that we in industry, should rely upon libraries as sources for our research material. Nor that universities should be centered around them. You need to reach the people. The voter, the man responsible for those who will make the decisions for each of us.

I should like just for a moment, to ask this question: You people have a product—what is being done to improve this product? What is being done to bring people off the streets, and out of their homes, to use this product?

You and I can sit here all day, and talk to each other about the need for knowledge. And I can say, and you can agree with me, that knowledge is a wonderful thing. But unless you get people to seek out this knowledge, you are not doing the job.

One of our most intense pursuits is the pursuit of leisure time. Television is aware of this pursuit—so are the movies—so is radio—so are newspapers and magazines. Furthermore, they are doing something about it.

You might say all these media are competitors of yours. Well, they are—but only because this is a hungry world, and the race to satisfy that hunger will fall not to the swiftest, but to the most imaginative—the ones who make the most imaginative use of modern techniques to satisfy the oldest hunger of all—the hunger to know things.

Honestly, now, what do you suppose the average man would say, if he were asked to give his impression of a typical library? He's standing on a street corner, in the bright sunlight, with the traffic hooting and honking all around him. And he is asked: "What, sir, is your impression of a public library?"

Would he think of something bright, amusing, attractive? Or would he recall something bound in by rules? Something with a "no this" and a "no that" wrapped around it, like lengths of old muslin around a mummy? Something musty, dark and forbidding? Something not to go forward to, with light spirit and eager brain—but something to avoid like an empty warehouse on a Sunday afternoon?

If this latter picture is the one conceived by Mr. Average-Man, then, indeed, is your job cut out for you. It doesn't matter whether this picture is true or not. You may know it's not true—and I may know it. But if that is the picture that is in the public mind, then you have got to get down to the business of correcting that picture. Maybe it's a job of public relations. If so, it's your responsibility to go out and find the people to help you solve this problem. You've got to get out and do something, if you want to change this picture—right or wrong. But this again comes right back to the basic need—a selling job. If you've got the product, are you selling it? And if you haven't got the product, what are you doing to get it?

You are not just keepers of our books—not just warehousemen of our ideas—you are there as well, to stimulate thinking-power, and to enrich our vision.

There's a barber I know. I've known him for quite a few years, and I like him. I like the way he cuts my hair. His name is Bill. Well, Bill hasn't had many customers out near where I live—and so, after quite a few years, he's decided to move to another location. I'm not sure Bill is going to make it at that new location. And there's a reason why. I don't think the people in the new neighborhood are going to be any more attracted, by the condition of Bill's windows, floors, and shelves, than were the people in the old neighborhood.

I used to say: "Bill—why don't you clean up a little? Make the place look nice?" "Sure, Mr. Kaiser," he'd reply—"I'll do that."

But the very next time I'd visit him, it would be the same thing. The last time I went there, in fact, there was a "Closed" sign hanging in the doorway. Well, knowing Bill, I knocked anyway—and sure enough, out he came. He had forgotten to turn the sign around when he came to work that morning.

Bill's not going to make it, until Bill changes. You've got to have the product first—and then you've got to sell that product. You can't wait, like Bill, for the people to walk in on you. You've got to go out and get 'em. You've got to advertise for them.

Progress is slow, I know—sometimes painfully slow. I'm sitting in a wheelchair—now this wheelchair is made of steel mostly, and it weighs around 45 pounds. That may not seem like much—but stuff somebody like myself into it, weighing around 200 pounds—and wheel me around all day, and it begins to grow on you—if you know what I mean.

Well for over a year now, I've been trying to promote the idea among one of the largest manufacturers of these things, to make them out of aluminum, and shed about 25 pounds of weight. Well, I can't be too sure, and I certainly don't want to be labeled a wild-eyed optimist—but I think that idea of mine is just beginning to penetrate where it should. It's taken about 14 months of persistent pushing, but I think they're getting the idea.

Pushing—that's the word. You've really got to push in this world, or you're run over before you know it, by someone who's pushing harder. Let me remind you—there's only one way to push, and that's forward.

Furthermore, what began as a purely personal inquiry on my part, has led to the discovery that this particular company which makes these wheelchairs turns out about 60,000 to 80,000 each year—not a bad market for Kaiser Aluminum, should that idea of mine ever bear fruit.

I can't tell you librarians how to improve your product; except that communications is a very broad thing, and I think you've got to be just as broad. I don't think we can afford to be book collectors only, when ideas are being communicated in film, over television networks, through records, and by every electronic means at our disposal.

There's a library going up in San Leandro. I kind of admire the way they're going about it. I've looked at their plans. They've got space for a theater and projection booth, and a music library, and there's a garden air about the children's room and in the walks. It breathes, it has life, it is not just a depository, not a vault, it is a place of beauty and light.

And once you improve your product think of the selling tools at your disposal, think just of television. Here is a magnificent tool which you can use to bring people out of their homes and off the streets into your libraries. How much use are you making of

it? Or are you being hopeful like Bill the barber, waiting for people to walk in under their own power? That could be a long wait.

Right across the bay, in Oakland, we have a new television station— KTVU. Now I am quite sure that this station has public service time available for announcements. And it's also got a big following, because it is showing some of the best movies around. Now has anybody from the Library Association approached KTVU, and asked for free time, to get people to come to the library? If so, I haven't heard about it.

You know, it's easier to use television than to lose it. No amount of wishful thinking is going to make television pack up its bags and move away. It's here, and though network time may be too costly there are local stations like KTVU, here in the bay area, which can be used. Are you letting this opportunity escape you? Think about that for a moment. And think, also, of your product. You can't rush out and sell something that isn't sellable.

The problems before us are complex and multidimensional. We cannot hope to solve them as half-educated, one-dimensional people.

By providing America with the tools and the facilities to meet this challenge you will be rendering a great and immeasurable service.

But let me remind you, once again, that we cannot wait forever to take up these tools and use them, nor can we wait for the public to discover them on their own.

To sum up, it seems to me that you have two jobs ahead of you. First, to improve the 14,163 libraries of the United States and Canada. I am surprised there are not more. There should be, considering the fact that we have 150 million people in this country and another 14 million in Canada. And secondly, to bring the people in, new people, and not just hundreds of them but thousands. Do not wait for them, bring them in.

And if you do these two jobs you will help America grow stronger in mind as well as in material goods.

"What do we plant when we plant a tree?
We plant a ship that will cross the sea,
We plant a mast to carry the sails,
We plant the planks to withstand the gales—
The keel, and keelson, the beam and knee—
We plant a ship when we plant a tree."

May each of us, together, plant a tree which will carry America and the free world forward to the bright future under full sail.

Thank you, friends, good luck and God bless you.

White House Conference on the Aging

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. JOHNSON of Texas. Mr. President, one of the most important things that could be done at the present time is to give deep consideration to the problems of our senior citizens.

Yesterday the House Education and Labor Committee approved a bill calling for a White House conference on the aging. This is a constructive forward-looking step.

This is a country in which we are not making full and adequate use of many of our experienced people. It is time that we acted to take advantage of this tremendous reservoir of talent which now is put to little use.

I ask unanimous consent to have printed in the Appendix of the RECORD as part of my remarks the United Press article printed in the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITE HOUSE PARLEY ON AGING IS BACKED

WASHINGTON, July 24.—The House Labor Committee approved today a bill calling for a White House Conference on the Aging.

The bill, approved by a voice vote, directs President Eisenhower to schedule the conference before September 30, 1960.

The conference would make recommendations to the President in such fields as employment, housing, medical care, and community activities for the elderly.

In general, the conference would follow the pattern of the White House Conference on Education in late 1955. It would be preceded by State conferences under the supervision of the Department of Health, Education, and Welfare.

The bill would authorize $50,000 to finance the cost of planning State conferences and sending State delegates to the national session.

The committee also approved a bill to authorize the Secretary of Labor to establish safety regulations for stevedores and longshoremen. It added a provision opposed by the administration to require the Secretary to appoint a committee representing unions, industry, and the Coast Guard to advise him on safety standards.

Nasserism and Nationalism

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. HUMPHREY. Mr. President, in recent days we have heard a great deal about Nasserism and nationalism. The point has frequently been made that these two movements are not necessarily identical, although in the current Middle East situation it is increasingly hard to separate them.

In this connection, two items in the press have come to my attention which I think bear close reading. The first of these is an editorial in the Washington Post and Times Herald for July 24, 1958, entitled "Nasser and Nationalism." The second is an article from the London Times, written by one of its special correspondents, entitled "Springs of Arab Nationalism."

I ask unanimous consent that these two items be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of July 24, 1958]

NASSER AND NATIONALISM

There is a strong temptation to blame the Wetsern predicament in the Near East on the mere machinations of Nasser and the Communists. Such a simple assessment not only misses the more basic cause of the unrest, it also leads to wrong conclusions as to what would be a wise course in the future.

Colonel Nasser has given expression to a particularly virulent kind of nationalism, and the Communists have been quick to exploit it in terms of the disruption of old power relationships. Nasser, though he by no means has the military machine of a Hitler, has some of the same megalomaniacal ideas and has embraced some of the same subversive tactics. But nationalism in the Near East existed long before Nasser, and it would exist in one form or another without him today.

What is happening in the Near East is a facet of the anti-colonial revolution that has swept Asia and is sweeping Africa. This revolution owes more to the ideas of jefferson and Gandhi, and to the centrifugal effect of two world wars, than to any current political maneuvers. Sometimes the revolution is blind; colonialism is associated with the presence of the western white man irrespective of the libertarian framework western institutions may have brought, and irrespective of the fact that the old kinds of exploitation are rapidly passing.

It would be a great mistake to assume that Nasserism and Arab nationalism are synonymous, and that if only somewhat Nasser's influence could be checkmated old relationships could be resumed. The nationalist fervor in the Near East is something much larger than the immediate problems presented by Nasser's subversion. It is rooted in a heretofore largely inchoate striving for dignity and importance, a feeling of community based upon common religion and language, an abhorrence of symbols of past repression. To many, Nasser seems to represent success in this endeavor, whatever his methods.

Yet there is a constant danger that the American and British expeditions to Lebanon and Jordan will create just such an impression. The dispatch of American troops to Lebanon was in response to repeated appeals, but it had less to do with the immediate situation in that tiny republic than with the revolution in Iraq. There was a feeling in western capitals, probably correct, that if nothing were done to bolster friendly governments others would topple or that there might be a more serious kind of intervention. However necessary was the response when it came, it had earmarks of panic and desperation. To think that the presence of American troops had solved the more basic problem, or that Nasser's subversion alone was responsible for the turmoil in Lebanon, would be monumentally foolish.

The important question, of course, is what we do in the future. If we are lucky, we may persuade members of the United Nations to take over the task of protecting the integrity of Lebanon and Jordan; we also may be able to establish some more effective guaranties against indirect aggression. But, barring the indefinite use of force which would be as repugnant to Americans as to the Arab peoples, we are altogether unlikely to see the reestablishment of old relationships in the area.

This, in turn, poses a challenge to American and western thinking. For real stability in the Arab Near East may well lie with independent neutrals rather than with shaky allies. There is no reason whatever to yield to the aggressive manifestations of Nasserism or to abandon our commitments; but there is every reason to accommodate western interests to Arab nationalism and to seek ways of channelizing that nationalism along moderate lines at the same time that steps are taken to make available alternate oil sources. That means heeding the counsel of authentic nationalists in such countries as Tunisia and the Sudan; it means, also, using

the tools of imaginative political and economic policy in anticipating new eruptions. Above all it means recognition of the inevitability of change. If we are to have any influence in minimizing violent change in the Near East, then we must be prepared to assert ourselves in helping bring about constructive change.

[From the London Times]

SPRINGS OF ARAB NATIONALISM

The emotion which persuades a Beirut taxi driver to display a photograph of Nasser, or a Syrian president to unite his country with Egypt, or a Baghdad mob to burn the British Embassy, is usually described as Arab nationalism. But, although in some ways it is parallel to—and indeed springs from—the national sentiment which turned Europe into nation states, it is an emotion with its own special complexities. 'Aruba, "Arabism" or "Arabdom," the word which is on the lips of every politician and the pen of every journalist, means the fact of being an Arab. The positive elements of Arabism are not so much racial as a sense of common history, and, much more potent, the existence of a common language. Islam, which provides a common pattern of social behavior as well as a divinely inspired book in the Arabic language, is perhaps the strongest element of all, though it is still heresy to orthodox nationalism to suggest that there is any essential division between Christian and Muslim Arabs.

At least as strong as the positive elements of Arabism are the negative. In its present form it means, above all, not being ruled—and preferably not being influenced by—non-Arabs. It means not admitting any form of commercial, diplomatic, or intellectual inferiority. Arabism is attached to no particular social or political beliefs, though its leaders usually have, or soon adopt reformist programs. For the man in the street, however, Arabism is something that can stand by itself. If he is poor, or his landlord tyrannous, the administration corrupt, elections crooked, or life generally frustrating, this is almost certainly the fault of alien influences which the triumph of Arabism will sweep away.

Arab nationalism has grown in this way because it is based on an apparently inexplicable humiliation. There, in the seventh and eighth centuries, was a blaze of glory, unique in its suddenness and extent. From, so it seems, virtually nothing the Arabs produced a prophet, a religion, an empire, and a civilization, which made the name "Arab" inferior to none and dominant from Spain to India. Then came centuries of decline and decay until, by the time when, in the 19th century, Arabs first began a critical survey of the world they lived in, the only genuinely independent Arabs were those so poor and remote that it had been worth nobody's while to subjugate them. What had gone wrong?

The dawn of this critical period, and the birth of Arab nationalism, is usually associated with the rise of Mehemet Ali in Egypt. Mehemet Ali was the incarnation of the negative elements of Arabism. * * * Impatient, brutal, thrusting western techniques on a torpid populace, Mehemet Ali was the Peter the Great of the Arab world.

The positive aspects of Arabism first emerged most clearly in Lebanon where, owing to the existence of a solid Christian community, intellectual influences from Europe most easily took root. These Lebanese Arabs who simultaneously rediscovered the past heritage of their race and the present achievements of Europe, and then compared them with the stagnation of Ottoman rule, had no choice but to become political.

It is all very recent. Arab nationalism was a matter of secret societies until the First World War. Men like Nuri es-Said and Shukri Kuwatly of Syria belong really to the first generation of Arab nationalism. It is partly because the whole period of political growth for the Arabs, from scratch to the age of the United Nations and the hydrogen bomb, has had to be compressed into less than a century, that their ideas seem often simultaneously very muddled and very simple. So many doctrines, suggestions, and outside forces are pulling them hither and thither, that it has been simpler to sum up their belief in a word, Arabism, which is something that can be felt so strongly that it needs no analysis.

Since the first generation, of course, Arabism has taken specific directions, or, rather, it has run up against specific obstacles which have diverted its course into new channels. The consequences of the First World War were disillusion. No doubt they were disillusioning for all the combatants. But the Arabs were less used than tired Europe to seeing political illusions vanish in a puff of smoke. Unity, independence, glory—all the things they had excitedly come to think of as being within reach, evaporated. Humiliation had become more profound. And the scapegoats were at hand—western imperialism, Zionism, and treacherous leaders. These are still the scapegoats.

For disciples of Arabism, too much has gone wrong to make it possible to do without guilty men. The Arab League has failed. The Palestine war failed. In spite of independence, unity has not materialized. It is Nasser's achievement to have fitted all his acts into the picture that Arab nationalists had drawn of a savior.

As has happened in the case of many other political prophets, Nasser's standing as the incarnation of arabism tends to increase in proportion as his direct influence decreases. Egyptians may still be proud of him, but most of them lack the terrifying fanaticism that his name can conjure up in countries like Iraq, where Nasser worship was officially forbidden. Nasser's neighbors in the Sudan and Libya and Lebanon know that his meddling has frequently taken forms—violence, incitement to murder—which are hard to reconcile with any principles of behavior, let alone the brotherhood of all Arabs.

If it were possible for the Arab countries to try the experiment of unity, under Nasser or anyone else, they would probably come to realize that political ideals are not as easy of realization as they seem. The contradictions and rivalries in the vast extent of the Arab world would be shown to spring from realities, and not to be inventions of imperialism. Neutrality and isolationism would be found to be incompatible with cutting a commanding figure on the world stage.

But, at present, it is not possible for the Arabs to feel that they are in sight of their goal. A sense of victory has not obliterated a sense of humiliation. Anyone who urges them to press on, and who unearths more sinister forces working against their interests will find a response. This is not strange. Arab nationalism is still young enough to be working out its character. The trouble is that it is clearer about its enemies than its friends, and that the working-out process has to go on in the most sensitive part of the world's surface.

Review of United Nations Role in Middle East Crisis

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 21, 1958

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of July 23. It is an excellent review of the developments to date in the United Nations with respect to the difficult situation in the Middle East, and I commend it to the attention of my colleagues on both sides of the aisle:

A REVIEW OF MIDDLE EAST CRISIS AND ROLE OF THE U. N.

The struggle over the Middle East in the United Nations boils down to this:

The United States is trying hard to have the cloak of United Nations moral approval thrown over its intervention. Russia is equally determined to withhold that cloak and try to show this country up as a naked aggressor.

For almost the first time since the United Nations was founded, the United States is in danger of suffering a major setback in world opinion. Many of our friends—pro-Western and non-Communist nations—are withholding their support and are even highly critical of our Middle East intervention.

The maneuvering in the United Nations is worth review.

Lebanon appealed to the U. N. on May 22, asking help against external aggression which the Lebanese said came from the United Arab Republic—in effect, Nasser's Egypt. Sweden proposed a force of U. N. observers to determine whether aggression existed. The force went to Lebanon to study the situation.

The preliminary report of the observer force cited no massive intervention into Lebanon. But it did not, as it develops, rule out the possibility of intervention existing. It merely said that, at the time, the force had not been able to check all rebel positions along the border and had not found sizable intervention in places that it had checked.

Secretary General Dag Hammarskjold, after talks with Egypt's Nasser and a visit to Lebanon, said he believed that no massive intervention existed. He reportedly was hoping to give Nasser a way of pulling out of the Lebanon situation gracefully and at the same time giving the Lebanese time to solve their own problems.

But then came the Iraq revolt. The United States, at the request of Lebanon's President, landed marines in Lebanon. The United States then rushed to the U. N. and said, "Take over to stop aggression."

The answer, from Sweden, Japan, and other nations, was, "What aggression?" The fat was in the fire. The last several days have seen it sputter and flame in the Security Council.

Sweden immediately proposed withdrawal of the U. N. observer force so that the U. N. would not be associated with the United States effort in Lebanon. Only Sweden and Russia supported the plan.

Russia proposed that the U. N. condemn American intervention and order the United States troops out. Only Russia voted for that, but Sweden and Japan abstained, giving the United States no comfort.

The United States proposed expansion of the observer force, establishment of contact between United States and U. N. forces and possibly placing United States troops under U. N. direction. Britain, France, Nationalist China, the ousted regime of Iraq, Panama, Colombia, Canada, and Japan voted for the proposal. Sweden abstained. Russia said "No," thus vetoing the plan.

Japan urged that the U. N. observer force be increased to a size capable of handling the Lebanese situation so that the United States could withdraw. Russian amendments to condemn the United States and force United States withdrawal failed. Only Russia voted for the amendments. But, again, Sweden and Japan abstained. Russia then vetoed the Japanese plan. (Hammarskjold is planning to add to the observer force on his own initiative.)

Thus the Security Council is deadlocked. The one sure thing is that the United States has thus far been denied the moral cloak of the U. N. The devastating thing is that this country has also been denied the support of many of its firm friends. Even some of the nations that have given support have been sharply critical. And nations not on the Security Council, such as India, West Germany, Ghana, Morocco, Ceylon, and many Latin American states, have been condemnatory.

The pleas for the United Nations to do something have so far failed. Our moral position before the world has thus been weakened. Our belated attempt to cover up intervention with U. N. approval has not succeeded. Hammarskjold has pointed out that the U. N. is not an entity—like a nation. It can work only when nations in negotiation want it to. Russia, of course, does not want it to. But the dismally sad truth is that, in this case, many other nations who normally take our side won't give this country U. N. approval either.

An alternative to Security Council action is a meeting of the U. N. General Assembly. It at least doubtful that we can get the necessary two-thirds vote there. Even if we do, it would only be after bitter attacks on this country and its intervention—attacks such as India, for example, has already promised. These attacks would be broadcast to the world—and would be devastating to our reputation in Africa, Asia, and the Middle East.

Another alternative is a summit meeting—in the U. N. Security Council, as the United States and the British have proposed. But this poses problems, too. It would be an ideal forum for the Russians, if they agreed to it. With Security Council procedural restrictions it could be stalemated.

Hammarskjold apparently desires a formal meeting of heads of states sitting in the Security Council—with the leaders involved retiring to private sessions to negotiate and make proposals to the council.

The Russians seem to dislike the idea. They want to force a real summit conference outside the U. N.—the kind that has been called the wrong meeting, at the wrong time and place on the wrong subject. They want an open world forum at which Khrushchev could whiplash the western leaders and establish himself as the dominant advocate of world peace.

Either conference now would violate this country's principles that a summit meeting must be preceded by careful preparation, must discuss problems left unsolved at the last summit meeting, and must have some real chance of making progress.

Thus on all points, from all sides, the American position is besieged. From every standpoint this country is in a mess—and has lost the moral position upon which its leadership of the forces of freedom and peace absolutely depends.

We have lost the initiative. We stand bare of policy. The gravity of the situation cannot be minimized.

District Federal Judge Win G. Knoch Named for United States Appeals Court

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. LIBONATI. Mr. Speaker, it is to the honor of the bench and bar of Illinois that the distinguished jurist and active Legionnaire district judge of the seventh Federal district has been named by Senator DIRKSEN for appointment to the United States court of appeals. He has demonstrated on his record throughout his legal career, as assistant states attorney, and circuit court judge of Du Page County, Ill., as well as Federal district judge, a high capacity for judicial responsibility and proven integrity. In the American Legion he was ever at the service of his comrades—and has earned their respect and love. His deep devotion to patriotic principles of true Americanism have endeared him to the rank and file of the organization.

He is a patient, quiet, and honest servant of the people. He is a polished speaker and has appeared innumerable times before audiences to deliver interesting speeches on subjects of national and local import. He, no doubt, will be advanced to this high and important judicial position, wherein he must weigh the court procedures and law questions involved in the trials of the district court. He has always enjoyed a high reputation for being just and fair, together with a vast knowledge in all fields of law. A fearless judge with a kind heart and with a high sense of loyalty to his oath of office.

He is a great jurist and is recognized as a pillar of justice in any court that he honors by his acceptance to preside.

The Chicago Tribune does him merited honor and justice in these excerpts taken from an article written by the popular and seasoned political editor, George Tagge, as follows:

[From the Chicago Tribune of July 23, 1958]

JUDGE KNOCH SLATED FOR UNITED STATES APPEALS COURT

(By George Tagge)

Judge Win G. Knoch, who in 1953 became the first Republican to be appointed to the Federal district court in Chicago in 22 years, is slated for appointment to fill a vacancy on the United States circuit court of appeals.

The tribune learned that Senator DIRKSEN (Republican, Illinois) has recommended presidential appointment for Judge Knoch with the hope that Senate confirmation can be obtained before the 1958 session ends next month.

FBI BEGINS CHECK

Routine checking by the Federal Bureau of Investigation has been begun here. Although the FBI process often requires 6 weeks, the fact that Judge Knoch was cleared by the same agency in 1953 will lessen the time needed, Senator DIRKSEN believes.

Death early this year of Judge Walter C. Lindley created the vacancy on the appeals court at 1212 North Lake Shore Drive. Further delay in filling it might result in Indiana or Wisconsin, also in the appeals court territory, seeking to name the judge.

Judge Knoch, 63, was an assistant state's attorney and county judge of Du Page County before his first election to the circuit court in 1939. He often sat as a visiting judge in Chicago. His knowledge of both rural and urban problems was stressed by Republicans who sought to draft him as a candidate for governor in 1955.

HEADED JUDGES' GROUP

Before attaining a Federal judgeship, Knoch served as president of the Illinois Circuit and Superior Judges' association. His grandfather, Christopher Knoch, immigrated from Germany 100 years ago and settled in Naperville.

Communists Have Turned China From a Land of Warmth and Laughter Into a Desert of Unsmiling, Frightened Faces

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the Belleville (Ill.) News-Democrat on July 23, 1958. The article entitled "Communist China as I Saw It" was written for United Press International by Rev. Father Joseph Patrick McCormack, a Maryknoll missioner, who was released from 5 years in a Red Chinese prison and sent home.

Father McCormack was born in Roscommon, Ireland, August 6, 1893. After attending schools in his native land he came to the United States, entered Maryknoll, and was ordained for the priesthood. In 1925 he left for the mission of Fushun, Manchuria. During World War II he was interned by the Japanese but was repatriated to the United States in 1942. Early in 1943 he took up new work in the missions of Chile. After the war Father McCormack returned to Manchuria, but Communist Army advances forced him to withdraw into South China. He was arrested in Shanghai with seven other missioners in 1953 and placed in a Red prison.

Father McCormack's story on life in a Chinese prison follows:

COMMUNIST CHINA AS I SAW IT

(By Joseph P. McCormack, M. M.)

Since my release after 5 years in a Red prison, people are continually asking me about the Chinese Communists. My reply is that there are no Chinese Communists for all Communists are men without countries. Regardless of their nationality—whether they're Russian or Chinese, or even American—once they've been indoctrinated with the Communist idea, they're the same all over the world—shrewd, fanatical, capable of doing anything to get what they want.

But mostly they're cruel. The Communists that I mixed with during my trial and while in prison had lost not only their personal identities, but their national characteristics as well. They were too cruel to be called Chinese.

The ordinary people of China are frightened to death because of Red brutality. They are terrorized by a highly efficient secret police organization which has a finger on everyone. A jailed Communist told me that between October 1953 and October 1954 the Reds arrested 35 million Chinese from all walks of life, and on the slightest pretext.

It's unbelievable how the face of China has changed. What was once a land of warmth and laughter is now a desert of frightened, unsmiling faces. In Shanghai alone, over 1 million people have been put in prison. The jails are jammed with men and women whose only crime is that they're too poor to pay taxes.

I saw part of the picture during a propaganda campaign which the Communists launched last February, using nine of us from the prison. After assigning 14 secret police to guard us, they took us on a 30-day

conducted junket of new redevelopment projects.

The tour was a big thing let me tell you, with high-powered publicity and all kinds of official clearance. Even though we knew we were being used—with photos taken of us in clean white shirts, eating good food, and smoking cigarettes—I must say it was a nice switch from prison life. So we went along with the game.

I wasn't much impressed with their building program. Most of it was a sham, like a set for a Hollywood movie. The one exception was the big bridge at Hankow, which they've been working on for several years. It's quite an engineering feat in any man's book—especially for China. But the tragedy is that all this is being accomplished by slave labor. I saw thousands of workers at the bridge site—prisoners from the labor camps—their bodies thin and worn, carrying heavy loads that you wouldn't put on the backs of animals, much less human beings.

The whole judicial system, from what I saw of it, is terrifying. As soon as the police pick you up, you know you don't have a chance. Arrest is synonymous with guilt, and you never try to obtain leniency by defending yourself. When they grabbed me in 1953 they said that I could have a lawyer, but that I shouldn't fight the charges. Because the more you fight, they told me, the more severe the penalty. They kept reminding me that what I said to the court really wouldn't matter—I would be judged on my mental attitude.

I never did find out what they meant by mental attitude, but I suppose they marked me fairly high on it, because I only got a 5-year sentence.

It all started for me when the Reds came storming through Manchuria after World War II. I was up there then, as vicar capitular of the Maryknoll diocese of Fushun. The wind was blowing against us, and as the Communist movement grew stronger, the persecution of the church became more intense.

The crucial point, in my own mind, was the slaying of an elderly Chinese priest in January 1948. For 2 winter months he had been in an unheated prison, covered only by burlap rags, and half starved. Then, on a bitter cold morning that I will never forget, they dragged him out of his cell, shot him three times in the back of the head, and kicked his body into a drainage ditch.

From then on, it seemed, everything went against us, and in desperation, I decided to abandon the present and prepare for the future.

The future of the church in China, as in any country, depends upon priests—so, I made arrangements for our 30 Fushun seminarians to move south, to Peiping, where they could continue their studies for the priesthood. With the help of God and a great deal of courage, my lads walked the 550 miles of road from Fushun to Peiping, mostly by night, to avoid Communists and bandits; by Easter they were once more behind seminary walls.

But north of us, the Communist victories kept piling up and I knew it was only a question of time before all of China would fall. So early in 1949 I hurried down to Shanghai, to arrange for their departure from the mainland and obtain funds to support them. Eventually, nine of them made it to Hong Kong, where they were later ordained. The Communists caught the remainder and sent them back to their villages in Manchuria.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

United States Intervention in Lebanon

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, July 25, 1958

Mr. HUMPHREY. Mr. President, among the critical analyses of our recent moves in the Middle East, none have been clearer than Mr. C. L. Sulzberger's columns in the New York Times. Two of these in particular impressed me during recent days.

The first was an article entitled "Lessons of Logic and Its Lack," which was published on July 19, 1958, and the second is entitled "Dilemma Without Visible Solution," which was published in the July 21, 1958, issue.

I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of July 19, 1958]

LESSONS OF LOGIC AND ITS LACK

(By C. L. Sulzberger)

The only steady aspect of our Middle Eastern policy is confusion. During a decade that saw creation of Israel, Nasser's rise, the Suez war and a drumfire of coups and assassinations, the United States never managed to define its own fundamental attitudes. This observation applies to two American administrations. Our Levantine follies have been gloriously bipartisan.

Three dilemmas perplexed Washington from the start. We couldn't resolve our determination to sponsor Israel with our craving for Arab friendship. Therefore we wallowed in a trough of indecision. We found ourselves unable to reconcile prejudices against colonialism with a need to support our strongest ally, Britain. And we muddled our analysis of Arab nationalism by always regarding its development in rigid anti-Communist terms.

The consequences led to diplomatic chaos. We have ended up supporting outdated regimes and opposing history's trend. Of our principal friends concerned with the Middle East, Britain and Turkey are widely disliked because of imperialist memories, an equally detested France has been excluded from the area, Israel is hated and Iran is weak and uneasy.

AGAINST THE TIDE

Today we find ourselves backing the Chamouns, the Sauds, and the Husseins against the tide of Arab renaissance. And, by our military interposition side by side with Britain, we have sacrificed those pretensions to moral grandeur we had claimed in the United Nations.

Our elementary aspirations are plain. We sought to keep Soviet influence out of the Middle East, to devise an alliance there for this purpose, and behind such a shield to pacify the area. These aims failed.

By creating the Baghdad Pact we alienated Egypt, most influential nation in the Arab world, and India, most powerful non-Communist state in Asia. Yet we never had sufficient faith in that same pact to join it ourselves.

We distributed arms instead of wisdom. Some of those arms have now been used to assassinate our three best friends in Iraq. We backed Nasser. But we wouldn't give him all the weapons he demanded; so he turned to Russia.

THE SUEZ AFFAIR

Because we unnecessarily offended the Egyptian dictator we provoked him into seizing the Suez Canal Co. This event could have been foreseen in the cloudiest crystal ball. But we didn't have one single position paper prepared in advance.

When Britain and France, together with Israel, cooked up a war to defend vital interests similar to those we now help London protect, we scotched their plan. Thanks to us Nasser was rescued from disaster and built to hero's stature.

If our policy was correct in 1956 when we backed Cairo against Paris and London, it is incorrect today. And if our policy is now correct, in deciding to risk war for strategic grounds, it was incorrect 2 years ago. Anglo-American intervention comes at the wrong places, at the wrong time, for the wrong reasons. At least Eden and Mollet had reason on their side when they went for Suez.

WHY WE INTERVENED

We didn't fly troops to Lebanon because of a sudden turn in that country's operetta insurrection. Iraq is the explanation. And Jordan, again insured by Britain, isn't a nation at all. A mapmaker's dream, it was created by Churchill and T. E. Lawrence over brandy and cigars to pay a feudal debt.

Nasser was taking kindergarten lessons on Soviet imperialism from Tito when we landed in Lebanon. Just as he was becoming wary we drove him back to Khrushchev's arms.

The existing mishmash cannot possibly be stabilized where it now is. Having embarked on an audacious expedition, we have to follow through. One way or another a new and prowestern government must be installed in Iraq and Nasser must be shrunken to size.

Otherwise, no matter how long Lebanon and Jordan totter along, they will fall between the jaws of a hostile Baghdad-Cairo nutcracker when our troops are withdrawn. If we can't aright the balance in Iraq and eventually in Egypt, some day we must ignominiously retreat. But in order to aright that balance, we may have to gamble on still more risky adventures than those begun this week.

Such is the logic of the situation. But logic has rarely featured our Middle Eastern policy.

[From the New York Times of July 21, 1958]

FOREIGN AFFAIRS—DILEMMA WITHOUT VISIBLE SOLUTION

(By C. L. Sulzberger)

Our Government deludes itself if it thinks the Anglo-American expedition will not be regarded as aggression into the Middle East by Nasser and that he will not request Russian help to thwart it. The probability is that this help, at least in the beginning, will not be open. But, if the crisis continues, we must reckon on its delivery in just the amount deemed necessary to frustrate us.

Nasser is a politically naive but exceedingly clever man. We have consistently failed to recognize the force of his mass appeal. He is determined to extrude all foreign influence from the Levant. And, if one great power bloc comes in, he is prepared to accept assistance from the other great power bloc to aright the balance. This in his conception of nonalinement.

Cairo and Moscow have both been out to destroy the Baghdad Pact, that disastrous invention of the State Department. Their initial aims, therefore, coincide. And Nasser, who regards himself as the incarnate spirit of pan-Arabism, is prepared for desperate measures to uphold what he terms dignity.

Nobody can pretend to know what precise commitments were made last week when the Egyptian dictator talked with Khrushchev. But Nasser's previous thoughts are no secret. Less than 4 months ago he told me in Cairo:

"You Americans say [middle eastern] aggression will come from the Soviet Union. In such an aggression, of course, we will expect the West to assist us. But what about aggression from the West? We will ask for the Soviet Union's aid."

SOVIET MOVES

Since this asservation Nasser has twice visited the U. S. S. R. Russian troops are maneuvering with blatant menace upon the borders of Iran and Turkey. Communist agents and Communist propaganda are busily working on the aspirations of the Kurdish minority in those two countries and in Iraq.

To Secretary Dulles' mind, trained as it is in legal intricacies, the Anglo-American expedition to Jordan and Lebanon in no way appears as "intervention" or "foreign domination." And technically it certainly is not. But to Nasser and the Arab crowds who venerate him, such distinctions have no meaning.

Nasser regards his Syrian-Egyptian federation as the traditional defensive line against outside aggression that has applied since the days of Saladin. He considers the Baghdad Pact or any other military link between an Arab State and external powers as a new sort of colonialism.

"We simply will not accept any foreign domination," he said to me, pretending to speak for all Arabs. "You Americans have neglected an understanding of the characteristics of the area. We don't have planning committees and maps on the walls which say what is to be an Arab confederation and when. But there must be solidarity between Arab countries. All Arab countries must stand back of each other. They must face danger from anywhere."

NASSER'S STANDARDS

We, of course, disapprove of his methods. But we fail to recognize that these are indigenous to the region and accepted by its peculiar standards: conspiracy, assassination, bribery, and gunmanship, distortion of the truth.

Nasser claims he dislikes communism's materialist aspects. Nor does he fancy tying himself so closely to the Soviet economy, as is now the case. But these, to his adventurous spirit, are relatively minor matters. Like so many earlier statesmen he hopes to use Russia for his own ambitions without

succumbing to its pressures. This belief may soon be tested.

We have now committed our prestige totally. We cannot retreat without grave consequences. And the Russians have put their chips upon the table by recognizing an Iraqi regime we should have reckoned on unseating if our hazardous undertaking was to make future sense.

Nobody in his right mind wants war. But it is questionable how many people in their right minds direct the world's destiny. We are in a position from which it would be disastrous to withdraw. Indeed, abstract logic urges us further on. And Moscow, quite plainly, will oppose us.

Whether Khrushchev's suggestion of a summit meeting opens the way to compromise cannot yet be said. The only evident alternative for straightening out this cruel mess would seem to be U. N. and that neutral opinion both blocs too often ignore and affront.

Mr. HUMPHREY. Mr. President, one of the factors in our intervention in Lebanon which has most disturbed Members of Congress was the abrupt manner in which the decision was made. Mr. William V. Shannon has contributed an article to last Sunday's New York Post, July 20, 1958, entitled "Suddenly." His article has received considerable attention here in Washington, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUDDENLY

(By William V. Shannon)

President Eisenhower's decision to intervene in Lebanon, regardless of the objective merits of that decision, is the result of a most curious and unsatisfactory way to make high policy.

His dispatch of the marines to Lebanon followed the same pattern of abrupt action he has twice before displayed during the past year—once last September when he rushed paratroops to Little Rock and again in May when he ordered them to the Caribbean to protect Vice President NIXON.

The circumstances in each instance were roughly the same. There was a long-drawn-out crisis and buildup of tension. Although the specific igniting incident could not have been fully foreseen—Governor Faubus' doublecross, or the Caracas riot, or the Iraq coup—any observer could see that such an incident was likely to occur under the given circumstances. The direction and significance, if not the exact details, of the incident could be foreseen. Each time there was also the same lack of any warning that General Eisenhower planned drastic action. On the contrary, the President allowed events to drift and gave the distinct impression he would take no action of any kind.

The ineffable Governor of Arkansas, the complaisant Venezuelan Government, and the antiwestern plotters in the Middle East were successively allowed to believe their moves would go unchecked. When these moves produced their natural, foreseeable, and inevitable consequences, the President, belying all expectations, reacted swiftly and with force.

The show of force may be wise, as it was in Little Rock, or merely grotesque, as in the Venezuelan-Nixon incident, but, wise or not, is this the right way to run a railroad or a great country?

These harsh, precipitate actions are from the outset doubly damaged. Their effectiveness is damaged, first of all, because public opinion in this country and abroad is not properly prepared beforehand and, therefore, does not give the immediate and overwhelming support that is important in making the policy succeed. Second, the actions lose part of their effectiveness, because they are burdened from the beginning by dragging doubts about their necessity. For example, Faubus might not have been so bold if he had been clearly and sternly warned by the President during their Newport, R. I., conference. Pygmies do not ordinarily defy giants if they know the giant is going to retaliate.

The same principle holds true when the antagonists are of equal size. If the United States had made it unequivocally clear to Premier Khrushchev months ago that we regarded the oil of the Middle East as indispensable to the security of our European allies and that we therefore would use military force to crush any pro-Nasser subversion in an oil country, the Russian Government would have had no doubts on what would happen on the morning after a revolt in Iraq or Iran or Saudi Arabia. The Russians do have such doubts and feel free to bluff, bluster and maneuver.

General Eisenhower did not make his policy clear to Faubus or to Khrushchev because his policy was not clear to himself. And it was not clear to him because he had not paid enough hard, careful attention to these problems until the crises broke.

This is not say that the President had not been briefed about the Middle Eastern situation and had not thought about it prior to Monday's crisis. He just had not given it his patient, unrelenting, overmastering attention.

Since the Lebanese civil war did not seem critical or urgent, he merely approved Secretary Dulles' general recommendation not to intervene on behalf of President Chamoun, and with that decision made he left the actual execution of policy, the careful weighing of alternatives, the close scrutinizing of daily events to Dulles.

There is nothing new in this performance. It accords with the President's methods of staff delegation and the detached, complacent attitude which has characterized his administration since its inception.

What is new in the past year is that when General Eisenhower has intervened at the last minute he has come down on the side of bold measures. During the Korean armistice negotiations of 1953, the crisis over American intervention in Indochina at the time of the Dienbienphu catastrophe in 1954 and the Formosa offshore islands crisis of 1955, the President exercised his decisive influence on our policy very late, but he exercised it on behalf of doing nothing or taking the most cautious, prudent step. There was no trace then of the "call the Marines" attitude which he has evinced in the past year.

The reasons for this change in his governing attitude are mysterious. What is clear is that the intervention in Lebanon was a complete reversal of American policy.

Just before the Monday crisis broke, Lebanese Foreign Minister Malik had become so disliked at the State Department because of his importunate appeals for help that when he asked for yet another interview with Department officials, he was granted one—a week later. Malik was so discouraged he went back to New York, where he is his country's U. N. representative.

The British jump into Jordan was the Macmillan government's own notion, quite uncoordinated with our own. Nor does the President's 11th-hour show of toughness in Lebanon indicate he is going to adopt a consistently tough line in the Middle East; the abandonment of Iraq makes that clear. We seem, for whatever reason, to have reached a stage where the President makes tough gestures for which he does not prepare the ground and which he will not follow through to their logical end.

Inquiry Into Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Inquiry Into Our Foreign Policy," published in the St. Petersburg (Fla.) Times of July 20, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INQUIRY INTO OUR FOREIGN POLICY

Challenges of the wisdom or the right of the American military entry in the Middle East are growing around the world. Some are born of nothing more than antiwesternism. Some are the fruits of neutralism at whatever the cost. Others take the form of stage-managed demonstrations. But some, at home as well as abroad, are reasoned, thoughtful.

What is the ultimate for the United States in the Middle East? Although not an exact parallel, our position recalls the tragedy of Korea. Will we again fight a war we can't afford to win? When and under what circumstances could we honorably disengage? What is our aim? Stability for the Middle East? Are we going to make the Arab world safe from the Arabs?

Our Middle Eastern misadventure imperils a large part if not all of the world. The consequences cannot be foreseen fully at this time. But, for the moment, the episode is more alarming in that it reflects the poverty of our diplomacy and the frightening misconceptions and invalidities of our foreign policy. If our policy could stumble us into conflict in the Middle East, it could force us into war elsewhere.

What are some of the misconceptions? The roots of our policy are imbedded in the concept of collective security, which history shows us is neither a collective nor a secure arrangement in all too many cases.

The fallacy of security through alliances has been demonstrated over and again. Napoleon III could give eloquent testimony by relating how his allies remained neutral or went over to the enemy in his bid to crush Bismarck's new Prussian army. The Hitler-Stalin agreement is a more recent example of collective inconstancy. And, of course, central to the situation at hand is the fact that another one of our collective security schemes collapsed when Baghdad, city for which it was named, fell to revolting forces. Ironically enough, it fell on the day that Baghdad pact leaders were to meet in Ankara to discuss aid to Lebanon.

How secure are we with the NATO collective? How constant would our western Europe allies be with an overwhelming land force on their borders and nuclear missiles over their heads? Didn't we almost lose one key post in the NATO system about three years ago? Suspiciously soon after concluding a fish barter deal with Russia, Iceland ordered American forces out of the air base as Keflavik. The order subsequently was reversed, but the example remains a sobering one.

Another misconcept is that we have friends all over the free world. Because a nation is outside the iron curtain doesn't necessarily mean it is behind the Stars and Stripes. Elmo Wilson's world poll in the New York Herald Tribune last year was jolting enough.

To the question of whether their nation should remain neutral in event of war between the United States and Russia, 94 percent of the Swedes responding replied in the affirmative. In Italy, 72 percent were for neutrality. In our own hemisphere, 61 percent of the respondents in Brazil replied "yes." We fared better in Britain, but even there 54 percent would stand by neutrality.

We would do well soberly to recall that in the Korean United Nations police action, outside the Koreans themselves, the United States supplied 450,000 troops, all the other U. N. members only 45,000.

In view of this, the number of trouble spots around the world in which we or our friends are involved in one way or another takes on more terrifying meaning. On Cyprus, there is a revolt against the British; in north Africa, rebellion against the French; in the Middle East, animosity against the three of us. Civil war is being fought in Indonesia, with an anti-West aspect.

Pakistan and India are at odds, with the United States bulwarking the former.

Fighting could break out in the Formosa Straits at any time, with the United States siding with the Chiang Kai-shek regime.

Renewed conflict in Korea always is a possibility, with Americans alined with Syngman Rhee.

Israel is in real danger from her neighbors, with President Nasser of the United Arab Republic on record as vowing that there never could be a State of Israel on what he called Arab land.

Our friends, the Turks, and the Syrians eye one another suspiciously across their borders.

The rollcall of trouble spots underlines other fallacies in our foreign policy—the determination in the name of collective security to prop up straw men and make believe that purely artificial lines have the true stability of natural boundaries.

Are we to fight for Chiang Kai-shek, or spill more blood for Syngman Rhee?

Are we to continue to believe that Jordan is more than a creature fashioned out of the map like a child toying with clay?

Are we to pretend that there is no Arab land and Arab nationalism, believing it will go away if we don't look?

Another source of outdated thinking is the geopolitical theory of a motherland which is a fountainhead for world dominance and must be ringed for the protection of the peripheral nations.

If there is a motherland, it is out in space, or on the moon or Mars. Containment, in any case, has not worked against the spread of communism any more than did the cordon sanitaire against nazism, nor lessed the number of trouble spots around the world in which the Communists have a hand.

Instead of containment or collective security we have arrived at something else.

Instead of the bold new approach to world problems, we have come up with an ancient and discredited one—the practice of the balance of power. And it isn't working now any more than it ever worked. Besides being a callous device in disregard for national rights and ordinary decency, the policy invites war—as witness the very situation we are in today.

It is easy to demand that we take a fresh new approach in our foreign policy, a glib and facile thing to say. What the new approach might be is more difficult to state.

It is easier to say what it should not be, and when this proposition is established, perhaps the way is shown.

Our policy should not deny or subvert that thesis so rightly beloved by Americans—that man is free; that there is dignity in human life, and that the right to govern themselves—and even to engage in revolution—is inalienable among the peoples of all nations. Our very form of government and all of our guaranteed rights were born of revolution. We should not create or support artificial or buffer states among a homogeneous people.

Our policy should not rely so heavily on the negative—against this and against that, and spelled out in such words as containment and massive retaliation and brinksmanship. We have been against suspension of nuclear tests—as if it were very important to the victim whether he was incinerated by a clean bomb or a dirty one.

Our policy should not be that of monitor of the world, with a father-knows-best approach to smaller nations on the one hand, while furnishing them with deadly weapons on the other. (Why in the world does a small nation, not as large as some of our smaller States, need the latest in heavy tanks, cannon, and jet planes?)

Our policy should not establish conditions under which free and easy world trade is hampered. World trade is a prerequisite to world peace. We could contribute immensely toward world peace by encouraging and helping in the establishment of common market areas—and the Arab lands would be an excellent spot for one such.

How much longer, in the name of collective security or peace seeking, could we afford to prohibit or discourage trade with hundreds of millions of people whose government we don't happen to like, while we furnish arms and otherwise transact with people whose government should be equally repugnant to ours?

Our policy should not close any doors toward international understanding on the assumption that opening them will be unproductive. We should be willing at all times to talk with any one or any group on the bare possibility of a profitable discussion. Why not—as former President Truman has suggested—invite President Nasser to Washington? Why not listen to his viewpoint? Why not try to reconcile differences, if it is not too late?

This does not ignore the facts of life today; that there is a cold war on with the Communist world. It is not a war of our making, and assuredly not one we would choose.

We must maintain a defense posture, to be sure. But have we moved with as much determination on positive lines for lessening the frictions and preventing Middle East flareups as we have on the negative theses?

That is the question sorely in need of profound study in Washington this day as the 6th Fleet and other military arms flirt with the conflagration.

Save Money Through Better Control of the Budget

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1958

Mr. PROXMIRE. Mr. President, one of the most important pieces of unfinished business confronting the Congress is Federal budget reform. The two Houses are in agreement that the Congress should get control of unexpended balances and carry on the appropriation process on a year-to-year basis. It is necessary now to agree on a bill and get the job done.

Mr. President, I ask unanimous consent that two excellent editorials dealing with this vital piece of legislation be printed in the Appendix of the RECORD. One is from the New York Times this morning, entitled "Federal Budget Reform." The other is from the Richmond Times-Dispatch of July 23, entitled "End Horse-and-Buggy Budgets."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of July 28, 1958]

FEDERAL BUDGET REFORM

Citing various features of the new Air Force Academy at Colorado Springs as an outstanding example of extravagance and inadequate planning, the House Appropriations Committee has sharply criticized the Defense Department for loose fiscal procedures in connection with construction policies and practices.

Sympathizing as we do with the committee's antagonism toward loose fiscal procedures in any branch of government, we cannot help but wonder why this same committee—or at least its most influential members—have fought tooth and nail against a measure that is designed solely to end one of the loosest fiscal procedures of all. This is the congressional practice of approving some kinds of appropriation bills in one year without retaining any real control as to how the funds may actually be spent in the next. To end this bad practice the Hoover Commission on Governmental Reorganization long ago proposed a reform of Federal budgeting procedure to require, in effect, that Congress specifically approve all expenditures.

Under this procedure Congress would in reality retain control of the Federal purse-strings, which—to the tune of many millions of dollars in carryover expenditures—it has now lost. For example, 2 or 3 years after the truce ending the Korean war billions were still being spent by the Defense Department that had been originally appropriated by Congress for war purposes. The subsequent expenditures may or may not have been wise, but the important point is that Congress had no direct control over them, as it would have had under the annual review procedures proposed in the pending bill.

But complicated and unusual parliamentary maneuvers, apparently inspired by influential Members of Congress who seem to fear that the new legislation might infringe on their prerogatives, have thus far prevented final passage of the bill known as H. R. 8002. Though in varying forms it has actually passed both Houses, it is now back in the Senate and has been again reported favorably by the appropriate committee. Considering that the President, Secretary of the Treasury, Comptroller General and Budget Director have all given their endorsement, it ought to be able to go through Congress once again before adjournment—if the leadership so wishes. We should think that the leadership would so wish.

[From the Richmond Times-Dispatch of July 23, 1958]

END HORSE-AND-BUGGY BUDGETS

With the crisis in the Middle East making greater and greater demands on the Federal Treasury, it is more important than ever that Congress modernize our budgeting procedures and get maximum value for every dollar. A bill pending in the Senate (H. R. 8002) is designed to do just that.

It is of vital importance that this bill be passed at the current session, which has about 3 more weeks to run. Action by both branches of Congress seems necessary, since changes have been made by each branch, and these must be reconciled.

Be it noted that the Senate passed the original measure—of which Senator HARRY F. BYRD, of Virginia, was a sponsor—without a dissenting voice. Then the House

passed it by the overwhelming figure of 311 to 87, after making a few alterations which do not vitally affect the bill. It remains for the Senate to approve the measure in the form passed by the House, and for the House to ratify any slight differences remaining.

As reported out by the Senate Appropriations Committee, the bill is endorsed by the Citizens Committee for the Hoover Report, President Eisenhower, Secretary of the Treasury Anderson, and others. As the Hoover Committee says:

"At a time like this we simply cannot afford to let wasteful, antiquated, horse-and-buggy business methods hamper a Government engaged in the space-age protection of our liberties and our very lives."

Certain Senators feared that the rules of the Senate would be adversely affected by the bill, as it came from the House, and 14 words were deleted by the Senate Appropriations Committee, to take care of this. Two other amendments were added, (1) to give the President flexibility, primarily in the Department of Defense, and (2) to provide that when liabilities are incurred within the annual limitation in a fiscal year, payment could be made in a subsequent fiscal year.

All these changes have been approved by the nonpartisan Hoover Committee, which is concerned solely with getting greater efficiency in our budgeting procedures. What is sought is to give Congress control over what the Federal Government will pay each year for goods and services received in that year, and give it an annual review of progress made with long-term spending programs.

Senator BYRD estimates that some $70 billion has been appropriated by Congress, but not spent, and he points out that this gigantic sum of money is now beyond the control of Congress. That can't happen again, if H. R. 8002 is passed. Its passage at the current session of Congress is vital.

Retirement of Dr. Gabriel Hauge, Presidential Assistant

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the RECORD an article from Time magazine of July 28, 1958, regarding the retirement of Dr. Gabriel Hauge, Presidential Assistant for Economic Affairs.

Let me say in this connection that I deplore the resignation of Dr. Hauge, who has been a stanch right arm for the President in connection with economic affairs during the past 6 years. He has been his constant adviser, and a very sound one indeed.

I believe that the fact that we shall not take a tremendous whack at our tax income this year can be attributed to Dr. Hauge's wisdom, courage, and determination, perhaps as much as to the influence of any other single individual. He has been a very wise adviser and a very capable assistant. I believe it is a source of regret to all of us that he feels compelled to retire from the White House staff. I wish him well in whatever his undertakings may be henceforth.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GABRIEL HAUGE

One 40-below-zero Sunday forty-odd years ago, a Lutheran minister made his way across frozen snowdrifts in a horse and buggy to keep his preaching schedule at five different churches in and around Hawley, Minn. In the winter and spring of 1958, the minister's son, Presidential Assistant Gabriel Hauge, showed the same old-fashioned fortitude in the face of icy winds of another kind. With the United States economy slipping downward, panicky cries for drastic Federal intervention rang out in Washington and across the United States. But calm, articulate Gabriel Hauge, sometime economics teacher at Princeton and Harvard, economics assistant to the President of the United States since the start of Ike's first term, counseled his boss to resist the pressures of inflation breeding, damn-the-deficits programs. The downturn would halt during the year's second quarter, Hauge firmly predicted, and then an upturn would slowly set in.

The second quarter did, indeed, see the end of the downturn, and by last week signs of upturn were visible even through gray-colored glasses. With his predictions and counsel proved sound, Gabriel Hauge, 44, made a decision to return to private life. His new job: finance committee chairman of New York's Manufacturers Trust Co., fourth largest United States bank (after California's Bank of America, New York's Chase Manhattan, and First National City).

In his letter of resignation Hauge summed up the administration economic philosophy that he himself helped to mold over the past 6 years. "You have brought a badly needed reemphasis of some plain but oft-obscured truths," he wrote to Ike. "You have:

"Restated the traditional American belief in incentive and reward for individual effort and excellence;

"Stressed integrity of the currency;

"Reasserted America's vital interest in strengthening economic ties with other free nations;

"Remembered the rightful claims of tomorrow in the policy decisions of today;

"Shown how a firm floor over the pit of personal disaster can be built without disregard for our heritage of self-reliance;

"Reminded us that only sensible economics, not razzle-dazzle substitutes, can truly serve the ends of equity and social justice."

Church Services in Our National Parks

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. NEUBERGER. Mr. President, the greatest cathedral or temple anywhere on earth is in the magnificent American outdoors. What more appropriate place could there be for worship than amidst the most sublime handiwork of our Creator? From my own memories of camping as a boy, I can still remember the profound spiritual impact upon me of church services held on the shores of Spirit Lake, beneath the great glacial cone of Mount St. Helens, at YMCA encampment. The National Council of the Churches of Christ has been encouraging the holding of church services, sermons, Bible classes, and similar meetings in the grandeur of such wonderful national parks as Yosemite, Grand Canyon, Crater Lake, Yellowstone, and elsewhere. I can think of no more appropriate way in which to inspire in people a feeling of true reverence for the Almighty, than to have the privilege of worshiping in such a setting as America's woods and templed hills.

So that Members of the Senate and House can become familiar with this splendid encouragement of worship in the outdoors, I ask unanimous consent that an article from the New York Times of Sunday, July 27, 1958, by Mr. Marvin Schwartz, be printed in the Appendix of the RECORD. The appropriate title of this inspiring article is "Churches Under the Open Skies."

It is my hope that we of the Senate, and particularly those who serve on the Senate Committee of Interior and Insular Affairs, continue every effort possible to facilitate these plans to hold regular worship in the national parks of the United States, which will be visited this year by 63,500,000 Americans, seeking the inspiration of recreation in the vast American outdoors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHURCHES UNDER THE OPEN SKIES—MORE PARKLAND SERVICES IN NATURAL SETTINGS OFFERED THIS YEAR

(By Marvin Schwartz)

Every Sunday morning in national parks and at national monuments and memorial sites thousands of vacationing Americans pause in their holiday activities to participate in community religious services. This year it is expected that 125,000 tourists will take part in these interdenominational worship services, many of them held in outdoor settings of inspiring, majestic natural beauty.

The estimate, by the National Council of the Churches of Christ, an organization of many Protestant denominations, is based on the increasing number of vacationists to the Federal outdoor lands and to the growing facilities for worship. The services are held outdoors and in such chapels as those at Yosemite and Yellowstone National Parks. This year a new chapel has been constructed at Mount Rushmore National Memorial.

The National Park Service expects that 63,500,000 vacationists will spend some time in Federal parklands in 1958.

FULL PROGRAM

Religious services in the parks have been held for many years. Yosemite Park Church was organized in 1925, Sequoia in the Thirties, Grand Canyon in 1948 and Yellowstone in 1950. But it was not until 1952 that a concerted effort was made to develop a full program of church activities in the parks on an interdenominational basis. This was done under the auspices of the National Council. Last winter its park project came into its own financially with a grant of $50,000 from John D. Rockefeller, Jr., for its ministry program.

The National Council began its project of coordinating park church service, Bible classes, vacation church schools, and personal counseling in a small way in 1952 when it appointed a staff of 17 ministers and student ministers to serve in Yellowstone National Park. By 1954 the program had been expanded to 17 parks and a staff of 89, and this year 131 ministers and their assistants will be holding services in 25 of the Nation's federally administered outdoor lands from Big Bend, Tex., to Mount McKinley, Alaska.

IDEA FROM STUDENT

The national council program was initiated largely through the efforts of the Rev. Warren Ost, who conceived the idea of offering park personnel and vacationists a complete church program on a daily basis while he was a preministerial student in the winter and a bellhop during summers at Yellowstone. The Reverend Ost is now executive director of the national council park program.

The national council program covers a wide range of activities. In some parks there are several Sunday services held from sunrise to sunset, daily events such as services, Bible classes for vacationists of all ages, vacation church schools for children, campfire talks, hikes, impromptu shows, singsongs and counsel for park employees who come to the ministers for guidance.

The services held under the auspices of the national council are interdenominational. A minister may be of any denomination and he may include any or all denominations and sects. At present there are four full-time, year-round resident ministers, in Grand Canyon, Sequoia, Yellowstone, and Yosemite National Parks. In winter their parishes consist of forest rangers, park personnel, and others who live in the parks.

Roman Catholic masses are also held in some parks, including Yosemite National Park.

The resident ministers, as well as the vacationtime ministers and their assistants, are appointed by the council.

They are chosen by the council from a host of applicants, on the basis of health, education, and other qualifications. The assignment is described as "rugged," for not only do the student ministers carry on the religious program but some also have part-time jobs as bellhops, assistant managers in the hotels and park concessions, waiters, and truck drivers.

MILLION BY 1966

Mr. Ost predicts that, with the expected increase of vacationists to national parks, a million persons will attend park services by 1966. The National Park Service's early forecast of 80 million park vacationists by that year is expected to be realized much sooner, perhaps by 1960.

Two new areas have been added to the program this year: Devil's Tower National Monument in Wyoming, where a student minister conducts sunrise and evening services in the amphitheater, and Devil's Postpile National Monument in California, where services are being held by a guest minister on a regular basis.

Record and Achievements of 85th Congress

EXTENSION OF REMARKS

OF

HON. ALAN BIBLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1958

Mr. BIBLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two news articles on the record and achievements of the 85th Congress, one a very fine article from the New York World-Telegram and Sun of July 25, 1958, by Marshall McNeill, and the other from the Washington Post and Times Herald of today, July 28, 1958, by Roscoe Drummond.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York World Telegram and Sun of July 25, 1958]

"TEXAS TWINS" AT HELMS, CONGRESS SETS ALL-ACTION RECORD

(By Marshall McNeill)

WASHINGTON, July 25.—The record of this session of Congress—now nearing its end, with 8 or 10 major bills yet to go—already stands out as one of the most productive in many years.

Important measures, kicked around for years and given only a ghost of a chance last January, have been enacted. Defense has been strengthened, and laws passed to beef up our free world alliances. Recession remedies have multiplied on the statute books.

The record was achieved in the face of the fact that the Senate is almost evenly divided along party lines. The House division is wider but it is dominated in the clinches by a coalition of Southern Democrats and Republicans.

This session convened in the shadow of the first Russian sputnik. A recession was in full swing. World troubles were immense. Election year problems engrossed every Member of the House and a third of the Senate.

Anyone would have guessed it would be a session of grumbling and political haymaking. But bipartisanship has been its hallmark.

The two major figures of the session have been the "Texas twins"—House Speaker SAM RAYBURN and Senate Democratic Leader LYNDON JOHNSON.

Under their leadership, and with important Republican assistance in the crucial moments, here are the top accomplishments of this session:

NATIONAL DEFENSE

Defense reorganization, a proposal that generated a lot of heat and debate but was settled to the satisfaction of both Congress and the commander in chief, and which promises to streamline Pentagon and military command operations and perhaps eventually save money.

Creation of the new national space agency, an idea born in Congress itself and followed by House and Senate decisions to set up their own space committees.

Atomic facilities bill, with provisions for substantial increase in production of plutonium, and studies of new power reactor types.

Military pay increased, in the pattern suggested by the Cordiner report, intended to provide better inducements for military men and women to make careers in the armed services.

Authorizations for Navy construction, including atomic subs and a nuclear-powered destroyer, dispersal of Strategic Air Command bases money for missiles bases and accelerated missile research, development and production.

INTERNATIONAL AFFAIRS

Mutual security authorized again, with the problem of foreign aid appropriations still pending in the Senate. That body now has before it firm declarations by Defense Secretary Neil H. McElroy and joint chiefs Chairman Gen. Nathan Twining that we'd buy better and more defense by restoring House cuts of about half a billion in aid, rather than adding that sum to our military spending.

Exchange of atomic weapons information with our allies.

Reciprocal trade agreements extension.

GOVERNMENT REORGANIZATION

Admission of Alaska.

A new Federal agency to control and enhance the safety of civil aviation, yet to be OK'd in the House.

Budget reform, passed by both Houses with a compromise yet to be achieved.

Curb on the Supreme Court's rulings on the primacy of Federal laws over State laws, yet to be acted on in the Senate.

NATIONAL ECONOMY

Increased the debt limit by $5 billion, with another $8 billion increase in the works.

Acceleration of Federal public works.

Extension of Korean War corporation and excise taxes.

Two housing bills and an extension of Federal Housing Authority's ability to insure mortgages.

Highway construction bill, with some measure of control over billboards.

Community facilities lending bill, yet to be acted on by the House.

Small business tax relief, pending in the Senate.

Subsidies for domestic metals, pending in the House.

Relief for railroads.

Increase of postage rates to put the Post Office nearer a paying basis, plus pay increases for postal workers and other Government civilian workers.

Authorization for two new superliners.

AGRICULTURE

Extension of authority to sell farm surpluses abroad, to be compromised in conference.

LABOR, WELFARE

Senate has passed bill regulating labor welfare funds, which is also expected to clear House.

Social security extension, out of House committee, with House approval sure and Senate action likely.

Extension of unemployment compensation to jobless who exhausted State benefits, financed by Federal funds.

[From the Washington Post and Times Herald of July 28, 1958]

CONGRESSIONAL AUDIT

(By Roscoe Drummond)

IT'S A DO-WELL SESSION

In some ways Congress is like a 6-day bicycle race; it never looks good until the last few laps.

Congress is now racing through its last lap for as early adjournment in August as possible, and its record is looking increasingly good.

If the Senate repairs the wreckage which the House wrought on the administration's mutual-security and foreign-aid program largely by Democratic vote—and there is a better than even chance that it will—the accomplishments of this Congress will in the end have proved to be considerable and constructive.

This will mean that the 85th Congress will have been a boon to President Eisenhower, since it will have granted him the substance of all his major legislation.

This will mean a boost to the Democratic Party—which doesn't seem to need much of a boost—since the record will show that this Democratically controlled Congress has responsibly supported the President at critical points and that LYNDON JOHNSON's leadership in the Senate has been the principal factor in making this possible.

The record, which seems to me to justify these judgments, shapes up as follows:

Defense mobilization

The Pentagon reorganization plan, which some said had a shroud around it the day the President sent it to Congress, is now law. The Eisenhower-McElroy requests were 90 percent approved. This is a victory for the White House. It springs from the military prestige of the President and it reflects the

high regard which the Congress has for Secretary McElroy. The new law streamlines the chain of military command, gives the Defense Secretary authority more nearly equal to his responsibilities, and doubles the combined planning staff of the Joint Chiefs.

Reciprocal trade

The best extension of the Reciprocal Trade Act since its passage in the early thirties is in prospect. The House overwhelmingly voted a clean, 5-year renewal. After the Senate Finance Committee tore it apart and turned it into a nonreciprocal, nontrade act, Senator JOHNSON and Senator KNOWLAND joined to repair most of the damage on the floor of the Senate. Further improvements will almost certainly be made in conference and a 4-year extension is probable.

Mutual security bill

At this stage the economic aid size of the mutual security program looks as though it had been written to please Nikita Khrushchev. Nothing could be more welcome to the Kremlin planners than to see the appropriation slashed and the development loan fund cut by more than 50 percent. Democratic votes did the most to bring this about in the House and it will certainly be Senator JOHNSON's goal to put the program back together again in the Senate. The real test will be the restoration of the development loan fund to at least $600 million for the next year, for here is the heart of wise economic assistance, providing loan capital for sound projects which do not qualify for loans on strict banking criteria. Here is the mechanism for shifting the maximum amount of gift aid on a loan basis.

Alaska

The 49th State with Hawaii in line in the next Congress.

Space agency

Coordinates outer space research and projects. Passed by both Houses.

Uncertain bills

Federal scholarship bill has much support but is not yet on the floor of either House. The labor reform bill to fight racketeers and safeguard pension funds, though it passed the Senate 88 to 1, faces energetic indifference in the House from extreme conservatives who want a tougher law or nothing, and extreme liberals who want nothing. An omnibus farm bill, carrying forward the gains already made toward a freer and more prosperous agriculture, is in the making.

It now looks as though the President will have fared exceedingly well—and the country also. This has turned out to be a do well Congress.

Wisconsin Welcomes the New Unity of Its Labor Movement

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1958

Mr. WILEY. Mr. President, in the press dispatches from my State, I was pleased to note that the Wisconsin labor movement has now been unified.

After 21 years of division, the Wisconsin State Federation of Labor has united with the Wisconsin State CIO Council, in accordance with the decision, last Thursday, of a combined State convention.

Of course, both these State labor bodies have been part of the nationwide AFL–CIO since the two national federations merged in 1955.

Nevertheless, the knotty, detailed problems of unifying at State levels have continually engaged the attention of several of the State organizations, as in Wisconsin.

In Wisconsin, this process has now been completed—at least as regards the major policy decisions.

The new president of the AFL–CIO in Wisconsin is Mr. George A. Haberman, who has served as the longtime head of the State A. F. of L. George Haberman is a man of deep and forthright convictions, a man of integrity and courage.

The new vice president of the State AFL–CIO is Charles M. Schultz; and the new secretary treasurer of the combined organization is George W. Hall—both able spokesmen of organized labor.

State AFL–CIO board members from the State federation are:

Arvel W. Kinney, Joseph P. Maley, Clarence A. Seefeld and Gerald J. Enright, all Milwaukee area men, and Orla V. Coleman, Madison; John Grant, Racine; Leonard E. Peterson, Superior; Reno Plenge, Nekoosa; Lawrence C. Reno, Oshkosh; Giles A. Wierman, Kewaskum, and Paul Whiteside, Kenosha.

Board members from the State CIO are:

Walter J. Burke, Harvey Kitzman, John W. Schmitt and Peter Zagrodnick, all from the Milwaukee area, and Glen G. Kruger, Eau Claire.

I earnestly hope, as I am sure all friends of the Wisconsin labor movement do, that this will prove to be a most successful unity.

It represents, at the outset, well over one-quarter of a million union members, including 176,000 in former AFL unions, and 86,000 in former CIO unions.

Unity, in and of itself, will solve some problems, but it will bring up others.

A strong labor movement is, in any event, essential to a strong, healthy American economic system, especially in times of unemployment and inflation.

Labor provides part of the indispensable system of checks and balances which keeps our economy competitive and keeps us moving ahead.

At the same time, labor faces the obligation, along with management, agriculture, and other segments of America, always to recognize the public interest.

I wish the newly merged labor body success in serving that interest responsibly, along with the interests of the laboring men and women of my State.

Wisconsin's is a clean labor movement, an honest movement, and one which, fortunately, by and large has escaped many of the problems which have confronted the movements in other States—for instance, neighboring Illinois. But the Wisconsin labor movement faces political problems on which there are strong differences of opinion within and outside the Badger movement. I hope these and other problems will always be met in a free, democratic way.

I send to the desk excerpts from an article which includes biographical data on the three top officers of the Wisconsin AFL–CIO. The article was published last Thursday in the Milwaukee Journal. I ask unanimous consent that the excerpts be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

HARD TIMES SHAPED UNION CHIEF CAREERS—HABERMAN, SCHULTZ, HALL WENT TO WORK AT EARLY AGE OWING TO FAMILY FINANCES

Here are biographies of the three top officers of the Wisconsin State AFL–CIO:

PRESIDENT

George Arthur Haberman, 61, first president of the State's united labor movement, is constructed as ruggedly as the battleships on which he used to serve.

He is 6 feet tall, weighs 240 pounds and wears a size 18 collar. His constitution is cast iron and his endurance legendary. At labor conventions he can stay up half the night with his friends and still appear fresh as dew the next morning to preside.

Haberman's voice booms out of his barrel chest.

Born in Milwaukee, he was only 9 when he quit school because of family money problems (his mother and father had separated when he was 5) and got a job on a Sauk County farm.

Joined Navy, then Army

Haberman enlisted in the Navy at 13—one of the last of the boy apprentices. He was a coal passer, a fireman, and finally a chief petty officer.

His enlistment ended on March 1, 1917. On April 6, the United States declared war on Germany and 2 days later Haberman enlisted in the Army.

He was assigned to the field artillery, became an ammunition supply sergeant, was gassed and hit by shrapnel in France.

Haberman got out of the Army on May 1, 1920, because he wanted to get married and could not support a family on his $33 a month Army pay. He and his wife, Eleanor, have two married sons, Donald and George, Jr. They lost a third boy in World War II.

Haberman found work as a rigger on a construction job on Jones Island. In the fall of 1920, he went to work as a steel erector and joined local 8 of the Iron Workers' Union.

Appointment manipulated

He ultimately got into ornamental iron work and became a traveling field superintendent for a firm specializing in installing windows and elevator doors.

Haberman was elected treasurer of local 8 in 1922 and vice president of the Milwaukee Buildings and Construction Trades Council in 1926.

In 1929, Haberman was named city minimum wage supervisor, though he was seventh on the civil service list. By the time a circuit judge had ruled that Haberman's appointment involved "manipulation of the eligible list," he had been renamed and was in the clear.

By 1936, Haberman's duties of making sure that contractors doing city work adhered to union wage scales had become so limited by a depression-induced lack of construction work that he was given an additional job as field supervisor in the garbage department.

Haberman fills term

Meanwhile, in 1932, Haberman had become a part time special representative for the Wisconsin State Federation of Labor. He made speeches, negotiated and organized in his off hours.

When Herman Seide, the State federation's president, died in 1943, Haberman was

named by the executive board to fill out his term.

Haberman had formidable opposition when he sought election to the State federation's top spot in August of 1943. Opposing him with Rudolph Faupl, who since has become the International Association of Machinists specialist in international affairs, living in Washington, D. C.

Haberman, backed by the powerful building trades unions, defeated Faupl, 600 to 507.

Mounting pressure seen

The next year Haberman was opposed by Jacob F. Friedrick, now general secretary-treasurer of the Milwaukee Federated Trades Council. Haberman won, 722 to 579. He has not been opposed since. (State federation presidents have established an extraordinary tradition of survival. In 65 years there have been only four: Frank Weber, Henry Ohl, Jr., Seide and Haberman.)

At a point in life when many men are beginning to think of taking it easy, the pressures on Haberman are likely to increase. The first several years in the life of the Wisconsin State AFL–CIO will be ones of trial and tension. All in all, it is likely that Haberman will earn his $15,000 a year salary—and then some.

VICE PRESIDENT

Charles M. Schultz, 42, vice president of the Wisconsin State AFL–CIO, might have been a Lutheran minister.

He was planning to study for the ministry after graduating from Washington High School, but had to work instead. He got a job carrying coal off a truck, then as a cabinetmaker with a furniture firm, but was fired for union activity.

Schultz then went to work as a pick-and-shovel man with WPA. He led a strike of WPA workers and was fired.

Those were rough days for Schultz. He went on relief and finally became a refrigerator assembler. In 1940, he went to work at the West Allis works of the Allis-Chalmers Manufacturing Co. as a punch press operator and eventually became a die setter.

Headed CIO council

Schultz became recording secretary of local 248 of the United Automobile Workers in 1948 and the local's president in 1949. He was president of the county CIO council for 1 year in 1950 and was elected State CIO president in 1952.

Schultz is a man of extraordinary energy. As State CIO president, he evolved some ambitious plans. Some years ago he threatened to call a citywide general strike if a Norwegian motorship carrying clay for the struck Kohler Co. was unloaded here. Local CIO leaders, most of whom had "no strike" clauses in their labor agreements, were upset by the threat and told Schultz so privately.

Schultz was born in Sheboygan, moved with his family first to Denver, Colo., then to Casper, Wyo. The family came to Milwaukee when he was 10.

Schultz and his wife, Verna, live at 5666 North 60th Street. They have 4 sons and a daughter. Schultz is 6 feet 1 inch tall, weighs 225.

SECRETARY-TREASURER

George W. Hall, the State AFL–CIO secretary-treasurer, was everything from a farm hand to a decorating contractor before he first became a full-time union official in 1936 at the age of 32.

The only things about Hall's life more varied than his past occupations are his present hobbies.

He dabbles with oil painting; collects guns, stamps and coins; plays a violin, takes motion pictures; is a home handy man and has missed only one deer hunting season since he was old enough to carry a gun and that only because he was sick.

Helps support family

Hall was born on a farm near Millston (Jackson County), Wis. Hall's father died about the time that young George finished the 8th grade, so the boy worked to help support his family. He was an itinerant farm hand and milk condensery worker for a number of years and moved to La Crosse when he was 21 to work in a tobacco plant. He later worked in an auto parts factory, rising to foreman.

Hall had always liked to paint, so he went to Chicago to study decorating and worked at a mail order house. In 1926, he returned to La Crosse and started a painting and decorating business. He joined local 374 of the Painters' Union.

Hall soon became recording secretary of the painters' local, then its treasurer and later president. He was elected a delegate to the La Crosse Trades and Labor Council, became its president and in 1936 was made its general organizer, his first full-time union post.

Subsequently, he was elected to the board of the State federation and in 1951 became the federation's secretary-treasurer and moved to Milwaukee. He and his wife, Violet, live at 3530 North 54th Boulevard. Hall has three children by a previous marriage.

Hall's job keeps him away from home a good part of the time. During legislative sessions, he spends most of the week at Madison lobbying.

Hall is 54, 5 feet 11½ inches and weighs 190 pounds.

Pressures on Public Servants

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article by the Junior Senator from Oregon [Mr. NEUBERGER] entitled "When Influence Is Good—and Bad" which appeared in the New York Times magazine of July 27 be printed in the Appendix of the RECORD.

This article is especially timely in view of the current controversy concerning proper and improper influences of Government servants. The thoughts of Senator NEUBERGER on this subject, and his suggestions as to a code to help subdue and discourage the harmful and illegitimate use of influence in Government, deserve careful study.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEN INFLUENCE IS GOOD—AND BAD

(By RICHARD L. NEUBERGER)

WASHINGTON.—At sporadic intervals throughout their history, Americans have become indignant and alarmed over a fear that their Government might be riddled with the improper exercise of that subtle leverage known as influence. This apprehension extends today to the symbolic citadel of ultimate Federal executive authority, the White House itself. The principal assistant to the President of the United States stands accused of having used his great influence to secure special favors for a wealthy friend who had conferred upon him valuable gifts and other financial benefactions.

The episode has been made all the more sensational by the fact that the leaders of the present National Administration frequently raised the issue, during the political campaigns of 1952 and 1956, of influence pedding within the previous Democratic regime.

What is influence? And is all influence in government, ipso facto, bad?

As the Sherman Adams-Bernard Goldfine story has unfolded—and as the Harry Vaughan and Lamar Caudle tales were disclosed when President Eisenhower's predecessor, Harry S. Truman, was in office—it seems increasingly evident that the average citizen regards influence in government as something that bodes no good for the public welfare. The very word influence has for him an ominous connotation. It implies backstairs deals, whispered orders and the furtive passing of quid pro quo.

Webster's New Collegiate Dictionary provides this definition:

"Influence, n. * * * The act or the power of producing an effect without apparent force or direct authority; as, influence by suggestion * * * in current use, it often suggests conscious and, sometimes, underhanded power used in affecting a person or in effecting a result."

There appears scant doubt that the description of influence as being sometimes underhanded most fits the prevailing concept. And yet, a government free of all influence is probably what Americans, in their hearts, want least. One of the proudest boasts of an American citizen is that his Government can be influenced by public opinion, whereas theirs—meaning that of the Russians—is immune to such an influence.

And how is public opinion brought to bear on democratic government except through a complicated series of pressures and contacts, which can be defined accurateley in the aggregate as "influence"?

If a letter or postcard is sent to me by a Union Pacific brakeman in the upland town of Pendleton, Oreg., telling me to vote for the Smathers bill for the relief of the railroads, has he not attempted to influence my decision?

The average person would insist that this was a wholly appropriate use of influence, and of course he would be right. Yet one of my Senate colleagues from the Pacific Northwest has protested vigoroulsy against the manner in which he claims the railroads have tried to manipulate and dominate a letter-writing campaign among their employees in behalf of the Smathers bill.

It is easy to recognize and to condemn the improper influence arising from a direct conflict between an official's public duty and his private self-interest—as, for example, the contract given by former Public Buildings Commissioner Peter J. Strobel to his own firm—or the improper influence of gifts, loans, or favors from persons with a financial stake in the official's conduct of his public duty. This was exemplified in the recent investigation of the Federal Communications Commission that led to the resignation under fire of Commissioner Richard A. Mack. When such improprieties are uncovered, the public's judgment is swift and sure, and it is usually put into execution without much doubt or soul-searching about the nature of influence.

As a Senator who is elected to represent a definite constituency, on the other hand, I am conscious of the different aspects of influence that confront an elective representative, whose very functions are to be receptive to the expressed wishes of his constituents and, in turn, to apply his best judgment to influence governmental actions.

Unless we are to assume that our Government ought to operate in a vast antiseptic vacuum, acts of influence will probably continue to be universal. As these words are written, I am attempting to influence a department of Government, the Corps of Army Engineers, to give a firm in my home

community of Portland a contract to repair a huge floating dredge. Portland is an area of labor surplus, with widespread unemployment due to distress in the lumber industry. It is supposed to qualify for preference in Federal procurement. If I did not make this effort I feel sure I would be subject to criticism back home by Democrats and Republicans alike.

Senators undertake such chores for constituents nearly 365 days a year. They spend much of their time trying to influence veterans' hospitals to treat cases which may be borderline, to persuade the Immigration Service to admit relatives of constituents, or to convince the Social Security Administration that a constituent has been unfairly denied his full old-age annuity. And, so long as all residents of a State have equal access to a Senator for such intercession, can it be said that these examples of influence are wrong?

In the atmosphere of the disclosures regarding Sherman Adams and his telephone calls to the Federal Trade Commission it is undoubtedly second nature for one to contend that no private interest should be pressed upon these commissions by a Senator. But must a Senator remain mute if he believes that the FCC has arbitrarily denied to a community of his State the privilege of having a television outlet? After all, if the television license eventually is granted, a private firm unquestionably will operate it and profit thereby.

Furthermore, I might emphasize that since I became a Member of the Senate in 1955 I have glimpsed relatively little about the personnel of Government boards and regulatory bodies to persuade me that these men should be encouraged to function entirely free of congressional or Executive influence. In a distressingly large number of instances, commissions have been made the sanctuaries for defeated politicians of the party in power or for favored satraps of men still in office. Confidence on Capitol Hill in such appointees is not very enthusiastic, although the system rarely gets disturbed. Who knows when he himself likewise may be in need of a well-paying refuge from the political storms?

It is obvious to me that, in a democracy, we actually do not want our Government to operate unfettered by influence. When the cherry growers in the fertile Willamette Valley demanded that I help to curtail the President's authority to negotiate reciprocal trade treaties, they are using their not inconsiderable influence upon my vote in the Senate. And, although I disagree with them, their action is thoroughly legitimate and proper.

When might it become improper? If a cherry grower offered me a contribution for a future campaign? If another cherry grower promised to establish a fund to pay for my CONGRESSIONAL RECORD reprints? If my wife and I were entertained at dinner by these people? If they took us to Florida for a vacation? If I were threatened by them with political defeat because of my support of the reciprocal trade program?

At first glance, the answers to these questions may seem evident. The threat of retaliation at the polls is certainly a rightful attempt at influence in American politics—perhaps the most rightful and traditional of all. Probably the invitation to dinner can be considered harmless. But what of the other circumstances? Are they in the underhanded category? After all, campaign contributions are completely legal in this country. Indeed, leading journalists have estimated that it takes a fund of $200,000 to elect a Senator in an average State and at least $1 million in a populous industrial State. Can it be said that cherry growers should be bared from making donations to senatorial campaigns?

But, then, it will be claimed that surely a special fund for Senators is wrong. Yet the Vice President of the United States, when a Member of the Senate, had an outside fund to take care of extra expenses. The fund came from people with an interest in specific legislation. In fairness, it must be added that a few Democratic Senators have had somewhat similar funds to pay for their stationery and reprints. Could it be claimed that cherry growers desiring to influence legislative issues cannot contribute to such funds, while others are at liberty to do so?

I cite these complex hypothetical situations merely to demonstrate that, while it may be virtually second nature to proclaim that all influence in government is per se bad, it nevertheless might tax the sagacity of a Jefferson to isolate illegitimate forms of influence—under our contradictory standards and mores—from influence that is acceptable or even necessary in the public interest.

Today, Sherman Adams is in disrepute and Bernard Goldfine has fared no better. Their trouble stems from the fact that Mr. Goldfine gave Mr. Adams certain gifts, such as a rug and an overcoat, and Mr. Adams allegedly telephoned Federal agencies in quest of information or of lenient treatment for his friend. But what if Bernard Goldfine and his family had contributed $26,500 to the Eisenhower election campaign and Sherman Adams had used his influence with the State Department to have Mr. Goldfine named as our Ambassador to a strategic nation overseas? Would this have aroused equal furor or, indeed, any furor at all?

The exercise of influence to secure governmental decisions that might augment the beneficiary's pocketbook is understood by the public—and deplored. Yet, a comparative complacency exists over influence that obtains ambassadorships for generous campaign donors to the party holding the White House—appointments that might put an unqualified person in charge of American diplomatic relations in an area of the world where a breakdown of our intelligence and diplomacy could lead even to that ultimate disaster, global war.

An old couplet from out of British antiquity runs like this:

"The law locks up both man and woman
Who steals the goose from off the common.
But lets the greater felon loose
Who steals the common from the goose."

Influence in the crucial matter of public policy appears to disturb us infinitely less than influence directed toward private favoritism. The whole Nation can bristle—as it should—when the son of an influential figure is believed to have escaped military service, or if influence is alleged in the placing of a contract for caps to be worn by the Armed Forces. But what of the possible influence of oil and gas campaign contributions on the disposal of the coastal tidelands, of utility contributions on the fate of the water power site at Hells Canyon, of labor contributions on legislation drafted to regulate union elections? This kind of potential influence touches off few sparks; in fact, it is only rarely discussed.

It may be that, in the general realm of influence on governmental policy, it is simpler to focus attention on relative minutiae than on matters of cosmic significance. A key ambassadorship in exchange for cash on the campaign barrelhead may be beyond the public ken, because few citizens think of themselves in these terms. The yearning to reign over an Embassy is hardly universal. Furthermore, both major parties so often have used diplomatic posts to reward lavish contributors that an uneasy truce seems to prevail whenever the question is raised.

Because we do not actually desire a government emancipated from influence we must decide specifically what kind of influence is desirable and what kind will jeopardize our democratic institutions. Elected officials, in particular, dwell in an all-pervasive atmosphere of constant, neverending efforts at persuasion.

Everybody wants to sell them a cause, a program or a bill. The process goes on around the clock. They are approached by groups as diverse as the League of Women Voters and the High Commissioner of Baseball. In the name of democracy—1 man, 1 vote—Senators and Representatives should equably and cheerfully subject themselves to these influences:

Letters, telegrams, petitions, newspaper editorials.

Radio and television commentators.

Demands and recommendations by the executive branch.

Buttonholing by constituents and fellow legislators.

Telephone calls at all hours of the day or night.

Even committee hearings and actual legislative debate.

Likewise, in the name of democracy, Senators and Representatives ought not to be susceptible to influence of this sort:

Old friendships (1 highball, 1 vote?).

Campaign contributions ($1,000, one vote?).

Offers of future favors, legal as well as illegal (one Federal judgeship, how many votes?).

Personal self-interest as part of the decision at stake (1 share of stock, 1 vote?).

Threats of political criticism or attacks based on grounds other than the point at issue.

In the tempestuous hurly-burly of American politics, elected officials know that they must, for better or for worse, work out their destiny with the tools of oratory and other channels of communication to the electorate. But protection against improper influence within Federal administrative and regulatory agencies is more complicated. The career official's dependence on fragile civil-service laws makes him vulnerable to outside attacks which often can find a voice in Congress.

In any case, when the phone rings from the White House the administration official must yield. But how do we know whether what he executes is a private favor or a bona fide policy of the President? And how do we know whether the policy was hammered out within the administration on the anvil of facts and thorough discussion, or whether it originated in an effort to placate some intimate friend or contributor to the party exchequer?

The simplest answer to the question of legitimate versus illegitimate influence on administrative decision-making, whether by the President's staff or by Members of Congress, is that it may best be judged by whether or not it is done on the record. By this I mean that every intervention in any decision must be in writing, or reduced to writing for the record. Unrecorded oral attempts at influence—whether on the telephone, at the golf course or over drinks at a cocktail party—are fertile breeding grounds for charges of favoritism.

If the Senator or Representative or other official has to state his recommendation for a public record his reasons of necessity must be expressed in terms of the particular criteria of the public interest under which the decision is supposed to be reached. Threats and cajolery would vanish, for they are incriminating beyond belief in cold, hard, typewritten words. Think of what benefit such a requirement might have been to Sherman Adams himself in the episode which has so grievously embarrassed the

President and imperiled Mr. Adams' public career.

To begin with, it could have acted as such a restraint that Sherman Adams never would have exercised his influence at all in behalf of his benefactor, Mr. Goldfine. The very act of putting down in writing his request, for all the world to see, undoubtedly would have held to the barest minimum the exemptions or lenience that a man reputed to be as circumspect as Mr. Adams might seek from a Federal regulatory agency. And there now would exist no doubt or uncertainty over precisely how extensive was the favor the President's assistant sought.

And so, in my list of five major recommendations for a code to help subdue and discourage the illegitimate and harmful use of influence in government, I will begin with one which seeks to eliminate the cloak-and-dagger element of skulking oral fiats and directives:

1. The personnel of Federal administrative and regulatory agencies need the protection of a firm rule that forbids them to receive or consider communications not intended for the public record. Inasmuch as agency officials and employees cannot prevent members of the President's staff or of Congress from telephoning or writing to them, they could simply refer to the rule that either the message is made of public record or it will be given no consideration in the disposition of the case at issue. The use of influence will be much more moderate if it is on-stage all the time.

2. Enforcement and applicability of the Federal Lobbying Act should be greatly tightened, so that Senators and Representatives have a clearer idea of whom they are dealing with when efforts are made to influence pending legislation. Entertainment and gifts as deductible business expenses under the Internal Revenue Code might be reviewed, so that their use in lobbying could be discouraged. Chief Justice Earl Warren himself has warned from the bench that, unless lobbying operates in full public view, "the voice of the people may be all too easily drowned out by the voice of special interest groups seeking favored treatment while masquerading as proponents of the public weal."

3. Cabinet officers and other Presidential appointments, as well as Members of Congress, should have to make public annually their outside sources of items of income in excess of $100, including speaking or writing fees, travel expense payments, or similar emoluments. This is included in a bill I introduced early in June, with Senator JOSEPH S. CLARK, Jr., of Pennsylvania, as cosponsor. Bills along similar lines have been prepared by other Senators, such as CLIFFORD P. CASE, of New Jersey, and my Oregon colleague, WAYNE MORSE, while a bill by New York's Senator JACOB K. JAVITS proposes the creation of an Advisory Committee on Ethical Standards to aid in the enforcement of a tighter code of conduct for public agencies. Such legislation could safeguard the public against officials trying to occupy a dual role, and it would in turn protect officials from unjust suspicions.

4. As nearly as possible the legislative and executive branches of Government should be under the same conflict-of-interest statutes. This has been a festering source of irritation and hypocrisy for many years. The bill introduced by Senator CLARK and me would provide that Members of Congress and appointees of the President obey identical rules with respect to corporate equities, outside holdings, and similar matters. I think this might assure more fairness and equity in congressional inquiries into the lapses and peccadilloes of administrative officials. When investigations like those concerning Harry Vaughan or Sherman Adams are underway, many Americans become cynical over the fact that Congress seems to take the attitude of "Don't do as I do, but do as I say."

5. Finally, and most important, the dominance of large sums of money over election at the polls must be ended. All other efforts to curtail improper influence are swatting flies, while this would be draining the swamp. Can we reasonably expect no more gifts of coats or kitchen appliances when the highest officials in the land are free to accept practically unlimited quantities of coin of the realm in the form of campaign contributions? Is it not hypocrisy for a rug to cause a national scandal when cautious estimates place at $200 million the total amount of cash invested in political campaigns during the 1956 elections in all 48 States?

Our existing system of financing campaigns is doubly undemocratic, because it works adversely in both directions. It exerts an undue influence on the candidate who often must seek campaign donations from special interests. At the same time, the system also exercises an undue influence on the choice that can be reached by the voter himself, when he is denied an equal opportunity to see and judge competing candidates and policies.

The frequent great inequality in campaign funds, reflecting the judgments of powerful economic groups as to their stake and self-interest in the outcome of an election, actually corrupts the very fountainhead of democracy by intruding the undue influence of money into the area of each voter's free and equal choice. Can the citizen know and appreciate the merits of a candidate with a campaign fund of $25,000 who is opposed by an adversary with a campaign fund of $250,000? How can the candidate with the lesser sum reach the people with his message? Just one statewide mailing of a political brochure in a State like California costs something over $300,000.

There is one further step that can be taken to subdue and control improper influence in government. That is to make public service more attractive to young men and women of idealism, education, and character. It is dismaying when a Gallup poll discloses that some 70 percent of American parents do not wish their sons and daughters to enter politics. Many families are skeptical of the motives of politicians.

Yet most of the politicians of my own acquaintance are honest, overworked, and sincere. They frequently are trapped by unwise institutions that, like Topsy, have just growed. This refers particularly to the astronomical expansion of campaign-fund requirements during recent years. But, basically, there is no real substitute for personal merit and integrity. That is why our young people must take to heart the advice spoken to them a good many years ago by a great statesman of New York State, Elihu Root:

"Politics is the practical exercise of self-government, and somebody must attend to it, if we are to have self-government. The principal ground of reproach against any American citizen should be that he is not a politician."

George Edward Stringfellow

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief tribute to George Edward Stringfellow, who recently has become the leader of an important organization in the United States.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

RECORD OF IMPERIAL SIR GEORGE EDWARD STRINGFELLOW, IMPERIAL POTENTATE, A. A. O. N. M. S., 1958–59

(By Dr. Edmund L. Tink,[1] 33°)

The finest historical traditions of Virginia—deep, religious conviction, sterling character, flaming independence, sacrificial patriotism, and gracious hospitality—constitute the heredity and form the background of the formative years of George Edward Stringfellow, who was born in Reva, Culpeper County, Va., son of James and Elizabeth F. (Bowers) Stringfellow.

The first George Stringfellow to arrive in Virginia came from England in the year 1720. He brought with him the family coat-of-arms which his American descendants valued highly.

Five of George E. Stringfellow's early forbears preached the gospel as it was taught in the theological seminaries of the Protestant Episcopal Church. The Reverend Horace Stringfellow, who left Virginia to cope with the evils of Washington, D. C., as rector of Trinity Church, was described by Daniel Webster as "God Almighty's prosecuting attorney." Others were farmers, merchants, lawyers, physicians, and educators. Like many other early and courageous pioneering families the Stringfellows fought in their country's wars—from the Revolutionary through World War II. Many participated in various ways in the War Between the States; one being one of General Lee's most daring and dependable scouts, another being an educator during the days when Virginia was known as Military District No. 1.

Robert Stringfellow's retreat house, near Raccoon Ford on the Rapidan River in Culpeper County, Va., was, until it was burned in 1864, a gracious center of Stringfellow hospitality. Another ancestoral estate on the Rapidan has been in the family since it was built in 1832 by Thornton Stringfellow.

Our imperial potentate believes that the statement "Once a Virginian always a Virginian" is a true one, if not in geography, then certainly in terms of graciousness. To be his guest in New Jersey is to know Virginia hospitality at its best.

It was with this early background of historic patriotism and tradition that Noble Stringfellow began his productive years in New Jersey and built a modern noteworthy American career.

His outstanding achievements in business, his constructive independence in the affairs of government, his enduring contributions to civic life and to charitable and educational organizations, and his daily devotion to our fraternal activities constitute a record which is eloquent in its demonstration of his unusual qualities of leadership.

These qualities were recognized by Thomas Alva Edison, the wizard of Menlo Park, when he appointed George E. Stringfellow manager of his manufacturing firm's Washington office and 5 years later made him general manager of the corporation's largest business in West Orange, N. J. For more than a decade he was a daily business associate of Mr. Edison. He is now vice president of Thomas A. Edison Industries of the McGraw-Edison Co. and a

[1] Dr. Edmund L. Tink is superintendent of schools in Kerny, N. J. He is an executive member of the commission on higher education and a trustee of Syracuse University. He is active in professional, civic, service, and fraternal affairs. Dr. Tink was appointed by President Eisenhower a member of the International Organizations Employees Loyalty Board. He still serves on this Board, having been officially commended by the State Department for his activities in fighting communism.

director of a number of nationally known corporations.

Before coming to New Jersey Noble Stringfellow married Carrie M. Fearnow, a charming and vivacious young lady of Washington, D. C., who was born in Berkeley Springs, W. Va.

Noble Stringfellow is past president of the New Jersey Taxpayers Association and first president of the New Jersey division of the American Cancer Society; served 2 terms as president of the Kiwanis Club of New York City; served 2 terms as president of the Chamber of Commerce and Civics of the Oranges and Maplewood; served 4 terms as president of the board of managers of the New Jersey Home for Disabled Soldiers; represented Kiwanis International at the United Nations; served on the board of trustees of the Central Brick Presbyterian Church, East Orange, and Elberon Memorial Church, Elberon; and was former chairman of the finance committee of the Republican Party of New Jersey.

Noble Stringfellow is currently serving as a member of the board of directors of Indiana Technical College and holds membership in a number of professional organizations. He finds time for a heavy speaking schedule. His speeches are often editorialized, receive wide circulation, and many have been printed in the CONGRESSIONAL RECORD.

Noble Stringfellow has been the recipient of honorary degrees from various colleges in recognition of his many accomplishments: Doctor of humanities, doctor of fine arts, doctor of laws.

He received the citizen award for outstanding achievement in industrial statesmanship from the New Jersey Society of Professional Engineers; was made an honorary member of the New Jersey Medical Society, and was the recipient of the American Cancer Society award for his leadership and work in founding and supporting the New Jersey division of the American Cancer Society; and was cited by the Brotherhood Committee of Christians and Jews for bringing about a better understanding among the three religious sects.

During World War II he served as a member of several important committees of the War Production Board for which he received a Medal of Merit.

Our imperial potentate has received many honors from local communities, service clubs, and fraternal groups for his good fellowship and good works.

Noble Stringfellow was recently elected to honorary membership in the national chapter of Sigma Mu Sigma, an organization "dedicated to faith in the dignity of man and confidence in the integrity of youth."

In May 1958 he received the 1958 Academy of Medicine of New Jersey annual citizens award "for rendering extraordinary service to the health and welfare of the public."

While residing in Washington, Mr. Stringfellow was raised a Master Masion in Hiram Lodge No. 10, F. & A. M. He was exalted in Washington Chapter No. 2, R. A. M., and served as excellent high priest. He was knighted in Washington Commandery No. 1, K. T. He became a noble of the A. A. O. N. M. S. in Almas Temple.

He served Salaam Temple as potentate in 1947 and was unanimously reelected in 1948, the first potentate of Salaam to succeed himself in 43 years.

He is currently member of Hope Lodge No. 124, F. & A. M., East Orange, N. J.; the Ancient Accepted Scottish Rite in the Valley of Trenton, Trenton, N. J.; Crescent Temple, Trenton; Washington Commandery, No. 1, K. T.; St. Quentin Conclave No. 75, Red Cross of Constantine; Crescent Court No. 65, Royal Order of Jesters, and is an active member, International Supreme Council, Order of DeMolay.

Noble Stringfellow was elected to the imperial divan in Chicago, Ill., in 1949. He is an honorary member of 148 temples.

Among the clubs in which he holds membership are the Railroad Club and Kiwanis Club of New York City, Advertising Club of New Jersey, Duquesne Club (Pittsburgh), Montclair Golf Club, Montclair, N. J.

Those who know George E. Stringfellow agree that he is well qualified and prepared in terms of enterprise, experience, and energy for the leadership, arduous duties, and challenging responsibilities of the office of imperial potentate.

The Crisis in Lebanon

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Unlimited Dimension," published in the Wall Street Journal of July 28, 1958, dealing with the crisis in Lebanon.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN UNLIMITED DIMENSION

Before the United States intervened in Lebanon it was already generally understood in the world that this country was prepared to fight to save any "free" country attacked by Communist troops.

This has long been clear with respect to Europe and much of Asia. It was made clear regarding the Middle East in the Eisenhower Doctrine proclaimed last year. That statement promised military help for any Middle Eastern government threatened by overt aggression from a country controlled by international communism.

Now a fateful new dimension has been added to this already large commitment. Or so it will be if the only explanation offered so far for our intervention in Lebanon is allowed to stand unchanged.

President Eisenhower has explained that the United States put troops in Lebanon because it felt that otherwise no small nation anywhere in the non-Communist world would feel secure against overthrow of its government from any source, external and internal, Communist or otherwise.

The plain implication of that reasoning, if that is the reason for our action in Lebanon, is that the United States may henceforth intervene in any country whose government feels itself threatened from whatever quarter. The threat no longer has to be that of a Communist attack.

We think Americans might do well to reflect on some of the things this new dimension could mean for the future.

The United States Government believes, not without justification, that President Nasser, of the United Arab Republic, is busily trying to control many nations and areas of Africa—Libya, Morocco, Algeria, for example. Some people believe his ultimate ambitions may extend beyond the so-called Arab world and may embrace the whole continent of Africa.

Very well. Are we then to intervene every place a revolution allegedly instigated by Nasser threatens to succeed? If you perhaps think involvement in Lebanon—a country with complex internal political problems and a country not under direct attack from anyone—is messy, that is nothing to what it will be like if we start dropping troops into Ghana, for example, or Tanganyika. Sound fanciful? Perhaps; but it is also implied in our announced purpose in going into Lebanon.

Nor is that all. The threat to a legally constituted government need not be fomented by Nasser. If dissidents anywhere want to overthrow their government, that government can now appeal to us on the basis of Lenanon. And it might be noted that there are a lot of violent political dissidents in the world, especially in countries that have not yet developed political maturity.

But the picture is even broader than that; our succor is not confined to Africa and the Middle East. The potential expansion of our military involvement represented by Lebanon is, with the exception of the Communist empire, global. If called upon, are we to rush troops to the defense of any government anywhere that feels itself threatened from any source or for any reason?

This is, among other things, a curious position for a nation that came into being by armed uprising against a legally constituted government. It is one thing to try to grapple with the extremely difficult problem of Communist subversion, but it is quite another to try to protect any and all governments simply because they are governments.

There are something like a hundred nations in the world. Many of them are small, many have weak governments likely at any time to be toppled by revolutions. So make no mistake about it: We are going to have our hands full if we let the precedent of Lebanon establish the principle of unlimited intervention.

Need for a Thorough Discussion of United States Foreign Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. PROXMIRE. Mr. President, I have long felt that democratic government depends heavily on a public awareness of the problems facing the Nation. Indeed, such an awareness is often lacking in the field of foreign affairs, an important area of Government action which unfortunately tends to seem removed and overly complex.

Mr. President, it is of utmost importance that the public be offered a clear explanation and discussion of our foreign policy. Today, with our troops in Lebanon, and with the precarious world situation weighing so heavily on the minds of all of us, it is doubly imperative that the American people be given a full statement of policy by the administration.

A fine editorial from the Wall Street Journal of July 23, entitled "The Pitfalls of Silence," has been brought to my attention by Mr. Charles Manson, of Wausau, Wis. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PITFALLS OF SILENCE

It is over a week since the United States Marines were dispatched to Lebanon and in the intervening days Washington has been wrapped in a strange silence.

There have, of course, been many announcements and comments on the rapidly changing developments. But there has been almost nothing by way of official explanation or debate on what is still the central issue, the basic decision to intervene in the Middle East.

Congress has received one brief message from the President and the public, at least in some areas, has heard an equally brief statement read by the President on filmed television. Both of these dealt with the immediate moves, explaining that the Marines were sent at the request of the President of Lebanon to protect American citizens and the Lebanese Government.

But the President has not followed his previous practice, notably in the Suez crisis, of giving the public a complete and carefully reasoned statement of what the Government intends and why. The Secretary of State, moreover, has hardly been heard from at all.

Those in Congress who have doubts about what we are doing have been equally silent. Senator FULBRIGHT, of Arkansas, is one of the few Members of Congress to raise basic questions. The Democratic leaders in both Houses, for example, have used their influence to stifle questions; Speaker RAYBURN even went so far as to rebuke a Member of the House who started to make some criticisms of the Government's action.

Now it is possible to sympathize with the reasons for this silence. The President and his Secretary of State may feel themselves too busy dealing with rapid problems to have time for explanations; or they may feel it best not to explain. Those who have qualms about the action may feel under the necessity to rally around, to do or say nothing that might undermine confidence in the Government at a time when war threatens.

Still, it is a disturbing silence. Across the ocean, in the British Parliament, there were no such inhibitions. Prime Minister Macmillan, supporting the American action, went directly to the Parliament to explain in great detail why he did so. In fact, his presentation of the case for intervention is by far the best we have seen; it is calm, carefully reasoned and impressive.

Nor did Mr. Macmillan act as if questions about Government policy were improper. Mr. Gaitskell, the leader of the opposition, accepted his duty to ask questions. He made it quite clear that his party did not intend "to divide the House"; but he also made it clear that the policies of the Government were going to be thoroughly examined.

The result of that debate is that the members of the British Parliament and the British public are in a better position to understand all that is being done, and to judge it, than are Americans. And we cannot believe that the welfare of Britain is damaged by this kind of open debate.

On the contrary. In a country of freemen it is essential to real unity that those who lead explain to people carefully and thoughtfully the courses they pursue. People not only have a right to be told what is being done; they must understand why. And they cannot have that understanding if all questions, doubts, qualms and counterarguments are quashed out of fear that mere mention of them somehow constitutes an unpatriotic act.

There may be, as some would argue, some pitfalls in too much discussion of foreign policy moves. But there is a far more dangerous pitfall in silence when the United States is walking close to war.

Courage Has a Loud Voice

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, July 28, 1958

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Courage Has a Loud Voice," written by Helen Virden and published in the July 1958 issue of National Business Woman, the magazine of the National Federation of Business and Professional Women's Clubs, Inc.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COURAGE HAS A LOUD VOICE

(By Helen Virden)

Words throw long shadows and the militant echoes of brave men still echo down the years of history. But somehow through the years we have become suspicious of brave words. If we heard for the first time today the Gettysburg Address, the farewell words of Robert E. Lee or Patrick Henry's Liberty or Death speech, we would label them flag-waving. All of oratory seems glittering and sounding off if we do not look for the history behind the words. I strongly suspect that there were people in Patrick Henry's age who considered his flaming oratory as rabble-rousing and flag-waving because the listeners did not realize the words were making history.

Consider the Jeffersonian words of our Declaration of Independence, "We hold these truths to be self-evident, that all men are created equal." We mouth these words today as a part of our heritage, scarcely remembering their grandeur and all the heartache and the tears that went into making these words a part of our life. As George Washington once declared, "This liberty is going to look easy—when men no longer have to die for it."

America has always been the symbol of liberty and dared to raise her voice in defense of it. We have never kept silence before the crucible of the world's dictators.

These voices from our past are so recent our great-grandfathers could have heard them. We almost feel that we could ask "What would you do, Lincoln?"; "How would you vote, Jefferson?"

Words of men have triggered wars, toppled crowns, and bred revolutions.

Many weapons have been used to win battles. Many have been used in our perpetual war for freedom. The caveman had his homemade ax to protect the small cave that he set aside with a rock at the opening to call home. As mankind has become civilized he has used arrows and swords, daggers and muskets, bayonets and rifles, cannons and grenades, bombs and planes, guided missiles and rockets to fight wars. But the most potent weapon conceived by man is in the power of the pen, the words written and spoken by great men.

Perhaps the pen that gave the world the most courage was the pen of Tom Paine. It was Paine who gave George Washington the equivalent of the 10 regiments he so sorely needed.

Paine wrote when our Nation was at its lowest ebb. Later when armies had a taste of victory, setbacks were easier to bear but on that Christmas Day before Trenton, we had only defeat to remember. Washington's army had dwindled to 3,000 able men. Among his officers were defeatists and traitors. About one-third of this number were counter-revolutionists—fifth columnists we would call them today. Another third were ready to desert, happy to mind their own business and call an end to the bloody revolution. The remnant of brave men who remained true to their cause were faced with three enemies. They had their neighbors and Redcoats who had command of the sea, the Indians of the frontier, and the Hessians that were waiting like vultures across the river.

Even the courage of Washington flagged. He had to admit that it looked as if the game were up. Many of his men were deserting; he decided it had to be now or never, so he planned the attack. There was not even warm food or a glowing fire to bolster their spirits. All he had was the pen of Tom Paine, so he used what he had. In the bitter cold of that December Tom Paine had written "The Crisis" on a drum head by the light of the campfires of a retreating army. So he was in reality writing for those cold and hungry men; it was his answer to their often-asked question, "Can liberty be worth it?" Tom Paine was sure that freedom was worth fighting for. As he wrote, when a word struck him just right, when a thought came through strong and clear, he struck the drum with his fist and the sound went ringing through the December cold like the sound of the opening of a battle.

This hastily written pamphlet was rushed to the printer and then to the front ranks and George Washington caused the words to be read aloud to the soldiers waiting at Valley Forge on that cruel December night. These men were made of stern stuff and the words of Tom Paine were not flag-waving to them. They listened with brave hearts: "These are the times that try men's souls." Nat Griste read the words but every man could agree with them, "The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of their country." The men hearing these words felt a little steel running down their backbones.

To our ears the words of Tom Paine, "It would be strange indeed if so celestial an article as Freedom should not be highly rated," seem oratorically flowered and smack of triteness. But to the men listening at Valley Forge these words were a fire that warmed their hearts, and erased their fears.

Then the words of Tom Paine came to the ment in ringing tones from Nat Griste, "I love a man that can smile in trouble, that can gather strength from distress and grow brave by reflection. I thank God I fear not. I see no real cause for fear. I know our situation well and can see a way out of it." Here were brave words to flog the lagging courage and challenge the spirit of patriots. These soldiers took the words for their own. They, too, began to feel that they had no cause to fear and to see a flickering hope in a hopeless situation, and they won the battle that dawn.

Our history is crowded with valiant words. Fighting words that called out the best in men. Patrick Henry shouting "I know not what course others may take, but as for me, give me liberty, or give me death!" Strong words screamed from a fighting deck, "Don't give up the ship!" that brought us victory. There have been fighting words of

promised vengeance, "Remember the Alamo"; "Remember Pearl Harbor"; "I shall return". Churchill's voice was the voice of the warrier calling men to battle; Roosevelt's voice was the voice of a liberator, Eisenhower's words the reassurance of the dignity of man as he declared, "Freedom has not failed us, let us not fail freedom."

Words carried the story of liberty to all men. Words of learning took men out of the labyrinth of fear into the sunlight of today.

The words of America have been courageous words and that story of courage is still borne on the winds blowing from yesterday. When we let words like "I pledge allegiance to the flag of the United States of America * * * with liberty and justice for all," slip over our tongue, we groove a little deeper this pathway to our remembrance.

Sometimes these words that made history are blown from Cumberland Gap and you can hear that first tree going down and the cry of Daniel Boone against the lone wilderness. Sometimes it is warm words sunned by love, "With malice toward none, with charity for all," and it has come to us from a weary wind that carries a soft, sad sound and the weight of sorrow, "It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion."

Sometimes it blows with short gusts and we catch only fragments of the words, "fired the shot heard 'round the world"; "life, liberty and the pursuit of happiness", "My God! how little my countrymen know what precious blessings they are in possession of." Often it blows strong and sure and we can hear the voice of the Father of Our Country above the bickerings of those men framing our Constitution, "Let us raise a standard to which the wise and honest may repair."

Perhaps we of this age fear being thought sentimentar or perhaps we have lost something of the burning patriotism that enables us to see behind the words the great ideas of man and, not knowing, we call it flagwaving, when in fact it is a kind of glory when great men speak strong words and brave men listen.

International Rose Test Gardens at Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. NEUBERGER. Mr. President, my native city of Portland is justifiably proud of its famous International Rose Test Gardens. Portland, with its rich soil and cool nights, has proven ideal for the growing of magnificent roses of virtually all species and varieties. Under the vigilant care of R. C. Kalmbach, the able curator, the International Rose Test Gardens have become a legend to flower lovers all over the world.

In the New York Sunday Times of July 27, 1958, merited tribute was paid to Portland's International Rose Test Gardens in an article written by Miss Joan Lee Faust. So that Members of the Senate and the House may share in our appreciation of the oldest rose test gardens in the United States, which date back to 1917, I ask unanimous consent that Miss Faust's article, entitled "Portland's Pride," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTLAND'S PRIDE—THE INTERNATIONAL ROSE TEST GARDEN MAINTAINS HIGHEST STANDARDS

(By Joan Lee Faust)

PORTLAND OREG.—This is wonderful country for growing roses, a rosarian's dream come true. Days are warm and sunny, nights are comfortably cool. The rainfall is plentiful and the soil deep and fertile. Rosebushes respond with tremendous vigor. The flower colors are clear and bright.

A beautiful exhibit of northwestern roses can be seen in Portland's International Rose Test Garden—one of the oldest test gardens in the country. This 4½-acre display is a fine bit of landscaping, of which the City of Roses can be proud.

The setting alone would be hard to match. The garden is part of Washington Park and rests on a high hillside that hems the western edge of the city. Four broad terraces are cut into the slope. A visitor standing on a terrace can look eastward across the city to snow-capped Mount Hood, 50 miles away.

The four terraces of the garden are connected by wide steps. The banks in between are a perfect foil for floribunda displays and corners are accented with graceful weeping standard roses. The formal beds run the length of the terrace joined by grass paths.

BEAUTIFUL BLOSSOMS

Although the International Rose Test Garden is at its height in June and August there always is a fine display from summer through late fall. Again, it's the climate that keeps them going. To point up the vigor these roses achieve, plants usually are spaced 3 feet apart. Even then some are crowded. Easterners will recall that 18 inches to 2 feet is ample spacing for their plants.

Ten thousand rosebushes are planted in the test garden. Many beds are lined with established named varieties, but a great portion of the beds are devoted to the trial roses. The responsibility for care and record keeping of this vast test garden falls on R. C. Kalmbach, curator. He is a devoted rosarian and oversees the garden with a professional's eye. Weeds are heresy; faded blooms are hard to find and the borders and lawns are kept in tiptop condition. It is remarkable that Mr. Kalmbach accomplishes this outsized task with a modest three-man crew.

Tracing the history of the garden, Mr. Kalmbach explained, "This garden was established as a test garden way back in 1917. It is one of the oldest test gardens in the country, also one of the largest." Elizabeth Park in Hartford, Conn., also a test garden, was the first municipal rose garden. It has 14,000 plants.

THE INSPIRATION

The garden was the inspiration of three eastern nurserymen who wanted to have a garden where they might show their plants as well as test their performances. The park was established with the blessings of Portland's Bureau of Parks, the mayor, and civic officials. Trial rose entries were sent from all over the world. While leafing through the early records of the trial grounds, Mr. Kalmbach cited entry records for roses sent from England, Rumania, Czechoslovakia, Australia, Holland, France, Luxembourg, and this country.

Mr. Kalmbach went on to say that "today the rose hybridists of the world are striving to give home gardeners roses that are different, plants that will serve a multitude of purposes, so that gardeners may raise the kind of plants that pleases them most. With these needs in mind, hybridists are breeding for disease resistance, colorfast flowers, fragrance, and hardiness, so that rose growing will be practical for everyone."

Many of the foreign trial roses now come in through American hybridists who visit the European breeders and buy from them. These new varieties are sent to trial grounds to test their performance in this country. To some extent quarantine regulations have cut down direct imports. However, rosebushes still come to the test garden directly from France, Germany, Holland, England, and Canada.

The International Rose Test Garden in Portland is distinctive because it is the only rose test garden that issues its own awards. The plants are judged by six eminent rosarians in the Portland area. Their judging standards are rigid, considering the plant's vigor, floriferousness, disease resistance, bud form, foliage and flower color.

Any trial rose is eligible for the garden's certificate. Gardeners know that when a rose is selected for an award it will be especially suited for growing in the Northwest.

However, many roses of national garden fame have been honored with an International Rose Test Garden certificate. Among them are Chrysler Imperial, Ma Perkins, Independence, Carrousel, Peace, and Pink Favorite.

CERTIFICATES WON

This year three roses were given gold certificates: Kordes Perfecta, a hybrid tea; Little Darling, a floribunda, and an unnamed trial rose, 56–R–51. Silver certificates were presented to Governor Rosellini, a hybrid tea and Pinafore, a floribunda.

In 1938 the now famous All-American Rose Selections began testing rose introductions. This has been a great force to standardize the quality of roses. The Portland garden is one of 24 nationwide test gardens that screen the nurserymen's trials. These rose trials are watched over meticulously for an 18-month period and they are rated at 5 successive stages of growth. The scoring is set up on a point system and the totals are sent into the national board for tallying. A winning rosebush must excel on all 13 judging points.

HIGH SCORES

This means a lot of paper work for Mr. Kalmbach. When he sends in his scores usually they are higher than average—this climate again. Most of the trial roses perform very well.

There are some wrinkles to this, but they all smooth out in the final tallying scores. For instance, some roses are bred for hot, dry climates and these blooms fail to open or appear vigorous in the cool Northwest climate. Also, the winters are mild in this region. Tender roses come through successfully where they might be winter-killed if they were grown in colder climates. "But you know," Mr. Kalmbach reflected, "it's really the general public that is the judge of roses. They dictate what they want. The test gardens just screen the trials for quality, signified by the green AARS tag."

We Talk Big and Fly a Very Small Sputnik

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. EVINS.. Mr. Speaker, the accompanying article by columnist Drew Pear-

son is most challenging in thought. While all may not agree with Mr. Pearson in everything that he has to say, we must admit that he is a courageous and fearless news reporter and the things which he had to say in a recent article regarding American prestige sinking to a new low and suggested remedies to improve this condition is worthy of the thoughts of the Members of the Congress, officials of the State Department, and the Chief Executive and others.

The article follows:

PEARSON SAYS WE TALK BIG, AND FLY A VERY SMALL SPUTNIK—UNITED STATES PRESTIGE HAS SUNK TO A NEW LOW

(By Drew Pearson)

WASHINGTON.—The American public does not know it, but all last weekend and early this week there has been more diplomatic arm-twisting, more table-pounding, and more due bills collected by American diplomats at the United Nations than at any other time in American history.

The arm-twisting has been to drum up a two-thirds vote in the U. N. General Assembly to get a U. N. police force to take over for the Marines and thus get the United States off the hook and off the beaches in Lebanon.

The U. N. vote-getting has not been easy. Here is how some of the one-time friends and allies of the United States have reacted:

LATIN AMERICA

Argentina, Brazil, Chile, Venezuela, and Mexico have been cool. They argued privately that the good-neighbor policy has become a series of visits by American bigwigs and they are tired of smiling faces behind champagne glasses lifted to toast an empty policy. They point out that they are summoned by American-delegation office boys at the U. N. and told how to vote. They are telling American diplomats that they are tired of voting on instructions from the State Department.

EUROPE

West Germany, an anchor member of NATO, has been grumbling against American intervention in Lebanon. Norway, Denmark, and Belgium are irritated. The French, though for intervention, are most unhappy over the fact that some 1,800 of their troops have been anchored off Beirut for almost a week, anxious to get ashore, but unwanted.

ASIA AND AFRICA

Japan, which we have depended upon as our chief far-eastern ally, has been on the other side of the Lebanese fence. Saudi Arabia, which we have wooed and courted, sidestepped on O. K. for the use of the Air Force base in Dhahran, and refused to send oil to Jordan, even though King Saud, less than a year ago, had stationed his troops in Jordan to rescue King Hussein. Indonesia, India, and most African-Asiatic states are against the United States.

Remarked one Latin American ambassador: "How can I possibly explain to the people of my country why we should vote to take over for the United States Marines in a little country few of them have heard about and which they think is being occupied solely to protect American oil?"

In the last few days, some diplomats have been telling each other: "We've got to pitch in and save the United States. We can't allow her to lose face. It was bad enough to have Britain and France shown up as weak powers after Suez. We can't have the same thing happen to the United States."

All the above is not pleasant to contemplate. However, the American people would be guilty of keeping their heads in the sand if they did not wake up to the facts. And these unpleasant facts indicate how badly American prestige has slipped.

The question is—why? The answer, in brief, is that world leadership goes to—

1. The strong.
2. Him who leads.

On point 1, for the last 10 months it has been obvious that our onetime scientific and military supremacy has been going to the nation which was able to put a ton-and-a-half sputnik in the skies, and was able to test a long-range intercontinental missile as early as May 1957. In contrast, our ICBM, the Atlas, went pfffft at Cape Canaveral on July 19, the same day Khrushchev was demanding a summit meeting in brutal, bulldozing language.

On point 2, a nation which leads must not be a nation which waits. It must solve problems before they become acute. It must use imagination and inspiration. It cannot rely on bluster and talk. We have been talking big and carrying a little stick. We have been bragging about outer space, but beeping with a tiny sputnik.

We have been talking about massive retaliation and agonizing reappraisal when the world knew we weren't going to attack massively with the atomic bomb and the world has now come to realize that we have to undergo an agonizing reappraisal of our own policy of brinkmanship.

TIMES HAVE CHANGED

One policy we may have to reappraise is that of policing the world on the other side of the world—the equivalent of Russia landing troops near our border in Nicaragua, Guatemala, or Mexico. There was a time when we could do it without too much fear of the consequences. But Russia's intermediate range missile has changed that. She has them in quantity. We haven't.

These are some of the agonizing reappraisals we have to make. They are also some of the reasons why so much arm-twisting has been necessary at the United Nations to rally our old friends for a vote in the U. N. assembly. They are not pleasant facts. But it's best for the American people to know them rather than keep our heads in the sand.

Hells Canyon: A Billion Dollar Mistake

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. WEAVER. Mr. Speaker, it is apparent that a few political opportunists in Nebraska want to inject the controversial Hells Canyon issue into the coming election campaign. This is good, but Nebraskans are entitled to nothing less than the whole story and all of the facts about Hells Canyon which for the fifth time Congress has refused to authorize. The citizens of our State will not tolerate half-truths. Nor do they expect campaign issues to be discussed on that level by candidates hungry for votes.

I will attempt in the next several paragraphs to review this question in some detail and present what I know to be the hard cold facts about Hells Canyon.

Hells Canyon legislation calls for the construction of a Federal dam on the Snake River to provide power in the Northwest. In 1955, after Congress refused repeatedly to provide the money for a high dam at the expense of all the taxpayers, the privately owned Idaho Power Co. was granted, under Federal license from the Federal Power Commission, the rights to finance and construct in the Hells Canyon reach, 3 dams and to sell power from them for a 50-year period. Much-needed power will begin to flow very shortly from the first of these three units to be built and paid for by private enterprise.

The proponents of a Federal Dam still today want to drown out and destroy one dam which is nearly finished, the second which is in advanced stages of construction and the final unit expected to be started shortly. This would mean not only raiding the Treasury of over a half billion dollars for construction costs, but paying for some $80 million worth of work resulting from the stoppage of the contracts underway. It would mean that Congress would be responsible for the loss of over $500 million in potential tax revenues to our Government over the 50-year licensing period. It would mean endless litigation on a valid contract. It would foreclose an immediate power supply and cause disastrous shortages for this area. This all adds up to a billion dollar mistake.

Since Hells Canyon was to be built primarily for power, private enterprise consented to undertake and develop its power potential without cost to the taxpayers of America. A bipartisan Federal Power Commission, after exhaustive studies and hearings covering 5 years, licensed this private company and decided that the 3-dam plan was better than the plan proposed for a high Federal dam. It was a unanimous verdict by an expert body made up of Republicans and Democrats alike which since 1920 has had the responsibility to regulate and conserve the publics waterpower resources. This license has been held valid by the Nation's two highest courts, including the Supreme Court of the United States. Idaho Power is handling its own financing and surrendered voluntarily tax amortization certificates stating it would accept no concessions even though they were entitled to them under the law.

In comparing the licensed project with the proposed Federal dam, we find that the licensed project will produce about 5½ billion kilowatt-hours annually—slightly more than the Federal dam and will produce this power at a rate substantially lower than the cost of production in the Government proposed plant. Statements to the effect that the Idaho phosphate deposits are in the Hells Canyon area is about as true as saying Washington, D. C., is in the New York area or that Hastings, Nebr., is in the Kansas City area. The airline distance from the Hells Canyon site to Pocatello, which is the nearest phosphate bed and which city contains the nearest phosphate plant, is 274 miles. The large phosphate deposits are even farther away in the southeastern corner of Idaho. A new $5 million phosphate plant for the Farmers Co-op near Montpelier is 334 airline miles from the Hells Canyon site. Nowhere in the proposal to build the dam at Hells Canyon were any plans drawn for transmission lines

to carry electricity to the phosphate beds and the staggering cost of any such lines has never been estimated. The line loss alone would make such a proposal infeasible, but under no stretch of the imagination could the transmission be accomplished for less than 2 mills per kilowatt-hour. If you add 2 mills to the 4.3 million figure which the Bureau of Reclamation has given as the cost of producing a kilowatt-hour of electricity in the proposed Hells Canyon plant, you have a cost to the Government of at least 6.3 mills. This is substantially above the price being paid for electricity to operate the many electric furnaces treating phosphate rock in southeastern Idaho.

In discussing the interests of the farmers in a Federal dam in order to receive so-called cheap fertilizer, the public record shows that for 6 successive years the only 2 large farm organizations in the State of Idaho—the State Farm Bureau and the Grange—have each year gone on record as unalterably opposed to the building of the Federal project. Claims that by 1960 Nebraska farmers would be paying $750,000 more for fertilizer because the Federal project was not approved this year is hardly deserving of comment. Had Hells Canyon been authorized during this session of the Congress its building schedule as outlined by the Bureau of Reclamation called for completion at the end of the eighth year after start of construction, which would be 1967. This goal for completion was based on annual appropriations from the Federal Treasury at the height of construction in excess of $100 million per year.

Nebraskans should more properly have been reminded by these proponents that since the project has not been authorized the citizens of our State will save $3,364,000 as their pro rata share of the ultimate cost without considering the fantastic transmission lines probably closer to 400 miles in length because of the rugged terrain involved. Under a single Federal dam the generation of power would drop to a maximum of only 66,000 kilowatts for from 3 to 4 months every spring and summer while the reservoir is refilling. Just where the phosphate plants would get their electricity during this period is a mystery.

Nebraska's own Fred Seaton, Secretary of the Interior, had this to say about Hells Canyon in a letter to Dr. A. L. MILLER, former chairman and ranking republican member of the House Interior Committee:

If S. 555 is enacted, appropriations for the next 6 years for reclamation projects will have to be 60 percent higher than those appropriated for the last 6 years. Ten years ago, and from time to time since then, the Congress had a choice between Federal construction of the Hells Canyon Dam and the alternative of permitting the Federal Power Commission to license non-Federal construction. During this 10-year period the theoretical benefits dramatized by proponents of the high dam have been repeatedly considered by the Congress. The Congress did not heed their pleadings and refused authorization for Federal construction. Today we are not faced with a theory. As a practical matter, it would be impossible to justify to the taxpayers of the Nation, overburdened as they are, the extravagant waste of authorization of Federal construction at this time.

It is significant to note, in conclusion, that Democrats joined with the Republicans in the Interior Committee this year to bury this monstrosity. I hope for good. Until this became a political matter the vote in the House Interior Committee was unanimous by Republicans and Democrats in rejecting this proposition. Certainly wherever private enterprise can do the job and here is an excellent example, there is no justification for the Government getting into business.

Evidently the proponents of this legislation do not wish to adhere to a basic policy of Government enunciated by Abraham Lincoln.

The legitimate object of Government is to do for a community of people whatever they need to have done but cannot do at all, or cannot so well do, for themselves in their separate and individual capacities. But in all that people can individually do as well for themselves, Government ought not to interfere.

Making Cigarette Ads Tell the Truth

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled "Making Cigarette Ads Tell the Truth," which appears in Harper's magazine for August. During the recent extensive hearings and investigation conducted by the Subcommittee on Legal and Monetary Affairs of the House Committee on Government Operations we found that many cigarette ads were—and still are—grossly misleading about the effectiveness of filter tips as a protection against lung cancer. In this article I have set forth some of the findings of the investigation as well as legislative recommendations which I will introduce this week to halt this deceptive advertising which attempts to lead the American people to believe they are receiving protection from the ill effects of smoking which in fact they are not receiving:

MAKING CIGARETTE ADS TELL THE TRUTH
(By Congressman JOHN A. BLATNIK)

Most scientists now agree that cigarette smoking is related to both lung cancer and heart disease. The public is uncomfortably aware of this fact, but not sure what to do about it. Some people have stopped smoking altogether. In order to overcome this trend, much of the current cigarette advertising is misleading the public into thinking that it is getting a protection which really isn't there. And the principal device that is used is the filter tip.

I reached this conclusion after serving as chairman of a congressional subcommittee which recently investigated cigarette advertising. During the hearings I had a unique opportunity of listening to the testimony of some of the leading cancer experts and of examining cigarette advertising—particularly for filter-tip cigarettes. It struck me as significant that not one of the cigarette companies sent a witness to explain to our committee the value of filter tips, although they had representatives sitting in the audience during the hearings.

I was so alarmed by what I learned that I intend to introduce—at about the time this magazine reaches the newsstands—a bill to protect cigarette smokers from the misleading use of the word "filter" and from some of the other glaring misrepresentations in tobacco advertisements.

The whole problem started in 1953, when the first scientific reports on cigarette smoking and lung cancer were published. As a result, for the first time in 21 years, cigarette sales began to drop. The industry searched desperately for an answer and was not long in coming up with one: filter tips. About this time P. Lorillard had put on the market—and widely advertised—Kent, a king-size, filter-tip cigarette. Believing that the filter screened out the cancer-producing substances, smokers started the big switch. Sales of filter-tip Viceroys, long on the market, rose.

Other companies scrambled on the bandwagon. The American Tobacco Co., Liggett & Myers, Reynolds, and Philip Morris hastily introduced their own filter-tip models. And as competition between them increased and new scientific groups released new and more damaging findings on the connection between health and the nicotine and tar in cigarettes, tobacco advertising become more and more extreme in its claims.

Let us take, for example, the L & M campaign in the winter of 1954–55. Liggett & Myers ads declared: "No filter compares with L & M's pure, white, miracle tip * * * much more flavor, much less nicotine." The obvious question is, of course: Less than what? In 1955 tests showed that each regular-size L & M contained 1.5 milligrams of nicotine and 11 milligrams of tar.

Two years later, when the company was ballyhooing this miracle of the modern miracle tip, the new regular-size L & M's had an increase of 70 percent in nicotine and 33 percent in tar over the 1955 blend. This spring the company was advertising that you should "light into that live modern flavor and you get a more effective filter on today's L & M." But comparative tests made by Consumer Reports in April revealed that king-size L & M's had 17 milligrams of tar—scarcely different from L & M in March 1957, or in 1955, for that matter.

The ad is also misleading in another way. Most people who see the words less tars and buy the product do so in the belief that they are getting less tar than there is in other cigarettes. According to the same Consumer Reports tests, of 17 brands tested, 11 had less tar than king-size L & M. King Sano had 40 percent less; Kent, 30 percent less; Marlboro long filter, Old King king filter, Old Gold straight regular, and Parliament, 18 percent less; Philip Morris regular, Tareyton king filter, and Viceroy king filter, 12 percent less; Lucky Strike regular and Old Gold straight long, 6 percent less. To be fair, it must be noted that L & M—like many other cigarette firms—frequently changes both its filter and its tobacco blend. Tests published by the Reader's Digest in July (which are not comparable with the Consumer Reports tests, since a different method was used) showed that L & M contained substantially less tar than it had a year earlier—but that 15 other brands contained even less.

GIMMICKS AND FACTS

Right here I should perhaps make clear that I have no particular feeling about L & M's and that I am 100 percent for advertising, particularly in a Nation as large and heterogeneous as ours with its highly competitive economy. But I do believe that advertising should be honest, and as a Con-

gressman I intend to do whatever I can do to make it so.

As a matter of fact, some cigarette advertising is frank and to the point. A few months ago the Lorillard Co. advertised Old Gold straight (no filter) as "An all-tobacco blend of scientifically selected finest natural-leaf tobacco having a reduced tar and nicotine content under our previous tobacco." This is a perfectly straight-forward statement. The comparison is to itself, not its competitors, and it says in effect that, if you liked Old Gold in the past, you should like it even better now because it is milder.

I feel that if a cigarette has good points, like a relatively low or even moderate tar and nicotine content, it should stress them in its advertising, with the facts to prove them. This may seem a pretty self-evident proposition, but some companies seem to stress irrelevancies. Anyone glancing at the recent Philip Morris ads for Marlboro—the perpetual tattooed man's hand holding a cigarette—might think they were advertising tattooing. Anyone reading the copy would glean the information that "white smooth ash—the kind Marlboro has—is always a sign of good tobacco and a mild smoke." Marlboros have less tar and nicotine than some other brands. But the whiteness of the ash—which I have been told is due primarily to the composition of the paper, the physical form of the tobacco, and the method of construction of the cigarette—has nothing whatever to do with tar content.

Some advertising men would tell me, I suppose, that a gimmick sells more cigarettes than a flat statement of fact. My answer to them is that, in the present state of alarm about smoking, I would put my money on the flat statement.

Because it was not in our province, our committee did not go on record stating that there is a causal relationship between cigarette smoking, lung cancer, and coronary disturbances. But I and others who heard the testimony are convinced that there is. I am a habitual smoker, but since the hearings I have cut my smoking in half. More and more of the general public is becoming similarly convinced. This is what the cigarette companies are up against, and for their own good, as well as that of the public, I would urge them to remember it in their advertising.

THE SEAL OF APPROVAL

One series of ads that produced a storm of complaints, and resulted in the Federal Trade Commission's taking action, was the Parliament campaign featuring the United States Testing Co.'s seal of approval. Used in newspapers, magazines, and on TV, these ads were likely to mislead many smokers into thinking the cigarette had Government approval. Actually the United States Testing Co. is a private concern which does commercial testing for a fee.

Here, for instance, are the instruction to the cameraman for the filming of the TV commercial:

Zoom up pack. Lose bg. Crawl super: "The first filter cigarette in the world that meets the standards of the United States Testing Co."

Simultaneously Mike Wallace was saying: "From the Nation's leading independent research laboratory comes this important announcement: The first filter cigarette in the world that meets the standards of the United States Testing Co."

I submit that the use of the word "nation" is quite likely to make the listener think of the Nation's Capital, and the phrase "standards of the United States Testing Co." to confuse him into believing that Wallace was talking about the United States Bureau of Standards, a Government testing agency. And in addition to the very official-looking seal, the early ads also used a picture of the entrance to the United States Testing Co.—a facade that seemed almost as imposing as that of the United States Supreme Court. After protests, the picture was removed.

Complaints about the use of the words "United States Testing Co." and the seal have been brushed off with the retort that no one thinks the United States Steel Corp. is part of the Federal Government, so why should anybody be confused about the United States Testing Co.? The difference is obvious: The United States Government does not have a steel company, but it does have a testing agency.

THE HAMSTRUNG FTC

It is the responsibility of the Federal Trade Commission to protect consumers from false and misleading advertising, but it has been doing an inadequate job. In September 1955, it issued the FTC Cigarette Advertising Guide, a 7-point yardstick against which cigarette ads could be measured. Among other things it prohibited the use of medical approval of cigarette smoking and of phony testimonials.

For a time after the Guide appeared the companies limited their claims to tobacco taste, an apparently innocuous approach which turned out to have harmful effects. Taught that if a cigarette had a filter the smoker was therefore protected from harmful substances, many people decided that the only criterion for choice was taste.

But the Reader's Digest and Consumer Reports tests revealed that filter-tip cigarettes often contained more tar and more nicotine than the same companies' regular brands. After these were published, and after our committee hearings, which received widespread publicity, smokers began to worry again about the effectiveness of filters. The cigarette companies—apparently in a desperate countermove—began to make wilder and wilder claims in their advertising.

When complaints about the Parliament campaign decribed above reached the FTC, the Commission's specialists agreed that these advertisements were misleading. But 3 months later they were still appearing. FTC's excuse for its inaction was that the company had contract commitments, with magazines, newspapers, and TV programs for the ads; it apparently never considered that the copy could possibly be changed. These incidents—added to those revealed at our committee hearings—helped persuade me that legislation was necessary to safeguard the interests of consumers against the onslaught of a $5 billion industry.

I fully appreciate that the FTC at the present time is largely hamstrung. It does not have the right to obtain a court injunction against tobacco products, as it does against food, drugs, devices, and cosmetics. I shall, therefore, introduce a bill in Congress to include tobacco products under the injunctive powers of the FTC. This automatically will give the Commission the authority to apply to the courts for action against cigarette advertisers who refuse to cooperate. I shall, also, as I mentioned earlier, propose a bill regulating the use of the word "filter."

WHAT FILTER MEANS

The average smoker naturally believes that filters filter out injurious substances in cigarettes. Therefore he concludes that if a company puts out both a filter-tip and a regular cigarette, the filtered cigarette should contain less tar and nicotine than the regular. However, the April tests showed that, for instance, American Tobacco Co.'s filter tip—Hit Parade—contained 25 percent more tar and 29 percent more nicotine than its regular, Lucky Strike. The same company's king-size Pall Mall, which advertises that its greater length filters the smoke and makes it mild, has 25 percent more tar and 24 percent more nicotine than Lucky Strike. The Pall Mall ads which tell the reader that the end of the king-size cigarette filters while you smoke, don't mention that the more you smoke, the more tar and nicotine you get—particularly since Pall Mall had, as of last April, one of the highest tar and nicotine contents on the market. But American Tobacco Co. has recently been changing its product. According to the July Reader's Digest, Hit Parade now has one of the lowest tar and nicotine contents of any cigarette. However, Pall Mall still has very much more tar and nicotine than Lucky Strike.

How is the customer to know? As things stand now, he can't tell when a company changes its product. Even an effective filter can be made comparatively ineffective if the company uses a strong, heavy tobacco with a high tar and nicotine content. This is precisely what many companies have done with their filter cigarettes. But standards can be set up.

According to Dr. Ernst L. Wynder of the Sloan-Kettering Institute for Cancer Research, who has spent years studying the subject, the regular-size cigarette using fairly mild tobacco normally yields 18 milligrams of tar in its smoke when tested by the chloroform-extraction method. If an effective filter tip is added, this is reduced about 40 percent, to 11 milligrams—a significant reduction in cancer risk, Dr. Wynder says.

In my bill I am therefore stipulating that the word "filter" be prohibited in advertisements and on cigarette containers, unless the filter screens out enough of the tar and nicotine and results in a product containing no more than 11 milligrams of tar when tested by the chloroform-extraction method. At present this presents a special problem because there are more than three different methods of measuring tar and nicotine and each uses a different scale. This is as if one company used Centigrade and another Fahrenheit to measure temperature and no standard conversion factors were available. But both Government and industry are aware of these differences, and on February 26, 1958, the FTC called a 2-day industry conference to try to establish standard methods of measuring tar and nicotine. I believe that if the industry does not quickly agree to this, the FTC or preferably the United States Bureau of Standards which has facilities should establish a single standard of measurement. And it should become obligatory.

I am also introducing legislation to require all tobacco companies to state in their advertisements and on the labels of their packages "Not more than — milligrams of tar, not more than—milligrams of nicotine." And since manufacturers change their mixtures or filters from time to time, the law should provide that they change their statements of contents at the same time. Think of the smoker's dilemma. In June 1958, six different cigarettes simultaneously were being advertised as having the lowest tar content of any on the market.

Something is wrong and the Government is not doing a thing to correct it or to inform smokers of the truth. Therefore I am asking Congress to appropriate funds for the United States Bureau of Standards to start testing cigarettes for tar and nicotine. This will enable the FTC to learn which companies are being factual and which are not and should result in its taking stronger action against companies using misleading ads of this type.

My labeling legislation would prevent a cigarette like Winston from advertising: "Fine, mild tobacco, expertly blended and specially refined for filter smoking." According to the April tests, Winston was one of the strongest cigarettes around. It had 36 percent more tar than Parliament, 58 percent more than Kent. If it had to specify its tar and nicotine content, every smoker would know that. According to the July Digest tests, Winston is still highest in tar of all filter tips.

And finally, I shall recommend that a program to educate school children on the cigarette-health problem be conducted by the United States Public Health Service and the United States Office of Education in cooperation with the proper authorities in the States. A great deal of cigarette advertising is slanted toward young people. The Boston Sunday Globe has been running a comic strip: "Philip Morris, the cigarette with the man's kind of mildness, presents 'Duke' Handy."

While many adults admittedly read comic strips, they are primarily designed for the young, and in this series Philip Morris obviously is putting its arguments before lots of young people.

Camel's TV commercial has a similar appeal when it shows Lew Burdette on the mound at the Yankee Stadium while the announcer intones, "He likes the rich tobacco flavor of Camels. The agreeable mildness, that makes this cigarette so easy to get along with." In other words, Camels don't affect Burdette's breathing or his athletic prowess, and what's good enough for him is good enough for you.

I believe it is the duty of the Federal Government to warn boys and girls of the dangers of smoking. The Surgeon General of the United States has issued two statements on the causal relationship between cigarette smoking and cancer of the lung. But neither he nor members of his staff have done a job in bringing the story to the people. The United States Public Health Service has not a single movie, slide film, or booklet on cigarette smoking. This is in contrast to England, where warnings are issued to the general public.

It's not that I don't like cigarettes. I smoke them. But I believe the American public thinks its Government protects it from false and misleading advertising. The fact is, up to now, the Government has followed a largely hands-off policy as far as cigarettes are concerned. It's time for a change.

Opinion at the Grassroots

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. NEAL. Mr. Speaker, people back home are really doing some thinking these days. They are frightened at the growing national debt, wondering if the dollar will continue to buy less, disappointed that taxes are not being reduced, alarmed over trends toward bigger and costlier Government.

They realize national defense must be supported, but seriously question the wisdom of Congress making appropriations for additional domestic programs when, in the face of international unrest, our Government is already obligated for annual mandatory outlays approaching $20 billion.

They just do not feel that the Congress is exercising good fiscal judgment.

Of course, they are praying that we avoid being dragged into another world war, but they say it is high time our Government demonstrates a show of strength in its dealings with the Kremlin. They approve sending marines to keep face with Chamoun and agree that we should act through the U. N. as long as that body is capable of performing world service.

Members of Congress should not forget that the money they are spending is the people's money and their votes are being watched as never before.

Hawaii—Resource for America's Needs

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. BURNS of Hawaii. Mr. Speaker, on innumerable occasions during the 85th Congress, I have drawn the attention of the Members of the Congress to the invaluable and irreplaceable resource the United States of America has in the people of Hawaii. I have pointed out, also, that the great Union of States that is America needs Hawaii as a State, for only under the conditions of statehood can the resource of Hawaii reach its maximum potential and make its fullest contribution.

On January 23, 1957, I included for printing in the RECORD an article entitled "Man of the Pacific." Today, I draw the attention of the Members of the Congress to an editorial from the Honolulu Star-Bulletin of Friday, July 25, 1958, which quotes that renowned and dedicated American military leader, Adm. Felix B. Stump, whose international undertakings in the civilian field have contributed so greatly to the stability of our position in Asia.

Admiral Stump's words reflect the previous expression of President Emeritus Gregg M. Sinclair, of the University of Hawaii, who said:

[Hawaii] is the path of the United States into a future world understanding.

The man of the Pacific, in the words of Raymond Coll, editor of the Honolulu Advertiser—

is a fine, upstanding man of unswerving loyalty to and high pride in this his country, the United States of America.

Contrary to some expressions, the people of Hawaii are a reason for the admission of Hawaii as a State, not a reason against.

HAWAII: PACIFIC CATALYST

Adm. Felix B. Stump has an apt description of Hawaii.

"Hawaii," he said as he received an honorary degree at the University of Hawaii this week, "is a catalytic agent, bringing together and promoting understanding between Asians and Americans; showing free Asian people the kind of people we are and our desire to help them stand fast against communism. Nowhere in the United States can this be done except in Hawaii."

Admiral Stump, soon to retire after more than 40 years of naval service, paid special tribute to the University of Hawaii. He said:

"I feel honored in accepting this degree because the University of Hawaii leads in the lines I am interested in. I am interested in Asia; and the University of Hawaii, more than any other university, can help us in Asia."

The university campus is a remarkably apt meeting place for people from the American Continents and from Asia. Here they readily develop the personal understanding and friendship that marked American stewardship in the Philippines before the granting of independence 12 years ago—and the strong bonds of friendship which prevail today between the American and the Filipino peoples.

Visitors from Asia at the university often ask Americans of Asian ancestry why we don't work for independence of Hawaii.

"We're Americans," is the emphatic reply. Thus is born a better appreciation of Americans—the strong loyalty which living in the United States creates in United States citizens.

Admiral Stump's brief remarks emphasized the importance of our university in the future of the Pacific.

Many in Hawaii underestimate that importance. Men of Admiral Stump's training, experience, and insight do not.

Most Latin Americans Feel Nixon Visit Improved Ties

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. SPRINGER. Mr. Speaker, after the return of the Vice President from South America some weeks ago much was written in the newspaper about the tenor of the feeling in South America with reference to the United States.

Naturally, most opinions were formed as a result of some of the mobs which formed in two of the cities visited by the Nixon's. That kind of publicity is always spectacular and makes front-page news. The first real spadework that has been done to determine the sentiment of feeling about that trip is reported by Elmo C. Wilson, director, World Poll, as reported in the New York Herald Tribune of July 27. This report is based upon sentiment as reported interviews with people in those countries and the percentages of the people interviewed are set out. The number of people reporting more good than harm from that trip is indeed surprising—running as high as 72 percent in Bogota, Colombia, and Lima, Peru.

This report is most heartening to Americans who are of good will and had hoped that the people of South America felt the same toward them. I am happy to append the results of the poll in full. I am sure it will do much to correct some of the misrepresentations which have been made as to sentiment in South America toward the United States:

[From the New York Herald Tribune of July 27, 1958]

MOST LATIN AMERICANS FEEL NIXON VISIT IMPROVED TIES

(By Elmo C. Wilson, director, World Poll)

In all Latin American capitals recently surveyed, the number of people who regarded the Vice President's visit as a plus for relations between their country and the United States was greater than the number who say harmful effects from the visit.

NIXON SEEN EFFECTIVE

Despite the overt and organized actions against him, the Vice President's role as an ambassador of good will seems to have been effective in most of the countries he visited.

"The purpose of Mr. NIXON's trip was to serve as an ambassador of good will. In terms of creating a more favorable impression of the United States in this country, do you think his trip did more good than harm, or more harm than good?"

	Percent			
	More good than harm	More harm than good	Made no difference	No opinion, no answer
Bogotá, Colombia	72	9	11	8
Lima, Peru	72	15	7	6
Montevideo, Uruguay	63	20	11	6
Mexico City, Mexico	56	27	4	13
Caracas, Venezuela	47	36	11	6
Buenos Aires, Argentina	39	28	21	12

Surprisingly, since it was in Lima that the first eruptions of violence against him took place, the Peruvians range very high on the score of feeling that the trip was successful in creating a favorable impression of the United States. Many of the citizens of the Peruvian capital seem to have been impressed by his fortitude and his willingness to speak up to the hostile university students there.

VENEZUELA DUBIOUS

The Colombians also tended to be impressed by Mr. NIXON's ambassadorial achievements, while the strongest doubts in this regard came from the Venezuelans.

On this issue there were no important differences among the various age groups, although there were slight evidences that in some of the capital cities the higher income groups were more convinced of his effectiveness than were the poorer elements.

The following figures for Caracas and Montevideo are illustrative of this:

	Percent			
	More good than harm	More harm than good	Made no difference	No opinion, no answer
Among Venezuelans with—				
Higher incomes	54	30	11	5
Lower incomes	33	48	11	8
Among Uruguayans with—				
Higher incomes	71	15	10	4
Lower incomes	54	25	13	8

"The purpose of Mr. NIXON's trip was to serve as an ambassador of good will. In terms of creating a more favorable impression of the United States in this country, do you think his trip did more good than harm, or more harm than good?"

THE SECOND QUESTION

In five of the South American capitals visited by Mr. NIXON, and in Mexico City, which was not on his itinerary, World Poll interviewers asked cross sections of the population the same question. An Elmo Roper poll also asked a similar question of a representative sample of the United States population.

Of the countries visited by Mr. NIXON, the Colombians were least likely to believe their citizens shared the views of the rioters in the other capitals. And, indeed, there were no visible demonstrations against him in Bogota.

Asked in Latin America:

"While Mr. NIXON, who is Vice President of the United States, was on a recent visit to South America there were some violent demonstrations against him in Caracas and Lima. With regard to this country, do you think that those demonstrations reflect also the sentiment of most of the citizens of our country, of a sizable group, or of only a small number?"

Asked in the United States:

"On Vice President NIXON's recent trip to South America, do you think the demonstrations against him reflected the sentiments of most of the people there, of a sizable group, or of only a small number?"

	Percent				
	Most of the citizens	A sizable group	Only a small group	No one	No opinion, no answer
Mexico City, Mexico	4	17	39	29	11
Bogotá, Colombia	5	21	64	------	10
Montevideo, Uruguay	11	25	57	------	7
Buenos Aires, Argentina	11	30	48	------	11
Lima, Peru	14	18	64	------	4
Caracas, Venezuela	17	22	54	------	7
United States	6	23	58	------	13

Because the ringleaders of the demonstrations against NIXON appeared to have been drawn from university student groups, it is interesting to compare the attitudes of the various age groups in the six cities on this question:

"While Mr. NIXON, who is Vice President of the United States, was on a recent visit to South America, there were some violent demonstrations against him in Caracas and Lima. With regard to this country, do you think that those demonstrations reflect also the sentiments of most of the citizens of our country, of a sizable group, or of only a small number?"

	Percent				
	Most of the citizens	A sizable group	Only a small group	No one	No opinion, no answer
Among Mexicans—					
18 to 34 years	4	18	42	23	13
35 years and older	5	16	36	34	9
Among Colombians—					
18 to 34 years	5	30	54	------	11
35 years and older	6	14	71	------	9
Among Uruguayans—					
18 to 34 years	13	32	48	------	7
35 years and older	10	20	63	------	7
Among Argentines—					
18 to 34 years	12	25	49	------	14
35 years and older	11	33	46	------	10
Among Peruvians—					
18 to 34 years	14	18	63	------	5
35 years and older	14	19	65	------	2
Among Venezuelans—					
18 to 34 years	19	24	51	------	6
35 years and older	15	19	57	------	9

The younger Uruguayans, together with the Venezuelans under 35, were most willing to believe that most or at least a sizable group of their compatriots shared the feelings of the demonstrators.

TVA: Model for Democracy in Action Around the World

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. EVINS. Mr. Speaker, on July 24 the distinguished Representative from Minnesota, the Honorable WALTER H. JUDD, inserted in the Appendix of the RECORD an article by one of his constituents, a distinguished economist, Mr. W. S. Woytinsky, who reported on the attitudes of South Americans toward the United States. Among the significant comments made by this distinguished reporter was one on the deep impression which our own Tennessee Valley Authority has made on the thinking and the planning of our neighbors to the south. He points out also that it is unfortunate that so many Americans, including those in high places who visit Latin America, do not appreciate the significance and importance of this influence.

Mr. Speaker, this is true not only of the Lation American nations, but also of other nations throughout the world. Especially to the underdeveloped nations who are attempting to better their way of life, the TVA has been a model of democracy in action. In view of this, and believing that my colleagues will find it interesting to review the influence of the TVA around the world, I insert in the Appendix, under unanimous consent, an article by Prof. Henry C. Hart, of the University of Wisconsin, in a recent issue of the Progressive magazine, entitled, "TVA Around the World." The article follows:

TVA AROUND THE WORLD

(By Henry C. Hart)

"President Tito Visits 'French TVA,'" "A TVA for the Khuzestan Region," "Colombia's TVA Gets the Green Light"—these are among last year's headlines from the New York Times and Time which illustrate a semantic development Julian Huxley noted 15 years ago: "In almost every country, the initials TVA stand for the multiple use of a single river to meet all the needs of man."

That the initials of an American agency should be the word by which most men everywhere refer to intensive river development is itself something of an achievement. But has TVA given more than its name to foreign projects?

What we need to answer that question is the view of foreign political leaders themselves—the men who planned and legislated the projects. We can sample that view authentically in the case of India—a nation which is not underdeveloped in recording and publishing its political decisions. We need to go back 15 years to the genesis of India's TVA—the Damodar Valley Corp.

World War II was closing in on India in July 1943, when the Damodar River burst its levees. It is not a big river, but the flood struck at a crucial time, destroying 200,000 acres of rice, cutting the rails to Calcutta, and sharply intensifying the horrible Bengal

famine. The wartime British governor of Bengal was an action-minded Australian, R. G. Casey. To the Viceroy, Lord Wavell, he sent off a preliminary proposal to store the floods for hydroelectricity and irrigation. At one point, the proposal said flatly, "The nearest parallel to the Damodar is in the Tennessee Valley, United States of America." Lord Wavell's reaction broke directly away from the normal strategy of empire. Against the recorded opposition of British interests who would lose not only prestige but probably design and equipment contracts for the project, he cabled the British Ambassador in Washington to enlist a TVA engineer to come to this British colony, not on a flying consultant trip, but to stay and design the engineering harness for the Damodar.

The man who went was William L. Voorduin. In his 10 years at TVA he had had the opportunity to create for himself a then new profession—that of planning engineer. His skill was in the strategy, not merely the tactics, of using a river. In 6 months, as actual head of an Indian government agency, he had produced a plan for the unified development of the Damodar River. (That phrasing of the title is the hall mark of the TVA influence on river engineering around the world.)

Two years later Voorduin left India in the midst of the bloody Hindu-Muslim riots, afraid that his foresighted scheme was lost in the birthpangs of the new nation. Meanwhile, other men, sophisticated in Indian administration and politics, had taken up the cause. Dr. Sudhir Sen, sent from his post at the Indian Embassy in Moscow to Knoxville to observe the TVA model, went home to negotiate the agreement with the two Indian states through which the Damodar flows.

In 1948, when the bill creating the Damodar Valley Corporation reached the floor of the Indian legislature, shrewd minister N. V. Gadgil prepared for the job of steering it through by watching a TVA movie. He declared with pride, "The bill that is now before this House is modeled on the provisions of the Tennessee Valley bill which was passed by the Congress of the United States of America." The only criticism that argument drew was from an M. P. who thought a minor provision of the Indian bill departed needlessly from the language of the TVA act. Without making a search of the record of laws transplated among nations, I doubt whether there are many analogies to this situation. Dictators have imposed foreign models often enough, and former colonies have copied the mother country. But to search the world, and take from a country with which you have had no previous relations a pattern for an agency, an engineering plan, a form of intergovernmental relations, and a statute, is something else again.

The use India has made of the TVA example is, by now, greater still. Sudhir Sen, as general manager of the Damodar Valley Corporation, repeatedly used TVA experience in solving his agency's problems. Prime Minister Nehru consulted two former chairmen of TVA, Arthur Morgan and David E. Lilienthal. Andrew Komora, once construction engineer at Norris Dam, has now finished his sixth year, and sixth day, as chief engineer of the DVC. When he showed me around the half-finished Maithon Dam, speaking proudly of the young Indian engineers who had taken command, he chuckled over one curious TVA contribution. It was a large manganese-steel casting—the jaw of a heavy-duty rock crusher. After sizing the stone for Norris Dam's concrete, it was sold to Shasta in California. DVC had bought it at a bargain and it was still inexhaustible.

What are the sources of TVA's apparently limitless influence overseas? First, certainly its high visibility. In the first 10 years after the war, TVA had 12,000 visitors from 90 countries. Some were tourists. But others were men like the directors of the Corporacion Autonoma Regional del Cauca (Colombia); Ambassador Norman Makin of Australia, whose government had asked him to get information for the Snowy Mountains Hydro-Electric Authority; President Aleman of Mexico and his Secretary for Hydraulic Resources; the chief civil engineer of Uruguay's Rio Negro Project; Abdullah Khan, president of the Helmand Valley Authority in Afghanistan.

What these hundreds of engineers, planners, and lawmakers saw in TVA was a demonstration of work their countries needed. They saw how it had been done, not only the concrete and the steel, but the wording of the law, and the relaxed, man-to-man way the TVA-paid assistant county agent talked phosphates with a Cumberland Mountain farmer. The confidence of accomplished results, as well as the techniques, equipped them to win support for a TVA counterpart back home. Of all the things that are done to develop a poor country, dams, canals, and transmission lines have the greatest power to catch the eye—and the imagination. But the dramatic look of TVA has been given a limitless reach and a profound as well as a sharply defined meaning by the articles, books, and speeches of David E. Lilienthal and Gordon Clapp, and the band of professionally competent crusaders who worked for TVA.

The TVA's alumni are, indeed, the second great source of its influence abroad. The roster, far too long and varied to list here, certainly begins with Lilienthal and Clapp. In 1955, after each had served as an international consultant on a highly delicate mission, Lilienthal on the Indus River which flows from India through Pakistan, and Clapp on the Jordan, they teamed up with an experienced international investment banking firm, Lazard Freres, to establish the Development & Resources Corp. The TVA's pioneers set up shop at 50 Broadway, not many doors off Wall Street. Lilienthal put the new firm to work advising the Government of Colombia how it could exploit the water and power of the Cauca River to open up for farming and industry a beautiful valley high on the western slopes of the Andes. The first dam is almost finished now; it will send 90,000 kilowatts into the booming city of Cali in the heart of the valley. Flood control, irrigation for sugarcane and rice, a new highway down to the Pacific, and new industries are coming with the dam.

The Lilienthal-Clapp firm is now deeply involved in another TVA-like enterprise in Iran. Director Abol Hassan Ebtehaj, of the Iranian plan organization, called on their corporation in 1956 to see what could be done with the barren southwest corner of his country, Khuzestan, one of the hottest places inhabited by men. When the Lilienthal-Clapp plan came in, the decisive Ebtehaj promptly commissioned their firm to build it. He released $38 million of Iran's oil money to get the project started. The Development & Resources Corp. had never before accepted construction responsibilities. But just about now dirt will begin to move on the first Khuzestan dam in a gorge of the Diz River 150 miles north of the Persian Gulf. By 1962 it ill be storing water to irrigate an eventual 250,000 acres and generate 80,000 kilowatts of power.

As in TVA, the river will be made to serve a complex of agricultural and industrial developments already authorized to be built halfway down from the dam to the Persian Gulf. A refinery will process sugar from the irrigated plantations. To this now desolate spot will come a sure water supply from the reservoirs above, electricity from the thermal plants at the Abadan refineries (even before the dam is complete), and an enormous supply of piped-in natural gas. The first industry will be a plant turning out 9 million pounds of plastics per year. "From the petrochemical point of view," said Lilienthal last October, "this area resembles the gulf coast 25 years ago, except its resources are greater."

Coordinator of the international planning, design, and construction group in Iran is another TVA alumnus—John B. Blanford, Jr., former general manager.

The variety of jobs being done on river valley development abroad by other former TVA people is suggested by even a small sample:

Carl A. Bock, chief engineer, and from 1953, head of the Water Resources Authority of Puerto Rico.

James B. Hayes, chief engineer of the 1948 Palestine Commission, and Van Court Hare, engineer for the 1953 U. N. Advisory Commission, to plan development of the Jordan Valley.

A. A. Meyer, chief design engineer, and William J. Hayes, technical adviser, of the Cauca Valley Corporation in Colombia.

John P. Ferris, in general charge, to 1957, of the work in southern Asia of the United States International Cooperation Administration.

What is it that commends men like these not just as consultants or contractors, but to carry some of the responsibility of the governments that hired them? I think it is the demonstration of their TVA performance that they can put fine technical skills to the service of public aims and economic transformations that reach way beyond engineering.

"If we are successful here," Franklin D. Roosevelt told Congress in calling for TVA, "we can march on, step by step, in a like development of other great natural territorial units within our borders." What an ironic sequel this 25th anniversary of that eloquent message reveals. At least eight nations have "marched on" consciously to apply the lessons of TVA to their rivers; the United States Government, author of the experiment, has stood still.

I think it is possible, by examining the record of the export of the TVA idea, to come close to explaining this paradox. The TVA has been taken as a model, first, for rivers of middle size. Little watersheds are developed as features of agricultural or city water supply programs. The giants—the Indus, the Nile, the Rhine—like our own Ohio and Missouri, are too big to encompass with a unified development.

It is interesting, too, that the TVA idea has been most usable in semi-developed nations. To take the first steps from poverty and tradition a single-purpose development may stretch a nation's capacity—the old British Gezira irrigation scheme on the Sudanese Nile may seem a more appropriate model than TVA. It was a brutal aspect of the poverty of India when she attained independence that only in one small valley, the Damodar, could she afford a plan to stop floods. Her larger rivers had to be harnessed initially for irrigation and electricity, which would pay out in money, not lives. The highly developed countries of Western Europe, and even Japan, have found their river valleys already committed to earlier navigation, or hydroelectric development, or water supply, or irrigation, or transport, or industrial uses too far reaching to incorporate into a unified plan centered on the river. The TVA idea has fit best the hitherto slightly exploited river basins in nations (or even empires), having some means, some markets, and some qualified men, but wanting more.

So far, too, no country has built a second project of the TVA pattern. Perhaps the intensive development of a river, apace with the related development of forests, farms,

and minerals which can be tied in with it via hydroelectricity, or transport, or irrigation, or watershed protection, is inherently a pilot plant operation. Perhaps, as some entirely dispassionate American political scientists believe, the tie of the land and the minerals to the river that drains them is not made by nature, but by imaginative men. And once the value of the development of related resources has been demonstrated, nationwide programs tend to spring up—soil conservation, encouragement of small industries, rural electrification, adult education, and many more. The valley authority may have extended its lessons without extending its form.

Certainly there is one powerful force working for valley authorities abroad which is missing at home—the World Bank. The utterly pragmatic loan examiners sent out by bank chairman Eugene R. Black want irrigation, and kilowatts, and increased productive capacity for every dollar they invest. Projects for hydroelectricity, irrigation, and flood control, incidentally, have received more loans from the bank (close to $1 billion) than any other type of project. And so, as for the Damodar, the Cauca, the Ping River in Thailand, the Litani River in Lebanon, the bank itself has insisted on making its loan to a regional, businesslike agency—an agency like TVA. To quote Black's reasoning:

"The bank places particular stress upon the assurance of adequate management for the project. * * * In this connection, the bank has frequently insisted, in the case of Government projects, that their operation be entrusted to a quasiautonomous authority, or in some other fashion be insulated from political pressures and the rigidities of Government administrative procedures."

A satirist of contemporary ideologies would certainly find it amusing that these semideveloped countries, some of them addicted to a socialist ideal, have employed a businesslike, corporate organization for their new river development, while business-oriented America leans on the Bureau of Reclamation, the Army Corps of Engineers, and the National Rivers and Harbors Congress. There may even be some wry humor in the profligate manner in which the House and Senate Appropriations Committees still finance domestic dams, as compared to the hard-boiled insistence on results of an international "giveaway" agency.

Now Russia, and soon China, will be pushing us hard as exemplars to the nations on how to use the water in their rivers to break loose from the immemorial circle of poverty, wasted resources, and human frustration. The dams they are building now are bigger than ours, much bigger. So far, I hope this report makes plain, our example, our people, our ideas have been influential abroad at the level of policy decisions, and not just engineering techniques. In that we have a precious advantage over the Russians in any free country. Only satellite countries will do what we, or the Communists, say is good for them. Independent countries will accept what we have demonstrated is good for us.

Beneath their propaganda, Russia and China appeal to underdeveloped nations as models because they can say, "you can do it, too." What we prosperous Americans are liable to overlook is that the power of TVA to inspire men abroad, now that we are turning our backs on it at home, comes from precisely the same identification, carried one vital step further. What the engineers and the lawmakers from poor countries hear when they drive out of Knoxville and stop at a hillside farmhouse is, at bottom, this: "We were poor, too, 25 years ago. We always had been. You can do what we did using your river and your soil. But you can do it and keep running your own government, too. In fact, with your demonstration farms and co-ops, and your unions, and your new schools, you can do it better that way."

Who will teach the world the lesson for the next round of development: how to organize the programs pioneered by the valley authorities on a national scale, how to reach the little watersheds, how to plan for the giant rivers; more important, how to select and plan and make use of the whole gamut of resource improvements?

Electricity plus Soviets equals communism, said Lenin. We once showed men from every country that we could add something to electricity to equal democracy. Can we add it still?

TVA'S AROUND THE WORLD

Projects expressly modeled in part on TVA include: Damodar Valley Corporation, India; Helmand Valley Authority, Afghanistan; Khuzestan project, Iran; Puerto Rico Water Resources Authority, Puerto Rico; Corporacion Autonoma Regional Del Cauca, Colombia; Snowy Mountains Hydroelectric Authority, Australia; Papaloapan Commission, Mexico; Litani River Authority, Lebanon.

Threat of Global Warfare

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I place in the Appendix of the RECORD an editorial from the Vallejo (Calif.) Times-Herald.

This editorial is based on a very thought provoking book recently published by the National Planning Association. This book is entitled "1970 Without Arms Control" and it portrays graphically the growing danger of the nuclear arms race between the Soviets and the nuclear weapon owning nations in the free world.

THREAT OF GLOBAL WARFARE

The National Planning Association adds to our worries by reporting the dangers of global war are real and will continue as a menace for the next few years. The explanation of this gloomy outlook is that irresponsible parties may get hold of some nuclear bombs and accidentally set off the fireworks. The idea is not as far-fetched as it may sound; somebody will spill the beans so that anyone desirous of doing so may buy or build some deadly bombs.

Russia may have been playing fast and loose with realities when she charged the United States was flirting with war by sending bomb-carrying planes across the ice floes of the Arctic, but not alarmingly. Two may play at that game, and regardless of how skillfully the game is conducted, there always is danger that a trigger-happy individual may decide to risk the consequences just to see how much devilment a bomb explosion can create.

For some reason or other the Middle East seems ripe for a great upheaval. If we dare not trust the Soviets in a talk fest, how can we trust them to withhold bombs from the troublemakers huddled around the Mediterranean? A bomb released in any of the small nations could create a medley of wars that would challenge the rest of the world to extinguish. The only safe way to deal with nuclear bombs is to destroy them before it is too late, and the formulas for them.

The successful creation of A-bombs and H-bombs has created a new menace, one that posses the greatest destructive power in history. It is next to impossible to keep these instruments out of the hands of irresponsible persons, either the careless or the more willful who would carelessly, or with malice aforethought, shoot a few bombs just to see what would happen.

The outbreak in Labanon is characteristic of the thinking of the rebellions. The United States has granted several millions of dollars to aid Lebanon, on a matching basis, but that kind of aid is not enough. Lebanon demands more money and unrestricted management, under prospects of changing allegiance to Russia. Things are a little uncertain in the Middle East.

Cleaning Up Our Water

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. BLATNIK. Mr. Speaker, water pollution control and water conservation in general is largely thought of in terms of health, recreation, and even economics. Another aspect, although seldom discussed, is legal in character.

Recognizing this fact, the Federal Bar Association in cooperation with the Bureau of National Affairs, Inc., recently spnsored a briefing conference on water resources here in Washington. One of the most important papers presented at the cnference was delivered by Mr. Murray Stein, Chief, Interstate Enforcement Section, Water Supply and Water Pollution Control program, Bureau of State Services, Public Health Service. For a concise and yet detailed explanation of the Federal water pollution control program and its importance to the future development of our Nation, I highly recommment that every Member of the House read Mr. Stein's paper entitled "Cleaning Up Our Water":

CLEANING UP OUR WATER

In the long run no civilization is stronger than its natural resources. Our unique heritage of personal and economic freedom, coupled with the preeminent position of the United States among nations, is due to a fortunate coalescence of enlightened political philosophy, temperate climate, and abundance of natural resources.

Not the least of these resources has been an ample supply of water of usable quality in large segments of the country. Ample up to now—but with our explosive population growth and industrial expansion, including amazing new chemical and nuclear technologies, even the humid parts of the country are beginning to be pinched for enough water of usable quality. Thus we may be at the dawn of an era where water of usable quality will be this country's most critical natural resource.

In recognition of the need for action to protect this vital resource, more definite water resource policies are being evolved by the Federal Government, the States, and regional and local groups. Conferences such as this one provide the synthesis of ideas necessary for the establishment of these policies. Out of such meetings has come the inexorable conclusion that a water resource policy must be based on hard scientific facts

concerning the quantity, location, and quality of water.

First, we must recognize the basic fact that pending a breakthrough which will permit economical conversion of salt water to usable water on a large scale, this country today has just about the same amount of water as was available the day Columbus arrived. If we rely on natural phenomena, and make allowances for dry and wet cycles, we can be reasonably certain that the total amount of water will not materially increase or decrease in the future. Demands on this relatively fixed supply will become increasingly acute as our population, agriculture, and industry expand.

A second consideration is the fact that surface and underground waters are confined by nature to the drainage basins and aquifers in which they are found. Like the wind, water is restless and moves from place to place. In so doing, it does not respect political boundaries—local, State, or Federal. Therefore, any comprehensive water resource policy must be based on or take into account the drainage basin concept with its interstate aspects. Water resource policies also must take into account hydrological information on the character of underground aquifers.

Third, we must come to the realization that the assimilative powers of the Nation's waters to absorb wastes are limited. In many areas of the country the polluted conditions of our waters make them unfit for a variety of legitimate water uses. And we are awakening to the realization that having polluted water is almost as bad as having no water at all.

Taking these basic precepts into account, the objectives of a water-resource policy may be stated as: (1) The equitable apportionment of water among competing demands; (2) stabilization of water flows and water supply; and (3) improving water quality.

The equitable apportionment of water among often conflicting interests may well be one of the major social-legal-political problem areas of our time. Any determination in this area, however, necessarily will be shaped and limited by the quantity and quality of water available.

More and more of our water courses are becoming regulated streams. Water is stored and judicially released so as to prevent floods and yet provide adequate stream flows to meet a variety of other uses.

Along with effective regulation of water quantity there is the need for astute, comprehensive, water quality management to insure that water is in a condition which meets the requirements of legitimate water uses. These uses are:

(1) Municipal and domestic water supply; (2) industrial; (3) agricultural; (4) fish and wildlife propagation; (5) recreation; (6) navigation; (7) power development; and (8) transportation of wastes.

In addition, most important watercourses must be managed so as to prevent floods and protect the public health. Aspects which are often apt to be overlooked are those concerned with use of water within the stream bed, i. e., dilution of water for carrying away effluents from waste treatment plants, and the needs of fish and wildlife, recreation, and navigation. Significant in this respect are the increased demands the American people are making for active and passive water recreation facilities.

In recognition of the emerging national character of the problem of improving the quality of the Nation's waters, bills to establish a Federal water pollution control program were introduced in every Congress since 1900 (except the war years). It was not until 1948 that the first comprehensive Federal Water Pollution Control Act was enacted. This act was amended extensively by the 84th Congress, and the new Federal Water Pollution Control Act (Public Law 660, 84th Cong.) was approved by the President on July 9, 1956. This program is administered by the Surgeon General of the Public Health Service, under the supervision and direction of the Secretary of Health, Education, and Welfare.

The Federal act reaffirms the policy of Congress to recognize, preserve, and protect the primary responsibilities and rights of the States in preventing and controlling water pollution. The Federal role is to support and aid technical research and to provide Federal technical services and financial aid to States, interstate agencies, and municipalities.

The activities authorized by the Federal act to implement this policy include:

1. Development of comprehensive programs for control of water pollution in cooperation with other Federal agencies, States, interstate agencies, municipalities, and industries.

2. Encouragement of interstate compacts and improved State laws.

3. Conduct and support of research, investigations, and training, and dissemination of information.

4. Technical services to States.

5. Basic data collection and evaluation.

6. Program grants to States and interstate agencies.

7. Grants to municipalities for construction of sewage-treatment works.

8. Federal enforcement measures to abate pollution of interstate waters.

STATE LAWS

In order to carry out its statutory responsibility to encourage improved State laws, the Public Health Service in 1950 issued a suggested State Water Pollution Control Act. This suggested act was prepared after complete analysis of all existing State water pollution control laws of the States and Territories, and consultation with and comment from State water pollution control administrators, attorneys, municipal groups, industry, and others interested in the field. The principles of the suggested act have been used by 33 States in amending existing State water pollution control legislation or in enacting new legislation. This suggested act has become the basic document which is considered before State legislation is drafted. It should be emphasized that this is a suggested, not a model act. As water resources conditions and water pollution control problems vary from State to State, it is believed that the legislative approach to solving the problems must also vary. Further, use of these different approaches affords an opportunity to examine and test new techniques. The Public Health Service is now contemplating a second analysis covering all current State and Territorial water pollution control acts, which will be used as a basis for a revision of the suggested State act. We expect to have the revision ready for the 1959 State legislative sessions.

INTERSTATE ENFORCEMENT

Under the Federal act, pollution of interstate waters which endangers the health or welfare of persons in a State other than that in which the discharge originates is subject to abatement. Briefly, the interstate enforcement feature of the act may be considered in three major steps:

1. A conference with State and interstate agencies to determine the nature of an interstate pollution problem, the adequacy of treatment measures taken, and the nature of delays, if any. The conference may be called by the Surgeon General if he believes that pollution subject to abatement under the act is occurring; it must be called if the Surgeon General is requested to do so by a State water pollution control agency, or a governor of a State.

2. A public hearing, called by the Secretary of Health, Education, and Welfare, when a reasonable time has been allowed, following the initial conference, for the abatement of the pollution.

3. If remedial action is not taken, following the hearing, the matter can be referred to the Attorney General for court action upon the request of a receiving State or the consent of the discharging State.

In only one case has it been necessary to go to the hearing stage. In all other cases satisfactory action seems to have been achieved around the conferenec table.

We find that getting the State water pollution control agencies around the conference table with the persons responsible for an interstate pollution situation is a most helpful mechanism for getting results. It is on this device that we are placing our present enforcement emphasis. The conference idea is not a new one. As long ago as 1921, the judge in the famous case of *New York* v. *New Jersey*, stated: "We cannot withhold the suggestion, inspired by the consideration of this case, that the grave problem of sewage disposal presented by the large and growing populations living on the shores of New York Bay is more likely to be wisely solved by cooperative study and by conference and mutual concession on the part of representatives of the States so vitally interested in it than by proceedings in any court, however constituted."

In addition, we are preparing dockets on about 150 actual and potential intertsate pollution areas. With this information kept current we can: (1) Provide accurate information on this problem when it is requested; (2) use the data to guide our actions when enforcement becomes necessary; and (3) use the data to encourage the adoption of programs to prevent relatively clean areas from becoming polluted.

INTERSTATE COMPACTS

The Public Health Service also encourages the formation of interstate compacts by participating in negotiations and giving technical advice and assistance when requested. The compacts now in existence having substantial water pollution control functions are:

1. Interstate Commission on the Delaware River Basin: New York, New Jersey, Pennsylvania, Delaware.

2. New England intertsate water pollution control compact: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

3. Tristate Compact, interstate sanitation commission: New York, New Jersey, Connecticut.

4. Ohio River Valley water sanitation compact: Illinois, Indiana, Kentucky, New York, Ohio, Pennsylvania, West Virginia, Virginia.

5. Bistate development agency: Missouri, Illinois.

6. Intertsate Commission on the Potomac River Basin: Maryland, Virginia, Pennsylvania, West Virginia, District of Columbia.

7. Klamath River Basin compact: California, Oregon.

In the process of negotiation or approval are the following:

1. Tennessee River Basin water pollution control compact: Alabama, Georgia, Kentucky, Mississippi, North Carolina, Tennessee, Virginia;

2. Columbia River Basin compact: Idaho, Montana, Nevada, Oregon, Utah, Washington, Wyoming.

3. Arkansas River compact: Kansas, Oklahoma.

4. Red River compact: Arkansas, Louisiana, Oklahoma, Texas.

5. Little Missouri River compact: Montana, South Dakota, North Dakota, Wyoming.

More and more water apportionment compacts are giving consideration to inclusion of pollution control features as the recognition of the need for quality as well as

quantity of water becomes increasingly evident.

CONSTRUCTION GRANTS

Under the Water Pollution Control Act, construction grants are made for municipal waste treatment works in the amount of 30 percent of the cost of the project, or $250,000, whichever is less. An annual appropriation of $50 million is authorized for this purpose, up to an aggregate of $500 million. Grants are made to those projects which have been certified by the State water pollution control agencies as having priority over other eligible projects on the basis of financial as well as water pollution control needs. Therefore, this grant program is a cooperative Federal-State program and not a Federal-municipal program as are many other similar construction programs, in which the States are bypassed.

The construction grants program has been in actual operation for about 18 months. Examination of construction award data indicates that substantial progress in pollution abatement is being afforded through the stimulus of these Federal grants. After a sharp decline in the first quarter of 1957, the seasonally adjusted anual rate of contract awards for sewage treatment works construction has maintained an almost steady upward trend. By the end of March 1958, the rate had reached the highest level on record. This steady increase, in contrast to the declining trend for collecting sewers and waterworks, indicates the stimulation afforded by the construction grants program.

PROGRAM GRANTS

Up to $3 million a year is authorized for grants to States and interstate agencies for the extension and improvement of their water pollution control programs. Here are some interesting examples of progress made in 1957 in expanding State and interstate water pollution control programs:

1. Total personnel employed increased from 604 to 709, an increase of 17.5 percent.

2. Twenty-one agencies increased activities involving stream surveys.

3. Forty-four agencies bought major items of field, laboratory, and office equipment.

4. Sixteen agencies initiated or expanded research programs.

5. Twenty-six agencies added radiological surveillance to water quality programs.

RESEARCH

The belief seems to be widespread that the pollution control problems of the country may be solved by the provision of money and construction engineering know-how. Nothing is more misleading. The gap between what we know about the increasingly complex water pollution problems and what we need to know is growing yearly. By and large the answers we must have will come from research. Unfortunately, the growth of research in water supply and water pollution control has been relatively slow. Since the enactment of the Federal Water Pollution Control Act of 1956, the Public Health Service has been able to double its previous research program. The Sanitary Engineering Center in Cincinnati is carrying on research in three major areas of water quality management interest—water supply, sewage treatment, and industrial waste treatment. Although most of this research is carried out by our own people, some is done on contract with outside organizations when this is more efficient or when such organizations can provide personnel, equipment, or competency in highly specialized areas. In addition to direct and contract research, the Service makes research grants for projects proposed by qualified individuals and organizations that meet high standards of potential significance and validity.

TECHNICAL SERVICES

A major element of the Federal program is the provision of technical services on request by Federal, State, interstate, municipal, and other agencies. These professional services are given by our staffs at the Sanitary Engineering Center and in our regional offices. Assistance has been extended to all the States and Territories for consultation, laboratory investigations, and field studies. Projects referred to our Cincinnati laboratories for technical assistance are carefully screened for research value.

Recently, many States have been able to increase their programs and staffs to a point where they are able to solve most of their own problems. This is permitting the Service to direct more and more of its technical assistance effort into problems of an interstate and regional nature rather than into special problems of an individual State. An example of such a regional problem, now being studied by the Service, is the problem of pollution by natural salt deposits and by oilfield brines in the Southwest. This creates a regional water-quality problem in an area of already limited water resources.

To study this regional problem, we have initiated in the Arkansas and Red River Basins a water-quality conservation project in cooperation with the States and local communities of the area. Its purpose is to find ways of preventing and controlling brine pollution. In many ways this project is a pioneering operation that we believe will demonstrate the values of both immediate and long-range water resources quality management planning. The engineering facts from this study will permit Federal, State, and local agencies to build water-resources projects with assurance as to the water quality that will be obtained. In addition, the study will provide a water-quality inventory of two of the Southwest's most important resources—the Arkansas and Red Rivers.

BASIC DATA

In recent years there has been growing concern over the lack of basic information on the Nation's water resources. As a consequence, the Congress inserted in this act authority for the Service to collect and disseminate basic data on water quality.

We have initiated a long-range basic data program in which State and local agencies are actively participating. We are also establishing a national network of water quality sampling stations to provide data on trends of improvement or deterioration of water across the country. To date, 44 stations have been placed in operation and a national total of 250 to 300 stations is planned.

We are also bringing up to date our inventories of water supply, sewerage, and industrial waste treatment facilities. These are soon to be printed along with more than 30 tables of evaluated data taken from them. Also, the 1957 issue of our annual publication of contract award data is now in press.

Working with State and Federal agencies, municipalities, industry, conservationists, and other groups interested in water resource problems, the Public Health Service, under the Federal Water Pollution Control Act, is making a concerted effort to improve the quality of the Nation's waters. We believe that water quality management is an essential part of maintaining and preserving the water resources of this country for our people. And we believe that the adequacy of our future water supply will be assured when the American people have a full understanding of the relationship which this program of water quality management bears to the provision of adequate quantities of water.

Distinguished World Visitors Beat Path to TVA

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. EVINS. Mr. Speaker, the great influence of the TVA as a model of democracy in action has been pointed out by many observers of the world. TVA reports that it is receiving critical and intensive study by private and governmental organizations throughout the civilized world. Hundreds of persons are coming to the Tennessee Valley each year to see TVA in operation. More than half are from countries other than the United States. They come to see for themselves how this great American institution operates and to draw from it lessons for application to their own lands.

In this connection and under unanimous consent, I insert in the Appendix a tabulation and summary list of special distinguished foreign visitors and guests for the past 10 years to the TVA. The list follows:

These special visitors divide themselves roughly into two groups. The first and smaller one is composed of trainees, who come to TVA for varying periods, not infrequently months, and have opportunity for observation within the divisions in whose work they are particularly interested. The second, and numerically greater group, visits TVA for periods ranging from 1 day to about 2 weeks.

Almost every profession and interest is represented.

FOREIGN VISITORS TO TVA

Below is a tabulation of visits by noncitizens for the past 10 fiscal years:

Fiscal year	General study visitors	Trainees
1957	2,792	62
1956	2,071	59
1955	1,723	38
1954	1,756	35
1953	2,178	45
1952	2,068	26
1951	1,206	37
1950	1,006	57
1949	651	61
1948	686	57
1947	668	60

Some of the outstanding visitors include:

The Prime Minister of Afghanistan, Sardar Mohammed Doud, June 1958.

Ambassador Ben Aboud, of Morocco, March 1957.

The President of the General Assembly of Morocco, El Mahdi Ben Barka, March 1957.

The President of the Republic of Vietnam, Ngo Dinh Diem, May 1957.

The Deputy Premier of Burma, U Ba Swe, and Madam Ba Swe, December 1957.

Prince Albert of Leige, brother of the King of Belgium, in November 1955.

Prime Minister U Nu, of Burma, in July 1955.

Ambassador Gaganvihari Mehta, India, Ambassador to the United States, in May 1954.

Ambassador Eikichi Araki, Japan, Ambassador to the United States, in December 1953.

Ambassador and Mrs. Eban, of Israel, in May 1953.

Muhammed Qudrat-I-Khuda, Minister of Defense, of Pakistan, in December 1952.

Ambassador and Mrs. Feridun C. Erkin, of Turkey, in October 1952.

Adm. Renato de Almeida Guillobel, Secretary of the Brazilian Navy, in September 1952.

Former Prime Minister Hans Hetoft, of Denmark, and Ambassador Henrik de Kauffmann, of Denmark, in July 1952.

Queen Juliana and Prince Bernhard, Netherlands, in April 1952.

Prime Minister David Ben-Gurion, of Israel, in May 1951.

Prime Minister Joseph Pholien, of Belgium, in April 1951.

President Gabriel Gonzales Videla, of Chile, in April 1950.

Dr. Franz Bluecher, Vice Chancellor, of West Germany, in February 1950.

Prime Minister Pandit Jawaharlal Nehru, of India, in October 1949.

President Enrico Gaspar Dutra, of Brazil, in May 1949.

Right Honorable Hector McNeil, British Minister of State, in April 1949.

The Khan of Kalat, ruler of Kalat, Pakistan, in April 1949.

Prince Charles, Regent of Belgium, in April 1948.

Abdel Meguid Pasha Saleh, Egyptian Minister of Public Works, in July 1947.

Prince Seif Al-Islam, Abdullah Hamiduddin, of Yemen, in July 1947.

President Miguel Aleman, of Mexco, in May 1947.

Tribute to Dr. Gabriel Hauge

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Evening Star of Monday, July 21. It very appropriately commends an able public official of the Eisenhower administration, who, after 6 years of devoted service, is now returning to private life. I have a very high regard for Dr. Gabriel Hauge. His counsel and guidance through a difficult period in our country's history have been of tremendous value to the American people.

I wish to join with his many friends in offering my congratulations and best wishes to Dr. Hauge.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 21, 1958]

DR. HAUGE'S SERVICE

This has not been the easiest imaginable period in which to serve as a Presidential special assistant for economic affairs. For one thing, it has become almost axiomatic in the public mind that the Government should, or at least can, manage the national economy in a way to assure a constant and lovely prosperity. When it became evident last year that the business turndown was going to be of more than a few months duration and probably more severe than most recent recessions the pressure inevitably grew for the Government to do something. Just as inevitably, from some quarters there was pressure to do nothing.

Dr. Gabriel Hauge was in the spot where his counsel to President Eisenhower was a major element in administration policymaking. In simplest terms, the policy was a middle of the road one—holding the line on taxes, refraining from gigantic public works, but accelerating the flow of expenditures which already were planned over a longer period. Dr. Hauge himself, attributing the course to the President's own judgment, referred to it as "sensible economics, not razzle-dazzle substitutes." In answer, Mr. Eisenhower called it "your own economic philosophy."

There is evidence, in any case, that the economy has turned back uphill and that the policies followed are entitled to some of the credit. In this circumstance, it seems fair to transfer a share of this credit to Dr. Hauge and to wish him well in the private banking career he has decided to undertake.

National Defense Education Bill To Come Before the House

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. BOLAND. Mr. Speaker, I want to commend Chairman CARL ELLIOTT and members of the House Subcommittee on Special Education for drafting the national-defense education bill which will soon come before the House for consideration.

This is the first time that legislation to provide scholarships and loans for well qualified but needy students has been reported out of committee in the House, although some of us have been pressing for such a bill for a long time. Shortly after taking my seat as a Member of the House in the 83d Congress, I filed a bill which would establish a Federal scholarship loan program. I filed the bill again in the 84th Congress and in the 85th Congress, the latest bill number being H. R. 95. I am very pleased to know that the House Education Committee has incorporated my scholarship loan feature into the National Defense Education bill.

Mr. Speaker, since I filed H. R. 95 in January 1957, the need for a broader Federal scholarship program has been sharply brought into focus by the scientific advances made by the Soviets with the launching of their first earth satellite. As I told the members of the Education Subcommittee in January, the problem of financing higher education for the vast number of exceptionally bright American high-school graduates transcends all of the other problems with which this Nation is faced because of the cold war.

I think that these young people should be given the opportunity to develop their intellectual potential, not only for their own benefit, but for the benefit of their growing country and the free world. If the United States is going to remain ahead of the Soviets in the present race for survival, it cannot afford to lose its vast reservoir of brainpower in the fields of engineering, science, and the humanities merely because these young Americans cannot pay for a college education.

To meet this emergency, Mr. Speaker, I think that the Federal Government has now got to establish some direct Federal scholarships and student loans for young Americans who have achieved brilliant records in private, parochial, and public high schools. However, as a permanent program, I am still in favor of a Federal scholarship revolving fund from which loans can be made to students sincerely desiring a college education in the years ahead.

Mr. Speaker, I want to emphasize again that I am wholeheartedly in favor of the national defense education bill and will vote for it when it comes to the floor of the House. I certainly hope that the Rules Committee will grant a hearing on this legislation soon and clear the measure for House action.

The Crisis in the Middle East and Our Declining Influence in International Relations

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a newsletter commenting on this Nation's declining influence in international relations. The newsletter follows:

THE CRISIS IN THE MIDDLE EAST AND OUR DECLINING INFLUENCE IN INTERNATIONAL RELATIONS

The action of the President in sending American troops to Lebanon in the Near East is an action fraught with grave dangers and consequences. But the failure to act would have indicated weakness on our part and the President's decisiveness and forthrightness has undoubtedly won the support of a majority of our citizens.

Our Nation is committed both legally and morally to help our friends and allies maintain their independence and resist Communist aggression. The murder of the leaders and citizens of Iraq and the coup to take over the Government of that country were merely the latest and most extreme of a whole series of Communist-inspired moves to take over the Arab nations 1 by 1. To fail to prevent this movement from spreading would be to surrender and to yield to Communist aggression.

American troops were sent to Lebanon at the request of the Lebanese Government and following our country's promise to provide such assistance when needed and requested.

Our failure to live up to this commitment would in effect be telling the entire world—friends, neutrals and enemies alike—that our solemn pledges are empty words. The President's action, therefore, should reassure our allies and friends and strengthen their own determination to preserve their independence and to resist Communist infiltration.

In view of the current development in the Middle East it is appropriate to review briefly our international standing at this time. One of the most dismaying developments of recent years has been the steady loss of confidence and respect our Nation has suffered throughout the world.

As we know, the President has just returned from Canada on a mission of trying to restore the cordial friendship and understanding we once enjoyed with our neighbor to the north. A few months ago, the Vice President, on a neighborly good will mission, was jeered and stoned in several South American countries where once we enjoyed the greatest good will as the result of Judge Cordell Hull's good neighbor policy. In the East, about the same time, the Republic of Indonesia which was established with our help and encouragement, seems today to trust us far less than the Communist Chinese. In Africa our libraries have been destroyed. In the North Atlantic the Parliament of Iceland has formally requested us to recall our troops stationed there for mutual defense. England and France did not have enough confidence in us 2 years ago to consult with us or even to inform us when they landed troops in Egypt. Now we have witnessed the convulsions in the Near East where the Arabian peoples, who once looked to us with hope, are turning against the United States.

The President's action now in living up to our solemn commitments will not win the complete approval of all. But it evidences a return to positive leadership and can help us win back the respect and confidence of the free world providing America remains constant in our friendship and our devotion to democracy.

This has been the purpose of the mutual-security program. The mere spending of money under this program will not alone win us true friendship. Fewer dollars and more understanding of the needs and problems of other nations and people would do a far better job.

As a matter of fact, it can be said that the crisis in the Near East is the result of manipulating foreign-aid funds without real understanding. It will be recalled, that Egypt had a dream of lifting its economic conditions by building a TVA-like development on the Nile River. We encouraged them in this great plan and promised help in financing the building of the Aswan Dam. Then in a momentary spirit of anger our State Department withdrew our offer of help. Egypt then turned to Russia which encouraged the Egyptian leader Nasser to take over the Suez Canal and to stimulate the convulsions in the neighboring Arab States that led to the present crisis. Thus we lost the opportunity to lead the people of the Middle East to a better life and permitted them to be intoxicated by Russia with the heady wine of Pan-Arabic imperialism.

Our Nation will back the President in the present crisis and we all hope that his forthright action will calm the crisis. But we must realize that armed force and money alone will not bring back the confidence and respect of the world. We must prove our ideals and principles and spoken words by living up to them and backing them with action both at home and abroad.

Poles in the United States—The 350th Anniversary of Their Settling in America

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. FLOOD. Mr. Speaker, the earliest Polish settlers in this country arrived in October 1608 in Jamestown, Va., just 1 year after the founding of this historic town. That is the first landmark of Poles in America, and I am indeed glad that its 350th anniversary is being celebrated this year.

We do not know with certainly how many Poles were in that immigrant first group; probably they were not more than a handful. It is said that they were brought here "as experts and instructors in the manufacture of glass and pitch, tar and other products" which Poland exported to England in those days. Near Jamestown they built a glass furnace, and in a short time they were able to send to England the first samples of their work; these were the first products of American industry. Thus the earliest Polish settlers in America were artisans and technicians, and as such they contributed greatly to the birth and growth of certain industries here even in those early days.

The Poles also distinguished themselves as brave soldiers. Their descendants have turned out to be among the best and bravest fighters in defense of this country. It is stated that the first instance of their bravery in America is recorded in the year 1609. In that year when the Indians had set an ambush to kill Capt. John Smith, it was a group of Poles who saved his life. But the daring, bravery, and their devotion to the cause of freedom and independence was fully demonstrated in our Revolutionary War. It is hardly necessary to narrate in detail the deeds and accomplishment of Thaddeus Kosciusko and Casimir Pulaski, the bravest and most illustrious of Poles whose noble deeds are enshrined in the annals of this country. In a sense we can hardly do as much for Poland as these two Poles did for America during her fight for independence.

Thus long before the independence of this country, and ever since then, the Poles have been very active in their constructive work. Today many million Americans of Polish descent are among our most patriotic, public-spirited, and loyal citizens. They have, in the course of their long history here, contributed immensely, and in many instances with great distinction, to our civilization. I am extremely glad and proud to participate in this historic celebration, the 350th anniversary of the first Polish settlement in America.

Ashland, Oreg., Shakespearean Festival

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. PORTER. Mr. Speaker, the 1958 Oregon Shakespearean Festival opens tonight, July 28, in Ashland.

This is the 18th season for a cultural event that has gained international recognition for its authenticity and superior productions. The opening play is Much Ado About Nothing.

During the festival's season, playgoers will have opportunity to view three additional Shakespearean plays: King Lear, Merchant of Venice, and Troilus and Cressida. The theatrical season ends September 4, 1958.

Mr. Angus L. Bowmer is founder and producing director of the Ashland theater. This season he will play his seventh Shylock.

The 1958 company of 80 includes actors and actresses from 20 States and Canada and England. Many of them are in Southwestern Oregon for a return visit.

This year 35 Oregon post offices used a special cancellation to mark the 1958 event, following approval by the Postmaster General.

A good deal has been written about this event. Under leave to extend my remarks in the RECORD, I include The Bard at Ashland, an article appearing in the August 1958 Ford Times, and RX: Shakespeare, an editorial appearing in the July 18, 1958, Medford (Oreg.) Mail Tribune:

[From Ford Times of August 1958]

THE BARD AT ASHLAND

(By Marvin Rosenberg)

There are lots of places where Shakespeare's plays are acted out in the summertime. Any town named Stratford seems a likely candidate, and many a barn theater launches "Much Ado About Nothing" in a summery and beautiful setting.

But pretty as they may be, few are grander than the town of Ashland, in southern Oregon. When Portia says "The quality of mercy is not strained," she is saying it to a group of listeners who have just had a good look at the mighty Cascade Range.

For the most part, summer productions of Shakespeare are associated with our eastern seaboard, but the Oregon Shakespearean Festival, strangely enough, is America's oldest festival of works by the Bard of Avon. Throughout the month of August the green little town in the foothills of the Cascades and the Siskiyous, not far from the California border, blossoms out with holiday dress, the banners of Elizabethan heraldry, pennants on lampposts, and actors with beards.

The beginnings of the festival lay in the imagination of Angus Bowmer, the founder and producing director. In 1935 he looked at the ruin of an old Chautauqua auditorium and he saw in it the outline of an authentic Shakespearean theater. With WPA money

and a lot of local energy he built a facsimile of a 17th-century stage.

Next he drew directors and actors from the ranks of professionals and from universities. They arrive early in summer, rehearse, and present four plays. They have even developed a style of their own in which scene follows scene as fast as a motion picture. It is high-spirited and brightly colored, and it has no intermissions.

In the hundred-acre park where the plays are performed are a wooden camp and picnic ground where tourists may rent cottages or camp out. The beautifully landscaped Forest of Arden stretches past a bandstand and ponds for swans to a little zoo. Against these smaller pleasures are the magnificent ones—the mountains, Crater Lake, the Rogue River Valley, Oregon Caves National Monument.

The visitors love it. Shakespeare would have, too.

[From the Medford (Oreg.) Mail Tribune of July 18, 1958]

RX: SHAKESPEARE

The annual Shakespearean Festival, which opens in Ashland next Monday evening, affects different people in different ways.

There is a touch of midsummer madness involved for some—mostly the active participants, the actors, stage crews, and technicians—who find in the festival something more than simply an opportunity to improve their skills in the theater arts. They also find glamour, excitement, camaraderie, intellectual stimulation—the mystique of the stage and the magic music of applause.

Sensitive members of the audience, too, feel something of this aura. In the fresh air, under the stars, they can become captivated by the lights, music, color, action—and the timeless poetic insights of the world's greatest playwright.

In a more prosiac vein, the festival has other things to offer other people—to the hotel and motel proprietor, to the restaurant operator, to the merchant and service-station man.

For the festival has come to be one of Oregon's major tourist attractions, ranking only behind the Rose Festival, the Pendleton Roundup, Crater Lake, and the Oregon coast.

As such it draws thousands of people into the valley, and once here, they furnish the county's economy with its third-greatest stimulant, tourist dollars.

In cold cash, it is a major asset to the county, to all of Oregon. And, if for no other reason, thus deserves the support of all local people.

But it is something more than just a source of economic stability.

As man does not live by bread alone, neither is he wholly motivated by economic considerations. And the festival has gone far to give Jackson County, and specifically Ashland and Medford, something of a reputation as a cultural center.

The festival itself, of course, is the core of this, but as the reputation grows, other types of artiistic activity are attracted and stimulated.

For the arts and humanities—the things which make men a little something more than merely dull, workaday creatures—thrive and feed on each other, for all are related to man's instinctive desire for finer things.

Here is a suggestion to those in this county who have never attended a Shakespearean Festival play:

Try it, just once; give it a chance. And, who knows, maybe you will find something in it for you.

It may be the enchantment of what goes on on the colorful stage; it may be bemusement that a large number of highly intelligent people find it worthwhile to sit for hours in the night air to watch young people perform; it may be the simple pageantry to which the productions lend themselves.

You may find it's not your dish of tea. But, until you've tried it, you'll never know what you may be missing. (E. A.)

It's a Productive Congress

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an article, It's a Productive Congress, written by Marshall McNeill and appearing in the Washington Daily News of July 25, 1958:

IT'S A PRODUCTIVE CONGRESS

(By Marshall McNeil)

The record of this session of Congress—now nearing its end, with 8 or 10 major bills yet to go—already stands out as one of the most productive in many years.

Important measures, kicked around for years and given only a ghost of a chance last January, have been enacted. Defense has been strengthened, and laws passed to beef up our free world alliances. Recession remedies have multiplied on the statute books.

This session convened in the shadow of the first Russian sputnik. A recession was in full swing. World troubles were immense, frustrating, and growing. Election year problems engrossed every Member of the House and a third of the Senate.

Anyone would have guessed it would be a session of grumbling and political haymaking. But bipartisanship has been its hallmark.

The two major figures of the session have been the Texas twins—House Speaker SAM RAYBURN and Senate Democratic Leader LYNDON JOHNSON.

Under their leadership, and with important Republican assistance in the crucial moments, here are the tip-top accomplishments of this session:

NATIONAL DEFENSE

Defense reorganization, a proposal that generated a lot of heat and debate but finally was settled to the satisfaction of both Congress and the Commander in Chief.

Creation of the new National Space Agency, an idea born in Congress itself.

Atomic facilities bill, with provision for substantial increase in production of plutonium, and studies of new power reactor types.

Military pay increased, to provide better inducements for careers in the armed services.

Authorizations for Navy construction, including atomic subs and a nuclear-powered destroyer, dispersal of Strategic Air Command bases, money for missile bases and accelerated missile research, development, and production.

INTERNATIONAL AFFAIRS

Mutual security authorized again, with the problem of foreign-aid appropriations still pending in the Senate. That body now has before it firm declarations by Defense Secretary McElroy and Joint Chiefs Chairman General Twining that we'd buy better and more defense by restoring House cuts of about half a billion in aid rather than adding that sum to our own military spending.

Exchange of atomic weapons information with our allies.

Reciprocal trade agreements extension.

GOVERNMENT REORGANIZATION

Admission of Alaska.

A new Federal agency to control and enhance the safety of civil aviation, yet to be O. K.'d in the House.

Budget reform, passed by both Houses with a compromise yet to be achieved.

Curb on the Supreme Court's rulings on the primacy of Federal laws over State laws, yet to be acted on in the Senate.

NATIONAL ECONOMY

Increased the debt limit by $5 billion, with another $8 billion increase in the works.

Acceleration of Federal public works.

Extension of Korean war corporation and excise taxes.

Two housing bills and an extension of FHA's authority to insure mortgages.

Highway construction bill, with some measure of control over billboards.

Community facilities lending bill, yet to be acted on by the House.

Small-business tax relief, pending in the Senate.

Subsidies for domestic metals, pending in the House.

Relief for railroads.

Increase of postage rates to put the post office nearer a paying basis, plus pay increases for postal workers and other Government civilian workers.

Authorization for two new superliners.

AGRICULTURE

Extension of authority to sell farm surpluses abroad, to be compromised in conference.

LABOR, WELFARE, ETC.

Senate has passed bill regulating labor welfare funds, which is also expected to clear House.

Social-security extension, out of House committee, with House approval sure and Senate action likely.

Extension of unemployment compensation to jobless who exhausted State benefits, financed by Federal funds.

Nikita, Go Home

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. ANFUSO. Mr. Speaker, I see where Nikita Khrushchev is finally about to get his wish fulfilled for a summit conference and we shall be "privileged" to have him in New York at the United Nations.

It is too bad that we fell for another trick of this demon of propaganda. We all know that Nikita Khrushchev is out to destroy us; he does not come to us with any serious or genuine proposals for world peace. For this reason, I say that he is unwelcome in any part of the United States, and he is most certainly unwelcome in New York City.

I would have preferred that, if we had to meet with him, such meeting take place in neutral territory. There, if he proved to be a bluff—which I believe he is—we could walk out on him. I ask you in all seriousness, however, how could we walk out on him when he is

in our own home? If we did that, he would score another propaganda victory and we would become the laughingstock of the world. What remains for us to do, therefore, is to follow a strict agenda prepared in advance, and when that is completed to get him out of our country as fast as he came here.

It would be well for our leaders to avoid much personal contact with him, other than what is absolutely necessary. There should be no posing for pictures with smiling Nikita. There should be no comradeship and elbow rubbing with him over an alcoholic drink or two or three. Inside the closed-door meeting with him, President Eisenhower should treat him with the proper respect due him as a visitor in our country, but, at the same time, the President should inform Mr. Khrushchev in no uncertain terms that we shall not allow him to chew up one small nation after another, piece by piece—spelled p-i-e-c-e—from one side of his mouth, while he talks peace—p-e-a-c-e—from the other side of his mouth.

In short, Mr. Khrushchev is not welcome here because he does not come as a friend.

Streamlined for Modern Warfare

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the Appendix of the RECORD an editorial from the Springfield (Mass.) Union on July 26 for my colleagues to read. It is entitled "Streamlined for Modern Warfare," and commends the Congress for enacting the Defense Department reorganization bill.

STREAMLINED FOR MODERN WARFARE

The President says the Pentagon revamping bill, which Congress passed on Thursday, "adequately meets every recommendation" on this subject. The plan was to bring the organization of the Defense Department in line with the needs of space-age warfare, and it faced severe and vested-interest opposition in Congress.

The arbitrary and nearly sovereign division of our armed services bears little relationship to reality today. It is outmoded and outdated by modern weapons which cut across all services. The need is for integrated commands, for greater unification in administration and budget.

But this goal also cut across the vested legislative interests in Congress where long-standing spokesmen for the Navy, the Army, and the Air Force wanted to preserve separateness rather than further needed integration. The separateness of the appropriation decisions in Congress, determining exactly what shall be spent by the Army, Navy, and Air Force, controls the strategic plans of the Joint Chiefs of Staff.

The three services tended to maintain the maximum separateness in the hope of retaining the largest military roles and getting the largest share of the budget. And Congress tended to maintain the same separateness in order to retain the maximum appropriation control.

The reorganization plan was needed because modern weapons cut across all services. There needs to be not only combined strategic planning, but combined strategic commands in which each service will play its role under a supreme commander. The three services must be collectively administered under the Secretary of Defense.

Since the appropriations are made 18 months ahead, it has to be decided that far ahead how every dollar is to be divided, and the Defense Department can't shift a penny of those appropriations, however desirable. It will now have real flexibility in reallocating the budget, though Congress will still control the total amount.

Congress has done well to give the President most of the broad powers he sought to streamline and reorganize the Defense Department.

Presidential Pensions

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a sound and well-written editorial entitled "Presidential Pensions," appearing in the Boston Herald of July 24, 1958:

PRESIDENTIAL PENSIONS

Minority members of the House Post Office and Civil Service Commission do themselves no credit by opposing a bill to provide pensions and other benefits for former Presidents.

The Senate has twice passed the measure, which would allow ex-Chiefs of State $25,000 a year plus office space, staff assistance, and free mailing privileges. House leaders are confident that this year the Lower Chamber will go along. But a small group in both parties continues to oppose.

The Government, they argue, would have no control over the proposed ex-Presidential establishments. Former Presidents could run up bills of more than $100,000 a year, send out as many as 4,000 pieces of mail a year, and even campaign for public office with Treasury funds. Ex-Presidents and their staffs might become "an entirely new and additional branch of the Federal Government."

So what? Would the Government or the public be hurt if all this came to pass? Do we owe our former Presidents so little that we cannot afford to risk a few thousand dollars on their restraint and good sense?

Neither of our two living ex-Presidents is in need of assistance. Mr. Hoover is independently wealthy and Mr. Truman appears to have ample income from writing and other sources. But not all of their predecessors have been so well fixed, and not all of their successors may be. No man who has served in the White House should have to scrabble for money.

Ex-Presidents continue to be public figures. As elder statesmen they are frequently called upon for advice and for special assignments. They are as much on call as retired Supreme Court Justices and military leaders, who are pensioned accordingly. Their position does not permit them to refuse.

To say that the honor of the Presidency puts that office in a different category answers nothing. Presidents need and accept pay while they are in office, and the need is just as real, or may be, when they are out of office.

The Presidential-pension bill is an overdue obligation the country should insist upon honoring this year. The pettifogging objections of a few Congressmen should not delay final action by the House another week or day.

Open Heart Surgery

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call special attention to a program recently telecast by television station KPIX, San Francisco, of the Westinghouse Broadcasting Co. entitled "Open Heart Surgery."

Because I believe this program, which featured a delicate heart operation on an 8-year-old boy, to have performed a unique public service, I include the following descriptive materials: An open heart surgery fact sheet prepared by the sponsor; an editorial from the June 25, 1958, issue of the Redwood City (Calif.) Tribune and an editorial from the June 28, 1958, issue of the Palo Alto (Calif.) Times; and a resolution commending the sponsor:

OPEN HEART SURGERY FACT SHEET

The program, Open Heart Surgery, was telecast by KPIX on Monday, June 23, 1958, from 10 until approximately 11: 45 p. m. It was produced by KPIX in cooperation with the San Francisco Medical Society and the Stanford University Hospital. The program was telecast live from the hospital and from a specially constructed set in the studio as the events were happening.

The combination of surgery and television is not necessarily unique. The number of operations which have been performed for release over open circuit (i. e., over a commercial or educational channel for the lay public) is few, although closed circuit televised operations have and are being produced regularly for doctors and others interested in medicine.

Cardiac operations have been performed in Detroit and New York. These operations, however, were all blood vessels or arteries external to the heart.

The KPIX presentation marks the first time in history that an operation inside a live human heart has been televised on an open circuit basis. In this case the operation involved closing a hole between the two upper chambers of the heart. The procedure involved the substitution of an artificial heart-lung machine which was developed at the Stanford University Hospital by the team of operating surgeons who performed this surgery, for the patient's normal heart and lungs. The machine was connected for approximately 30 minutes during which time the blood was diverted from the normal heart to the machine and back to the patient. During this time the surgeons were free to operate on an essentially dry heart and complete the closure of the hole as predicted by the diagnosticians.

Because of the complex nature of the heart-lung machine and the whole surgical procedure, it was necessary to give the pub-

lic what one of them later characterized in a letter to KPIX as an "instant education" in cardiac surgery. This was undertaken with the help of diagrams, models, X-rays and photographs by KPIX and a group of doctors from Bay area hospitals. This portion of the program lasted approximately 30 minutes. Specially shot film sequences showing the operation of the heart-lung machine and the boy in his home environment were shown during this period.

The operational procedure at the hospital lasted the remaining 75 minutes. The operation was covered by 3 cameras: one located directly above the operating table, the second on the floor of the operating room, and the third in the gallery of the amphitheater. So as not to interfere with the operation in any way, a cardiac surgeon assigned to KPIX sat with the station's newsman in the amphitheater, and the two of them provided the necessary comment as background to the operation itself.

The program concluded after the operation was completed with films showing other Bay Area children who had undergone similar surgery and had now recovered, and a brief interview with the doctor who after leaving the operating table, explained the surgical procedure as he had seen it.

KPIX set up a special telephone number with automatic answering devices which handled somewhat in excess of 98,000 calls inquiring about the patient's condition during the succeeding 3 days. In all, they received some 300 letters from viewers commending KPIX, the Medical Society and the program sponsors for their foresight and imaginative use of the television medium for such an outstanding public service.

All of the San Francisco papers carried front page headlines, pictures and stories about the operation; one paper on the day of the program devoted nearly the entire front page of the second section of the paper to explanatory diagrams of the operation. Both United Press, International and Associated Press carried feature stories, as well as wire photo pictures, both preceding, during, and after the operation. In order to service the press, a special press bureau was set up at the hospital to supply picture stories and other required material.

[From the Redwood City (Calif.) Tribune of June 25, 1958]

AN EXPERIENCE WE'LL NEVER FORGET

It was sheer drama from start to finish. The fact that everyone involved was so matter-of-fact about it simply served to heighten the drama.

Little Tommy Hunter was not excited about the operation he was to have on his heart. He had been told all about what was to happen, and he knew that he was in good hands.

The team of surgeons headed by Dr. Frank Gerbode of the Stanford School of Medicine was not excited either. The doctors were confident of their ability to cope with the task ahead.

The rest of us, however, looked forward to the live television broadcast with anticipation and apprehension. Anticipation, because we were to get a chance to view the vital organ that is almost synonymous with life itself; and apprehension because of the delicate operation ahead and its effect not only on little Tommy, but upon ourselves as well.

What we saw more than fulfilled our expectations. The team of surgeons deliberately and skillfully laid bare Tommy's heart, transferred the burden of maintaining life to a wonderful machine, and sewed up the hole that could have limited Tommy's life span to no more than 20 years.

To us laymen, the operation was an awesome demonstration of what medical science is doing for us. The fact that we got a chance to see how it is done—deliberately, skillfully, and without Hollywood flourishes—should serve to give us greater confidence in our doctors, and should take away much of the fear that most of us can't help feeling when faced with a major operation.

The public owes a debt of gratitude to Dr. Gerbode and his team for letting us see them at their important work; to Tommy and his parents for permitting the televising of the operation; to station KPIX and to the pharmaceutical firm CIBA for taking us into the operating room.

The telecast, we believe, will do much to give greater awareness of the important role of the medical profession.

It also should do more. It should give all of us a greater appreciation of that wonderful machine, the human body.

This week we saw a boy's heart laid bare. We saw it quiet down as the surgeons performed their magic, then renew its task of pumping life.

We feel, too, that the case serves to disprove the fears of many doctors that putting themselves in the limelight is a questionable practice. What greater job of public relations could doctors do than that of Dr. Gerbode's team in performing that breathtaking operation? What act could better serve to show the public how exacting is the practice of surgery?

It was a never-to-be-forgotten experience, for which we are grateful and humble. Grateful for the doctors' skills, and humble for the gift of life that is given to Tommy and to all of us.

[From the Palo Alto (Calif.) Times of June 28, 1958]

THOUSANDS SEE HEART OPERATION ON TV

(By Jack Silvey)

In one of the most remarkable presentations since the advent of television, thousands of bay area viewers got a dramatic, surgeon's-eye view of a delicate heart operation on an 8-year-old boy.

A heart-lung machine took over circulation functions while doctors at Stanford Hospital in San Francisco mended a hole the size of a half dollar between the two upper chambers of the heart. In addition, two veins leading into the wrong chamber of the heart had to be rerouted.

Correction of the defects, which were overburdening the heart, gives Tommy Hunter, of Oakland, an excellent chance of leading a normal, active life, doctors say.

Hospital officials reported: "Everything is working out beautifully. Tommy is doing fine."

These tense developments emerged from the international scene:

Leaders of the rebellion in Lebanon increased their pressure against the prowestern government of President Chamoun and fierce battles broke out. Chamoun, expecting a full-scale assault at any time, asked for an armed U. N. emergency force to seal off his nation's frontier.

A milling, shouting crowd of more than 1,000 Russians demonstrated outside the United States Embassy in Moscow but inflicted no damage. The demonstration was organized in retaliation for western demonstrations protesting Russia's part in the execution of Imre Nagy, former Premier of Hungary and leader of the Soviet-crushed Hungarian revolt of 1956.

In a surprise turnabout, the Soviet Government told the United States it would not attend the July 1 conference at Geneva on nuclear test detection problems unless this country would see to it that the meeting led to a global ban on nuclear test explosions.

The United States contended the conference had been arranged to explore the problem of test detection, not to arrive at any political commitment on actually suspending nuclear tests. Western allies said they would proceed with the conference as agreed.

The Indochinese neighbors of Cambodia and South Vietnam became involved in a border dispute. Each charged invasion by the other.

United States District Judge Harry J. Lemley ruled that racial integration at Little Rock's Central High School could be suspended until 1961. His ruling bans seven Negro students still enrolled at the once embattled school at the end of the past school year.

John Fox, financier and owner of the now defunct Boston Post, quoted industrialist Bernard Goldfine as saying that he had bought a home for Sherman Adams, President Eisenhower's top aid.

Adams, who has admitted accepting some gifts from Goldfine, promptly denied the story about the house in a letter to congressional investigators.

The State highway commission allocated $1,017,704 to Palo Alto for construction of the South Palo Alto underpass. This, with funds from the city and Southern Pacific Co., assures full financing of the project. Work is expected to begin in late summer or early fall.

Santa Clara Valley's earlier-than-usual apricot harvest began. The crop was reported the smallest since 1921 and attracted a record grower's price—$147.50 a ton, plus $3.90 for hauling. In past seasons, the price has stayed near $100.

Whereas on June 23, 1958, television station KPIX, channel 5, of the Westinghouse Broadcasting Co. did telecast for the first time in history, a live program of cardiac surgery titled "Open Heart Surgery"; and

Whereas this program was seen by more than 1¼ million people in the San Francisco Bay area; and

Whereas this program was presented for the lay audience through the cooperation of Stanford University Hospital and the San Francisco Medical Society; and

Whereas the program was released as a public service by KPIX to television stations in Reno, Nev., and Sacramento, Calif.; and

Whereas in response to the public acclaim, interest, and demand, KPIX did subsequently release films of the original program to stations in Monterey-Salinas, San Diego, Bakersfield, San Luis Obispo, Calif., and Albuquerque, N. Mex.; and

Whereas the local and national press did bring this program to the attention of the bay area, the State, and the Nation: Be it therefore

Resolved, That the Open Heart Surgery program represented the optimum use of the television medium for the public interest, information, and education; be it further

Resolved, That KPIX and the Westinghouse Broadcasting Co. receive the grateful thanks and commendation from the people of San Francisco for this outstanding public service.

To Repay a Debt

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Navy Times of July 26, 1958:

TO REPAY A DEBT

As all men in uniform know, the highest honor the United States bestows on its defenders is the Medal of Honor. This honor is conferred in the name of Congress" and

therefore is commonly referred to as the Congressional Medal of Honor.

The some 320 living men who wear the light blue ribbon are the elite of the Nation. But the Nation as a whole, its Government, even the Services whose uniform these men wore have not really done right by these men.

The editor of Navy Times has been privileged to meet twice with these wearers of the Medal of Honor as a group. We have had long personal friendships with several individual holders of the honor. Thus we have some knowledge of what these men are and what they are willing to do, and can do, for the Nation.

Organization is the principal need. Once the medal wearers are organized properly they can both obtain recognition for themselves and—more importantly to the Nation—render new valuable services to the country for which they have done so much.

Organization of the medal wearers received an impetus after they, for the first time, were assembled as a group at Eisenhower's inauguration. The men were enabled to meet when they returned for Eisenhower's second inauguration and for the interment of the Unknowns of World War II and Korea this past Memorial Day. Following the breakfasts which the company which publishes Navy Times arranged for them on each occasion, the men moved en masse to nearby meeting halls to conduct business.

They could not have met had they not been summoned to Washington for other purposes. For one thing, they hadn't the resources. For another, how could they have contacted each other? We doubt any reader can conceive of the difficulties Defense and this company had in contacting these men to invite them to Washington.

The United States had little idea of which of its honored heroes were even alive, where they were living and what they were doing. Yet each is a potential shining example to the rest of the country, though the country and the services have neglected to exploit that opportunity.

The fledgling society wants to be so exploited.

Now Defense, particularly the Army, is bestirring itself. The trips to Washington are evidence of that. Incidentally, Army Secretary Brucker stretched a point and got $12 a day per diem for the men while they were here, a most helpful gesture though that amount doesn't cover hotel living in Washington. Official and private entertainment and some assistance from this company and other private organizations in transporting dependents took up the slack. And the Army also surprised the group by giving them a handsome seal at the May 31 meeting here—a seal designed, by the way, by the man who designed the tombs of the Unknowns.

These aids—and some more— are needed if the group's to continue to function and do a unique job for the Nation.

For the group is too small for complete self-support unless it engages in fund-raising schemes. And that it does not want to do, nor should the Nation allow such capitalization of its foremost award. Although some members have means, most are in modest circumstances; many are downright poor. Because of this, the group doesn't even want to charge dues. However low, dues might keep from being all-inclusive a group which above all must be all-inclusive.

So the society functions without dues; without pay (or even expense money) for any official; without any aid except contributions from some of the better-off members and aid for the occasion of the type rendered by Defense, this company and some other organizations.

Despite poverty of some members, the group also is opposed to seeking, as a group, any benefits for wearers of the Medal of Honor as such. They'll accept as their due the benefits payable as to any veteran, but they feel no price should be placed on the medal itself.

What do they want? Not much—and these things will benefit the Nation as much or more than the group:

1. Aid in organizing. They want to hold annual meetings on military bases near major cities to benefit from cheap housing and meals and rent-free meeting places. The services are sympathetic and this is likely to be done.

2. Recognition as individuals. Even the most modest know they are, indeed, something special. They'd like their parent service to have information about them current and on file, for release when appropriate. They'd particularly like to feel that, when their last day comes, their Government will remind the Nation that one of its heroes has died. Thirteen died last year; only 1 received any special notice in the press.

3. Recognition as a group. The Senate has passed a bill granting a congressional charter to the society. A subcommittee of the House Judiciary Committee has unanimously approved the bill. The chairman of the full committee, Representative EMANUEL CELLER, Democrat of New York, has promised to bring the bill to a vote at its next meeting. But there is still the full House to face. And Members of the House are understandably frightened at the number of applicants for congressional charters and of the dubious uses to which some groups in the past have put the prestige inherent in their charters from Congress.

We think Mr. CELLER is wise enough to sell this bill to the House on its merits.

For one thing, this group is so special that chartering it sets precedent for no other charters. It's too small to be an effective lobby; in fact its charter, if granted, will forbid attempt to influence any legislation.

And it's particularly fitting that the 300 who alone among men wear an honor presented in the name of Congress should as a group hold their charter from Congress. Incorporate, the group must; and it is not fitting that the Nation should allow any State to do this service for a group whose service was to the Nation as a whole.

Behind the Black Robes

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Human Events of July 21, 1958:

BEHIND THE BLACK ROBES—HIGH COURT CLERKS: AMERICA'S HIDDEN LAWMAKERS

(By Rosalie M. Gordon)

When we visit the chamber of the Supreme Court of the United States, we see sitting before us, high above the audience and the disputing attorneys, nine imposing, black-robed Justices. But behind the Justices, in the inner reaches of the beautiful Supreme Court building, sit 18 young men through whose hands passes much of the work of the Court. They serve the Justices for only a year or two and then are replaced by others of their kind. During their service to the Court, we seldom see them or hear of them. But some of them have gone on to fame of a kind. Dean Acheson was one of them, and so was Alger Hiss. Another, who served Justice Frankfurter, later served a term in jail on a vote-fraud case in his native State. Many others, of course, have attained respected and useful places in the legal profession and in politics.

These bright young men are law clerks of the Justices of the Supreme Court. As of the 1957 session of the Court, 7 Justices had 2 clerks each, Justice Douglas had 1, and Chief Justice Warren had 3—18 in all. They are picked by the individual Justices for whom they will work, and are taken from among the top performers of the graduates of leading law schools, generally on the recommendation of the deans.

Quite naturally, this brings up the question of how much influence these young men exercise on the Justices and what part they have played in the type of decisions we have been getting from the Court these past two decades. First of all, it is beyond belief that a Justice would choose as his law clerk a young man diametrically opposed to the Justice's views. Second, these young men are the products of schools and universities which have been thoroughly infiltrated—in some cases saturated—with leftwing thinking. Six of the 18, for instance, serving the Justices in 1957 came from the law school of Harvard and 3 others from Yale. Yale and (more particularly) Harvard have been hotbeds of New Deal-collectivist-leftwing teaching in recent years.

Some scraps of evidence have begun to appear as to the nature and amount of influence wielded by the clerks. Justice Minton, after his retirement from the Court, was asked if his clerks helped in drafting opinions. He replied: "In my case, after an opinion was written I submitted it to the boys for their comments and criticisms. And if their criticisms were valid the opinion was rewritten." It is important to remember that the boys have just graduated from law school, that they have never practiced law, and that some of them are not yet even members of the bar.

Even more impressive evidence is supplied in a biography of Chief Justice Harlan Fiske Stone by Alpheus Thomas Mason.[1] Stone is quoted as saying at one time: "I am a good deal troubled by the dissenting opinion which Justice Black has just circulated. * * * He states a good deal which counsel did not take the trouble to present * * * I see in Justice Black's dissent the handiwork of someone other than the nominal author." And the same book points out that two paragraphs in a historic footnote to one of Justice Stone's own opinions were written by his law clerk. The clerk, Louis Lusky,[2] said Stone "adopted it almost as drafted, simply toning down a couple of overemphatic words."

It is in the selection of cases that will come before the Court for review and decision that these bright young men come into their own. Each year anywhere from 1,500 to 2,000 appeals are made to the Supreme Court to hear and decide cases which have been settled one way or another in the lower courts. The Supreme Court can hear and decide on fewer than 10 percent of the more than 1,000 cases that ask for hearing annually. But who is to decide what cases shall be heard? The rule is that when any 4 Justices agree to grant a petition for cer-

[1] Pillar of the Law, Viking Press.

[2] Lusky now serves as a volunteer lawyer for the leftwing American Civil Liberties Union, and helped to defend Carl Braden, a man convicted of sedition in Kentucky. (Braden's conviction was overturned by the Supreme Court's ruling in the Nelson case.)

tiorari—as these appeals for hearing are known in legal jargon—the Court will hear arguments in the case and decide it. But each of these petitions involves a brief asking the Court to hear the case, another brief asking the Court not to hear it, and, likely as not, a record of all the legal proceedings in the lower courts. That's where those 18 young law clerks come in. This mass of petitions is split up among them. Each clerk then writes a summary or memorandum for his Justice. This summary ostensibly states the facts of the case, the law on which the lower courts depended in deciding it, a short statement of previous cases on the same point, and, finally, a recommendation by the clerk that the case be heard or not heard by the Court.

It is then up to the Justice, of course, to decide whether he will accept or reject his clerk's recommendation. But we can see how easy it would be for a young law clerk, fresh from the groves of academe, where he was filled with a burning desire to remake America into the bright new Socialist mold, to let at least some of his zeal creep into his recommendation.

There is an indication of how potent this influence has been in the fact that, in late 1957, the Harvard Law Review found that the Warren Supreme Court was falling badly behind in its docket of cases. The thing that was causing the trouble was that the Court was agreeing to hear an unprecedented number of cases. In the 1956–57 term, for instance, it agreed to hear 208 cases. From 1948 to 1955, the figure ran from 88 to 162 cases per term. Legal experts familiar with the Court's work said it deserved no sympathy for the jam into which it had got itself. It was busy putting its liberal hand on a whole batch of lower court decisions on the assumption that these courts didn't know what they were doing. It would be interesting if we could have another survey of how much these bright young law clerks had to do with the High Court's determination to make the lower courts truly inferior.

Congressman GORDON H. SCHERER, of Ohio, a member of the House Committee on Un-American Activities, has noted the influences under which these recent graduates had come in their college years. Congressman SCHERER said:

"Our committee hearings have disclosed a considerable amount of ill will, bordering in some cases on hatred, by many professors for congressional investigating committees. They have determined in one way or another to destroy these committees ever since some of their clique were subpenaed to tell about their Communist and Communist-front activities."

As a member of a congressional investigating committee, Congressman SCHERER was especially interested in reading carefully some of the Supreme Court's decisions affecting the rights of congressional committees. He said:

"I have read in some of the recent shocking Supreme Court decisions almost the exact words, phrases, and arguments that have been used by some of these professors in their attacks against the committees."

Congressman SCHERER suggested that these words and phrases very well might have crept into the decisions of the learned Justices via some of those professors' former pupils, now hidden behind the bench of the highest court in the land.

Thanks to the enterprise of the weekly news magazine, U. S. News & World Report, we have had an even more authoritative statement of the role of those bright young law clerks from one of their own number. U. S. News hunted up a former law clerk to Justice Jackson—William H. Rehnquist, now with a law firm in Phoenix, Ariz. In its issue of December 13, 1957, U. S. News & World Report printed the following words from Mr. Rehnquist:

"The bias of the clerks, in my opinion, is not a random or hit-and-miss bias. From my observations of two sets of Court clerks during the 1951 and 1952 terms, the political and legal prejudices of the clerks were by no means representative of the country as a whole nor of the Court which they served.

"After conceding a wide diversity of opinion among the clerks themselves, and further conceding the difficulties and possible inaccuracies inherent in political cataloging of people, it is nonetheless fair to say that the political cast of the clerks as a group was to the left of either the Nation or the Court.

"Some of the tenets of the liberal point of view which commanded the sympathy of a majority of the clerks I knew were: extreme solicitude for the claims of Communists and other criminal defendants, expansion of Federal power at the expense of State power, great sympathy toward any Government regulation of business—in short, the political philosophy now espoused by the Court under Chief Justice Earl Warren."

But, you say, what is the Court to do? The Justices have to have clerks and they naturally choose those they think will be in sympathy with their views. Perhaps. But bear this in mind. These clerks are Government employees—although, unlike most others, they are not subject to the regular Government security or loyalty checks. Their pay ranges from $5,500 to $6,500 a year—paid not by the Justices themselves, but by the American taxpayer.

What the Russian Generals Think

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 23, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the July 21, 1958, issue of Time magazine, entitled "What the Russian Generals Think."

Mr. Speaker, the article is in the nature of an analysis of the recent book Soviet Strategy in the Nuclear Age, by Raymond L. Garthoff, a Department of Defense analyst and specialist on Soviet military writings. Although the article is set out in its entirety below, I would like to draw specific attention to some of the main points made in the article.

Mr. Garthoff's study of Soviet military thinking leads him to believe that after the initial strategic strikes by jet bombers, intercontinental and intermediate-range and rocket missile, and submarine-launched missiles, the war will be won or lost by the ground forces. He says:

The heart of such a capability is the ground forces—trained for nuclear war, armed with nuclear weapons.

He points out also that—

They—

The Soviets—

have not allowed nuclear weapons to overshadow conventional arms, and have thus retained their enormous superiority to fight nonnuclear wars, big or little.

Most interestingly, Mr. Garthoff indicates that—

The flexibility of the Russian theory may be illustrated by this difference: many Western military men believe that nuclear weapons in the hands of the infantry reduce the need for manpower because they increase firepower per man. This belief leads toward nuclear-armed ground forces so small that they could fight only nuclear war. But Russian generals believe that nuclear infantry weapons increase the manpower requirements because more soldiers will be needed to replace the heavier casualties. This leaves the Russians with large numbers of soldiers who can fight either nuclear or nonnuclear war.

The article from Time magazine follows:

WHAT THE RUSSIAN GENERALS THINK—BEYOND ATOMIC HOLOCAUST THE REDS SEE VICTORY

The West's military leaders have long understood that their Soviet counterparts were thinking along lines quite different from postwar western military thought. This difference was condescendingly put down to a time lag on the part of the Russians; they were believed frozen in the experience of World War II, unable to face the implications of the new nuclear weapons. This week, in a coldly penetrating study of modern Soviet military doctrine, Russian-speaking Raymond L. Garthoff, 29, Defense Department analyst and specialist on Soviet military writings, enters a strong dissent. Since the death of Stalin, in 1953, says he, Soviet military doctrine "has made a quantum jump from the bayonet age to the thermonuclear age."

This jump has not brought the U. S. S. R.'s generals closer to current United States military doctrine. It has, in fact, taken them in an independent direction. Garthoff, whose book is authoritatively studded with hundreds of references to Soviet military periodicals, backed up by personal conversations with Soviet officers, sums up the "Soviet image of future war" thus:

"The initial strategic strikes by modern jet bombers, intercontinental and intermediate-range rockets and missiles, and submarine-launched missiles, will wreak devastation upon both the United States and the Soviet Union, and upon their chief allies." But does mutual devastation spell mutual defeat? The Soviets answer "No." The priority strikes will destroy the enemy's strategic air and missile bases, insofar as these are known. Major cities and industrial centers, on a lower level of priority, will also suffer heavily. Radiological and bacteriological weapons may be used. But this enormous mutual destruction will probably consume the major portion of the respective long-range air and missile forces. Thus, the efforts of these forces would in a sense cancel each other out.

"This is a crucial phase of the war, one which a weak or ill-prepared power could lose. But it is not the decisive stage of a war between well-prepared major powers; it does not determine the final outcome of the war between them.

"'Tactical' air power and rockets, those forces designated to attack the enemy's military forces up to roughly a 1,000-mile range from the starting borders would similarly engage in mutual nuclear strikes. But here the Soviets do not see a mutual stalemate. The heart of such a capability is the ground forces—trained for nuclear war, armed with nuclear weapons—and here the war would begin with a serious imbalance: a preponderance of Soviet forces.

"Moreover, in the Soviet view, their mobilization and dispatch of ground forces would be much less critically disrupted than would ours by the nuclear exchange, due to their larger force-in-being and to its deployment. The surviving Soviet land armies are thus expected to be capable of defeating the proportionately weakened enemy forces on the ground.

"Thus the Soviets would strive to achieve at least a favorable 'draw' by occupying the Eurasian continent, and exploiting such resources as might still be available to restore some of the Soviet Union's losses. The shrunken and devastated free world would be entirely relegated to the Western Hemisphere."

THE FIRST HURDLE

Predominant United States military imagination tends to stop at the point of reciprocal nuclear holocaust. Why does the Soviet imagination leap this hurdle? Through continued ignorance of the effects of thermonuclear weapons? This can hardly be the explanation, now that the Russians have had years in which to test and ponder their own weapons. Garthoff suggests two other explanations:

First. "The massive military loss undergone by the Soviet Union in 1941, in a relatively brief span of time, was more comparable to the loss from a nuclear assault than anything else experienced by a great power in modern times. The Soviets lost from their control 40 percent of their population, 40 percent of their grain production, approximately 60 percent of their coal, iron, steel, and aluminum output, and 95 percent or more of certain key military industries, such as ball-bearing production. They lost 4 million soldiers, dead, wounded, or prisoners, and over two-thirds of their tanks and aircraft." A nuclear holocaust might be worse, but Russia has survived a military disaster of the same order of magnitude—survived and won.

Second. The United States definition of military purpose is merely to "deter and defeat attack." Russian military objectives are shaped by a fundamental objective: "To advance the power of the Soviet Union in whatever ways are most expedient so long as the survival of the Soviet power itself is not endangered."

The Soviets do not see how they could occupy and/or control the United States. But they do see how their conquest of all Eurasia would leave them at the end of the war in a position vis-a-vis the United States better than their present position. It is this vision that gives confidence to Russian spokesmen and drive to Russian diplomacy.

THE BASIS OF FLEXIBILITY

Because the Russians see how they might fight a big war, it does not follow that a big war is what they want. There are other kinds of wars in which they might gain, with less risk to Soviet survival. They have not allowed nuclear weapons to overshadow conventional arms, and have thus retained their enormous superiority to fight nonnuclear wars, big or little. They say publicly that limited nuclear wars are impossible, but Garthoff believes they have, in theory and in practice, the capability of fighting these, too.

The flexibility of the Russian theory may be illustrated by this difference; many Western military men believe that nuclear weapons in the hands of the infantry reduce the need for manpower because they increase firepower per man. This belief leads toward nuclear-armed ground forces so small that they could fight only nuclear war. But Russian generals believe that nuclear infantry weapons increase the manpower requirements because more soldiers will be needed to replace the heavier casualties. This leaves the Russians with large numbers of soldiers who can fight either nuclear or nonnuclear war.

Another difference is in civil defense. The United States has not even got around to thinking seriously about a nuclear shelter program. Garthoff is convinced that the Russians are taking the far more radical step of decentralizing their industry to minimize damage of nuclear attack. He thinks Khrushchev's program of industrial management decentralization is accompanied by physical decentralization for military purposes.

Soviet military theory may turn out to be wrong. But on Garthoff's showing, it is not backward. The Soviet generals have examined carefully the new weapons in the light of the political objectives set by their leaders. They think they know how to survive and how to expand. This gives confidence to their diplomats—who are today expanding Soviet power with less cost and less risk than actual war.

Displaying the Flag of the United States

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1958

Mr. PELLY. Mr. Speaker, some 3 weeks ago I addressed the House of Representatives on the subject of the flag of the United States. As stated then, I had previously urged President Eisenhower to name a nonsalaried board of distinguished citizens and heads of veterans and patriotic organizations to approve a new design in connection with admitting a new State.

Since I made that speech many colleagues have discussed this subject with me and it is obvious that there is widespread interest in the subject and also a lack of information. People are asking many questions and in particular, in the light of Alaska statehood, are inquiring what should be done with 48-star flags after a new State is added to the Union. Also flag etiquette and rules on proper display of the flag under various circumstances are matters of some confusion.

This current wave of public interest, Mr. Speaker, is at once healthy and gratifying. Also let me say it should be pointed out that the American Legion, the Veterans of Foreign Wars, and the other great national patriotic organizations as also many fraternal societies such as the Elks and the Eagles without question emphasize the flag code and ceremonial and consistently uphold flag etiquette and observance as a basic requirement of civic duty and practice of good citizenship, and I agree we must never fail as a Nation to render courtesy and respect to the flag, and always the flag ritual, individually or in a group, should be carried out in the approved manner.

One aspect of redesigning our flag was pointed up, here in Washington, a few days ago in a newspaper editorial which suggested to those not possessing a flag the purchase of one now—a 48-star flag—to be put away and treasured as an item which in time will become a priceless rarity and family heirloom. Imagine the value of a 13-star flag. However, as I stated in my previous discussion, once the design of a flag is officially recognized it is permissible to display it and anyone now possessing a 48-star flag may continue to use it until unserviceable even though Alaska or Hawaii become States.

A weekly paper in Seattle, the Capitol Hill Times, in conjunction with an annual community flag festival, recently ran an article on How To Display the Flag. I include this because the rules and approved practices regarding our national emblem should be known to all and especially so with the people of Alaska scheduled to vote on August 26, 1958, on the admission of Alaska as the 49th State of the Union:

The flag should be displayed from sunrise to sunset.

Unless there is some special reason for doing so, the flag should not be flown in rainy or stormy weather.

The flag should always be raised briskly and lowered slowly and ceremoniously.

When the flag is being raised or lowered, it must never be allowed to touch the ground.

In a procession with another flag, the flag of the United States is on the marching right.

In a procession with a line of other flags, the flag of the United States is in front of the center of the line.

When displayed either vertically or horizontally against a wall, or in a shop window, or elsewhere, the blue field is uppermost and to the flag's own right—that is, to the observer's left.

When used on a speaker's platform, if displayed flat, the flag is above and behind the speaker; if flown from a staff, the flag is in the position of honor, at the speaker's right, and preferably slightly in front.

When displayed with another flag against a wall, staffs crossed: the United States flag is on the observer's left, and its staff is in front of the staff of the other flag.

When the United States flag and flags of other nations, States, or cities, or pennants of societies, are flown from adjacent staffs: the United States flag is on the right of the line—that, on the observer's left.

When suspended over a sidewalk from a rope, extending from a building to a pole at the edge of the sidewalk: the flag is hoisted a part of the way out from the building, toward the pole, blue field first.

On a float in a parade: the flag is displayed from a staff.

When displayed on an automobile: the flag may be fastened to the car body, or clamped to the radiator cap. Under no circumstances should the flag ever be draped over the hood, top, or sides of an automobile.

The flag of the United States is an artistic, well-proportioned emblem whose beauty should not be marred by draping. Draping may be done with red, white, and blue bunting, but not with the flag.

Torn, soiled, or badly faded flags should not be displayed. When a flag is in such a condition that it is not longer a fitting emblem to display, it should be destroyed as a whole, privately, preferably by burning, or by some other method lacking in any suggestion of irreverence or disrespect.

Public Utility District Has Kept Benefits of Columbia River at Home

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the

Appendix of the RECORD, I am pleased to include an editorial from the July 21 issue of the Wenatchee Daily World, Wenatchee, Wash. This editorial relates to 10 years of progress and public service by the Chelan County Public Utility District.

I think this is an outstanding record of a local county and local communities going about the business of developing their own natural resources with an exact minimum of Federal assistance.

Much credit should go to the manager, Kirby Billingsley, and those who have been foremost in assisting him. These include Howard C. Elmore, assistant manager; E. C. Metcalf, chief engineer; Harley W. Bryant, commercial manager; Jack Shreve, distribution engineer; Gilbert Pyle, superintendent; Hale Tabor, research and information officer; Larry Wilcox, purchasing agent; Robert E. Crooks, auditor; Walt Woirol, Rocky Reach controller; and Dale S. Walker, supervisor of accounting.

This is indeed an outstanding celebration.

The editorial follows:

PUD HAS KEPT BENEFITS OF COLUMBIA RIVER AT HOME

This is a big day for the men and women of Chelan County Public Utility District and the communities it serves.

Ten years ago today the public utility district purchased the distribution system of the Puget Sound Power & Light Co. and so actually entered the power business.

If the district had not taken that step then, what a different place our county would be now.

Without that step, the one great stroke that severed the chain which bound this area to an economic dependence on fruit alone would never have been delivered. That's the establishment of the Alcoa plant and payroll here, of course.

Without that step people of Chelan County might never have reaped one benefit from a kilowatt of power produced from the Columbia River within the borders of our county.

The progress of the public utility district in just 10 years is phenomenal. Acquisition of distribution facilities, completion of Rock Island Dam, purchase of Chelan Dam, Dryden Dam, Rock Island Dam, and start of construction of a $250 million dam at Rocky Reach.

A remarkable Decade of Progress.

Possibly the most significant development, however, was completion of Rock Island Dam.

This dam—first power dam across the Columbia River—was owned by Pudget Sound Power & Light Co.

At the outbreak of the Korean war, a study was immediately made to see where new power could be generated quickly to supply rapid expansion of the war-needed aluminum industry. Quickest project was Rock Island Dam, where six more generators could be added to an existing structure.

If any agency other than the public utility district had done the job, chances are almost certain that the power would have been supplied to Alcoa in Vancouver, where the company's existing aluminum plant would just have been expanded.

But Chelan County Public Utility District did the job, and kept the power home. By selling power to Alcoa here, kilowatts of the Columbia actually began to benefit the people in the area where the power was produced. It meant payrolls for Chelan County—the same philosophy that prompted the district to build the dam at Rocky Reach.

All successful and venturesome enterprises have their detractors. And as it advanced through its decade of progress, the public utility district was no exception. Some of its biggest detractors in the early years have benefited the most through the payrolls and stabilized economy that home-owned power has brought.

Public power as represented by the public utility district was a new concept that once was opposed in principle by some people. The results of the past decade of progress have caused most detractors to change their mind.

You can draw a simile between public and private power and the difference between owning your own home or renting.

The man making payments on a home he has bought will in time of his loan wind up owning a property for which no more purchase payments must be made. The renter keeps paying indefinitely and never winds up with a physical property his payments have purchased.

Private power is the renter. In public power our payments are going to pay for the dams and systems that produce and distribute the electricity we use. When those are paid for, the only cost of our power will be minor maintenance costs.

In the lingo it's called "debt-free equity." One of the first public utility district's to be formed in the State—Grays Harbor Public Utility District—now owes only 15 percent of the original cost of its system. (It's a distribution, not generation system, however.)

Twenty percent of every $1 paid into the public utility district goes toward "paying off the mortgage."

What of the next decade of progress? What will the public utility district have to report on July 21, 1968?

The Nation is approaching what economists predict will be the biggest decade of growth in the Nation's history. With Rocky Reach Dam, Chelan County Public Utility District will have the power to bring new payrolls to the county.

Already the Chelan County Public Utility District is one of the 10 largest hydro generating organizations in the United States.

In the next 10 years probably all possible dams on the Columbia will have been built, including Ben Franklin Dam. The river will be navigable to here and possibly beyond. Agreement with Canada over upstream storage may provide additional kilowatts from the river. Chelan Public Utility District may be a water system utility as well as a power utility, as specified in the public utility district enabling act. (Today 12 public utility districts in the State supply domestic and irrigation water, and one—Skagit Public Utilities District—is a water utility only.)

At any rate, the first Decade of Progress has laid the groundwork for the community's future. It has harnessed the resources—the basic raw materials of power on which to build a tremendous economy for Chelan County.

If the leadership of the public utility district for the next 10 years retains the vision of the last 10, we predict the county will utilize those resources to build an economic future under which this county will prosper even above its prosperity of the past.

Fair Trade Proposals

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an open letter to the Congress written by Mr. Lawrence Fontana, 3648 Keokuk, St. Louis, Mo., who urges Congress to enact a fair-trade law:

OPEN LETTER TO THE MEMBERS OF THE 85TH CONGRESS OF THE UNITED STATES

ST. LOUIS, MO., *July 24, 1958.*

DEAR MEMBERS OF THE 85TH CONGRESS: Just dropping you a line to ask you to support the national fair trade bills now up for consideration. The Senate has a bill known as S. 3850, and the House has one called H. R. 10527.

I'm in the retail bicycle sales and service business. You know that the fair-trade laws have been wiped out in some States, and in many other States they have been cut down to where they are practically worthless. If this continues there will be no fair trade whatever in any of our States.

Pricecutters who operate discount houses are the headache of our business. They take a well-known product and cut the price to the bone just so they can use it to draw people into their stores. They can do this because they can make up the money they lose on other products. We in the bike business have only our bikes on which to make money, and if the discounters are allowed to football any product they want, it's a cinch we can't compete with them. The protection we would get from a national fair-trade law would give us a chance to compete on an equal basis.

The fair-trade bill is very important to me and every other retailer—practically a matter of life and death.

I hope you will do all you can to get this bill passed and I would like to hear from you.

Yours very truly,

LAWRENCE J. FONTANA.

"Uncle Miltie" Hunts Facts in Central America

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by George Dixon, which appeared in the Washington Post and Times Herald on July 21, 1958, which I think is probably the best explanation of Milton Eisenhower's trip to South America:

WASHINGTON SCENE
(By George Dixon)
"UNCLE MILTIE" HUNTS FACTS IN CENTRAL AMERICA

In this period of national anxiety it must be a source of consolation to many to know that Uncle Miltie is down in Central America finding facts. No official confirmation has yet been released as to whether he has found any, but I am betting on him upon his record. He is on a factfinding tour and has established quite a reputation as a factotum.

You need not be confused as to the identity of Uncle Miltie. This is Uncle Miltie Eisenhower, not Berle. It is not too difficult to tell them apart. One is more entertaining than the other.

The fact-finding Uncle Miltie has a wonderful opportunity to find a few facts on this expedition because he is comparatively unencumbered. He is not accompanied by Allen Dulles.

The head of our Central Intelligence Agency could not go along with Uncle Miltie

because he is too busy misevaluating facts for his brother, John, in the State Department. This has given Uncle Miltie, or Dr. Milton Eisenhower as he is sometimes known, a clear field in which to find facts without expert muddlification. It has paid off. Uncle Miltie has already found Panama, Honduras, and Costa Rica. Those are facts.

I don't know what other facts the brother of President Eisenhower expects to find, but if he doesn't unearth enough in Central America to suit him, he can always obtain a few upon his return. He can learn the facts of life from Sherman Adams.

I have faith that when Uncle Miltie comes back he will find Governor Adams still at his post of need. There seems to be no truth to rumors that while Uncle Miltie is hunting facts, Sherm is hunting a job. I am discounting utterly any gossip that Bernard Goldfine's White House telephonic correspondent wants to pose for those telephone company ads "Call Someone Today."

Parenthetically, there also is no truth to rumors that Senator JOHN SHERMAN COOPER of Kentucky has taken to signing himself "JOHN S. COOPER" as a result of the Adams-Goldfine case.

Apparently Ike's brother is not making the mistake of Vice President NIXON in trying to obtain facts from the people of the countries visited. So far as I can gather, Uncle Miltie is avoiding the populaces. At each capital he has himself whisked from the airport to the United States Embassy, after which he closets himself with the country's leaders. This saves him from being burdened down with petty details, such as what the people are thinking.

However, there must be some reason why Uncle Miltie is making this tour—don't you think? Possibly he wants advice from the chiefs of our sister republics on how to maintain prestige. Our prestige in the Middle East has sunk so low they're not even kidnaping Americans.

Another possible reason for Uncle Miltie pointing South at this time when our major problems are pointing East is that he may be searching for an out-of-the-way place to bury a speech that Republican National Chairman Meade Alcorn made in Des Moines a few weeks ago, in which that shrewd and far-seeing political soothsayer exhorted fellow Republicans:

"Don't be trapped by the Democrats into letting them choose the issues this year. Let us force our adversary into meeting us on the central issues of a world at peace and the Presidency restored to a symbol of respectability."

The Recent Decisions of the Supreme Court and the Crowded Court Dockets

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. DAVIS of Georgia. Mr. Speaker, those of us who have closely observed the Supreme Court during the last two decades have seen strange and almost unbelievable decisions come from that tribunal. We have witnessed the transformation of that Court from one which had high respect for the law and the Constitution, to one which has disregarded both on innumerable occasions.

During this 20-year period, the Supreme Court has followed a pattern of divesting the sovereign States of their constitutional rights and functions. The force and effect of this pattern of continuously overruling previous decisions to the dismay of litigants and confusion of the legal profession, has been to throw into uncertainty principles of law which had long been settled and upon which the American people could rely as being stable.

Recently I received from Mr. George Washington Williams, of Baltimore, Md., a copy of a statement which concerns itself with one of the major causes of the confusion and chaos which the Supreme Court has engendered as a result of overturning settled principles of law.

Under unanimous consent I insert this statement herewith:

THE RECENT DECISIONS OF THE SUPREME COURT AND THE CROWDED COURT DOCKETS

(Statement by George Washington Williams, Baltimore, Md.)

There is now a great deal being said by the Chief Justice, among others, about the overcrowded dockets. This complaint seems to be justified in many areas, (but I do not believe our Baltimore docket is subject to complaint). But he and they fail to put their fingers on one of the most basic of troubles, the one about which the late Justice Roberts gave due warning, namely, the failure of the Court to respect the rule of stare decisis to the extent that it should. That is the reason for the bringing of many cases, and is, in the opinion of the initiated one of the important keys to the problem.

It has been said, with truth, by high authority, that it is almost as important that the law be settled, as that it be settled right. If the law is settled then, at least, one can know with a reasonable degree of certainty what to expect from his actions, and, that is the essence of a stable and an orderly society.

My views are not to be taken as in any sense an attack upon the Court as an institution, and I resent any such inference, but as an effort, however feeble it may be, to do my part in trying to persuade the Court to confine itself to interpretation of the Constitution and law, and therefore to withdraw from the field of legislation and from that of politics, both national and international, certainly a legitimate function of the Bar.

Now, anyone who has kept a weather-eye out, in recent years, on the course of decisions of the Supreme Court has inevitably anticipated the development of overcrowded dockets, and the consequent criticism.

Justice Roberts, with Justice Frankfurter, dissenting, in *Mahnich* v. *Southern S. S. Co.* (321 U. S. 96, 112) warned the Court of this prospect, saying:

"The evil resulting from overruling earlier considered decisions must be evident. In the present case, the Court below naturally felt bound to follow and apply the law as clearly announced by this Court. If litigants and lower Federal Courts are not to do so the law becomes not a chart to govern conduct but a game of chance; instead of settling rights and liabilities it unsettled them. Counsel and parties will bring and prosecute actions in the teeth of the decisions that such actions are not maintainable on the improbable chance that the asserted rule will be thrown overboard. Defendants will not know whether to litigate or to settle for they will have no assurance that a declared rule will be followed. But the more deplorable consequences will inevitably be that the administration of justice will fall into disrepute."

He then made the obvious remark: "Respect for tribunals must fall when the bar and the public come to understand that nothing that has been said in prior adjudications has force in a current controversy. * * * the tendency to disregard precedent in the decision of cases like the present has become so strong in this court of late as, in my view, to shake confidence in the consistency of decisions, and leave the courts below in an uncharted sea of doubt and difficulty without any confidence that what was said yesterday will hold good tomorrow, unless indeed a modern instance grows into a custom of members of this court to make public announcement of a change of views on the same question when another case comes before the court. This might, to some extent, obviate the predicament in which the lower courts, the bar, and the public find themselves."

This warning was subsequently renewed by Justice Roberts in another case in the same volume, *Smith* v. *Arkwright* (pp. 649, 668), where he bitingly remarked: "The reason for my concern is that the instant decision overruling that announced about 9 years ago, tends to bring adjudications of this tribunal into the same class as a restricted railroad ticket, good for this day and train only," and he continued in the general vein of his remarks in the Southern S. S. case, but that such warnings have been ignored subsequent cases will show.

A modern echo of these lamentations is found 'n the concluding statement of the present Justice Harlan in *U. S.* v. *Ohio Power Co.* (353 U. S. 98, 111): "For the reasons given I must dissent. I can think of nothing more unsettling to lawyers and litigants, and more disturbing to their confidence in the evenhandiness of the Court's processes, than to be left in the kind of uncertainty which today's action engenders, as to when their cases may be considered finally closed in this Court," and as to the Court's "free wheeling" see his and Justice Frankfurter's dissent in Sinkler in *Mo. Pac. R. R. Co., 356* v. *326.*

That this is true is now further attested by such eminent jurists as Judge Learned Hand, considered by many as the primus inter pares among sub-Supreme Court judges, when he declared that: "I cannot frame any definition that will explain when the Court will assume the role of a third legislative chamber and when it will limit its authority to keeping Congress and the States within their accredited authority."

The A. C. C. N. Agency reporting on the lecture of Judge Hand, inter alia, said: "The Supreme Court's 1953 segregation ruling was viewed by Judge Hand as an example of the Court overruling legislative judgments by making 'its own appraisal of the relative values at stake' of a judicial concept it opposed." As to the Court's legislative decisions, he remarked that: "This is disastrous because disunity cancels the impact of monolithic solidarity on which the authority of a bench of judges so largely depends."

And again: "Moreover, it certainly does not accord with the underlying presuppositions of popular government to vest a court, unaccountable to anyone but itself, the power to suppress social experiments which it does not approve."

And Professor Corwin, of Princeton, in a letter to the New York Times, declared that: "There can be no doubt that on June 17 last the Court went on a virtual binge and thrust its nose into matters beyond its competence, with the result that in my judgment, at least, it should have aforesaid nose well tweaked."[1]

Charles Warren in his classical "The Supreme Court in U. S. History" reminds us and the Court that: "However the Court may

[1] We have been told by the press that the Chief Justice is now studying Talmudic law—see New York Times, September 14, 1957—with "emphasis on moral law." Page, United States Constitution and those of the States.

interpret the provisions of the Constitution, it is still the Constitution which is the law and not the decisions of the Court."[2]

The Court, we are told by the former Solicitor General, now chief judge of the fourth circuit, Sobeloff, always times its decisions and went on to illustrate that practice,[3] thus applying the homely wisdom of the Chinese proverb: "By taking one step after the other, one can reach the end of the earth." That this Fabian practice is alien to the thoughts of our Founding Fathers is apparent. That the Constitution is not so fluid is shown by two accepted constitutional authorities of another day; namely, Story and Cooley, along with the Court itself.

Justice Brewer, in *South Carolina* v. *U. S.* (199 U. S. 437), repeats the fundamental truth that "The Constitution is a written instrument, as such its meaning does not alter. That which it meant when adopted it means now. * * * Any other rule of constructions would abrogate the judicial character of this Court and make it the mere reflex of the popular opinion or passion of the day." This was the accepted doctrine until the Roosevelt neo-Supreme Court, and is the only legitimate one today. As long as the Court continues to free wheel and usurp jurisdiction and ignores the doctrine of stare decisis, the dockets will always be crowded.

So, when the above-quoted well-known and respected authorities make such comments, we of the lesser breed cannot be fairly denominated demagoges or crackpots, and if we are, we certainly are in good company.

We think that what Margaret Halsey said in a review of The Affluent Society is all too true: "It is banal to mention that the turning points of history have a way of passing without the people involved in them being aware of it." The moral is all the worse, however, when the principal actors know but to serve the hour, blind spot the ultimate effect, and whichever alternative one accepts the cold fact is that form exists long after the substance has disappeared our dual system is no more. Its demise was involved in the late Justice McReynolds' solemn declaration from the bench, "The Constitution is dead." We hope to regalvanize it by constantly emphasizing the evil consequences of the present course of action.

---

Do We Realize What Guard Cut Means?

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. SIKES. Mr. Speaker, I would like to call the attention of my colleagues to an editorial which appeared in the Florida Times-Union on July 18, 1958:

DO WE REALIZE WHAT GUARD CUT MEANS?

No wonder the governors are protesting a plan to reduce the number and strength of National Guard units.

In May Defense Secretary McElroy assured the national governor's conference that in no instance would reduction in personnel in any State exceed 10 percent. Under the new plan, however, cuts range as high as 31.8 percent and Florida's Guard will be cut nearly 24 percent.

This time of world crisis is a strange time indeed for cuts in the guard. We have great need of ground strength to fight any brush-fire wars that may start in the Middle East; the Marine units aren't numerous enough to handle all the eventualities. If the crisis worsens guard units would have to serve as the framework of mobilization as they did in the crisis of 1940.

What is the reasoning behind these cuts in guard units and their strength? The assumption seems to be that atomic capabilities reduce the need for ground troops. That is, the idea of using atomic weapons on the battlefield is behind the redesign of the ground fighting unit.

Certainly we must be capable of using such weapons. But to make ourselves incapable of fighting without them also involves risk. If we are inadequately prepared to fight with conventional weapons, we have committed ourselves to battlefield atomics. Are we aware of the implications of that commitment?

For example, in the present crisis if sporadic fighting increases do we want to use atomic weapons on Arabs where conventional tactics would be sufficient?

Have we decided that tactical use of atomic weapons in other areas would not spread into strategic use of them by a foe? In other words, how can we be sure they would be limited to the battlefield?

A decision to cut the guard is a decision to commit ourselves to battlefield atomics. That in turn may be a decision to invite nuclear retaliation on civilian populations. Have we thought through these implications "of economy"?

It may cost money but ultimately it seems best to have both the capacity for fighting a limited war with conventional weapons and the atomic capability for unlimited war. Our real foe in this world struggle has both these capacities. An effective ground force cannot be preserved without preserving an adequate mobilization framework in the form of the National Guard.

Age Discrimination Is Getting Worse

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 28, 1958

Mr. KEFAUVER. Mr. President, with the median age of the population rising steadily each year, we are faced with the responsibility of providing some means of subsistence for the older segment of our working force. It is clear that we cannot afford to cast these older members of our working population adrift, letting them survive as best they might. Industry certainly has a responsibility along these lines in providing employment for these competent and often skilled people who are discriminated against merely because of their age.

Sylvia Porter, in her column published in the San Francisco Chronicle of June 3, 1958, points out some of the difficulties faced by older persons seeking employment. I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

AGE DISCRIMINATION IS GETTING WORSE
(By Sylvia Porter)

Corporation employment barriers are going up again all over the country against the jobless man who is over 40 and the jobless woman who is over 35.

The age prejudice—senseless, cruel, wasteful, almost incredibly ironic though it is—appears in many areas to be worse than ever.

For the first time, resistance to hiring women, due solely to age, actually is showing up below 30. (A hag at 30?).

For a brief period during the boom-boom days, the discrimination against the "older" worker appeared to be lessening a bit. Or anyway, it went underground and companies which had rigid bars against the over-40 worker did not advertise the limits so blatantly.

But whatever feeble progress was made has been lost and now, the direction is backward.

"Our most recent survey of corporations employing almost 30,000 workers reveals that a man or woman over 30 is finding it increasingly difficult to get work—entirely due to age—and at 45, the resistance is very heavy," said George H. Gutekunst, Jr., spokesman for the Office Executives Association of New York, when I interviewed him by telephone at the national convention of the Office Management Association in Chicago.

"What we have found in New York reflects the national pattern. Prejudice in New York may even be less than in major manufacturing centers."

"Our inquiries across the country show that discrimination is much worse than it was a year ago—and it was bad enough then," added David D. Kiviat, president of the Forty Plus Club of New York, a nonprofit organization operated by unemployed executives to help find jobs for each other.

"Of the last 13 jobs that we unearthed, only one permitted a man over 45. The moment we mention a man is 45, the interest wanes."

"The unemployed who come in here blame us for the age barriers, but it is not our fault," remarked the head of one of the largest employment agencies in New York City.

"The age restrictions are imposed by two out of every three companies which give us openings. We can't budge them by a year."

And I confirmed the whole discouraging tale this past weekend when I plowed through thousands of want ads in the newspapers. In column after column, I found the words "25 to 32 years * * * not over 35 * * * not over 40 * * * to age 42."

The facts, as uncovered by the New York Office Executives Association's survey this spring are brutal. Read on and wince:

By the time a man reaches 50, a full 42.1 percent of the companies won't hire him because of his age.

When he hits 55, he'll be excluded from possible hiring by nearly 68 percent of the companies. Finding employment at 55 is almost impossible.

By the time a woman is 35, an astounding 10 percent of the companies think she is too old to hire, more than double the percentage which reported this age as their upper limit for hiring in 1957.

By the time she is 50, she will find the doors will be slammed in her face by 56 percent of the companies.

Yet, the same companies which have these arbitrary hiring rules admit that the absenteeism and turnover record of the older worker is no worse than that of the younger worker. They say frankly that older workers are just as reliable and productive, that they present no special problems of supervision, do not hurt morale. They just con-

tend—wrongly—that training of older workers poses a problem.

And the supreme irony is that these same companies place the most productive years for men between 25 and 55 and for women, between 25 and 50.

In other words, nearly 11 percent of the companies bar a man from employment before he has reached the halfway mark of his most productive years and 57 percent bar him during the second half as too old.

About 10 percent of the companies bar a woman before she has reached the halfway mark of her most productive years and another 48 percent turn her down in the second half as too old * * *.

There were some faintly heartening reports last fall that Congress might do something concrete to prod industry into curbing his discrimination. But since sputnik, there has been a deafening silence about this in Washington. What, then, can be done?

"Keep pounding at the stupidity of it," says Gutekunst. "Keep emphasizing it is a never-ending campaign," says Kiviat.

This is policy among industrialists who know they'll have to pay soaring taxes to support the older jobless—if the workers continue jobless. This is fact in a country in which the over-45 will constitute half our adult population by 1975. It doesn't seem credible.

The El Monte Herald Speaks Out

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. HILLINGS. Mr. Speaker, a thought-provoking editorial was written and published in the El Monte (Calif.) Herald by Editor Neil R. Murray on July 18, 1958.

This editorial was of extreme interest to me because it expresses forcefully an American's view of an American event of tremendous magnitude.

I recommend that my colleagues read the following editorial from the El Monte Herald:

There seems to be considerable disagreement arising as to whether President Eisenhower was right in sending Marines to Lebanon. Regardless of the right or wrong of it, we got a bit of a thrill over the fact that at last we had done something besides writing protests. Not being in possession of all of the facts concerning the serious step taken, we can't approve or criticize.

But in today's world anything America does can involve serious consequences, for which the greatest country in the world should be prepared at all times.

One thing is certain, regardless of the right or wrong of Ike's action, we'd have been considerably prouder and and more thrilled had America sent the fleet to Cuba with the command: "Bring our American kidnapped citizens aboard alive, or we'll take Casto dead."

Likewise, we would have been considerably prouder and more thrilled had America sent to Communist China the command: "Return our 29 airmen unharmed at once or we'll come and get them after taking suitable military action."

Then everyone would have known, after these two wonderful things had happened, that America would go to any length to protect American citizens.

We have an idea that Teddy Roosevelt or Douglas MacArthur would have handled both situations that way and that it would have worked in both cases.

Indications are that America could wipe Russia and China off the map if the American people were as heartless as the Communists and probably both countries know it, but are pinning their hopes of gaining strength by bluffing.

Are we going to let our airmen imprisoned in Red China remain prisoners for life? The American people hope not. We have the greatest faith in the courage of the American people. If America were to be overpowered by the Communists tomorrow, most good Americans would wish to live the rest of their lives today.

We remember back a good many years when we were attending a baseball game at Wrigley Field. A cripple sat with his wife harmlessly watching and enjoying the game. A big ignorant drunk staggered by and chucked the wife under the chin. At least 20 men arose from their seats, but before they could get into action the cripple pulled himself erect and knocked the drunk down. That's what America is beneath the surface.

The American people want leadership like that of Teddy Roosevelt.

So we can't disapprove of any positive and courageous action by this Nation at home or abroad. But we would like it to be ready to protect American citizens everywhere and not just oil supplies or rulers of little nations.

We really would be vastly proud if the prisoners in Communist China and the kidnaped prisoners in Cuba were back home because America commanded they be returned and was prepared to back up the order. And we firmly believe that the leader who took such action would be backed up to a man by Americans, once again so proud of their country they could burst.

So, once again, America would be supreme in the respect of other countries over the world. And not because we're feeding them free millions of dollars, but because we had restored evidence of the courage for which America once was famous.

We wish the words, appeasement, negotiations, and protests could be removed from our political dictionary.

Vice President RICHARD MILHOUS NIXON, yes, and his wife, Pat, displayed the true American courage during their terrific ordeal in South American countries.

Christian Democratic Party of Italy Gains Strength in Recent Elections

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 2, 1958

Mr. LIBONATI. Mr. Speaker, the Christian Democratic Party gained strength in the recent elections in Italy due to the efficient organization developed by its aggressive party leader Amintore Fanfani.

The prowestern Christian Democrats increased their representation in both the Chamber of Deputies and the Senate but fell short of their goal of an absolute majority in both houses. Thus they had to depend upon the loyalties of the minor centrist parties to form a new coalition government. The Communists lost 3 seats in the Chamber while the left wing Socialists led by Pietro Nenni picked up 8. The extreme right Monarchist group and neo-Fascists suffered a crushing defeat. The Communists held their own, increasing the popular vote from 35.2 percent to 36.4, an increase of 1.2 percent from 1953. The Christian Democrats increased their vote from 40 percent to 42.4 percent, an increase of 2.4 percent over the last general election in 1953. It gave them 122 seats in the Senate, an increase of 12 over 1953 and 273 seats in the Chamber, an increase of 12 seats over 1953, but 23 short of a majority.

Although the election left the situation the same as far as placing complete control in the Christian Democratic Party, yet there was a strengthening of the center parties that are prowestern in their attitudes.

The leadership, having fallen to Fanfane, a dynamic statesman who believes in the coalition between the center and non-Communist left, has led to a formidable grouping of prowestern North Atlantic Atlantic Treaty Organization policy and acceptance of allied missile bases on Italian soil.

His conferences in Italy with the Ambassadors of Turkey, Egypt, and Western Germany and the Prime Minister of France will enable him to give the proposals not only of the Italian plan of its Mid East policy but also the viewpoints of these other nations as well and so, he comes well informed to Washington to discuss with President Eisenhower and Secretary of State Dulles the Mid East-Orient situation relative to its effect on the Italian economy and the problems of the others. This is indicative of the high trust and complete confidence that the officials of the aforementioned governments placed in him. He certainly is a statesman of definitely an important stature. As a cofounder with the late Gaspari and others of the Christian Democratic Party he has always maintained a belief that Christian principles as a political platform can be worked toward the betterment of the national life; and on the whole the party has done a fine job. The party publicly has proclaimed separation of church and state, their critics maintain that the policies of the party are dictated by the Vatican. Of course in any nation where the predominance of one religious group makes up the very religious complexion of the body politic, the same accusations are made.

We are fortunate that the leader of the Christian Democratic Party visits our country, within which thousands of his comparees are its citizens and whose most fantastic dreams have been realized through the great opportunities toward their accomplishment.

He knows of and saw in his own Italy during World War II thousands upon thousands of Americans of Italian extraction, sons of these pioneers, march through Italy with bloody bayonets and hand-fired weapons at short range; at the landings, the bloody triangle at Casino and Anzio Beach—there is no hyphen here—but just a high respect and a fond regard for the homelands of our ancestry. America is strong because she

venerates in all her people the love and interest in the folklore, the customs, and the welfare of the homelands of the many nationalities that have contributed so much to the strength of the greatest Republic. A Republic that protects the freedom at birth and to the very grave.

In her role as the leader of freedom-loving nations, she has been very patient and at times the rich chump of satellite sweethearts. But in her spendthrift orgies she gives away only what she cares so little about if peace has a price. But once aroused to even a scarey threat of the loss of the sacred freedoms of her peoples or these peoples over which she has placed her protecting hand—God has unleashed the fury of the damned—to the last man—it will be the last war. The courage of America is not in the dollar but "in God we trust" and so we welcome our fighting friend the great Premier Amitre Fanfani of the Republic of Italy always a nation whose population was our friend—even though in this generation it was once betrayed by a dictatorship that was betrayed itself under its own tutilage. Italy passed through the reconstruction era after the war and made tremendous strides in its recovery, standing next to the great Republic of Western Germany as one of our most powerful allies in the Atlantic Pact.

We know that the President of the United States, Dwight D. Eisenhower and Secretary of State Dulles will accord to him every advantage that is necessary to help maintain the independence and security of the great Italian Republic and its liberty-loving people. America is fortunate in having this great statesman on its side—Italy, as the most strategic spot in Europe, is of the greatest importance to the maintainance of our supremacy in Europe. God bless Premier Fanfani and may the gratitude of the United States protect and support him in his common stand with us for the freedom-loving nations of the world. He is our kind of statesman. At the present time he is already moving fast toward the implementation of his economic and social program for Italy, whose aim is to give each Italian an education, a home, and a job. This program he knows will insure the popular support of the democratic institutions and stability of the Italian Government.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Washington Post and Times Herald and an article from the Chicago Sun-Times as follows:

[Editorial from the Washington Post and Times Herald of May 29, 1958]

GOOD NEWS FROM ITALY

Although the Italian elections leave the political configuration only slightly altered, their net effect is to strengthen the center and the non-Communist left. The middle-road Christian Democrats, who have constituted the strongest party since the end of the war, gained by more than a million and a half in the popular vote. This was reflected in their gain of 11 votes in the Chamber of Deputies and of 6 votes in the Senate; but they again fell well short of an absolute majority in the chamber. The Communists lost some ground in the chamber but gained four additional places in the Senate, and in the popular voting barely held their ground.

On the other hand the left-wing, or Nenni, Socialists emerged stronger than ever and the right-wing, or Saragat, Socialists also made substantial gains. The parties of the extreme right, such as the Monarchists and the Neo-Fascists have been so severely atrophied by the returns as to be no longer serious political factors.

From the point of view of international policy the Italian elections are a clear victory for the West, since the controlling power in the new Parliament will lie, and even more firmly than before, with the pro-Western parties of the center. On the question of internal policy the consequences are less clear. Much will depend upon the personal composition of the new Parliament, for under the Italian system of proportional representation the voters are permitted to state preferences among the individual candidates of a given party. This is especially important as concerns the Christian Democrats who include in themselves right, centrist, and radical wings.

The election, nevertheless, may be interpreted as a personal triumph for Signor Fanfani, leader of the Christian Democrats and also of their more radical faction. His assumption of the Premiership is now strongly indicated though as yet by no means assured. It is possible that Signor Fanfani, now that he has nothing to fear from the Right, may even seek to woo the Nenni Socialists even farther away from their former Communist allies in the hope of gaining their support for further economic and social reforms.

As for the Communists, the earlier returns by districts suggest that the party has suffered heavy defections to both Socialist parties in the industrial and now relatively prosperous north but that these were largely offset by gains in the agricultural and still misery-stricken south. If this proves to be correct, it will give further plausibility to the theory that Italian communism is much more a matter of the stomach than of ideological conviction.

[From the Chicago Sun-Times of May 29, 1958]

FIND MILD SATISFACTION FOR UNITED STATES IN ITALY'S VOTE RESULTS

WASHINGTON.—United States officials drew mild satisfaction from results of Italy's general election.

Slight strengthening of the center parties offset the pro-Communist left's modest gains. It was the extreme right—Monarchists and Fascists—that suffered appreciable losses.

The voting Sunday and half of Monday elected a senate or upper house and a new Chamber of Deputies, in which the real power resides. State Department experts were suspending final judgment until they learned the balance of power inside the major parties.

FANFANI OR PELLA?

For instance, it remains to be seen whether the dominant man among the Christian Democrats, biggest party, is Amintore Fanfani or the present Foreign Minister, Giuseppe Pella. Both are potential Premiers of the next Government. Fanfani, a former Prime Minister, is more inclined to form a coalition between the Center and non-Communist left.

Pella leans toward the right wing of the Christian Democrats and would head a more conservative Government.

In the less important Senate, the Christian Democrats just missed winning a majority.

It is the lower house, or Chamber of Deputies, that experts are scrutininzing closely. There the 3 rightist parties together lost 21 seats out of their 69 in the recently dissolved Parliament. The 3 are the 2 Monarchist Parties and Italian social movement (Fascists).

On the left, the Communists increased their popular vote to 6,700,000: from 6,120,709 at the last election in 1953. But owing to the influx of new voters since 1953, it took more ballots to hold the same number of seats. So the Communists dropped from 143 to 140 seats. Their share of the total vote was almost identical with that 5 years ago—22.7 percent now, as against 22.6 then.

NENNI GAINS MORE SEATS

The Socialists under Pietro Nenni fared better than the extreme left. Nenni increased his party's seats from 76 to 84, its popular vote from 3,441,014 to 4,198,000, and its percentage of the entire poll from 12.7 to 14.2.

The Socialists have tended to crawl into bed with the Communists on major issues.

The Christian Democrats, while making a good showing, failed to win an absolute majority of the chamber. They gained 12 seats, now holding 273 as against 261 in the former Parliament. Their popular vote was 12,508,000, compared with 10,834,466 in the 1953 election. They increased their slice of the total vote from 40 percent to 42.2.

Bracketed with them in the moderate center are the Social Democrats, Liberals, and Republicans. The Social Democrats won 23 seats (formerly 19). Liberals 16 (14). Republicans 9 (5).

Since the Christian Democrats fell short of the strength needed to form a one-party government, these coalitions are possible:

1. Christian Democrats, Social Democrats, and Republicans, with 305 of the total 596 seats in the chamber.

2. Christian Democrats, Liberals, and (Guiseppe Lauro's) Monarchists with 302 seats.

3. Christian Democrats, Social Democrats, and Liberals with 312 seats.

All these groupings mean continuance of Italy's pro-Western, North Atlantic Treaty Organization policy and acceptance of Allied missile bases on Italian soil.

It appears that the rightists' losses were divided about equally between the center and left.

Can We Stop Slaughter on the River?

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Detroit Free-Press:

CAN WE STOP SLAUGHTER ON THE RIVER?—CARELESSNESS, IGNORANCE OF BOATERS BLAMED

(By James Glynn)

On a lazy afternoon early this summer a high-powered motorboat with four occupants was cutting wide circles in the Detroit River pulling a water skier.

All four occupants were facing the stern of the boat watching the skier. None of them saw the approaching cruiser.

The motorboat struck the big pleasure craft amidship. The shattering impact hurled the 4 people in the motorboat against the side of the cruiser, maiming 2 of them for life.

The police report shows that the driver of the motorboat was 15. The oldest passenger was 13.

Now it's a Saturday morning last June.

The early morning weather report indicates scattered thunderstorms in the Detroit area. The wind is blowing in gusts from

19 to 23 miles per hour from the north. Small craft warnings are posted.

But a 21-foot kit boat puts out from a marina near Metropolitan Beach. Five persons are aboard.

Less than 3 hours later the Coast Guard has completed its tragic report. The boat was found listing badly in the choppy water. the gas tank had been smashed out of its moorings by heavy waves. The propeller blades were broken off.

The five bodies were fished out of the lake and sent to a morgue for identification.

Less than a week later a small outboard motor boat is preparing to enter the mouth of the Detroit River from Lake St. Clair.

There are 6 people aboard, including the owner, who knows that the boat's capacity is 4.

The traffic is heavy at the mouth of the river. The overloaded outboard gets caught in one backwash after another from heavier boats.

It takes too much water and sinks. One passenger drowned before help could arrive.

This is the kind of weekend mayhem that goes on every summer in spite of frantic efforts by the Coast Guard and the Detroit Harbor Police to stop it.

Just when we think things are getting better, said a veteran patrolman, some darn fool who doesn't know the first thing about boats in the first place goes out there and starts buzzing some kids who are in swimming.

The situation probably will get worse before it gets better.

Few people are aware that in the area along the lakes and rivers between Monroe and Tawas there are approximately 45,000 boats.

When they all get out there together on a Sunday afternoon, said a Coast Guardsman, it's every man for himself.

Trying to preserve order on the water in the Detroit area are 37 men assigned to the police Harbor Master's office on Belle Isle and a larger complement of Coast Guardsmen assigned to Lake St. Clair, Lake Huron and the St. Clair River.

Accidents resulting in injury or damage are investigated by the Coast Guard's Marine Inspection Bureau in the Federal Building.

This office is headed by Comdr. Benjamin Malloch, a veteran Coast Guardsman, who shudders at the sight of most of the reports crossing his desk.

Boating accidents, he claims, are caused primarily by three factors—poor seamanship, overloading and complete disregard of prevailing weather conditions.

"Anyone who has the money can buy a boat," says Malloch. "They buy what they want, launch it, and they're off to the races without knowing the first thing about regulations or seamanship."

But there are many cases, he adds, of accidents caused by downright recklessness.

His office is investigating the case of a hit-run driver who was piloting a high-powered motorboat on Lake St. Clair at high speed with no lights.

The motorboat glanced off the side of a cabin cruiser with a party of six aboard. One passenger was thrown to the deck and suffered a fractured skull. The cruiser was partially disabled and it was hours before the injured person could be taken to a hospital.

But reports of water accidents, for some reason, are slow in reaching investigative officers.

The hit-run accident occurred on a Sunday. The first details of the crash did not reach Malloch's office until the next Friday—probably giving the offender enough time to have the damage to his boat repaired.

If an accident is caused by criminal negligence, the case is referred to the United States Attorney for prosecution.

Reckless drivers on the Detroit River receive the same treatment as automobile drivers.

They are given citations ordering them to report to traffic court. Fines range from $5 to $100 depending upon the degree of the offense.

To flag down reckless drivers, the Detroit Police Department has a high-powered 30-foot patrol boat and two 26-footers.

They cruise on the river from 10 a. m. to 2 p. m. daily, watching for overt acts of recklessness and speeding.

The police claim that their biggest headache is the maniac who overpowers his boat.

"He gets himself a small, light boat," said an officer, "and a motor big enough for a tug. Then he goes out on the river and flies along the water."

Smart alecks who like to show off by buzzing the waterfront bars are another source of trouble.

Inspector Oliver Beresford, in charge of the river detail, says that "buzzers," operating too close to shore, cause considerable damage to boats moored along the river's edge.

So far this summer, about 55 accident cases involving damage or injury are under investigation.

That figure does not include the citations issued by the harbor police. Nor does it include cases of recklessness and speeding in which the driver got away before he was detected.

What to do about it?

Police officials have two suggestions—operator's licenses for boat drivers and a minimum age limit.

So far as they know, there is no legislation pending for either of these possible cures.

Some kind of parental supervision for juvenile boat operators would be helpful but too often it is conspicuously absent.

Commander Malloch tells the story about a mother who called him on the telephone to say that she was going to buy a boat for her son.

She wanted Malloch's advice on the kind of a boat she should buy.

"How old is he?" said Malloch.

"He's 14," said the mother.

"Then my advice," said Malloch, "is to buy something that he could float in the bathtub."

TWO CHILDREN DROWN AS BOAT FLIPS

Two children drowned Saturday when a 16-foot boat with a 40-horsepower motor turned at high speed and rolled over on an artificial lake 25 miles west of Cadillac.

Drowned were Carol Butler, 7, and her brother, Lee, 5, children of the Reverend Durell J. Butler, pastor of the Remus (Mich.) Church of God.

Two other Butler children, Judy, 8, and Floyd, 6, were rescued by an unidentified camper. William Lamb, Jr., 14, operator of the boat, got to shore himself.

State Police said the boat was both overpowered and overloaded and Lamb tried to turn it too quickly, causing it to roll over and pitch the children from it.

The four Butler youngsters had been vacationing with Lamb and his parents, Mr. and Mrs. William Lamb, at the Mesick Chamber of Commerce camp grounds near where the accident occurred.

Despite rescue attempts by Gail Reeb, 15, of Brighton, Ria Smith, 14, of Flint, drowned in Ore Lake, 4 miles southwest of Brighton, Livingston County.

The two girls were wading in 4 feet of water with Ria's sister, Mrs. Davina Lathrop, 22, of Hamburg Township, and Anita Audreini, 14, of Flint.

About 40 feet offshore, the group slipped from a dropoff into 40 feet of water. Anita made it back to shallow water and Gail, an excellent swimmer, aided Mrs. Lathrop.

Then Gail swam to help Ria but couldn't find her.

Hamburg Township firemen recovered the body.

A Trenton man, Harry Los, 33, drowned late Friday when he stepped into deep water while wading in the St. Clair River near Algonac. His body was recovered.

Vice President Nixon's Salute to the Bausch & Lomb Honorary Science Award Program

---

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1958

Mr. KEATING. Mr. Speaker, it was my privilege and pleasure recently to participate in a program commemorating the 25th anniversary of the honorary science awards presented by the Bausch & Lomb Optical Co. Each year, this company, which is located in Rochester, N. Y., presents bronze medals to leading scientists in graduating high school classes. This program has contributed much to encouraging science education in this country.

This year some 6,500 awards were presented, thus bringing the total number given out over the years to 125,000. The keen interest in these medals and the tremendous honor they represent make them highly coveted by our graduating seniors. They have stimulated literally thousands of young people to go into the vital fields of science upon which so much progress—and, indeed, our very survival, depends. They show the important role the private sector of our economy can play in the cold war science battle.

Attending the silver anniversary luncheon on June 17 were Dr. Norman H. Nachtrieb, one of the original 1933 award winners and now a distinguished physicist at the University of Chicago, and two of this year's winners, Miss Constance Sue Rose, of Charleston, W. Va., and Thomas Hodgson, of Moorestown, N. J. The principal address—a stirring and inspirational extemporaneous speech—was delivered by Vice President RICHARD M. NIXON. In his timely remarks the Vice President emphasized the importance of the Bausch & Lomb awards and of science teaching, in our never-ending struggle to preserve our freedoms.

Because his remarks are so sound and apt, they deserve the attention of every Member of this body. Under leave previously granted, I insert them at this point in the RECORD:

REMARKS BY THE HONORABLE RICHARD M. NIXON AT THE SILVER ANNIVERSARY OF THE BAUSCH & LOMB HONORARY SCIENCE AWARD JUNE 17, 1958, SHERATON-CARLTON HOTEL, WASHINGTON, D. C.

Now, if I might have the opportunity to speak to you informally for just a moment before this very fine occasion comes to an

end. I think that all of us (the people that I refer to make up this select audience today) must have many thoughts running through our minds, on an occasion like this. There is always a tendency for us, of course, to put these events in a personal context. I was speaking to Constance Sue Rose and to Dr. Nachtrieb before and during the luncheon today with regard to my own activities in this field when I was going to school. And I pointed out to them that, like many people who had some ability in the field of history, and literature and language, that I had no ability whatever in the field of science. Nevertheless, I recall when I was a jnior in high school, I had a very remarkable man in the year 1929 who was a teacher of chemistry. He was such an inspirational teacher (and incidentally both chemistry and physics were required for the high school degree in those years) so I had to take them even though I had no aptitude whatever. But I recall he was so inspirational that I many times would spend half the night in order to work out the problems prior to the examinations that might take place the next day.

This kind of inspiration is something that made an indelible impression on my mind. It taught me, as a person, as an individual, to learn something, at least to get some basic knowledge in the field of science. More than that, it also gave me at that time a picture of how much we owe to teachers in all fields. These people who teach in our grade schools and our high schools and our great colleges and universities inspire literally hundreds of thousands of young Americans to develop their creative ability, not only in the field of science represented at this luncheon today, but in all the other fields which, together, make up the American society we are trying to perpetuate.

I think that we are very fortunate that Dr. Nachtrieb is here today because he represents too, as do our two award winners, a group much larger than is here in this room.

It is a group of the literally thousands of teachers in all of the schools of this country, in the field of science and in the other fields as well. I asked him, just before the awards were presented, whether he had any regrets that he chose teaching as a career. "None at all," he said, "you know, there are many compensations in the field of teaching which far exceed any monetary gain that you might receive."

This is something that we often lose sight of. Not with the thought in mind that the teaching profession in many of our universities and colleges and certainly in our public schools is underpaid and sometimes unappreciated, but something we lose sight of when we consider the fact that the teaching profession is one of the noblest in a free society. It is one in which we have literally thousands of dedicated people, whose compensation in other walks of life could be much greater. But who, because they have a zeal, a mission, a passion for passing on the inspiration which they themselves have received from teachers; because they have this, they go into this profession, and they help to make the country in which we live a better place for all of us.

And so, I appreciate this opportunity to speak not only as an individual but as a Government official. For Dr. Nachtrieb, and all of those in the teaching profession, just as he himself present such a fine example, have gone into teaching not for the monetary rewards which are there, but primarily because they realize that there are other considerations which are important, and because they appreciate the opportunity of instructing the young people of this country, and of inspiring them to greater efforts.

Now, if I could turn for just a moment to our two award winners, I think as you have both noted and as I indicated in my remarks a few moments ago, these are all-around young people. I think too often, as Dr. Teller informed me recently after he had appeared before a congressional committee, too often in the United States we get the impression that anybody in the field of science, chemistry, physics, and all of the other very complicated subjects of higher mathematics, that anybody to be an expert in that field has to be what we call a square—somebody who is a little bit on the queer side. Now I think we all realize that, as Dr. Nachtrieb has suggested, we need a lot more good scientists and mathematicians in the United States than we have today. And I want to point out that we can be fortunate in the fact that we do have a great many. We must not ever get the impression that because of the deficit we have in this area, that we are not blessed with a great deal of talent throughout the country. But I think also we should bear in mind that these two young people are typical of the types of students that our schools are turning out today. People who have real ability as specialists in the field of science, but people who are well rounded. I don't mean that every science student must be a good college football player, or a baseball player. I do mean, however, that you will find more often than not that our young people who go into science and into mathematics and into these specialized subjects, are people who are specialists but who also have a broad interest in the problems of their schools and who later on, when they go into the society, will have a broad interest in other problems as well. And in this respect these two young people are certainly typical of the very best that American schools produce today.

I'd like to say just a word, too, about Carl Hallauer and Bausch & Lomb. As far as this particular award ceremony is concerned I can imagine that there are those cynics who would suggest that it is a pretty good advertising gimmick for Bausch & Lomb to make these awards to 125,000 over the period of 25 years. All that I can say, if it was planned as an advertising gimmick, we need more advertising gimmicks of this type. Also, the way in which it has been handled on this occasion, in the visit that was paid to the White House, it was certainly in the very best taste and in the very best tradition.

What I am really trying to convey is this: When the first sputnik was launched a few months ago, the people of the United States got excited about science. Justifiably so. Because for years, as a matter of fact, at least I remember from the time that I came into the administration in 1953, we had been hearing about the great gains that the Soviet Union was making in the field of science; about the training programs that they have. We had been hearing, not that they were ahead of us overall, but that they were concentrating more in this field than we were. That unless we proceeded to pay more attention to this area than we had, they would overtake us. This, in other words, was the essence of the problem. As I say, the sputnik merely brought that home to all of us, because this condition has been existing ever since World War II. And it exists not only in the field of science, but in many others.

Now, what we really then come to is this: when we were reminded by the sputnik that the Soviet Union was concentrating in the field of science, we had a number of suggestions as to how we were going to meet this problem. Most of those suggestions were with regard to Government action. Some of them were rather naive in a sense. Naive, to the effect that in order to produce scientists, all you had to do was to have a Government program which would simply turn them out somewhat as you would turn them out in an assembly line. It doesn't work that way. It certainly doesn't work that way in a free society where there is a choice among our young people as to what field they desire to devote their studies for the balance of their lives.

What I want to get across here is that today we have an example of the difference in the approach to this basic problem of a free society competing with a dictatorial society—of the difference that must characterize our approach as compared with theirs. In a dictatorial society, the State can say what the young people will do. The curriculum, everything else, is determined by the State. And people who have certain abilities in certain areas go into the areas in which they are needed. And in the short run, there isn't any question but what they can make very significant progress. And make no mistake about it, and I am sure we will not, the Soviet Union has made remarkable progress and will make more in the years ahead.

But, on the other hand, I think we must never forget that if we lose faith in our approach, the approach of what we term the free society, then we will certainly be lost. Because we need not assume that the only way you can inspire young people, the only way that you can get the scientists that you need is through a Government program which literally forces them into this area or that area where they may be needed. In other words, we see here today a typical example, one of many that could be expanded throughout our society, of how American private enterprise, working with the public school systems of this country and private school systems as well, has, over a period of 25 years, recognized the need and has contributed to the solution and the filling of that need. It has contributed to it not through a system which forces young people to do something which they do not want to do, but one which inspires them. It inspires them, not with a great deal of money, but with recognition—recognition in the form of a symbol, a very small one, but one which, as Dr. Nachtrieb has indicated, can mean even more than a monetary award.

So, I am very happy to be here today to pay a tribute and to express our thanks to Carl Hallauer, to Bausch & Lomb, and to him and his company, as they represent the other companies of this type throughout the country who have recognized this kind of need and who are engaging in this kind of program. Because this, in essence, is the most effective way to answer the challenge which is presented to the free nations. Once we recognize a problem; I have no doubt whatever that free peoples working voluntarily with encouragement from Government—not with the type of Government control which a dictatorial society must have—that a free people with the challenge with which we are presented, working under a free Government can, in the end, not only survive but will surpass materially as well as in more important areas on the spiritual side, a people who live under a system of slavery.

All of you probably noted what happened just yesterday in Hungary. We saw there the ultimate result of what can happen in a dictatorial society. I remember, immediately after sputnik, you heard quite a few people who very honestly would say, "maybe this system of dictatorship is one which in the long run can produce materially a more productive society and a richer life for people." In other words, we at least have to consider this. For the answer all we need do is look at the events of yesterday, to see the sad end of the Hungarian revolution; a revolution in which young people like this, by the thousands, in which workers by the thousands were shot down in the streets of Budapest, in which the Premier, Governor, and General Maleter and the others who led the revolution were then executed after they were promised safe conduct. We can see the real difference, the real difference between the system of freedom under which we live

and a system of slavery with which we are in competition.

This is neither the time nor the place to discuss in detail the basic issues involved from the diplomatic and foreign policy standpoint between the Communist bloc and the free nations. But I can say this, on the basis of my travels throughout the world, most of which have taken me to countries which are underdeveloped, countries in which there are literally millions of people, yes, a billion people, who want a better way of life, that I have found a fundamental truth evident every place.

Whether in South America, in Africa, in the Near East or in Asia, people do want a better way of life and they realize that the development of their resources, the development of industrialization, the training of scientists and engineers and the like, can lead to a better way of life. They see what has happened in the Soviet Union, the development that has taken place there during the past 40 years. They see what has happened in Communist China. The major difference is that the peoples in these countries, believe me, want a better way of life but they would prefer to have it with freedom. And that, therefore, is the advantage we have. On the other hand, if they cannot have a better life with a system of freedom, they are going to take it the other way. Because, above everything else, they want to get away from the terrible poverty and misery and disease that has plagued them for centuries.

So this, then, is the challenge that we face. A challenge which these young people will help us to meet. A challenge which Dr. Nachtrieb, through his own efforts and those of his colleagues, and through the students that they will train, will help us to meet. A challenge in which free peoples will prove that we can train the scientists and the engineers, all the other specialists that we need, to produce a better way of life for our people as well as other peoples in the world. But produce it in the climate of freedom rather than the climate of slavery. And so, may I say again that I am privileged to be here as a spokesman of the government and also as an individual, to express our thanks to Carl Hallauer, to Bausch & Lomb, and particularly our compliments and our congratulations to these fine young examples of our American schools and the products of our schools. At a time in which everybody is suggesting that our young people are going to the dogs, I can only say that if this is an example of it we can be very proud of the way they are going. Thank you very much.

School Tree Plantings in Memory of Theodore Roosevelt

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. AYRES. Mr. Speaker, when schools reopen in the fall many children will once again be engaged in the worthy ceremony of tree plantings. In this centennial year of the birth of Theodore Roosevelt, the Natural Resources Council of America has made the fitting suggestion that these plantings be made in the memory of the great "T. R."

I commend the announcement that follows to the attention of my colleagues:

JULY 15, 1958.

We, the undersigned members of the Theodore Roosevelt Centennial Committee of the Natural Resources Council of America, urge the superintendents, principals, and teachers of the public schools to observe the memory of T. R., who was one of our foremost conservation leaders, by promoting tree planting by the youth of the Nation during 1958. There could be no more fitting tribute to this pioneer conservationist during the centennial year of his birth than such a program symbolizing the former President's varied personal interests in natural resources, forestry, wildlife, and youth.

We feel that tree-planting activities, conducted with appropriate ceremonies, would serve the dual purpose of inspiring the young people of America with the spirit and philosophy of Theodore Roosevelt, under whose administration the first fully effective laws protecting our national resources were enacted, and dramatizing the ability of individuals to enhance the beauty, wealth, and future welfare of the Nation.

Tree planting in the fall, up to the first hard freeze in the Northern States, can be as successful as spring planting. Everyone retains memories of tree-planting projects in which they have engaged, and it is hoped that there will be widespread participation in this phase of the Theodore Roosevelt Centennial program.

C. R. GUTERMUTH,
Chairman; Vice President, Wildlife Management Institute.
JOHN A. BAKER,
President, National Aubudon Society.
FRED E. HORNADAY,
Vice President, American Forestry Association.
HARLEAN JAMES,
Secretary, American Planning and Civic Association.

A Special Report on the Mideast

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. DENT. Mr. Speaker, in order that all of us can better understand the Mideast situation, I offer this special report without personal comment. I am presenting facts, statements, and comments of others, but I reserve my own opinion until a later report and after more details are known to Congress.

I believe we should have a short rundown on strife-torn Iraq:

In its stormy career as a nation since its independence was proclaimed in 1932, Iraq has witnessed five military coups d'etat in the course of being ruled by about 40 cabinets. Iraq was established by the British in 1921 out of the Ottoman Empire and became independent in 1932 when the mandate ended. It was ruled for its first 12 years by the Emir Feisal, who was placed on the throne by the British as a reward for his services during World War I. Feisal was succeeded by his son Ghazi, who was killed in an auto accident in 1939.

In 1941, a pro-Nazi coup overthrew the government, but was in turn driven out by a column of British troops rushed from Palestine. Ever since then, the country's allegiance to the West has been dubious. In 1948, for example, an uprising followed the signing of a 20-year treaty of alliance with Great Britain in which 70 were killed and 300 injured. The treaty was later repudiated and the Premier who signed it fled into exile. In May 1957 when Jordan was threatened by a Nasser coup, Iraq showed little eagerness to help. Later that year, Iraq was constrained to give moral support to Syria in the Moscow-inflated Syrian crisis.

The country was ruled until 1953 by Prince Abdul Ilah, who was the regent for King Feisal II. The Prince was assassinated in the current coup. The pro-West Nuri as-Said held the office of Premier at least 13 times, and rigidly controlled all organs of information. It was often said that Iraq stood with the West largely because of the influence and prestige of this one man.

Despite its great oil wealth and its fertile soil, Iraq has made slow economic progress. Its population of about 5 million is largely ignorant and untrained. The national per capita income is about $85. New hospitals and schools are handicapped by the lack of trained professional help. There are relatively few doctors and most of them are concentrated in Baghdad. Infant mortality remains high at 250 per 1,000 births.

Included in Iraq's population are about 90,000 Christians. Only 5,000 Jews are left out of a population of 130,000 in 1948, most of whom emigrated to Israel.

Political power is held by a group of feudal sheiks who name and control members of Parliament by gerrymandered districts. Only 15 percent of the registered voters went to the polls in 1953, and civil liberties have been rigidly controlled by the government in power.

Iraq is a member of the Baghdad Pact and has been receiving military supplies from the United States since 1954 under the mutual security program. Its army, now estimated at more than 50,000 men, has never been noted for its reliability or effectiveness.

On May 15, 1948 it invaded Israel with a force of 18,000 men and 100 armored vehicles but was unable to advance more than 3 miles. Previously, a number of Iraqi officers, however, entered Palestine and served with the Arab irregulars in the futile struggle to destroy Israel. Iraq never signed an armistice with Israel but withdrew its troops after turning over their positions to Jordanian forces. Iraq has poured out a constant flow of hatred and incitement against Israel down through the years.

These threats and the instability of the government led to strong criticism from friends of the mutual security program who contended that economic aid would better serve the Arab people than arms and jets.

A few comments, worthy of quoting:

History:

The United States Government [Eisenhower and Dulles, at time of the Suez crisis] denounced the attack on Sues by British, French and Israeli troops. Demanded cease fire and evacuation before U. N. intercession.

Walter Lippmann, in his column of July 1, said:

After the stand we took in the Suez affair, we are committed by our own acts and declarations to a policy of coexistence with Nasser.

Commenting on this statement, Ernest K. Lindley, in Newsweek of July 14, said:

With Nasser as ruler of Egypt and head of the United Arab Republic, yes. With Nasser's ambition to control the entire Arab world, no. Nasser seeks to destroy, or at least bring to heel, every Arab regime friendly to the West. His propaganda organs have gone even so far as openly to urge the assassination of chiefs and statesmen who stand in his way.

On July 8, a Cairo broadcast accused Nuri Pasha of plotting to bring Lebanon into the Baghdad Pact and charged:

When the imperialists failed to stir up the world against the heroic Lebanese people, they began to manipulate Nuri. He hastened to London to extend his poisonous fangs.

The broadcast concluded with a denunciation of the Iraq premier and imperialism. A few hours after the coup Nasser cabled the Iraq revolutionaries from his yacht: "God grant you success in the service of Arabism."

Our present position as we knew it on July 16, 1958:

THE CALL FOR AID

Then came the blow in Baghdad, with repercussions in Beirut. It was now clear that Lebanon could not quell the revolt. From the beginning, the United States had promised that it would respond to a call for assistance if it came. The failure of the Lebanese Army to deal sternly with the rebels and the disappointing U. N. report had created misgivings about the validity of intervention. But Baghdad changed that. The call came on July 14. President Eisenhower called congressional leaders primarily to discuss Lebanon appeal, for reports from Iraq were fragmentary. The President felt that there was no alternative but United States intervention and the landing of United States Marines.

The administration's position was supported by Republican leaders and by most of the Democrats, but Senator MIKE MANSFIELD, Democratic whip, argued strongly that the United States take the case first to the U. N. One Congressman recalled the missed opportunity when Israel launched its attack on Nasser in 1956.

Excerpts from editorials of Washington reporters:

The very serious situation facing the United States and the world in the Middle East is a part of the pattern of Soviet strategy in the economic field. The Russians seem fairly content to reduce the power of the West by the acquisition of areas which will embarrass Western Europe and the United States economically.

The Middle East is an ideal field for Russian operations. To begin with, it is extremely rich in oil, which has now become a necessity for heating and power in Western Europe, and to a great extent in the United States. This vast wealth, coupled with the incredible backwardness of the areas, give the Soviet strategist a rare opportunity.

It should be noted, as these events unroll, the alternate sources of oil supply to the Western World are also in danger, and it is not difficult to project a situation in which the pattern of revolution spreads from the Middle East into Indonesian and Malayan oil supplies, and also to Venezuela. The situation in Venezuela is much more serious than can be imagined. The left wing group which has taken command of the rich South American Republic, is moving rapidly toward the consolidation of their gains. The country has about 20,000 active Communists, which remained in the underground during the regime of Perez Jiminez. Since his overthrow, they have opened the borders to thousands of others, many of whom have been trained behind the Iron Curtain, ready to take command in the pattern used more than 20 years ago in Spain.

This technique has been found very successful by the Russians. They infiltrate the ranks of students, labor and anticlerical groups and select persons of energy and ability for indoctrination. These natives are transferred surreptitiously behind the Iron Curtain and are given intensive training in the fields of military, economics, sabotage and subversion. In Spain a humble fisherman, farmer, student or laborer disappeared in the early 1920's, only to reappear when the revolution broke out in 1936, as trained military officers ready to occupy positions in power in the armed revolution. This is exactly what is happening in Venezuela today. Persons not seen for many years are reappearing, full of fight and fire, and well-trained to take over the country and to use its wealth for purposes of subversion in Panama, Costa Rica, Cuba, and Puerto Rico.

If the chain of events now taking place in the Middle East continues, Western Europe and the United States will be denied huge sources of cheap oil. This could result in over-expenditure of native resources and increase our hazards as a "have-not" country. The drift of Venezuela to the left is becoming more apparent and it can be readily seen that there is a tiein between the freely operating Communists of Venezuela and the Communistic operations of Fidel Castro in Cuba. Whereas the funds for propaganda for the Cuban revolution have formerly originated in Mexico, now they are pouring in from Venezuela. In addition, Venezuela radio is rebroadcasting the propaganda from the Castro radio in Cuba.

The hope of the present Middle Eastern situation probably lies in Israel. That country in the center, supported by Turkey on the north and Iran and Pakistan on the east, could very well be the basis for operations of the west against Russian revolutionary tactics. There is no question about the fact that we must risk a widespread war in the Middle East to bring the area back into our orbit. It may be that we will have to commit large numbers of troops and planes to these countries to reassert our determination to halt Communist conquest.

The foregoing is presented without prejudice or opinion and merely as information and background for our better understanding of the problems.

Report on Ceylon

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include and commend to the attention of my colleagues an article which appeared in the July 14 issue of the New York Times, reporting on the situation in Ceylon.

The article was written by Mr. Drew Middleton, and it has some interesting things to say about the administration of our aid program to Ceylon under the guiding hand of Mr. John L. Roach, the chief of the International Cooperation Administration mission in that country.

Ceylon is an important, and a strategically located nation. What happens there should be of considerable interest to all of us in the free world.

The article follows:

CEYLON ECONOMY FALTERING BADLY—AID FROM WEST AND RED BLOC MAY BE DECISIVE IN EFFORT TO WIN ISLE'S ALLEGIANCE

(By Drew Middleton)

LONDON, July 13.—The impact of United States and other Western-aid programs on Ceylon's faltering economy may prove a decisive factor in the coming struggle to hold the island nation within the West's sphere of influence.

In many respects what is happening in Ceylon typifies the economic and diplomatic conflict throughout free Asia between the United States and its allies and the Soviet Union, Communist China, and their allies.

An island about the size of West Virginia, Ceylon is strategically situated on the great trade route between the Middle East and the Far East. She has a Government veering to the left of center, a rising birth rate and a declining economy.

Unemployment has increased 31 percent, to 116,000, in a year. Export trade for the first quarter of 1958 was down by 11 percent, a favorable trade balance is beginning to wane and external assets are declining.

Ceylon's population of just in excess of 8 million is increasing by 2.6 percent a year. The island must import more than 40 percent of its food.

This correspondent found in Colombo and elsewhere in Ceylon that the economic decline had been caused in part by political trends.

STRIKES HARASSED PORT

A series of strikes in the port of Colombo, the Orient's third largest, crippled export trade. The government showed considerable tenderness toward the unions and strikers and the port's recovery has been slow.

While export trade has slumped, imports have risen in price. Foreign shippers have been so frightened by political trends and communal rioting that, though world freight and insurance rates are depressed, Ceylon pays inflated rates.

Another cause of the decline is uncertainty about the government's economic plans. Prime Minister S. W. R. D. Bandaranaike is committed to a program of nationalization.

Consequently, foreign investors are hesitant and are unimpressed by promises that new industries would not be nationalized for 10 years after their establishment. This promise, by a government official, is not regarded in government circles as a statement of policy.

The Sinhalese-Tamil riots in May and June disrupted internal trade, whose value has fallen by at least a third. The rioting, over the Tamils' demands that their language have parity with Sinhalese, took 158 lives, according to official figures, and left 12,000 persons homeless.

The deteriorating economy is a target for two sets of aid programs, Western and Eastern.

SIXTY-ONE MILLION SIX HUNDRED THOUSAND DOLLARS FROM WEST

The West has put about $61,600,0000 into Ceylon since 1956. This includes aid under the Colombo plan, which aids Asian nations, and loans from the International Bank for Reconstruction and Development as well as the United States program, which has provided $36,550,000.

From the East Ceylon has obtained roughly $56 million in aid. A $30 million credit agreement extended by the Soviet Union runs for 12 years at 2.5 percent interest. The Chinese Communist Government has made a 5-year grant of $16 million for rehabilitation of Ceylon's rubber industry.

There is also a 5-year general trade agreement between Ceylon and Communist China under which 30,000 tons of rubber will be exchanged yearly for 200,000 tons of rice.

Most Ceylonese civil servants are more receptive to western than to eastern aid, and not soely because there has been more of it. Arrangements made by the Communists in establishing their programs have aroused doubts about the real altruism of Moscow and Peiping.

For instance, the 2.5 percent interest in the Soviet credit agreement is lower than the United States rate, which fluctuates between 3.5 and 4.5. But the Soviet interest is collected in goods or sterling, and Ceylon is short of both.

Similarly, in carrying out the trade agreement with China, Ceylon is finding it difficult to get what she needs.

SOVIET UNION SLOW

Finally, the Soviet Union has been surprisingly slow in implementing its trade pact. Agreement has been reached on only one project, the construction of a sugar refinery.

The United States program has two positive advantages. The first is that diversification brings home the fact of United States interest and help to a wide section of the urban population. The second is the enthusiasm bordering on dedication on the part of the men working under John L. Roach, chief of the International Cooperation Administration mission.

The principal disadvantage, it was conceded, is that the program's impact on the economy will not be fully registered for 5 years or more.

There are two exceptions to this. One is local railway service around Colombo, which will benefit from the introduction of 45 diesel-power coaches. The second is the program of CARE (Cooperative for American Remittances Everywhere, Inc.), which provides milk and buns for 1,250,000 schoolchildren every schoolday.

The most ambitious and expensive of all aid projects is the development of what is known as the dry zone, which lies in the eastern half of the island. Centuries ago it helped make Ceylon the granary of the East, but malaria and the breakdown of ancient irrigation systems turned it into a desert.

The Government approached the huge task of reclaiming the dry zone because it had to alleviate the problems of overpopulation, growing unemployment, and increasing dependence on imported foodstuffs.

OTHER AID PROGRAMS

Since 1956, the United tSates has contributed more than $4,500,000 to the project. This has gone mainly into irrigation, expansion of the repair shop of Ceylon's Irrigation Department, training of technicians in the use, maintenance, and repair of earth-moving and construction equipment, and repair of irrigation facilities damaged by floods last December.

United States funds and technicians will play a part in the development of water resources for irrigation and power in the basin of the Mahaweli Ganga River, in building roads across the dry zone and in the eradication of malaria.

United States financial and technical assistance also has been extended to agricultural research and education and industrial development and productivity. A survey of physical resources, hydroelectric power plans, a survey of Colombo's airport, the University of Ceylon, science education, and public health have all benefited.

Many Ceylonese, although grateful, also are conscious that a greater national effort is required.

"We have had enough of proposals, reports, experts, opinions, and protestations of intentions," said the Ceylon Daily News recently. "If the people have to wait for a full-scale development program, it looks as though the wait will be timeless. A few projects now are better than many projects at some uncertain future date."

Do the people know much about the size of the United States and other western aid?

In a general way officials, especially those of mature years who were trained by the British, are aware and grateful. But talks through interpreters in villages on the road to Kandy and in the hills beyond that city found little realization of United States help among the peasantry. Relief measures instituted after the disastrous floods had made some impression, but there was little recognition of more important long-term programs.

Need for a National Fuel Policy

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 17, 1958

Mrs. KEE. Mr. Speaker, the need for the Federal Government to formulate and announce a national fuel policy—a policy that will recognize the problems of the coal industry—has never been more apparent. Two developments emphasize this:

First. Congress, in passing reciprocal trade legislation, rebuffed the coal industry in its efforts to secure protection against a growing influx of foreign residual fuel oil or liquid coal.

Second. And just recently, the General Services Administration announced the award of construction contracts which included the conversion of the Chicago Post Office Building from coal to oil.

Mr. Speaker, these two separate developments indicate clearly that the Government has stacked the cards against the coal industry. Not only is it encouraging the imports of residual fuel oils, which take valuable industrial business away from coal, but it is also directing Federal installations to change from coal to oil.

The Chicago case is not an isolated example. All across the country Government buildings are being made dependent upon oil for heat. In Washington, eight schools are being converted to oil from coal and the Capitol Building itself will soon add four new oil-fired boilers, when existing coal-fired boilers could be expanded.

A person who had no knowledge of the coal industry would assume, from these Government actions, that coal is a disappearing fuel. The fact of the matter is coal supplies are sufficient to last into the indefinite future. But the industry is operating at about 22 percent below the 1957 level and thousands of miners are out of work.

The Federal Government apparently is placing its reliance and staking the future of the country upon oil and gas. Oil supplies of the Middle East, upon which this country is more dependent each year, are subject to the whims of Middle East politics. Growing Arab nationalism could, it is recognized officially, cut off this oil supply from the United States and the West.

As for gas, the supply is not inexhaustible. Should the day ever come when coal becomes unavailable because Government policies have made it uneconomical to mine, this country will face a bleak future indeed.

Mr. Speaker, coal can compete with other fuels if the Government permits it to compete on an equal basis. It cannot compete if Government policies deny it access to major markets.

I have been criticized in some quarters because of the emphasis I place upon the coal industry. Yet, I do not see how anyone representing the Fifth District of West Virginia can ignore the tremendous importance of coal to the economy of our district and to the entire State.

It is highly significant that the crisis in which the coal industry finds itself has brought about close cooperation between labor and management. This has been a healthy development. When the coal industry speaks with one voice, it is listened to more carefully in Washington. I congratulate both labor and management for this fine progressive attitude.

Bounty Proposed on Predatory Dogfish Shark To Lessen This Menace to Commercial and Sports Fish

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. MACK of Washington. Mr. Speaker, I am informed that dogfish shark during recent years have multiplied so enormously as to become a great menace to the salmon and other commercial and sports fish and to the crabbing industry. Dogfish shark are predatory. They live upon salmon and other fish and crab, especially the small ones, and consume enormous numbers of these commercial and sports fish each year.

The menace of these predatory shark is especially great and growing in the waters of the North Pacific—the Columbia River, Grays Harbor, Willapa Harbor, and Puget Sound—and also, I am told, in the waters along the New England coast. Also, these shark often foul and destroy fishing gear.

The great damage being done the commercial and sports fish by these predatory dogfish shark certainly suggests that

the menace be brought under control to preserve the commercial and sports fish in our North Pacific and New England waters.

I have introduced a bill which proposes that the Federal Government pay a $10 a ton bounty on dogfish shark.

In 1944 shark livers were in great demand as a source of vitamin A and fishermen sought them with great zeal. In that year 23,000 tons of these dogfish shark were taken in western waters. Since that time, however, synthetic sources for vitamin A have been discovered, and the demand for shark livers so lessened that it is scarcely profitable for fishermen to fish for these predatory dogfish shark. Since dogfish shark fishing has been largely abandoned, the annual take has greatly decreased and dogfish shark have multiplied enormously with the result that the menace of these predatory fish to the commercial and sport fish has multiplied manyfold.

If my bill is enacted into law and increases the dogfish shark take by fishermen to that of the highest year of record—23,000 tons in 1944—the total cost of the bill would be only $230,000.

Since each dogfish shark each year eats many times its own weight of commercial and sports fish, the saving of edible fish easily will have a value of many millions of dollars annually. The small sum paid out in bounties for the destruction of these predatory fish will prove a most profitable investment.

I hope legislation of this type will get, in these closing days of Congress, prompt attention from the House Committee on Merchant Marine and Fisheries.

Gen. Robert E. Wood, the Giant on the Paths of Boyhood Charity

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1958

Mr. LIBONATI. Mr. Speaker, Gen. Robert Elkington Wood was born on June 13, 1879, in Kansas City, Mo., the son of Robert Whitney and Lillie nee Collins Wood. His father was one of the John Brown's raiders, a captain in the Union Army, a Kansas homesteader, a Colorado gold prospector, a coal and ice merchant. Young Wood went to West Point because he wanted an education and loved military life. He was graduated high in his class—13th—in 1900. He was careful in spending his money and left the Academy with a nest egg saved from his $45 monthly pay. He served in the Philippines for 2 years—Philippine Insurrection—and was promoted to 1st lieutenant in the 3d Cavalry. He was posted in Montana and for 2 years taught French and Spanish at West Point. In 1905 he was sent to Panama.

Only a great man who has a real knowledge of the boys' world's desires could do the things that Gen. Robert E. Wood has done and is doing for the youth of the city of Chicago; through his tremendous building and recreational programs for the Chicago boys' clubs. Even in his retirement he contemplates earning a million to leave as a permanent endowment to the clubs. And he certainly is not fooling.

Throughout his entire life he has been in the center of big operations. His 10 years spent, first, as assistant chief quartermaster, then chief and later director of the Panama Railroad Company during the construction of the Panama Canal he hired thousands of employees and distributed millions of dollars of supplies each year.

Before the United States entered the First World War, however, Wood retired from the Army. He spent 2 years, from 1915 to 1917, with Du Pont and as assistant to the president of General Asphalt Co., but in 1918 donned his uniform once more. A colonel and a brigadier general, he acted as Quartermaster General for the entire United States until 1919 buying and distributing food, clothing, and materiel for 4 million soldiers. Perhaps no one has ever had Army experience so helpful as General Wood's in the operation of a mail-order business.

His first mail-order house was Montgomery Ward, and until 1924 General Wood was vice president of that company. By the time he left to become vice president of Sears, Roebuck (Fortune has intimated that he was fired), Montgomery Ward was really beginning to show the other firm a contest. But not for long. Both Wood and President Kittle of Sears believed that the next great national growth would come from the South; they opened a string of southern mail-order houses, then a retail chain in the larger cities. When Kittle died in 1928, General Wood succeeded to his position, and he began the practice of establishing several medium-sized neighborhood department stores in big cities rather than one mammoth store downtown.

His expansion program of setting up retail stores in areas of expanding populations and activities as the vice president and president of Sears, Roebuck & Co. placed the concern in top position as the leader of mail order, retail, and department-store merchandising. The chainstore system grosses $200 million and the retail department stores $375 million annually. In 1938 Sears' gross income was $575 million. In 1939, under retirement rule, General Wood moved up from president to chairman of the board. He remains "in the driver's seat."

He is an individual with an enlightened philosophy on life's social problems. He once stated:

> I am a firm believer in the capitalistic system. Nevertheless, I do not see that the charge of socialism, communism, or regimentation should be hurled at every new proposal or reform. * * * A lot of businessmen will not look at facts. * * * Their reasoning is based on their dislikes. When you know the current income and trend for tenant farmers and sharecroppers in some States, for example, you cannot dismiss the problem by saying they are shiftless. Instead you know something has to be done to protect society against such a focus of trouble, and you lose your horror of the fellow who is willing to try to clean up the mess.

Until his disagreement on foreign policy, General Wood was friendly and cooperative with the Roosevelt administration—1932–36. He favored the AAA, SEC, social security, the housing program, and was called to Washington frequently for his advice, testimony, and service on committees. In 1939, Harry Hopkins appointed him to a temporary post as an official adviser on business relations. He was in disagreement on the domestic program. He advocated the desterilization of sterilized gold and described the modification of capital gains and undistributed profits taxes as burning the house down to get roast pig; begged for an end to hate talks. In 1940, he returned to the Republican fold.

A look at the Sears policy for its workers shows his attitude toward them. He believes that the Sears savings and profit-sharing pension plan helps to avoid strikes and labor unrest. It gives the employee greater security and unites him in the interest of the company's program. A feature of the plan treats with constant wage formula for seasonal workers and sickness and vacation allowances.

General Wood is a director in the Atlas Corp., the United Fruit Co., the Illinois Central Railroad, and the National Life Insurance Co.; he is department chairman of the Federal Reserve Bank of Chicago; and in September 1938 he become one of the three "public" governors of the New York Stock Exchange by appointment of President Martin. He resigned his post as chairman of the Economic Policy Committee of the National Association of Manufacturers in July 1941.

The general's America First activities brought him under public fire more than once.

Secretary of Interior Ickes was most vitriolic in his attack. But many interventionists spared him while attacking other prominent isolationists, and although he never showed any signs of open disagreement with Colonel Lindbergh or others, it was frequently rumored that he planned to resign or dissolve the America First Committee if the international situation should grow so critical that disunity placed the country in actual danger. This he apparently did not consider necessary until the Japanese attack on Pearl Harbor. On December 1, 1941, he announced that America First would "go into the 1942 national elections" with support for candidates opposing the administration's foreign policy, which was condemned as a "trend toward Fascism in America." On December 8 he was quoted:

> We opposed participation in this war in good faith, but now that we are in it, we shall support it.

In April 1908 General Wood married Mary Butler Hardwick, of Augusta, Ga. He is a great believer in big families, and they have four daughters and a son. Grandchildren get 200 shares of Sears common stock when born. Wood is usually up at 6, full of "storming, gregarious

exuberance," and in bed before 11. Clothes do not matter to him; he is sometimes so impatient that he eats caramels with their paper on; he is a restrained doodler; his favorite expression is "let's charge," and his company has sometimes been called the old soldiers' home because there is more than one retired military man in it. He has a remarkable memory, even more for figures than for people, so inaccuracy makes him lose his temper more quickly than anything else. In Panama they say that he used to turn down parties in order to stay home and study census figures, and today the United States census reports and the Statistical Abstract still comprise his book of revelations. His life is not entirely a matter of statistics, however. He is a good horseman and dancer, a great reader of biography and history, an enthusiastic shot and fly fisherman.

These interesting excerpts from an article written by Eleanor Page, the celebrated society feature writer of the Chicago Daily Tribune, on June 16, 1958, accurately depicts the strong sense of family unity practiced and advocated by General Wood. Chicagoans admire and children revere this great American who lives to serve the youth of America that they may better prepare themselves for the patriotic and civic responsibilities of citizenship.

A COOL BREEZE FAILS TO CHILL WARMTH FOR GENERAL AND MRS. WOOD—YOUNG AND OLD OF FAMILY ATTEND GOLDEN FETE

(By Eleanor Page)

Noses, fingers, and toes were cold, but hearts were warm at the reception General and Mrs. Robert Elkington Wood held to celebrate their golden wedding anniversary Saturday in the Lake Forest home of their son-in-law and daughter, Mr. and Mrs. Calvin Fentress, Jr.

Unseasonably chilly weather kept those at the outdoor event on the move. A setting sun glistened on velvety lawns. Red carpeting protected the path from the rambling home, formerly General and Mrs. Wood's, across the terrace and down to a green and white striped tent which sheltered the buffet tables.

STROLLING VIOLINISTS PLAY

A dozen strolling violinists played as relatives and friends gathered to congratulate General Wood, war veteran and business and civic leader, and his wife on their 50 years of married life.

A devoted family man, General Wood delayed the celebration from April 30, the actual date of the marriage, until yesterday so that his grandchildren and great-grandchildren, some of whom would have been away at school, could be present. And they all were from David Gorter, born in March, to Mrs. James W. Kinnaer III, of Jamaica, the Woods' oldest grandchild, who arrived with her infant son, William Mitchell, in her arms.

All family members wore white rosettes with ribbons printed with the years 1908–1958. David's rosette was pinned to his perambulator. The Wood's oldest daughter, Mrs. William H. Mitchell, pinned hers to a blue print frock, in which she shivered bravely. The youngest daughter, Mrs. Hugo V. Neuhaus, Jr., of Houston, pinned hers to a mink jacket which she wisely brought north to wear with her yellow print frock.

FRIENDS AND ADMIRERS

Among early arrivals was the dean of Chicago bankers, bearded, 90-year-old Albert W. Harris, longtime friend of General Wood. Through the receiving line flocked neighbors, and former neighbors, General Wood's former associates at Sears, Roebuck & Co., of which he was chairman; coworkers on the board of the Chicago Boys Club, one of his favorite civic activities, and scores of other friends and admirers.

A large American flag was hung between trees at the entrance to the home. Mrs. Wood, clad in blue-gray lace, and General Wood, in striped trousers and cutaway, were aided in the receiving by children and grandchildren, who took turns greeting guests.

ADMIRE FAMILY TREE

A dramatic entrance was made by Mrs. George Enzinger, the former Irene Castle McLaughlin, who braved the breezes in an ankle-length, figure-molding gown of scarlet taffeta, a long overskirt of scarlet net trailing behind.

Everyone admired a Wood family tree mobile made for the occasion by Mrs. Charles F. Glore, a Lake Forest neighbor. It stood on the sun porch, and whenever anyone became confused about which child belonged to what parents and grandparents, the tree, with its family names dangling on fishlike shapes, was there to solve the problem.

General and Mrs. Wood were married in New York City while he was an instructor at West Point. He celebrated his 79th birthday at a dinner Friday night.

[From the Chicago Sunday Tribune of July 27, 1958]

BOYS CLUBS—BOON TO CITY YOUTH—HELP IN FIGHT ON DELINQUENCY

(By Jacquelin Southerland)

Once upon a time, a group of boys broke into a deserted old home in one of Chicago's transitional areas. They were caught and they were afraid. They thought they would be sent to jail.

They weren't. They were lucky. The man who caught them was a Chicago Boys Clubs official. The home they broke into was slated to become another boys' club.

He invited all the boys to come back to the scene of their break-in once they club was in operation. They did and became charter members. Most of the boys were helped, but not all. To show the extremes, one became an outstanding student leader. Another, sadly, eventually went to a reformatory.

NOT A CURE-ALL

"We're not a cure-all," pointed out the boys' club director who told this story to illustrate what the clubs can and cannot do. "We don't claim to be able to end all juvenile delinquency or to help everybody. But we try. And we think we have a pretty good batting average."

Once upon an earlier time, an underprivileged boy had to sweep floors at the Lincoln Boys' Club to earn his membership fee.

Years later the boy, Irving Rudolph, became executive vice president of the Chicago Boys' Clubs.

In case the reader thinks it was cruel for the club to make Rudolph work for his dues, listen to his comments.

MORE APPRECIATIVE

"We've found," he said, "that boys appreciate things more if they have to work for them. Something for nothing doesn't work. The clubs aren't charity."

Today many boys still work for their dues, ranging from 25 cents to $2 a year.

The first club was organized in 1902. The movement grew. Now there are 16,000 members in Chicago, ranging from 6 to 18. There are 13 clubs, 2 outposts, 7 camps, and 2 farms.

The newest completed club building is the General Robert E. Wood Club at 2950 25th street, built 3 years ago. Another new one is in the making. This is the Colonel Robert R. McCormick Club being built at 4835 Sheridan road.

The clubs are supported by the Community fund (19 percent) and contributions (81 percent). The Robert R. McCormick charitable trust has pledged $400,000 toward this newest club named after the Tribune's late editor and publisher, and a fund campaign now is in progress to match this amount.

The clubs range from cramped quarters in rundown neighborhoods to comparatively plush buildings in well kept, home owning communities.

A Tribune photographer and reporter recently visited four of these clubs. First stop, the Kiwanis, formerly the Sheffied club at 2742 Sheffield avenue, in the midst of a community of 12,000 school-age children served by only four agencies.

The Kiwanis Boys Club is above the Sheffield police station. It covers two floors. On its first, the gymnasium once was a cell block, the recreation room was a courtroom.

GIRLS ARE MEMBERS

Upstairs are a library, science room, and crafts area. In the library, a 14-year-old redheaded girl, Rosalie Cook, 2738 Fullerton Avenue, was reading to some youngsters. Some clubs take girls, although the national policy frowns on it since there also is a national girls clubs organization. However, these clubs have not reached Chicago and, therefore, the Chicago boys clubs have 3,500 girls in their membership.

Rosalie took the club's science classes last winter, showing a marked aptitude for chemistry. She wants to be a doctor, perhaps a surgeon.

The club quarters obviously are old, so is much of the equipment. But both are kept in tiptop shape.

The table tennis tops are waxed to make them last longer. There are no initials cut into the furniture, no scribbling on the walls, and the place is cleaned twice a week, said the director, A. O. Nicolette.

"I've been in boys club work for 35 years," said Nicolette proudly, "and I have never seen a nicer bunch of youngsters."

Despite Communist Persecution Christianity Will Survive in China

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1958

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I wish to include the second of two articles written for United Press International by Rev. Father Joseph P. McCormack describing life in a Chinese prison. The story which appeared in the Belleville (Ill.) News-Democrat on July 24, 1958, follows:

COMMUNIST CHINA AS I SAW IT

(By Joseph P. McCormack, M. M.)

It was in June of 1953 that the Communists arrested me in Shanghai. For two

reasons: I was a Maryknoll priest, and I was an American.

My houseboy had tipped me off, so I sat there on my front porch one beautiful summer evening waiting for them. And sure enough, they came, and led me off to police headquarters.

They brought me into a large room which had been set up for a special tribunal, with 10 people in military uniform sitting along the left wall; in front of them, 5 women, and an interpreter. In the center of the room was a table, lined with my judges, and at the far doorway, a rather young looking girl holding a machine gun. I sat down in a low slung chair that was obviously meant for me. That was about 9:30 at night.

I was still sitting there at 5 o'clock the next morning. They kept firing questions at me, and I fired answers back at them as best I could. In a way this confused them, because the judges would frown at one another, then have a whispered conference, and make new charges. All of the accusations had something to do with illegal financing of espionage. Altogether, in that first session with them, they changed the charges against me 20 times. By the time they led me to my cell I was pretty tired, and I had the feeling that they weren't too sure why I was arrested.

Looking back on it all now, I still can't think of any reasons, within Chinese law for my imprisonment other than the fact that I was an "undesirable"—a priest and an American.

The prison conditions were rough. I had to lie flat on the floor of the cell, completely still and without uttering a single word. Armed guards stood over me to make sure I didn't make the slightest move with my hands or feet. The food, when I got it, was a soft mushy kind of something, and pretty strong smelling. But I was hungry. And I ate it—at times, with an appetite.

I had been in prison about 3 days, when the interrogations began. There were 72 of them altogether, each one lasting about 2½ hours It was hard at first, but I got used to them. Most of the interrogations, in the beginning, centered on the 30 seminarians, my bringing them to Peiping, and then shipping some of them to Hong Kong. I told the Communists the straight story about it all, but they weren't convinced.

Later, the line of questioning switched to the entire diocese of Fushun and the work of Maryknoll in Manchuria. They wanted to know statistics on converts, the number of mission out-stations, and the names of clergy, religious and seminarians. I gave them as many wrong answers as I could. But they kept pressing me for more.

So I finally took a week off, asked for pen and paper, and wrote in my most legible handwriting, a full confession. It was right off the top of my head and not a shred of truth to it. But I was quite proud of it when I handed it to the judge, and he gave me a big smile, as if to say, "Ah, McCormack—we always knew we could scrub your brains clean."

Ten days went by. Evidently they were studying my manuscript, because they left me to myself, and I was able to catch up on my sleep. But then I figured it was time to call it quits, so I told the guard I had another confession to make. He hopped upstairs and brought back one of the secretaries—a girl we had nicknamed "Pigtails" who had two long braids hanging from her temples to her knees.

I dictated for about 20 minutes, denying everything in my writen confession. "Pigtails" just sat there, stone-faced; when I had finished, she whisked upstairs. Another 10 days went by. Finally the judges summoned me, and when I appeared before them they asked: "McCormack, why did you write this bundle of lies? Why did you try to deceive us?"

I looked right at them and said, "Because you kept pressing me. Press, press, press—these last months—and I'm not one who can keep my mouth closed." Which was true. That was toward the end of 1955. About this time, the brainwash sessions tapered off. Then, after all those months, they filed formal charges of "espionage and sabotage for American imperialists" against me.

The trial itself lasted about 8 weeks. "We are not trying you as an imperialist or as a capitalist," they said. "We know that you are a son of a poor man, that you like the Chinese people, that since you were born in Ireland, you must be anti-British. And we thank you for that. But you have allowed yourself to be used by the capitalists, and for that reason you must be punished."

It was for this "crime" that I received my 5-year sentence.

A few months later, about the beginning of 1956, I asked for an interview with the prison officials. I explained to them that I was a sick, stupid old man. Which was partly true. I was, actually, very sick. My entire body was swollen and distended because of the prison diet. Lack of vitamins, I suppose.

They talked this over among themselves, and decided to send me to the prison hospital—we called it Ward Row—and that meant I'd sleep in a bed for the first time in 3 years. Of course, the big reason for allowing me to go to the hospital was obvious: too many priests had already died in the jails and prisons of China. They didn't want that to happen to me.

The treatment at the hospital was adequate. I received injections once a month, but the swelling of my body and limbs still continued. Even now, my stomach still expands about 6 or 7 inches every day.

In June 1956, my health improved considerably, so I was shown leniency, and they moved me into a small house on the other side of Shanghai, where I lived with several other American priest-prisoners. One of the priests there was Father Cyril Wagner, the Franciscan from Pittsburgh who had been framed on charges similar to mine. We were eventually released together.

The food was terrible there. We would have all died had it not been for Red Cross parcels, and the parcels from America that the Red Cross managed to get to us. So we lived, until the day of freedom came.

Since I've been back, nearly everyone has asked me about the church in China. Is Christianity surviving?

And I tell them this story. It's true—it happened not too long ago when the Communists launched a big campaign in Shanghai to kill all of the sparrows around the city. The people were mobilized and told to keep a constant racket going, by beating pans, blowing horns, and lighting firecrackers. The idea was to frighten and kill all the sparrows.

Well, the sparrows took it all in stride. They hid under the eaves, or flew to the highest trees; sometimes they moved their nests out into the suburbs. When they could not get worms, they ate insects. When the ponds and puddles of water were closed off, they survived on dew. After several days, the fanatical persecutors were worn out—and the noise and the fury died down.

The sparrows? Today in Shanghai, there are almost as many sparrows as before—stronger ones. The sick and the weak died. The healthy survived.

And that's the way it is with the church in China.

The Youth Camp Recreation Act of 1958

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1958

Mr. LIBONATI. Mr. Speaker, after an extended period of experience in the youth-camp program, I learned that the greatest influence for good was the placement of children in summer camps for at least a 2-week period.

One does not realize how much can be done in the way of morale and spiritual building of a child's life and character by concentrating on a well balanced 2-week program of recreational and instructional activity.

Poor children are ever anxious and ready to participate in any program that will give them a symbol. Crippled, blind, and physically handicapped children are most appreciative for any interest shown in them. It does not cost much money or effort to make a child happy. Youngsters are happiest when they feel that some adult or adult group is interested in them. And, of course, each youngster wants to belong to someone or some movement or club.

To build up a healthy program that will influence this type of activity, I introduced H. R. 12778 which establishes and initiates a program for the subsidizing of youth camp recreation programs and assists those organizations that have for their purpose the providing of healthful outdoor and camp training for indigent children.

The bill sets up a Youth Camp Recreation Commission composed of nine members—a representative from the Department of Health, as Chairman, Navy, Army, Air Force, National Park Service, Bureau of Land Management, Fish and Wildlife Service, Bureau of Indian Affairs, and Soil Conservation Service. The member acts in a liaison capacity between the Commission and the agency he represents—working out agreements for the utilization of the resources, property and services under the jurisdiction of said agency which would be useful in the operation of camping programs under the act.

The Commission sets the standards to qualify for participation, including the camp facilities and eligibility of the group or organization sponsoring the program; i. e., an organization approved by the Secretary of the Treasury under section 501 (c) of the Internal Revenue Code of 1954, which is exempt from taxation.

The United States Government would give to sponsored camps 50 cents per day per camper and limited to 28 days, and not in excess of $50 per 2-week period in camps maintained and sponsored by the Government, in areas where charitable organizations are not existent or active in this work.

The average level cost of a camper is $2 per day throughout the country. So

that in sponsored camps the Government, by its 50-cent contribution, equals a 25-percent subsidy.

The laudable purpose of this act is that it will provide the opportunity for healthful training and recreational advantages for indigent children through programs of spiritual, patriotic, physical, and educational development, planned by the Director of the Youth Camp Recreation Commission with the assistance of the Commission; and second, to provide immediate camping opportunities for indigent children in areas which are congested and in which subnormal housing conditions contribute to the delinquency of the underprivileged.

(b) As a further purpose, this act is intended to stimulate and promote the public interest in establishing camps first for recreational, moral, patriotic, and educational purposes, second, for the training of indigent children, thus creating and activating human factors for the prevention of juvenile delinquency, and third, to create in youth a patriotic sense of devotion to this great Republic by teaching the citizens of tomorrow the true Americanism encompassed by the patriotic principles of freedom, justice, democracy, and love of God.

I realize that some doubters and ultraconservative individuals will question the expenditure of public moneys for these purposes. But the act is very restrictive and absolute in its control of any practices by dubious setups to divert these moneys to their dishonest gain.

All of us, I am certain, realize the terrific need of measures to correct and prevent the growing delinquency of the youth of America. I am sure that a program of this type will reward the citizens tenfold in curbing the present tendency of a boy to join in sinister activities of child gangs.

There are several of these types of camps in operation in the several States. One in Illinois, sponsored by the past commanders of the American Legion of that department, hosts 1,000 poor children—boys and girls in 5 separate periods—each summer.

This program also receives financial support from the State of Illinois, the Chicago American, a popular publication that has always promoted children's programs for the indigent, the Marine Corps League, Cook County Council of the American Legion and its auxiliary, and the Women's Auxiliary of the Department of Illinois, and the Past Presidents Club.

The appropriation of $750,000 as in this bill, will provide—at the average 2-week period—to charity-sponsored organizations, a sum of 50 cents per day per camper for approximately 100,000 children.

It may take time to impress the Congress to favor this type of legislation, but it is the excellent way of combating delinquency.

It costs far more to maintain our delinquents in homes and institutions. A small pittance could at least realine the predelinquent who wants someone to be interested in him, especially the paternalistic interest of an adult. Keeping him happy in a camp results in a cleaner reaction toward life, and a taste of real kindness that he will never forget. Yes, now he believes there is a God and that he was not abandoned. Let us take care of those whom nobody wants, those at the bottom of life's cycle. It will pay real dividends in the end. It is the new generation that must be jealously preserved to insure the future strength of the manpower of the Republic.

It affords the underprivileged and needy children of our Nation, many from teeming tenement and slum districts in metropolitan areas, the opportunity for a training which will instill a sense of devotion and duty toward God and our great Nation.

I feel that a program which appeals to the basic, and often times neglected, emotional desire for recognition of the indigent children, will be a major contributing factor toward the prevention of juvenile delinquency.

It is my sincere belief that the Youth Camp Recreation Act of 1958, through its program of spiritual, moral, patriotic, physical, and educational development, will help bring about responsible and patriotic citizens for the future.

The youth camp project is to be under the jurisdiction of a Commission, composed of nine members, established within the Department of Health, Education, and Welfare, from which Department, that member will sit as chairman. The remaining eight members are to be representatives from the various departments of Government, as listed in the bill; the purpose being to utilize facilities and services of the respective departments for the camp program.

The Commission is to be adviser to the Director, who is appointed by the Secretary of Health, Education, and Welfare, and who shall administer the program and receive therefor compensation in the amount of $18,000 per annum.

It is the duty of the Director to determine the need and sites of camps, select camp operators, determine eligible children, appoint necessary personnel, enter into agreements necessary for operation of the program, and otherwise prescribe rules and regulations consistent with and promoting the purposes of the program.

Eligible children are to be in the 7 to 16 age group, except for those with talents deemed useful to the camps, who may be over 16 years of age. Attendance during any one year is not to exceed 28 days.

The camp operators, whose eligibility is determined by the Secretary of the Treasury, are to receive in addition to other assistance, 50 cents per day for each camper in attendance. Camp operators may be State or local government, or any eligible organization. The camp operators are directly responsible and accountable to the Director.

The Federal Government is to appropriate $750,000 for the first and suceeding 2 fiscal years commencing July 1, 1959, and such amount as Congress deems necessary for each fiscal year thereafter.

We Have No Alternative

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 17, 1958

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following address by Louis Nizer, attorney and author, which he delivered before the Bronx Bar Association on November 28, 1956, at the Waldorf-Astoria Hotel in New York City, together with the preface by Stuart Levison, president of the Bronx Bar Association.

Mr. Nizer's remarks are not outdated but are extremely timely and appropriate. If we had followed his suggestions, we would not be in our present unfortunate position:

WE HAVE NO ALTERNATIVE

(By Louis Nizer, attorney and author of What To Do With Germany, Thinking on Your Feet, and other works)

FOREWORD

Chief Judge David W. Peck, of the appellate division, said about the speech which is here reprinted:

"To Louis Nizer, I would like to say what all of you did say by your ovation to him at the end of his remarks, that his address was one of the most thoughtful, penetrating, philosophical, and spiritual messages that has ever been delivered in any gathering."

Such an evaluation from one given to measured words may convey the emotional impact of the address upon all who heard it. The effect was not temporary. Upon reflection, it seemed to grow, and we reecived an unprecedented number of requests for copies, coupled with the concern that none would be available, since Mr. Nizer spoke without script. However, a court stenographer had recorded the address, and we now make it available not only to the members of the Bronx Bar Association, but to the members of other bar associations whose presidents heard it, and also asked for reprints.

As was suggested by various judges and distinguished members of the bar, we are also forwarding copies to President Eisenhower, the State Department, and leaders of Congress.

There are rare occasions when a speech may affect international policy. It is possible that this reprint may achieve such historic significance.

STUART LEVISON,
President, Bronx Bar Association.

Mr. Chairman, Chief Judge Peck, distinguished members of the judiciary, counsel, and ladies of counsel, ordinarily, I would deem it my first duty to disavow the general compliments, and the obituary, which have just been read about me. I shall not do so, however, because your chairman has such a fine reputation for accuracy that I would not insult him by suggesting that anything he said about me was not precisely true. Indeed, he also has a reputation for understatements. If I were hard pressed, I might confess to you that if it were not for that frality he would have done me more justice.

It is good, on an evening like this, to share the dias with so many judges. In France, the identity of the lawyer is preserved by his costume. The French lawyer wears a gown with a red velvet collar. In England, the barrister wears a wig. In this country, democracy has denuded us, and we do not

wear a gown or a wig, although we are sometimes permitted to wear our masks.

In any event, it is good on such an evening to catch the judges with their robes off; it gives us an external appearance of equality.

When you invited me to address you this evening, I had thought it was to be a meeting only of the members of the Bronx Bar Association and, therefore, I intended to address you on the subject of technical professional interest.

Then, I learned that this was to be a social gathering indeed, as I now know, preceded by a cocktail party designed, I suppose, to dull the razor-sharp brains of many counsel here. I also learned that it would be an occasion which was to be graced by beauty other than that which can be found in a legal syllogism.

Therefore, I decided it would be wrong to talk shop, just as if you had a lady speaker—it would be wrong for her to talk shopping.

Instead, I choose this opportunity to address you on a subject which has pressed upon my mind, and is very dear to my heart. I hope you will find it appropriate, because it does involve the subject of international law. I assure you, though, it is a subject of profound interest to every person alive today, for it involves nothing less than the survival or extinction of the human race.

I do not like suspense, except in stories. When an associate of mine comes from the law court, I implore him to tell me the conclusion first, and then he can sit back and tell me at gerat length, how he brilliantly bested his adversary. Therefore, I shall state my conclusion first.

President Eisenhower should address the United Nations and propose a new constitutional convention to amend the Charter of the United Nations. Such procedure is authorized (United Nations Charter sec. 109, Subdivision 3) at any time after 10 years existence of the United Nations.

The calling of such a convention to amend the charter need be passed by only a majority of the Assembly, and seven members of the Security Council.

The objective would be to create an effective instrumentality for the preservation of world peace.

In making this proposal, I do not share the view of those who think that the United Nations is an impotent, helpless organization, which might mercifully be put to death.

On the contrary, to have a shelter where all the nations of the world can gather and listen to each other, and pass resolutions which at least have the moral grandeur of an international assembly meeting in democratic process, is the hope of the world. It is because, in our desperation, we reach forward to that hope and find it a mirage, that we must take steps to make it real.

In discussing this proposal, I shall drink heavily from the fountain of our constitutional history. For there is a remarkably apt analogy of our own ineffective Constitution which was later revised to make it workable.

In 1776, when this country was founded, we drew the Articles of Confederation. They were so ineffectual that the Republic foundered. Eleven years later, in 1787, though there was no authority to do so, we called a Constitutional Convention. We transformed the Articles of Confederation into the Constitution as we know it today.

Notice even the similarity of the lapse of time—11 years between 1776 and 1787—and it is 11 years since the United Nations Charter was drawn in 1945.

Why did the Articles of Confederation turn out to be inadequate? Chiefly because each of the 13 States deemed itself to be an independent nation, and would not surrender its sovereignty to a Federal Government. Article II of the Articles of Confederation read: "Each State retains its sovereignty, freedom and independence."

This meant that the Federal Army was subordinated in effectiveness, to the State Militia. Massachusetts and other States had their own armies, while the Federal Army constituted only a token force. Notice the new United Nations token Army we have just founded for the Mideast crises.

Under the Articles of Confederation, there was no effectual means to raise money. The Federal Government levied a tax of $8 million. Only $420,000 could be collected.

Congress consisted of 1 house, and each State had 1 vote, just as each country has 1 vote in the United Nations. Nine out of thirteen States had to assent to make possible a decision. This was equivalent to veto power.

Indeed, each State considered itself so much an independent sovereignty that it would not even yield to the Government the right to declare war or make peace. Georgia declared war on 2 Indian tribes, used its own Georgia army to win, and then made 2 peace treaties, ignoring the United States Government.

Four States, Maryland, New Jersey, Pennsylvania, and Virginia, entered into treaties with each other, without the consent of Congress.

Many States taxed imports across their borders. New York, for example, imposed a tariff on wood and cabbage which came from Connecticut.

There was no Federal Judiciary. There was no Supreme Court until 1787. When there was a dispute between the States, Congress would appoint a committee to determine it and, sometimes, the States would not even subject themselves to the jurisdiction of the that congressional committee.

The result was that our Federal currency failed, our laws were unenforceable, and there was chaos in our Republic. This great and noble experiment in modern democracy almost collapsed during the first 10 years of its existence.

When John Shay, a hero of the Revolutionary War, led an army in revolt, due to the desperate condition of farmers and debtors, the time had come for some radical measures.

Alexander Hamilton, practicing deception, got together the representatives of the Thirteen States on the theory that they would made some minor amendments to the Articles of Confederation. Previously in 1785, he tried to convene them, but only five States agreed to attend.

Then it was that out of a cauldron of fierce debate, resistance, and compromise the Constitution of the United States emerged.

What were the changes of the Articles of Confederation which transformed it, 11 years later, into the Constitution? As we analyze them, keep an eye on the present situation in the United Nations, because the parallel is striking.

First, we made possible, through effective taxation, the maintenance of a Federal Army to enforce the edicts of the Federal Government.

We changed the voting, so that representation was based on population. But we created a bicameral legislature so that, in the Senate, each State would still have an equal vote with any other.

Finally, we created the United States Supreme Court over such protests as that of Mason, the delegate from Georgia, who said: "I will not permit a foreigner from New York to determine the rights of the sovereign State of Georgia."

We think of our Constitution as an inspired work designed by great minds. So it is, but those who drafted it had misgivings, for they were compelled, by fierce opposition, to compromise their convictions.

Patrick Henry is often quoted, approvingly, for "Give me liberty or give me death," but listen to him, as the delegate from Virginia, oppose the Constitution: "I would rather infinitely have a king, lords, and commons, than a government so replete with such insupportable edicts."

A Delaware delegate said: "We are told that although 3 large States form a majority of the people in the 13, yet these 3 States will never do any harm to the rest of the States. Gentlemen, I do not believe you."

Jefferson said about the Constitution: "There are, indeed, some faults which revolted me a good deal in the first moment, but we must be contented to travel on toward perfection step by step."

The delegate from South Carolina said: "What is liberty? The power of governing yourself. If you adopt this Constitution, have you this power? No. You give it into the hands of a set of men who live 1,000 miles distant from you."

There were also predictions that the Federal Capital "would be a walled or fortified town with an enormous standing army to sally forth and reduce the people to submission."

Yet the new Constitution was adopted and, from a faltering Republic, a steady and powerful Nation emerged.

How shall we now amend the United Nations Charter to transform an ineffectual symbol into the reality of international power?

First, the veto must be abolished.

Russia is guilty of many, many iniquities, and communism is the shortest distance between the cradle and the grave, but let us not blame the existence of the veto upon Russia. The truth is that the United States, as well as Russia, had to have the veto. Without it the Senate would not permit us to join the United Nations and "surrender our sovereignty" to foreign powers.

We did not join the League of Nations because of article XIII, which was deemed to impinge upon our sovereignty. President Roosevelt, mindful of that experience, took the precaution of designing the veto, so he could say to the United States Senate: "You are not surrendering your power; you can always veto a decision which you, in your sovereign powers, deem should not be made." Thus, we were lured into the United Nations. But the time has come to eliminate the veto, which immobilizes any effective action. How, for example, could any judicial system operate if the losing litigant could veto a decision rendered against him? We can no longer permit the paralysis which the veto imposes on international conduct.

We might realistically take a new look at the outmoded notion of sovereignty. Sovereignty means free and independent choice of action. Have we real sovereignty with respect to taxation, or is it determined by Russian policy, and the necessities for defense? Have we read sovereignty with respect to our domestic program, or is it determined by what happens in the world about us, over which we have no control? Is it not true that sovereignty can actually be enlarged by each nation diminishing the extreme concept of its sovereign rights, and pooling it for the common good? The greatest sovereignty of all is that of the human being. We speak of the rights of nations, but who speaks for man, and his self-preservation?

The Charter of the United Nations should be amended so as to excise the veto, and subject all nations to the will of the world assembly. Only in this way can sovereignty be preserved at all.

Second, we must amend the charter so that voting power will be more representative. Today, 20 South American nations, representing 7 percent of the population of the United States, control 40 percent of the votes in Assembly. Russian satellites carry an artificial voting power. In dealing with Mid-Eastern crises, 24 Afro-Asian votes, can defeat any resolution which requires a two-thirds assent.

I have no precise blueprint to submit on this difficult question, but let me suggest a few thoughts to stimulate a solution.

Would it not be wiser to have voting power which reflects four combined and weighted elements—populations, industrial output, food production, literacy and education?

Such a yardstick for voting would more realistically measure the size and power of each nation.

To those idealists who believe that raw power should not be afforded so much consideration, I would commend Churchill's statement: "Only if you make a political organization which has an alinement between the reality of power and politics can you achieve an ideal ultimately. * * * We may deplore, if we choose, that there is a difference between the strong and the weak in the world, but there is undoubtedly such a difference, and it would be foolish to upset such arrangements in order to try to attain immediately what is a hopeless ideal."

Third, we must create an International Supreme Court with power to enforce its edicts. The judges should be chosen as were those of the International Court of 1921; each country nominated 1 of its own nationals, and 2 from other countries. National partisanship was thus reduced to a minimum. This device had all the ingenuity which is attributed to the Greek generals who, after their victory over the Persians at Salamis, voted to select the best among them. Each general voted for himself, but each chose Themistocles as the second best. It was he who was declared the winner. It is possible to establish a tradition of impartiality, freed from national bias just as we have achieved such a tradition in the United States Supreme Court, notwithstanding the dire prediction of State prejudice.

Finally, we must create a United Nations military force to implement its decisions.

There have been many cogent proposals for a world army. I submit only one: That each nation give 20 percent of its military power to the United Nations, and the collective 20 percents would be greater than any country's individual army.

The byproducts of such an international military body would be to encourage genuine disarmament among the individual member states. We would not have to resort to such circuitous plans as air inspection—Russian planes flying over America, and American planes flying over Russia. On the contrary, United Nations representatives would have free access to all countries of the world, to every city, nook, and cranny of them.

Would Russia continue to belong to a United Nations which had been so revised? The probability is she would. Self-interest, rather than good faith, might compel her to. For Russia has always wished to be in contact with world opinion. She has always respected military and political power. Russia may want 1 world which is divided, but she does not want 2 worlds. I think she would fear to be outside the pale of international justice as organized in the United Nations.

However, let us suppose that Russia and her satellites chose to quit a vetoless United Nations. Would we be worse off?

Let us make a few comparisons of power:

The United States and the United Nations would have a production of 165 million tons of steel, as against 50 million tons of Russia and her satellites;

Six hundred and ninety billion dollars of gross national products, against $155 billion for Russia.

Three hundred and twenty-three million tons of oil production, against 68 million tons.

Fifty-eight percent of the world's total power consumption, against 19 percent.

Our farmers are five times as productive, per man, as Russia's and her satellites'.

Our rate of increase of surviving population is twice as great as Russia's and her satellites'.

Another advantage to the free world would be that our military position would be improved by the cooperation of all members in the United Nations against any nonmembers. No longer would it be necessary for us to implore distant countries to afford us bases or sell our soul for such privileges. The United Nations would have the right to call upon every nation to make available sites for United Nations bases.

Even if Russia and her satellites withdrew from the United Nations, the possibilities of peace would be better than they are today.

I come, then, to the final inquiry: Is it possible to achieve this utopian scheme, as many will call it? Shall we yield to the cynicism that one cannot hope to organize international society to stop war, because, by precedent, nations have always had war?

The answer—and I ask you to note it deeply in your hearts—is that we have no alternative. We have no alternative.

The peoples of the world are not fully informed concerning the power of annihilation which now exists. The bomb at Nagasaki had 20,000 tons of TNT power, and today there are hydrogen bombs of 10 million tons of TNT power. Indeed, we have had to coin the word megaton to measure a million tons of TNT power.

The fallout destruction of one such 10-megaton bomb could extend to 100,000 square miles—twice the area of the State of New York.

We have no alternative.

We have now learned how to make hydrogen bombs of limitless power because we case them in U-238, a uranium isotope easily created.

Scientists now tell us we can combine a hydrogen bomb with cobalt, a common ingredient available cheaply which has the characteristic of becoming radioactive, and floating for long periods in the air currents, until it descends to lay waste to vast areas. Indeed, it is no longer an imaginary concept that we could destroy not only all human life on this earth, but every insect, invisible microbe, and every blade of grass and vegetation.

We have no alternative.

Even hydrogen bombs give only a glimpse of the potential horror. It is now possible to wage biological or germ warfare. Without use of intercontinental missiles, an enemy can destroy, selectively, the complete cattle or wheat supply of another nation, not to talk of the human supply of any nation.

Even this is only the beginning of the obliterating power which now exists. There are the "G" gases, nerve gases, which can destroy anything they touch, in 45 seconds, and they are invisible and unstoppable. One of our allies shunned possession of these gases after the last war ended and sunk them in the middle of the Atlantic.

We have no alternative.

Perhaps the rules of physics which threaten our destruction may also teach us how to survive. In releasing the energy from atoms, we have progressed from fission to fusion. Atom bombs split the larger atoms. This process is fission.

Hydrogen bombs, which use the atom bomb as a detonator, force together the smaller atoms of hydrogen so that they join together to become larger and larger. This process is fusion.

Perhaps this foretells the destiny of the world. For centuries we have proceeded by fission, splitting the Adams of the world into different countries. The power released from this fission has been hatred and war.

Now, we must turn to fusion—the joining together of the Adams of the world, into a larger unity, into an international society. The power released from such fusion could be beneficial. If the United States could have rid itself of the burden of $300 million spent in the last 10 years for destructive and defensive armaments, and a current average expenditure of $35 billion each year for the same purposes, what glories could be achieved.

We could build medical centers, the size of cities, to eradicate the scourges of mankind: cancer, heart disease and high blood pressure.

We could organize psychiatric clinics in all the cities of the Nation, so that, instead of having 1 child psychologist for every 46,000 schoolchildren, as we have today in a few of our cities, we could provide adequate care for all emotionally disturbed children. We could wage war successfully against juvenile deliquency.

We could apply all the new techniques for healing the mind, so that we would no longer have 1 out of every 10 Americans at some time or other occupying a bed in a mental hospital.

We could build geriatric institutions to study the aging process, and provide dignified and serene surroundings for the aged, so that they would live out their lives, rather than die out their lives.

We could construct an adequate and completely new educational system, both in bricks and mortar and in teaching personnel, adequate to the needs of a new society.

We could offer subsidies to all gifted children, so that they could follow careers in the arts, whether music, painting or writing and thus develop to the full potential the genius of our youth.

We could give subsidies to scientifically inclined children, so as to create a new class of physicists and engineers to usher in the new era of atomic energy and automation and, similarly, a new and adequate group of doctors, nurses and psychiatrists.

We could construct new housing for all classifications of income, with installations of the new miracles of science to control light, temperature and entertainment facilities.

We could do all this, and have billions left over to balance our budget.

Yes, we could create a veritable paradise on earth.

We have no alternative.

I cannot believe that the destiny of mankind is international suicide.

If you will look at the map of the world, you will see that the bulge of Africa and the bulge of South America fit together. Apparently, they were once one continent. Perhaps what tore them apart millions of years ago was the same power which man has discovered today.

Shall nihilism be our unseen epitaph? Shall we look backward and say peace cannot be won because it has never been more than a temporary interlude? If we look backward, we will move backward. Nothing is inevitable that is resisted. Mankind faces the greatest of all dilemmas, the most fearful of all challenges, the most sublime of all choices. Will we end the story of man, in one final, suicidal holocaust which obliterates all living things and, perhaps, the planet itself? Or will we vindicate the evolution of reason and erect a peaceful society, blessed with the joys of noblest fulfillment?

It is a moment for religious evocation. Isaiah prophesied that "Nation shall not lift up sword against nation, neither shall they learn war any more."

Perhaps an allegory points the way:

The master of the library was asleep, and the books in the library took to quarreling with one another as to which was the most

important in the library. The dictionary argued that he was the king of the library for, without him, there would be no language. The book of science said that he was the king of the library, because without him man could not have progressed to the heights he now enjoys. The book of poetry said he was the king, because he gave peace and surcease to people who read him. The novels claimed that they were the masters, because they had the most expensive gold backing, and described the foibles and joys of mankind.

And so, the din rose, and the fury of argument grew greater and the shouts and noise were deafening.

Then, from an old worn book on a table in the center of the room, there came a thin voice which said: "The Lord is my Shepherd; I shall not want." All the noise and fury ceased. There was silence in the library, for everyone knew who the real king of the library was.

We have reached the stage in international affairs where, despite all the din, contentiousness, confusion, and threats, we must resort to the one hope that there is a true Master of the world, and that He has decreed for us a fate of peace and existence.

The Five Valleys Bookmobile

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 25, 1958

Mr. METCALF. Mr. Speaker, the appropriation bill for the Departments of Labor and Health, Education, and Welfare for fiscal 1959 includes $6 million, double the budget request, to carry out the provisions of the Library Services Act.

As a cosponsor of the authorizing legislation, sponsored also by the senior Senator from Montana [Senator MURRAY] and the junior Senator from Montana [Senator MANSFIELD], as a member of the subcommittee which held hearings and reported the bill, I have worked for this improvement in library services to rural areas.

So, an article in the current issue of Montana Libraries, published quarterly by the Montana State Library Extension Commission, caught my eye. Entitled "The Five Valleys Bookmobile," it is an account of the extension of library service, made possible by this act, to seven Montana counties, among them my home county of Ravalli. This account is neither dramatic nor exceptional. It is typical, and I want to share it with my colleagues. The article follows:

THE FIVE VALLEYS BOOKMOBILE
(By Elevelyn L. Swant, Coordinator)

The first bookmobile to serve the counties of Missoula, Sanders, Ravalli, Mineral, Granite, Powell, and Lake, was made possible through the Library Services Act (Public Law 597). It was delivered by the State Library Extension Commission to its headquarters at the Missoula Public and County Library on May 17, 1957, but 4 weeks elapsed before a sign was painted, a driver procured, and the shelves stacked.

The first trip was made on June 17, 1957, in Missoula County to the areas of Target Range, Green Acres, Cold Springs, Lolo, Woodman School, and Lolo Hot Springs. The driver, Joseph C. Thompson, was accompanied by Geraldine Adams of the Missoula County Library staff and Astrid Arnoldson, public relations assistant of the Five Valleys Federation of Libraries. That first day the bookmobile traveled 88 miles and circulated 128 books.

At the end of its first 3 trips, all in Missoula County, the bookmobile started branching out into the other counties, and by July 11, 1957, had visited all 7 counties and a total of 84 communities. On its first two rounds of visiting each of the counties, the trips were mainly to survey the communities and to compile information as to mileage and driving time required between stops, how much time to allow for each stop, the selection of a good place to park—going on the suggestion of the local people, talking to storekeepers, postmasters as to interest in the community, getting information on road conditions in winter, the summer demand versus the school year demand, the type of books to be carried, and the taking of special requests. (Books on Montana and by Montant writers have been consistently in demand.)

By the middle of September and close to the end of the second round of trips, each stop was evaluated and 53 of 84 were eliminated for the winter months ahead. Some communities were eliminated because they were being adequately served by established libraries or by nearby libraries and others because of insufficient community interest. The objective was to lengthen the time of the stops in the communities that wanted and needed library service, and make a schedule so that each community could be visited regularly every 4 weeks, a schedule which we have been able to maintain throughout this past winter. A summer schedule for the months of June through August, now in the planning stage, will attempt to reinstate some stops that had to be eliminated last fall. Also, next fall, we hope to be able to work out a revolving schedule so that each community will have some Saturday stops to give the children a chance to visit the bookmobile during the school year.

Having but one bookmobile, with a capacity of approximately 1300 volumes, one driver-librarian (the driver has been alone since his first four trips), and 32 communities to serve, with a population of about 12,572, adult and family reading has been stressed, and no school stops planned for the school year. In and near the communities visited, there are 54 elementary schools or 432 grades, with an enrollment of approximately 3,670 children that could use and should have some type of library service. However, to be fair, the bookmobile could not serve some schools and bypass others, so until another bookmobile is procured, or the area reduced, the pattern of bookmobile service has to be adult and family reading, with only community stops.

As of December 31, 1957, and with 6½ months in service, the bookmobile had traveled 12,510 miles, registered 1,179 borrowers, and recorded a circulation of 12,678 volumes, an average of 1,950 volumes per month. It has been on the road 3 days a week, and at headquarters 2 days for stocking, records, servicing, etc., and for a day off for the driver. Its trips vary from 68 miles for visits to communities in Missoula and Ravalli counties, to 361 miles for visits to communities in Sanders County. There are 3 trips a month with overnight stops at Polson, Garrison and Thompson Falls. The mileage on these trips is 304, 233, and 361 miles respectively, and the counties for Sanders, Lake, Granite, and Powell are visited.

The bookmobile has had two drivers—Mr. Thompson for the first 6½ months and Douglas Brown, since the first of the year. Mr. Thompson, a former principal in the Chicago school system, made all the survey trips, sometimes working a 13-hour day, leaving early in the morning and coming in late at night. His report on each stop was invaluable in evaluating it for later scheduling. He has worked out all of the bookmobile schedules and, when relieved of the driving, continued on the staff as the supervisor of the bookmobile service.

Every means of communication has been used to publicize our program, from 2-cent postal cards to television. The public relations assistant has prepared weekly releases to all of the daily and weekly newspapers in the area and the radio stations as far distant as Great Falls and Spokane. The cooperation of all mediums has been wonderful in promoting this program.

We feel that the bookmobile service is appreciated. We know that we are reaching people who like to read good literature and also people who look to books to provide them with helpful information. We are reaching busy people on farms and in small communities and also handicapped people, people in rest homes and people who have retired from the active work-a-day world. All have a need for library service. Nothing unique has been done except to introduce to southwestern Montana its first traveling library.

The Italian Situation and Its Relation to World Affairs

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1958

Mr. LIBONATI. Mr. Speaker, there are several outstanding articles written on Italian affairs by distinguished members of the press, on the Italian situation in its relation to world affairs that are so interwoven with the future success of our Mideast crisis that I do not hesitate to place them in the RECORD.

Drew Pearson, who visited Italy previous to the Italian elections, in a special article covers the political problems confronting the Italian electorate and spells out the issues with expert analysis, as follows:

[From the Washington Post and Times Herald of May 20, 1958]

CHURCH-STATE ISSUE STIRS ITALY
(By Drew Pearson)

(Following is Drew Pearson's fifth dispatch from Rome in covering the forthcoming Italian election.)

ROME.—When the late Premier Alcide de Gasperi, Amitore Fanfani, and others organized the Christian Democratic Party in the dim postwar days when Italy was emerging from Mussolini rule and Nazi occupation, they endeavored to put Christian principles to work in practical politics. On the whole, the Christian Democrats have done a remarkable job.

But, though they have publicly proclaimed separation of church and state, their critics maintain the Christian Democrats are directed from the Vatican and this has become the biggest issue in the forthcoming vitally important Italian election. To some extent, the future of the American alliance with Italy depends on this delicate, passionately debated issue.

Most Italians want to be christened by the church, married in the church, and buried

by the church, but on election day they want the church to stay out of politics.

This church-state issue has become so fiercely debated by some that the newspaper Espresso, founded by Prince Carocciilo, whose mother came from New Orleans and grandmother from Cincinnati, has built up a profitable circulation by following an anticlerical editorial policy. Last year Espresso made a profit of 150 million lire.

The church-state issue came to a head when Mauro Bellandi, of Prato, a former Communist, published a civil notice of intent to marry. This meant that he would marry outside the church. Bellandi's priest, Rev. Danilo Aiazzi, then denounced him from the pulpit which is a routine procedure.

ANTICLERICAL WAVE

The Bishop of Prato, the Most Reverend Pietro Fiordelli, went further and wrote a letter to the priest accusing Bellandi of "concubinage."

This caused widespread anticlerical reaction. Bellandi brought a charge of criminal libel against the bishop. A three-judge court held that the bishop was guilty of criminal defamation of character.

The court's decision would have been an important aid to the Christian Democrats in refuting the charge of links between them and the Vatican had it not been for four additional developments.

1. The Vatican excommunicated the three judges, the public prosecutor, and everyone connected with the trial. This gave new ammunition to the anticlerics.

2. Espresso published details of how the Pope's three nephews received tax exemption on the excuse they are papal ambassadors. One nephew, Mark Antonio Pacelli, is extremely wealthy, owning one of Rome's water companies and having a reputed income of $750,000.

3. Roger Peyrefitte, French writer and former diplomat, wrote a series of articles in Paese Sera, a pro-Communist newspaper, attacking the Vatican. The Vatican then initiated charges against Peyrefitte through the Italian courts. He was indicted and now awaits trial.

4. At this point Guido Carli, Minister of Foreign Trade, wrote a strong letter supporting his friend Peyrefitte and simultaneously offering to resign from the cabinet. His resignation was not accepted.

To get the view of the most authoritative political leader in Italy on this question, I visited Fanfani, secretary of the Christian Democratic Party.

"Our goal is a Catholic party completely divorced from the Catholic Church," he said. "We are patterning our policies after Adenauer's West Germany—a great Catholic who has kept his government completely divorced from the church."

From other sources, I learned that Samuel Cardinal Stritch has given Fanfani vigorous support in his stand for division of church and state.

"Don't let the Vatican push you around," the American Cardinal told the Italian leader. "People in Chicago used to come and ask me for political advice. I had one reply: 'Do you wish to make a confession?' "

We turn to a splendid article by Leo Wolleborg reported in the Washington Post and Times Herald on July 27, 1958, for an insight upon the important role played by Italy through its dynamic leader and prowestern Premier, Amintore Fanfani and his Italian Mideast plan:

[From the Washington Post and Times Herld of July 27, 1958]

EFFECTIVE ATLANTIC SOLIDARITY IS KEY POLICY, FANFANI SAYS

(By Leo Wollemborg)

ROME, July 26.—"Today, as yesterday, the guiding star of Italian foreign policy is the fullest and most effective Atlantic solidarity."

With these words Italian Premier and Foreign Minister Amintore Fanfani on the eve of his departure for Washington opened a 60-minute interview with this reporter, the first interview he has granted since his government received a vote of confidence in Parliament last week.

Such solidarity does not rule out and in fact demands the frankest exchange of views within the alliance which will be all the more efficient as each of its members is both more capable and enabled to make its own positive contribution to the common policy with due regard, of course, to its strength, geographic position and specific interests in the problems under consideration.

In the Middle East, today's most pressingly important theater, Italy's special contribution according to Fanfani is the natural product of geographic, political and economic considerations. The Premier told me "First of all Italy occupies a frontline position in the Western alinment just behind those Middle East outposts which are today being subjected to the heaviest and most direct Soviet pressure.

"At the same time Italy has no colonies (this is one of the historical circumstances that bring our political position closest to that of the United States and of Western Germany) and therefore is in a better position to show interest in the national aspirations of other people without arousing distrust or suspicion. The Italians have gone through a colonial experience and while they do not disown the good things they may have done they are convinced by now that they would have done better to devote efforts and resources to the development of their national territory."

Last but not least the Middle East and Mediterranean basin are among the areas that lend themselves most naturally to the development of Italian trade relations.

Concerning the summit conference within the framework of the United Nations, the Italian Premier reaffirmed forcefully that in order to be really useful it must be prepared and have a precise agenda. As to the selection of the participating countries, Fanfani said "Italy does not intend to create difficulties. She is certain in any case that on the western side there will be previous consultation either bilateral or collective with those members of the alliance that for practical or organizational reasons may not directly attend the summit meeting now being contemplated. In the Middle East the American and British intervention has provided a tampon but it is not and cannot be the medicine to heal a dangerous situation."

The remedy, according to Premier Fanfani, must be sought in the course followed in the past by the colonial powers themselves in the wisest and most farsighted phases of their policy; there is no doubt, for instance, that British policy toward India prevented that country from becoming an open field for the maneuvers of international communism.

ECONOMIC PACT NEEDED

Fanfani went on to say "a few days ago Khrushchev proclaimed that he could collaborate with Nasser even though Nasser is a nationalist and not a Communist. How far can the western powers admit that they can work with people whose methods of internal policy or view of the international situation differ quite a lot from those of the West? Can the West beat on its own grounds Moscow's much vaunted realism which as proven by the Hungarian events can be hamstrung by ideological and strategic considerations that are part and parcel of the Communist system itself?"

In the past there has been talk about economic aid to the Middle East; now political agreements are contemplated. Fanfani told me that "a political agreement requires an economic agreement and the latter in turn is required to give substance to the eventual political agreement." This approach brought up a question concerning the oil deal just brought off in Morocco by the Italian state agency ENI. Fanfani replied that "the issue of Italian oil enterprises in the Middle East and in Africa like any other issue related to our sharing in the economic development of the underdeveloped countries can always be examined in a spirit of friendly cooperation. The need to coordinate the undertakings of the allied countries in this field appears especially urgent today since oil is now over and above its obvious industrial importance a key factor of security for all the free people."

CALLED LITTLE DYNAMO

Undoubtedly Fanfani is going to bring to his job as foreign minister the same drive that in domestic affairs has earned him the nickname of Little Dynamo. He is only 5 feet and 2 inches tall but does not appear to suffer from an inferiority complex and often is the first to joke about his size. He is already moving fast toward the implementation of his economic and social program whose aim is to give each Italian an education, a home, and a job. The Premier counts on this program to consolidate on a broader foundation of popular support of the democratic institutions of the country and the stability of his own government.

We hope first of all to change the wait-and-see attitude of the Republican Party into open collaboration with the present coalition of Christian Democrats and Social Democrats, this would give us a parliamentary margin slightly larger than that enjoyed by the coalition governments that were in power before the last election.

"We also rely on our program to bring about some changes of mind and perhaps some crises within the opposition parties that are less distant from the center. But above all and first of all we rely on the implementation of our program to attract voters who have cast their ballots for those parties. From this point of view we can say that we are not going either to the right or left, we are going ahead, that is to say, we are advancing to meet the legitimate aspirations of an ever-growing number of Italians."

All in all it appears that Fanfani, the Little Dynamo, is bound and determined to provide a more dynamic driving force to Italy's domestic and foreign policy.

FANFANI TO LEAVE FOR UNITED STATES ON MONDAY

ROME, July 26.—French Foreign Minister Maurice Couve de Murville arrived in Rome today for talks with Italian Prime Minister Amintore Fanfani before Fanfani leaves for Washington on Monday.

The only known item on the agenda here was the Mideast situation.

It seems likely that De Murville is seeking Italian support for France's policy on the Mideast, just as Fanfani is going to Washington to try to sell Italian policy to President Eisenhower.

But just what Fanfani's Mideast policy is, no one knows. Republican Party leader Randolfo Paccirdi said he was glad the United States considered Italian Mideast policy important enough for Fanfani to discuss it in Washington. But, added Paccirdi: "We would be glad to know what the policy is, too."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Church, Yarborough, Clark, Jordan, Carlson, Jenner, Langer, Martin of Iowa, Morton and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Church, Jordan, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Place.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.

OFFICERS OF THE SUPREME COURT

Clerk—John T. Fey, 2931 Cathedral Ave.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Road.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Drive, Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Road.

Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS
JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Burton. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Scholarships, Fellowships, and Other Assistance to Education

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I issued yesterday, after the Senate Subcommittee on Education reported favorably a bill providing scholarships, fellowships, and other assistance to education. I ask to have printed with my statement an editorial, from the Christian Science Monitor of Saturday, July 26, 1958, which sets forth cogently the need for legislative action in this vital area.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CASE OF NEW JERSEY

I am happy indeed that the Senate Subcommittee on Education has today reported favorably a bill providing scholarships, fellowships, and other assistance with emphasis on improving the teaching of the physical and social sciences, as well as languages. The next step is up to the full Committee on Labor and Public Welfare, and I am hopeful that the committee will see fit to schedule this bill quickly so that fiqor action on this needed legislation proposed by the President last January will be taken before Congress adjourns.

The subcommittee still has before it legislation providing Federal assistance for school construction, as well as my own bill providing assistance for the construction of public community colleges. Now that the logjam has been broken in subcommittee, I am hopeful that some action will be taken on these bills also. As long as we have inadequate and overcrowded classrooms at the elementary, secondary, and college levels, American youngsters will be thwarted in their ambition to obtain a good education.

[From the Christian Science Monitor of July 26, 1958]

SCHOOL AID: INDEX OF CONCERN

Up to a year ago the great concern over American schools was about crowded classrooms. Congress readied legislation to aid States and local school districts in overcoming this shortage by a nationwide building program.

This effort was seriously hampered by endeavors to use it as a lever against local school segregation. Fears that Federal control might follow Federal aid were aroused by those who held them sincerely and by those having other axes to grind. The chamber of commerce campaigned against it and perhaps usefully showed that local ability and willingness to solve the problem had been somewhat underestimated.

In the face of all this Congress still would have passed Federal aid had it not been for failure of the White House staff to inform the President that Democratic leadership had swung over to support his insistence on a means-and-effort test in allocating funds among the States. His influence applied in time would have won back enough Republican votes to overcome the five-vote margin by which the measure lost.

Then came sputnik.

THE IMPACT OF SPUTNIK

Almost overnight one would have thought that artificial satellites and ICBM's were being designed and turned out by hordes of precocious youngsters currently ground out of the Soviet school system. Contrariwise, that American youngsters had been spending their school years in snap courses, athletics, and rock 'n' roll. Educators were blamed and both they and Congress were importuned to get academic assembly lines going fast.

Happily, one of America's greatest assets—free discussion—rolled into action. There have come informed and capable reports on Soviet education, and professionally calm assessments of the American. ICBM's and sputniks, it develops, are products of scientists and technicians educated mostly outside Soviet territory and a decade or more ago. However, both Soviet Government and people have turned to schooling with disciplined, deadly earnestness and, characteristically, have turned schooling en masse to serving the current ends of the state: production of researchers and technicians.

NOT ALL DARK

On the other hand, we are responsibly assured that in good American schools—and there are many of them—the sciences and mathematics are being taught as well as anywhere in the world. But that there are too many poor-to-mediocre schools. More high-school pupils, numerically, than ever before are taking these tougher subjects. But there should be much wider training in languages.

Languages, too, discipline the processes of thinking. And in this shrinking world Americans can no longer assume that people among whom they will find themselves a day's journey away will speak a tongue they understand. Businessmen and public servants need increasingly to communicate in more than one language.

Significant achievement in any of these three academic categories calls not only for conscientious effort; it calls for that and for those still little understood qualities called aptitudes and for the interest which usually accompanies them. Americans have not yet done enough to discover these talented youngsters systematically, and to help them develop their talents by financial aid where needed and by making advanced courses available.

THE SECOND LOOK

It boils down to the fact of one nation newly emerging from mass illiteracy and hungry for learning—a nation with a still austere standard of living, a nation which views its people collectively and as servants of the state. And to the fact of another nation which has come to take universal schooling much as a matter of course, a nation which suffers more from a surfeit of things than from the sharp spur of necessity, a nation which in education as in other areas listens to what the individual wishes (but has as yet arrived at no clear consensus on school curriculums which also serve best the common good).

The Soviet nation, on the one hand, having destroyed its aristocracy of birth, finds it not unnatural to exalt an aristocracy of learning; the other, the American, having conquered a wilderness and developed the resources of a subcontinent in a half-dozen generations finds it not unnatural to give preferred status to the doer in commerce and industry above that of the scholar and teacher.

One of the penalties of this imbalance in rewards has been to draw away into business and industry too many of those who should be teaching the businessmen, the industrialists, the researchers, and technicians of the future. This is like eating the seed corn.

THE SAVING TOCSIN

To this second nation—the United States—the advent of sputnik may prove to have been the saving tocsin. For it is only by rivaling the Soviet people's dedication to education, their respect for its practitioners, and the priority they give it in their public spending that Americans will bring their schooling to a standard befitting the world's wealthiest Nation and meeting the imperatives of the 20th century's grim competition.

Could we be sure that the impetus of sputnik would carry through to every school district in the land—and do so fast enough not to lose 4 or 5 school generations of talented youngsters, and lose, perhaps, for all Americans the world competition militarily, economically, and culturally—an American educational renaissance might be built more solidly from the grassroots up.

The fact of this uncertainty introduces the question of a national concern with the education of American youth. The whole history of American democracy says this concern cannot be implemented by any ukase from Washington. It must be expressed by incentives and aid.

MANY TRIES AT HELPING

There are hundreds of aid-to-education bills in this Congress. Of these, less than half-a-dozen are given the slightest chance either of being passed or of being incorporated in some comprehensive bill with a chance of passage this session. Federal aid to classroom construction is not among these few.

What has become of the overcrowded classrooms and the double session schools? Did they vanish between defeat of the latest bill to correct such conditions last July and the appearance of sputnik in the October skies? The chamber of commerce figures gave more reason to hope that States and local school districts could do more of the job than thought at first. But parents and classroom teachers in hundreds of localities can attest that there is quite a job to be done. And unless these local departments and boards accomplish enough within the coming year to alter the picture radically the Nation will likely be confronted with a situation sharpened by cumulative resentment against neglect.

MEASURES WITHIN REACH

The measures given the best prospects for passage are:

1. To make available perhaps 20,000 Federal scholarships a year (twice what the administration believes manageable) to enable talented youngsters to attend college for 4 years, these scholarships to be awarded by

State commissions with preference given to those studying science and mathematics and consideration given to financial need. Also Federal loans to students to be administered by the colleges, and aid to States in providing equipment for teaching science, mathematics, and languages. Also aid in training foreign-language teachers, for graduate students and graduate schools, and for testing and guiding high-school students.

2. To permit teachers in both public and private schools to deduct up to $600 a year for income-tax purposes for money spent for professional improvement by college and university study.

AN INDEX OF CONCERN

These measures are all in the right direction, whatever may be the differences in opinion on their details. But it should be said that their passage, of itself, would not answer the needs of American education. Nor should they fail of enactment would American education stop still. They are, however, indices—needles on a dial. And they will indicate by the seriousness with which Congress handles them how much importance Congressmen, and likely their constituents, are giving this matter of education in the Nation's future.

Conversely, a wisely framed program of national aids and incentives can carry inspiration to every town and crossroads by its solid evidence that some of the concern for educating American youth anywhere belongs to Americans everywhere.

Invitation to Khrushchev To Attend Summit Conference

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Invite Khrushchev to the Midwest?" from the Minneapolis Tribune of July 27, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INVITE KHRUSHCHEV TO THE MIDWEST?

If Nikita Khrushchev comes to New York to attend a summit conference at the United Nations, wouldn't it be a good idea if he were invited to visit the upper Midwest?

We think it would be for a variety of reasons.

In the first place, he could see for himself the benefits that improved practices, mechanization and modern techniques have brought to farmers in the richest farming area in the United States. He could see that American farmers have housing, automobiles, television sets, educational opportunities, and a standard of living that compare favorably with—and often surpass—those of city people.

In the second place, exposing Khrushchev to the realities of American agriculture and to its accomplishments under our capitalistic system might even suggest to him that capitalism is not doomed—as Marx predicted—but that perhaps he and his people have more to learn from it.

In the third place, our Government and the U. S. S. R. already are exchanging experts in various fields in the hope—on our side, at least—that these exchanges will bring a little more light into the Soviet Union, ease the tensions between our two countries and perhaps even tell us more about what makes the Soviet Union tick. A visit by Khrushchev to the upper Midwest would be consistent with this policy.

We think that Khrushchev might be interested in accepting such an invitation because he could learn much from this great farming area. Russia still is predominantly an agricultural country and one of its major problems is to increase both the overall output and the productivity of the individual Russian farmer.

Khrushchev already has shown a great interest in American farming methods and techniques and has put into effect reforms in Russian agriculture inspired by and copied from the United States after the visit of Soviet farm specialists to the Midwest several years ago.

The Russian premier has been talking about a contest between Russian and American farmers in the production of butter, milk, and meat, and he could see here evidence of the tremendous productivity of American agriculture that has resulted in surpluses of these products as contrasted with the shortages that still plague Russia.

Some people argue that we should not help Russia increase its farm output. But our hope is that any such increase would in the long run enable more of the Russian people to enjoy a higher standard of living than they now do—and eventually appreciate the contribution of the United States toward this end.

So what have we to lose by inviting Khrushchev to come here?

Certainly any such invitation would not necessarily imply approval of anything that Khrushchev and his government do or have done.

And while such a visit would increase the security problem for our police, secret service, and FBI, we doubt that Khrushchev would be in as much danger out here as he would be in New York, regardless of the protection afforded him there.

Well, what do you readers think of the idea?

Speech of M. Louis Armand, President of the Commission of Euratom, Before the European Parliamentary Assembly

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by M. Louis Armand, President of the Commission of Euratom, before the European Parliamentary Assembly at Strasbourg, June 23, 1958:

Mr. President, ladies and gentlemen, in agreement with the Committee of Presidents, our President has kindly agreed that we should give you today a short account of the establishment of the Commission of the European Atomic Energy Community and of the tasks it has already accomplished.

The Euratom Commission is now almost 6 months old. At such an age, months still count; and it has therefore acquired a more definite character since the time when my colleague, M. Enrico Medi, Vice President of the Commission, described to you the main features of its work.

To give the Assembly a formal report, it would suffice to take up the treaty, and to try to establish how far we have come in the various fields which are entrusted to the community. This will be done completely and systematically in the statement which is to be made to you at the next session of the Assembly.

I would therefore refer you, for this purpose, to the detailed report which will be sent to you a month in advance of the session.

In order to profit from this opportunity of informing you, the Commission has requested me to describe our work, not so much in relation to the text of the treaty as in relation to the development of atomic energy. For we must have a clear picture of reality, and before we can judge the significance of the steps which we are taking along the road indicated by the treaty, we must define the domain which we are to explore and in which we are to work. It is this survey which I should like to make, very rapidly today.

Here, in fact, the Commission and the community have a very broad mission to fulfill. This mission is defined as follows by article I of the Euratom Treaty:

"It shall be the aim of the community to contribute to the raising of the standard of living in member states and to the development of commercial exchanges with other countries by the creation of conditions necessary for the speedy—and I should like to emphasize that word 'speedy'—the speedy establishment and growth of nuclear industries."

Every word of this article, which defines the role of our Atomic Energy Commission, face to face with Europe's problems, should be carefully weighed.

The words "nuclear industries," first of all, show that it is essentially an industrial development which we have to help bring about. On the other hand, Euratom also has a social and economic aim—the raising of the standard of living in member states. Finally, the treaty explicitly provides for the development of trade with other countries. The community must therefore be open and outward-looking.

THE DOMAIN OF NUCLEAR INDUSTRY

Let us first try to define the domain of nuclear industry that we have to develop. This is something which is spoken about every day, because it is fashionable, but usually in very vague terms. Not only vague about the scientific aspect of the problem, vague about neutrons or mesons, because it is polite to begin conversations about nuclear energy by saying: "Of course I am not an expert"; but also vague about its economic aspect, where many people are tempted to jump to conclusions. In fact, comparatively little is as yet known about the economic aspect of the nuclear industry. In this field we ought to behave like the pupils of Professor Oppenheimer, who when they come to join his seminar, have to learn to admit in all modesty that there are certain things of which they are ignorant.

But because one knows nothing, one might be tempted to do nothing and simply wait. If that were so, Europe would have to abandon all hope of taking her place in a field which, if today it is full of speculation, is nevertheless full of hope and certainty for the future. I should like to bring home to you this contrast—between the great uncertainty of the present day and the certainty for the future—a certainty shared by everyone throughout the world. Only a few years ago, atomic energy was wholly the affair of research specialists and military men; and those who then prophesied its industrial future can see today that they were right when they see the importance that the great countries of the world attach to the nuclear industry.

In the United Kingdom, Her Majesty the Queen opened Calder Hall. In the United States it was President Eisenhower who pressed the button to start the turbines at Shippingport. These ceremonies symbolize the importance, for a great country, of assuring its nuclear future.

NECESSARY ASSOCIATION

The optimists, then, were right, and they saw to it that Europe was given an industrial atomic community. To the word "industrial," the word "peaceful" should be added. These, indeed, give the two essential characteristics of Euratom. Of all the many international atomic organizations existing today, Euratom is the only one which has both these characteristics at the same time.

Let us see what this implies for the peaceful development of atomic energy. It certainly imposes on us the most difficult task in the whole atomic energy field. Cooperative efforts for the "scientific" development of atomic energy do not encounter particular difficulties: it is simply a question of setting up large-scale laboratories and the appropriate equipment.

The "military" development of atomic energy is also relatively simple, for two very different reasons. The first is, in a sense, a philosophic reason: That is, it is always easier to develop energy for destruction than for creative use. It was easier to use fire for burning the crops than for cooking, because for the latter it was necessary to invent cooking utensils. The same is true of atomic energy; it is much easier to produce military energy than peaceful energy. Thus, only uranium can be used today for making bombs and for operating generators to produce peaceful power; whereas plutonium, and energy produced by the fusion of light atoms, can, as yet, be used only for purely destructive purposes. This is certainly an important problem for those who seek to develop the peaceful uses of atomic energy.

The second difficulty results from the fact that in military affairs, questions of cost play only a minor role. The essential aim is technical success. On the other hand, the peaceful development of atomic energy can only take place in the light of economic necessities, and it can only contribute to the raising of the standard of living of which I spoke just now, if its cost is reasonable.

It is the difficulty of this task that makes necessary our efforts at cooperation and association.

I said just now that we were living in a period of the greatest uncertainty. I do not mean only the dreams which journalists built up around Zeta[1] and around the hopes, now more or less dashed, which it aroused. As a matter of fact, the industrialists and technicians concerned with the transformation into kilowatt-hours of the natural uranium extracted from the earth are faced with very diverse methods and possibilities. The exploration of these various methods and possibilities poses such technological problems that the effort involved looks rather intimidating. Those who have to choose must therefore act with the greatest prudence, for every experiment is costly: it may amount to some $50 million. It also involves a whole series of ancillary industries whose work might be wasted if finally some other method had to be chosen.

It might be thought sufficient to bring a number of experts round a table in order to choose the best solution: but this is not so. Experts cannot choose the best method until the technicians have built and operated the actual apparatus which will permit them to work out the cost price. What will therefore be decisive as between the various methods in question is the technological progress and experience achieved.

[1] Britain's code word for the controlled fusion experiment.

This shows the importance of what is being done now, not on the experimental, but on the industrial scale.

And that, gentlemen, is why Euratom came at the right moment. The six countries are joining together at a time when industry is, so to speak, joining battle to determine which of all these various methods will give us competitive cost prices.

THE NEED TO CATCH UP

We saw just now that Euratom is required to work for the speedy establishment of nuclear industries. Why is the matter so urgent? Not only because it is right always to push ahead as fast as possible, but also because Western Europe, as you know, is herself forced forward by her ever-growing energy deficit. For all of our six countries in 1957, energy imports cost $2,000 million. In another decade, they will cost $4,000 million. Our energy deficit is therefore an urgent matter. Moreover, we are lagging behind in nuclear affairs. In mathematical terms, the momentum of the forces which ought to drive us to develop atomic energy is the product of our deficit and our time lag; and the latter is especially large in comparison with the other great world powers. It is certainly the Europe of the Six which will now have to devote the most capital to the development of atomic energy, because it is now that its economic future hangs in the balance. Euratom has thus an essential and necessary role to play as a catalyst and accelerator of the efforts required. This is not the desire of a technician; it is the fear of an economist.

How do other countries stand in this respect? Let me briefly sketch the situation.

Russia, which is very rich in conventional power, in coal and oil, has nevertheless planed a vast program for the development of atomic energy. This is not only a production program, but a program of research in various directions. Research is in progress on some 10 types of reactors, and a capacity of 2 million to 2½ million kilowatts is forecast for 1960.

I am speaking of millions of kilowatts of installed capacity; for those who prefer to calculate in tons of coal, it is only necessary to multiply by three to obtain the number of million tons of coal annually saved by means of such nuclear electricity capacity.

The United States atomic program is that of a nation rich in energy and above all in cheap conventional energy. Nevertheless, by 1960, there will be an installed capacity of 600,000 kilowatts, quite apart from all the equipment designed for powering submarines, which is a magnificent technological achievement from which power production will benefit. But the United States has not undertaken a program for the large-scale production of atomic energy. The latter is considerably more expensive there than conventional energy, which is by no means lacking since the United States in fact exports coal.

Only Great Britain has embarked on large-scale nuclear energy production based on a single type of reactor, which has shown itself to be an incontestable technological success. Its target is for 6 million kilowatts by 1965; even if it takes slightly longer to reach this target, there will still be some 1.5 million kilowatts installed by 1962, corresponding to 4 large nuclear power stations of some 300 to 500 megawatts each, apart from Calder Hall.

If the six countries were to have made a comparable effort, their energy situation would have required the installation of 15 million kilowatts within a decade. That, indeed, was the target for Euratom set by Herr Etzel, Signor Giordani, and myself, last year, in response to the question our governments charged us to answer.

Euratom's action will enable the six countries to achieve a program which meets their economic needs more effectively than have the ordinary national projects embarked upon hitherto.

In England, the undertaking of a large-scale program has been facilitated by the fact that large-scale power stations have been directly financed by the authorities responsible for developing electric power production. In many of our countries, on the other hand, it is private industry which has to finance the power stations, and it is only interested in doing so if cost prices are low enough. This, then, is one of the difficulties which I mentioned just now: that is, the importance of cost prices.

It should be added that basic atomic science is less highly developed in the six countries than in Russia, in England, or in the United States; for in these other countries considerable sums have been spent on military programs.

The amount spent on atomic affairs in the United States since 1940 is in the region of $15 to $20 billion; in Great Britain, more than a billion dollars; and in Europe only about $500 million, most of it in France. Fortunately, these figures do not measure the time-lag in the development of peaceful atomic power, for part of the expenses in question have been devoted to military ends. Nevertheless, the general training of technicians and the equipment of certain branches of industry are closely related to the sums already spent. Each of the six countries must therefore make a considerable effort.

Let us make no mistake: Europe will not make up her time-lag in the energy and atomic fields simply by virtue of having signed a treaty in Rome. There is no built-in miracle in the treaty setting up the Euratom Commission. The time-lag can only be made up if each of the six countries to make a greater effort. It is necessary both to fill the gaps in our technical knowledge and to establish a program to put into practice the discoveries of which our scientists will certainly be capable if we give them the tools, but which they will not be able to bring to fruition if the tools are not there.

The Commission has the duty of seeing that the funds devoted to the development of atomic energy by the various community countries are used in full awareness of the facts. Euratom has to see to it that development is coordinated; it will avoid reduplication, and it will create a friendly rivalry without arousing wasteful competition.

The means for this are supplied by the treaty, but—I repeat—nothing can be done without the financial efforts which will have to be made by each of our six countries in the years to come. However great may be Euratom's ability to ensure the best use of men and capital, if a minimum of investment in atomic matters is not effected in the next few years, our countries will still lag behind the great powers, which nevertheless need this new source of energy less urgently than we do.

The solution to our problem does not lie simply in the creation of large industrial complexes or large atomic research centers, atomic energy in fact demands a very large range of equipment, stretching from uranium mines to electronics. It is necessary to set up an industry capable of producing fuel elements as well as reactors and kilowatt-hours.

A FORTUNATE CONSEQUENCE: STIMULUS TO INDUSTRY

It must not be forgotten that the necessary adaptation has a double aspect. If all that we could do were to buy reactors and make them work, we should be in the position of underdeveloped countries. On the other hand, if we can build reactors, we shall not only be able to export them, but we should also be able—and I insist upon this because it is seldom stressed—we should also be able to renovate our industries as a whole.

Indeed, all the industries which help in the development of atomic energy are already looking to the future, for this very

reason. This is the case, for instance, with the very highly developed metallurgical industry needed for nuclear energy: progress here will give good service in many other fields. There is also the example of electronics and telecommunications. As a result, making atomic energy means renovating industry.

This is worth pondering: the impulse which Euratom must give will serve as a catalyst to speed the modernization of our countries. In other words, to produce atomic energy will not only put our countries in a position to solve their energy problem; it will also give our industries the chance of thinking afresh.

When one compares this role of Euratom's with that of the other two European communities, one cannot avoid being struck by the difference of scale between them. The problems of the atomic community are in fact very limited, and even within the next 10 years will only represent a small part of the whole economy. There is in fact no common measure between the extent of problems facing the coal and steel community and the European economic community on the one hand and those facing Euratom on the other.

Nevertheless, Euratom may serve more rapidly to bring about a community spirit and thus to accelerate our thinking afresh.

THE FIRST MONTHS OF EURATOM

Ours will therefore be an advance-guard community. Let me now give you a rapid summary of what its tasks will be.

So far it has very little staff. I don't think there are as many as 150 people working for it at the Rue Belliard in Brussels.

It is determined to work in common with the other communities on all the problems which it shares with them. Professor Hallstein will shortly make to you a declaration on the subject of common services, on which the Euratom Commission is fully in agreement.

We shall have to handle expenses which will be greater than those of our administration itself. We have, in fact, to set up a common study center and to develop a research program, for both of which the treaty provides a sum of $215 million. This figure is large by comparison with the administrative budget of a community: but on the atomic scale it is small. This sum of $215 million for 5 years is roughly as much as the United Kingdom spends in this field in a single year.

As a result if Europeans think that they can relax merely because they have decided to set up a common study center, they are gravely mistaken. This center can only be complementary to the effort which everyone must make himself.

In order to set up this common research center, we need the support and advice of the widest possible range of experts. This will be given us on the European scale, by our Scientific and Technical Committee, which is already in being. Beginning on the 7th of July next, it will be consulted on the first research projects to be undertaken by the community.

Naturally, we shall include in this research some work on fusion. I said earlier that the first hopes of achieving fusion on the experimental scale had been disappointed. It is therefore necessary to start, in all modesty, from the beginning; and in this field, Europe has just as much chance as the others. We are going to try to start off on the right foot by bringing together all the necessary experts. But the hopes raised by fusion must not act as a tranquilizer, as one scientist put it, which lulls us into doing nothing in the field of uranium. The atomic power that we urgently need will have to come from uranium.

In order to collaborate in the field of fusion, on the widest European scale, we have made contact with CERN[2] in Geneva, and this very week we are to examine the conditions of our collaboration on this subject. That, I think, is an index of our will to cooperate with other international bodies. In the same spirit, we have already had numerous contacts with the Nuclear Agency of OEEC.

Within a year we should be able to give the Council of Ministers precise details of our research program and clear indications of the lines we intend to pursue.

Apart from research, we have to undertake a whole series of other activities resulting from application of the treaty. All have been begun—and even finished—within the time limits laid down. Alongside the research center, we have to organize a personnel training center.

More than this, the treaty requires us to present, within a year, proposals for a European university. In our view, this problem is too important not to be considered jointly by the three communities. The first meetings between their representatives have already taken place. The preparation of a European university is one example of the catalyzing role of Euratom in the most varied fields.

We are further required to set up a nuclear common market. This will really be the advance guard of the industrial common market, following that of the coal and steel community; since from the 1st of January 1959 onwards it will bring about the free circulation of a certain number of nuclear materials and goods.

To go beyond this first step, negotiations between the six countries are provided for by article 94b of the Euratom Treaty. The necessary measures have been taken in order to present, within the required time limits, practical proposals to this end.

As a further essential of the nuclear common market, a supply agency has to be set up. The Commission was given a time limit of 3 months to propose the statute of the agency to the Council of Ministers. This has been done, and it will be discussed at the meeting of the Council of Ministers on July 1.

Safety regulations likewise had to be proposed to the Council of Ministers within 6 months; this too has been done.

The problems of health protection are at present under study. Experts have been appointed, and are working to establish the basic rules which will be common to our six countries. Naturally, this work will be carried out in liaison with OEEC and with the IAEA in Vienna.

Another of our tasks is to draw up an inventory of all the industries contributing to nuclear energy. This inventory, in accordance with article 213 of the treaty, must be submitted to the Assembly within 6 months of the Commission's taking up its duties. Within 10 days from now, this inventory will be laid before the bureau of the Assembly, and my colleague Mr. Paul de Groote will have the opportunity to discuss it with you and to describe the conclusions to be drawn from it.

ENERGY POLICY AND RELATIONS WITH THE UNITED STATES AND THE UNITED KINGDOM

After this survey of the different tasks entrusted to us by the treaty, I should like to say a few words about the power program. In this vital domain we have to define our policy in concert with the other communities. We have therefore set up a liaison body with the European Coal and Steel Community and with the European Economic Community.

In fact, in this period of rapid evolution, we must have sufficiently detailed knowledge of the economic factors affecting costs. That is why we have to have a first-rate economic service.

In the effort to make up our timelag, we shall not be alone. Great Britain has appointed Sir William Meiklereid as its diplomatic representative to the European Atomic Energy Community, and last week Euratom representatives had preliminary talks with the British authorities. We hope that these talks will quickly lead to concrete results and to a closer and closer collaboration between Euratom and the United Kingdom.

With the United States, already represented vis-a-vis the community by Ambassador Butterworth, we held preparatory discussions even before the conclusion of the treaty, at the time of the mission of the "Three Wise Men." For this reason we have been able very quickly to establish close relations with the United States to the mutual advantage of the latter and of our six countries. My colleagues Messrs. Krekeler and Sassen, who have been especially charged to conduct the negotiations, will have the opportunity of discussing this subject with you at greater length when the negotiations are finally and definitely concluded.

What are the bases of this cooperation? They may be found in the survey which I have just made of the degree of progress in atomic energy in the various countries. The United States does not immediately need atomic energy, since it has abundant and cheap conventional energy. It has no incentive at present to embark on an industrial energy production program, and in fact they have at present only an experimental program. In this case, why not set up in Europe a large complex of industrial nuclear-power stations, making use of the experience already acquired in the United States? That is how there arose the idea of a joint United States-Euratom program for reactors of an electric power of 1 million kilowatts.

American participation in the execution of the program is as follows:

First, supplying the fuel. Thus, thanks to this joint program, we shall be able to try out enriched uranium reactors. For us, this is a new departure. The British operations, like the French, are so far only with natural uranium.

Secondly, financial aid. The total cost, corresponding to the installation of 1 million kilowatts, will be in the region of $350 million. The United States would grant a loan of $135 million to encourage atomic investments, which for the moment are more costly than investments in the same capacity of conventional power.

Furthermore, there is one characteristic of the agreement that is novel and fundamental: technological research on these reactors will be carried out jointly. Remember that even as little as a year ago, countries which could not build reactors could buy them from more advanced nations, but were, so to speak, forbidden to look at how the reactors were made. The United States Government has decided to devote to this research $50 million for the first 5 years; Euratom will contribute the same sum. We have already seen how important this technological research is, since it determines any lowering of cost prices.

Finally, the United States has agreed to buy back the plutonium produced by these reactors and not to use it for military purposes. This is even more important, since because Euratom's aims are exclusively peaceful, it would have been almost impossible for it to undertake such a program by itself, owing to its inability, for the moment at least, to find a use for the plutonium. This, then, is an action of the greatest political importance, a demonstration of confidence which will enable us to start off on a large scale.

[2] Organization for European Nuclear Research.

There remains the important question of the inspection and control of fissile materials. In agreements hitherto reached with other countries, the United States made a point of retaining the right to inspect and control the establishment of the reactor projects and the use of the fissile materials they supplied. In our agreement, the United States has consented to recognize inspection and control by Euratom.

Since the governments of the six countries have delegated to Euratom the ownership of fissile material, the community has been able to secure recognition of its own inspection and control. Is that not a striking example of the community's value? We regard this acceptance as something much more important than a satisfaction of prestige: we regard it as the germ of a world inspection and control of atomic energy. Our young community, endowed quite simply with the confidence of our governments, is in process of establishing inspection and control of a new type, and one which could serve as an example to all nations.

The agreement with the United States, therefore, embodies great hopes, ranging from technical subjects to high politics. As it happens, it has been signed just today by President Eisenhower; and if I have been somewhat leisurely in the course of my statement today, it was in order to wait for the precise moment when I could publicly announce it.

I should like to conclude this statement by saying that the Euratom Commission has sought to give the Members of Parliament of our six countries the completest possible information on our problems, without trying to conceal their difficulty. It has sought also to bring before you all the hopes which its work arouses and, in particular, those which may be realized in a few weeks' time, now that the agreement with the United States lies before Congress.

Congress Has Done Much This Session

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the Independent, a Pasadena, Calif., daily, July 24 edition, entitled "Congress Has Done Much This Session":

CONGRESS HAS DONE MUCH THIS SESSION

The 85th Congress is nearing the end of a respectable road. Perhaps Congressmen haven't made many bold strokes this session, but they have passed a lot of good, solid legislation and they have kept party rancor at a minimum during an election year.

Both Houses have been energetic and efficient. In many cases they pushed something requested by President Eisenhower beyond where the President was willing to go.

Often the legislation reaching the President's desk has differed in some respects from what he asked for, but Congress has usually given him a bill he can live with, and he seldom found use of his veto power advisable.

It's worth noting that there has been considerable bipartisan cooperation, especially in the Senate between two veteran legislators who know its value, Democratic Majority Leader LYNDON JOHNSON and Republican Minority Leader WILLIAM KNOWLAND.

Both are strong characters, giving a measure of leadership which has unfortunately often been lacking of late from the White House.

It is a paradox of our Government today that President Eisenhower has gotten behind an excellent legislative program, but hasn't pushed.

Thanks in great measure to JOHNSON and KNOWLAND, and in the House to Democratic Majority Leader SAM RAYBURN and Republican Minority Leader JOE MARTIN, key bills have won the backing of the middle-of-the-road Republicans and Democrats, leaving a few die-hards on the extreme fringes in opposition.

By the time it adjourns, the 85th Congress will have chalked up more important legislation to its credit than any Congress in 25 years.

To accomplish this, leaders have had to use their utmost skill to maneuver critical bills around death-dealing amendments and through dust-catching committee pigeonholes. Our Congress deserves the Nation's thanks.

KNOWLAND is especially to be commended for remaining at the helm in Washington while his political future rides on his own campaign for governor of California.

Although his presence in the State would boost his chances against Attorney General Edmund G. Brown, KNOWLAND has chosen to put country before self.

Puts Cramps on Freedom

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. McGREGOR. Mr. Speaker, under unanimous consent I incorporate into the RECORD a newspaper editorial from the Newark Advocate, which was sent to me by one of my good friends, Fred C. Morrison, of Newark, Ohio.

This editorial was written, I am advised, by Frank Spencer, Jr., the son of a very close friend of mine, the owner and publisher of the Newark Advocate. To my way of thinking, it is an excellent piece of journalism, and I commend it to the attention of every Member of the Congress who still values the right of free speech and the principles of free private enterprise.

The questionable tactics brought to light by this editorial, if allowed to continue, will certainly destroy some of the liberties for which many of us have fought, and if the Government persists in such interference with private enterprise, it will not be long before our economy is completely Government-operated. By this latest maneuver, the New Dealers, after setting up a gigantic Government monopoly in the form of the TVA, have now denied private industry, which must compete for business with TVA, the right to criticize its activities without paying a completely unreasonable tax for the privilege of doing so. At the same time, all of us taxpayers are forced to subsidize not only the operations of TVA, but also we are expected to pay for the expense of promoting and advertising its operations.

I hope and trust that each Member of Congress will find time to read carefully this excellent editorial:

PUTS CRAMP ON FREEDOM

When freedom of the press is in any way jeopardized, or even mildly threatened, we feel we have the right to speak up. At this point we should like to defend the rights of our advertisers to speak their minds without intimidation. It has recently come to our attention that the rights of the private power companies to speak up freely in the press are being encroached upon through a devious, if not downright sneaky means. A recent ruling by the Commissioner of Internal Revenue, Russell C. Harrington, states, in effect, that private power companies using advertising to talk against Government-owned power are engaging in political propaganda, and, as such, those advertisements are not tax deductible. It is all too clear as to what the Government's getting at: it would like to strangle its opposition. Private power companies have spent millions of dollars to bring their point of view to the American people. Are they now to be penalized for voicing that opinion?

What the Internal Revenue Service has decreed is nothing more than a censorship of advertising. While it would not (as yet, at any rate) dare to outlaw advertising against Government power projects, it has put a serious cramp on the private power companies' ability to propagandize effectively. And in so doing, the Government is working on a double standard. At the same time the private companies are being penalized for publicly stating their case, the Government itself, upon the 25th anniversary of the Tennessee Valley Anthority, issued a publicity kit, dispatched to 400 newspapers all over the country, extolling the virtues of the TVA. The expense of those kits was, in all probability, borne by the American taxpayer. In other words, the Government, each and every day, is given free newspaper space for its own power projects. Privately owned power companies, on the other hand, have to pay for their space through advertising.

Advertising has always been considered a legitimate business expense. As such, it has been deductible for tax purposes. Are we now entering an era in which the Government may decide what kind of advertising is good and what is bad? The Internal Revenue ruling stated that advertising "incurred primarily for lobbying purposes, for the promotion or defeat of legislation, for political purposes * * * or for the furtherance of matters in the area of political controversy" is disallowed for the purpose of tax deduction. It would seem clear that the Government is using a very clever and underhanded means to do away with its opposition within the open forums of the country's newspapers. The freedom of any group to advance its own point of view should never stand in jeopardy of disappearing through an encroachment on that freedom by the Government. However underhanded and indirect the means may be, the end result is clear: freedom of speech is in danger of being destroyed.

Dominican Republic Centennial

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. WITHROW. Mr. Speaker, a few days ago there came to my attention an article by United Press International. I have spoken in behalf of the Government of the Dominican Republic on oc-

casion, and have been met with critics who speak of that Government as depressing for the individual. I submit this article to illustrate that the Dominican Government does concern itself with the welfare of the people, individually and collectively. For all of our economic assistance to the so-called backward countries, we have yet to inspire in any nation an announcement like this. I want to invite the attention of the House to the fact that it is done without economic assistance under the mutual security bill, and is done with the lowest assistance cost to the United States of any country even including any military assistance. I congratulate the Dominican Republic upon this forward step.

The article follows:

THE DOMINICAN REPUBLIC WILL CELEBRATE THE CENTURY OF THE RESTORATION OF ITS INDEPENDENCE BY GIVING THE FINAL TOUCHES TO A HUGE PLAN OF PUBLIC WORKS ALL AROUND THE COUNTRY

CIUDAD TRUJILLO, July 24.—The Dominican Republic, according to an announcement made today, is planning to celebrate in 1963 the century of its independence with the completion of a huge plan aimed to the betterment of the conditions of the Dominican people.

Generalissimo Rafael L. Trujillo, leading figure of the Dominican public life, has set the year 1963, year of the century of the restoration, as the Dominican called the war against Spain, for the completion of a program which includes the following goals:

1. Total literacy in the country.
2. Complete electrification of the rural regions of the country.
3. Erradication of malaria.
4. A program of colonization, within which there will not be a single peasant family who will not be the owner of land, and the teaching of the most modern methods of cultivation.
5. Intensive construction of suitable dwellings for the families living in the rural areas as well as in the cities.

To execute these programs the Government intends to utilize the technical assistance services of such international organizations as UNESCO, OAS, FAO, and others, but all expenditures will be met by the Dominican Government.

The Iraqi Revolt

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. HEMPHILL. Mr. Speaker, I desire to read to the distinguished Members of the House of Representatives two articles written by Col. Talbot Patrick, editor and publisher of the Rock Hill (S. C.) Evening Herald, who was on the scene in Baghdad during recent events. Colonel Patrick, who is a brilliant journalist and successful businessman, gives us firsthand information which might be of value to the Congress and the Nation in considering the true aspects of our Middle East problems. I hope the membership, the State Department, as well as the Central Intelligence Agency will take time to read these interesting stories:

AID TO LEBANON ISSUE SPARKED IRAQI REVOLT

(EDITOR'S NOTE.—Talbot Patrick, editor and publisher of the Rock Hill (S. C.) Evening Herald, has traveled in many countries. He arrived in Baghdad 2 days before the revolution. Now on his way home and free of the Iraqi censorship, Patrick gives here an authoritative report on the spark that set off the revolt.)

(By Talbot Patrick)

ROME.—The revolution in Iraq was executed by troops ordered to go by airlift to Lebanon to support the Government of that country.

"We were ordered to fight against our brother Arabs," commented one army officer who participated in the revolution. "Rather than that when our units were on the way from the base toward northern Iraq, we stopped in Baghdad and asked the King to abdicate and the prince regent to give up his power.

"They fired on us from the palace. We returned the fire. Finally, when they came out from the burning building, they were shot."

The troops came from the 20th Brigade base outside Baghdad. The brigade was commanded by Brig. Abdul Karim Kassem, who headed the revolt and has since become Premier.

It was after announcement of the successful revolution over the Iraqi Government radio, which is monitored in neighboring countries, that American marines were ordered to Lebanon.

The fact that orders to go to Lebanon were the spark that set off revolution was not a secret in Baghdad. But I would have hesitated to be so definite about something that Iraqi newspaper acquaintances as well as others told me if I had not been able to confirm them through an individual with unusual contacts.

For his own future protection in the Middle East, I must keep secret the identity of this man. But I can say that for years he has had intimate contact with members of the former government, as well as with leaders of the then opposition, which has supplied many officials of the new Iraqi Government. And in addition he has had close contact with foreign diplomatic sources, not only in Iraq but elsewhere.

He was absolutely definite about the order. He had talked with men who received it and then rebelled.

"I should not have been surprised," he said, "but I hadn't expected it so soon, even though there had been previous signs that it would come."

At the time that Iraq and Jordan were being joined together, he said, one division planned some sort of action against the Government. But levies of other troops and of tribesmen supporting the Government were sent to camp on either side of the division.

"The leaders in the division suspected that someone had gotten wind of their plot," my informant said, "so the day set for a revolt passed without any action."

On another occasion, he said, the King and the prince regent went to inspect army maneuvers. Two artillery shells landed near the royal tent, one quite close. A court-martial was told "It was all a mistake." But the King and prince regent hastily left the maneuver area for a return to Baghdad.

"Things had reached such a point," said my informant, "that most of my friends in the Government were trying to ease out—before something happened. Men who once were Government supporters had reached the point of themselves being disgusted with the way things ran.

"It was said in business and government circles that if you wanted to start a business of any size the prince regent had to be given 60 percent of the stock before you could start in business. A small clique ran everything for the members' personal benefit, and the nation and its people got very, very little."

At least at this time, in his opinion, the great mass of the Iraqi people, as well as an overwhelming majority of the educated and more advanced groups in the country, support the new Government and the ideas for which its spokesmen have said it stands.

IRAQ REVOLT DESCRIBED IN DETAIL BY SOUTH CAROLINA EDITOR

(EDITOR'S NOTE.—An American editor happened into Baghdad 2 days before the world-shaking July 14. For more than a week he was eye and ear witness to the Iraqi upheaval. Talbot Patrick, editor-publisher of the Evening Herald of Rock Hill, S. C., now has arrived in Europe with the following detailed account.)

(By Talbot Patrick, editor-publisher, Evening Herald, Rock Hill, S. C.)

ROME.—The death list of the Iraq revolution totals several dozen instead of thousands—and perhaps I am alive to write these words—because of the remarkable control taken over Baghdad's million people by the army group which put through the revolution.

I believe one reason the army could maintain such control was because the mass of the people apparently welcomed the revolution.

At 7:30 the morning of the revolution I woke to hear coming from a distance the sound of rhythmic continued shouting. Then the sound died away in the morning noises of a big city. I began the routine of tea and rolls in my room, shaving, bathing.

At 8:30 a knock at my door. Half dressed, I cracked the door open. It was an Iraqi newspaper friend. Excitedly, he burst in.

"You got here the right time," he almost shouted. "There's been a revolution. It started at 4:30 this morning. It's all over now. A group of army officers did it. The King is dead. The crown prince, his uncle, is dead. You better stay here in the hotel. I'll come back later for you."

I had him repeat what he'd said. Just the afternoon before, my first day in Baghdad, I had had a long talk with the director general of the Information Ministry, a brigadier in the army. This same morning, he had told me, the King and various Ministers were to go to an international conference at Istanbul.

"He's out now," my friend said. "All the old government are out. I think some of the Ministers may be dead. People are crowding in the streets. I think you better stay inside until I come for you."

He left. Finishing dressing, I went to the lobby of the small hotel. Strangers, Americans and Europeans,were standing around as if they didn't know what to do. At the reception desk the clerk said, "Yes, there had been a revolution. It was announced over the Government radio. Everything in Baghdad was closed up. The telephone system was dead. Better stay in the hotel.

Little by little strangers began to speak to each other. A small gray-haired American woman said, "I woke up early and when I looked out I saw soldiers on the roof of the four-story building across the street from my end of the hotel. They seemed to be searching a couple of small penthouses on the roof. Then one of them came and looked over the side of the balcony of the floor below. But there wasn't anybody on any of the balconies below. Then the soldiers went away."

Hearing shouting, I looked out. Up about a quarter of a block the hotel street ended at what evidently was one of the city's main streets. A group of shouting men walked past. Later came a truck crowded with more shouting people, with others hanging onto the outside of it.

I ventured out onto the sidewalk. Of the few people on my street none seemed to pay any particular attention to me. So I drifted cautiously toward the corner. More people here, along the sidewalks on each side of the street; men, boys, a few women in the black shawls which cover them from head to foot with only part of their faces exposed.

Another crowded truck came by. Held high at the front of it was a big photograph of Egypt's Nasser. The shouting men in the truck mostly looked young. People along the street clapped as they went by.

None of the usually numerous white-uniformed police with white spike-topped helmets were in sight.

Along came a group on foot, young men, older boys. Again a picture of Nasser was carried. They stopped at the intersection as one of their number shouted a short talk to them and to the people on the sidewalk, then all waved their arms in the air, shouted and went on.

From time to time, on the sidewalk, I saw apparent friends meet each other. They beamed with smiles, sometimes embraced, kissed each other on the cheeks.

Up the street, horn blowing, came rushing a private car with women leaning out the windows from the back seat and the seat beside the driver. They were Iraqis, dressed in European clothes, their faces wild with delight, shrieking out to all who might hear. More hand clapping from the spectators for them.

One crowd, bigger than most, had been dragging something dark along the pavement. Not until the next day did I realize it may have been what was left of a human body.

Most of the groups on foot and in trucks were coming from the north, the direction of a number of government buildings. Just past my street intersection, on the other side of the street, was another government building. Set back about 100 feet from the sidewalk, its three stories were topped by a big crown set with electric-light bulbs. As one of the groups on foot came in front of this building, several rocks were thrown at it and the group started to slow down.

Then two men in khaki uniforms who had been toward the back of the group walked forward into it talking. One or 2 more rocks were thrown, but then the group moved on.

Several groups later, the same thing happened. Later on, another group started in off the street toward the building. "They're going to break in," I thought. But again a couple of men in uniform stepped forward, pointed back down the street where, from the way they had come, there was shouting. And the group turned back that way.

By this time, I realized, just as every truck and group had at least one picture of Nasser, every group of any size included a couple of men in khaki who walked inconspicuously toward the rear of the group until action by them was needed for protection of the government building. Their actions suggested some organization or control of what was going on.

After a while I went back to the hotel, and was there when my friend returned at noon.

"Everybody is going to have to get off the streets," he said "There is going to be what you call a curfew from 1 o'clock this afternoon until 5 o'clock tomorrow morning."

"Yes," he answered a question from me, "there is a whole new government. Maybe tomorrow I can take you to the Ministry of Information and you can get news to send to the Associated Press. But I must go now because of the curfew."

That afternoon the strangers who were cooped in as fellow guests began exchanging the reports and rumors they had heard: the British Embassy had been burned out; British, Americans, some other foreigners had been killed.

The big uncertainty was whether the army division which had taken control of Baghdad and begun the revolution would receive support or encounter opposition from the greater part of the army, most of it to the north. Some of us with experience in other countries realized only too well that a fight between different units of the army, or anything else which lifted army control from Baghdad, would result in the lowest elements of the city running wild in an orgy of looting, murder and destruction. Foreigners would be prime targets of such mobs.

The streets emptied gradually that afternoon. Individuals and small groups up to 3 or 4 were seen long after the 1 o'clock curfew. The radio announced that the next day everything was to be business as usual. But in the hotel the night was uneasy.

The next morning, the vacant lot across the street from my room was a tangle of parked cars. Many people were on the street. But the people stood talking together, often with excited gestures instead of moving about normally. About 9:30 my friend came in his automobile for me.

"We'll see if we can get to the Ministry of Information," he said. Several blocks along we came to a traffic circle, where a street coming from a bridge over the Tigris River intersected the one we were on. Two tanks were parked at the circle. Crew members, distinguished by blue berets, sat on top of the tanks and sprawled on the grass of the circle nursing submachineguns and rifles.

Up ahead of us, several men started running in the direction we were headed. In a moment, it seemed, the movement spread our way, so that not only was a crowd of runners forming ahead of us but more were coming from behind. Hastily, my friend turned up a narrow side street.

We got onto a street parallel with the first one, to try to continue in the direction we wanted. Once again something beyond our sight started the formation on the run of another crowd. Again my friend took to a narrow side street. Finding a place to squeeze in between other cars, he parked.

"I do not think we better try to go to the Ministry now," he said. "We will go to a newspaper office." I followed him into a winding lane so narrow that if I had spread my arms wide I would have touched the walls on each side at some places. From the corner of my eye I watched nervously the people we met. But, as they seemed to pay no particular attention to me, I relaxed.

"This is a part of the old city," my friend explained as we turned off into another lane in which overhanging enclosed balconies almost met at places.

The newspaper office was in small rooms on the second floor of an old building. My friend took me into one office where I met a couple of men who could speak a little English. One was a sports editor, another some sort of departmental editor. I was asked to sit down.

I was offered an American soft drink. The editors settled down to work, one writing Arabic with a pen from right to left on coarse copy paper. My friend said it would be all right if I just stayed there while he went off on an errand.

Interruptions came frequently for the working editors. Men who came in beamed, sometimes embraced those already there. The feeling between them seemed to be of intense jubilation.

Another round of soft drinks, this time a citrus-flavored carbonated drink. In pauses, various men talked to me about the government that had been overthrown, of corruption and thieves in high places, that the rulers of the Hashemite family had been imposed on Iraq by the British after World War II when Iraq supposedly was to be a free nation.

"It was a police state," they said again and again. "They had spies on the people. A report by even an unimportant policeman against you could mean a stop to your business; maybe you would be put in prison. Our written constitution has in it the same freedoms you have in America; but the people who controlled the government did not carry out what was in the constitution."

The radio had offered a 10,000 dinar ($28,000) reward for information leading to the capture of Nuri Said, former prime minister.

"I thought he was supposed to be an honest man," I said of this Iraqi, who has been the strong man of his country.

"Perhaps so," was the answer, "but he defended and kept in high places men he knew were crooks."

"Why?" I asked.

"Because he needed them to keep his power," was the answer.

I mentioned something about my getting a statement from the new government so the outside world might know something official other than what was gotten by monitoring the Iraqi government radio.

"The government is not going to make any statement," said one man who apparently was in close touch with some of the leaders, "until after the United States has issued a statement about what has happened in Iraq."

I tried to argue that the right sort of Iraqi statement might have some effect on what sort of position the United States Government would take.

My friend returned. There was more talk about the "thieves, spies, and robbers" of the former government. Coffee was passed to everybody.

"You said the group of army officers who accomplished the revolution are all young men, so junior that nobody knows them," I said to the man who seemed in such close touch with the new group. "What about the other divisions of the army in other parts of the country? Did the senior officers commanding fall in with and agree to what has been done?"

He shook his head. "They didn't. Before they knew what had happened, they were put under arrest." And, he declared, what later days apparently bore out as true, the whole army supported the new government.

Then, just before we left, and when I had tried again to sell the idea of the new government issuing a statement of its policies to the outside world, using me to get it to the Associated Press, one of the men told me the AP had an Iraqi part-time correspondent in Baghdad. So, a couple of days later when the cable office opened up and I heard from both Iraqi and American sources that the AP man had filed news reports, I dropped my own efforts to get news out.

It wasn't until a week and a day after the revolution that I learned from Stan Carter of the AP Rome bureau, first foreign correspondent to reach Baghdad after the revolution, that the Iraqi AP man had been put in jail after only a day or two of sending out news on the revolution. No word of that came to me from either Iraqi sources or official American ones in Baghdad.

Tension and worry among foreigners eased considerably after the third day of the new government. Iraqi people were still highly emotional, but settling. After the first day, curfew was from 6 p. m. to 5 a. m. Later it was 8 p. m. to 6 a. m.

A man from the American Embassy made a round of hotels where there were Americans. He said little more than not to worry, to stay in off the streets, that the embassy had no idea when the country would open its borders so that people might leave. He said the United States State Department

said all Americans in Iraq were safe and, in answer to a question, said no Americans had been killed. (Later it was learned that three Americans were killed.)

Then came the landing of American Marines in Lebanon, followed by landing of airborne British troops in Jordan. Reaction among Iraqi friends and acquaintances was immediate and strong. They demanded explanations of "Why, why, why?" and in almost every sentence was implied the question, "Are they going to attack us?"

Life grew more worrisome for us again.

A report that the airport would be opened two mornings each week somehow failed to be borne out in fact. But the American Embassy, followed by the British, did arrange for charter planes to get some pregnant women, sick people, children out. More such flights are in prospect for the future. But most Americans and other foreigners are still ringed in with uncertainty.

Will the Reds Also Withdraw?

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks I should like to call to the attention of my colleagues an excellent editorial which appeared in the July 25 issue of the Flint Journal, Flint, Mich. This editorial very effectively exposes the hypocrisy of Russia in attempting to assume the position of champion of Arab nationalism in the Middle East:

WILL THE REDS ALSO WITHDRAW?

We are hearing a great deal about Arab nationalism these days.

It can be defined as the desire of the Arab peoples to be free from colonial domination and exploitation. And it is a very real, very dynamic force in the Middle East.

One of the self-professed champions of Arab nationalism is Premier Nikita Khrushchev of Soviet Russia. He sees in the presence of American Marines in Lebanon and of British troops in Jordan a threat to Arab nationalism and the self-determination of other Arab countries. He has expressed righteous indignation at this so-called aggression by British and American forces.

He chooses to ignore the fact that they were invited, and that officials of both the United States and Britain have promised the troops will be withdrawn as soon as the United Nations can provide protection against the kind of coup which occurred in Iraq.

This pose of righteous indignation on the part of Mr. Khrushchev is ludicrous. It would be downright funny were there not so many tragic overtones.

The role of protector of Moslem political rights ill befits Khrushchev or the Soviet Union. There are an estimated 15 to 20 million Moslems living within the boundaries of the Soviet Union. They include the Azerbaidzhanis, the Uzbeks, Turkmen, Tadzhiks, Kirgiz, and Kazakhs, among others. The racial and religious backgrounds of these people, their culture, and languages are more akin to Turkey, Iran, and other Moslem nations of the Middle East than to European Russia. The Russian czars conquered them, and the Communists have carried on the efforts to destroy their Moslem religion, culture, and traditions.

This question is asked by the New York Times: "If self-rule is good for Egyptians and Iraqis, why is it not good for Uzbeks and Azerbaidzhanis?"

And columnist David Lawrence points out that while it is well to sympathize with the aspirations of Arab nationalism, the hopes of any nationalism can be crushed by the tyranny of a new kind of colonialism, unless military forces are ready to protect the territorial integrity and political independence of smaller countries.

"Certainly," he writes, "if the United Nations acts wisely now in supporting preventive measures against indirect aggression this will be a long step toward emancipating the countries already held captive through acts of indirect aggression. One wonders why so little is heard today about the aspirations of Polish nationalism, Bulgarian nationalism, Hungarian nationalism, Rumanian nationalism, Czechoslovak nationalism, Lithuanian nationalism, Latvian nationalism, and Estonian nationalism."

He wants to know if, when the United States and Britain withdraw their troops from Lebanon and Jordan, the Soviets will withdraw their troops from all the countries they now occupy by force of arms?

There is only one answer to that question.

Statement by R. B. Wilson Before the House Committee on Public Works

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to extend the remarks of R. B. Wilson, the president of the Mississippi Power & Light Co., made before the Committee on Public Works this morning:

STATEMENT BY R. B. WILSON BEFORE PUBLIC WORKS COMMITTEE, HOUSE OF REPRESENTATIVES, JULY 29, 1958

My name is R. B. Wilson. I am president of the Mississippi Power & Light Co., an investor-owned taxpaying utility, which serves approximately 175,000 customers with electric service in 44 counties in western Mississippi. My company was organized in 1923 and has played an important part in the economic growth of this area for the past 35 years and represents an increase in investment of over 100 million in facilities during this time.

I am here today in opposition to Senate bill 1869 for all of the reasons that some of my colleagues have previously placed before you but specifically for the purpose of showing what this bill can do to my company.

I want to take a few minutes to show you how the TVA has expanded in Mississippi, a State that has only an infinitesimal area in the Tennessee Valley. This map [not printed in the RECORD] shows the service areas of the companies serving Mississippi prior to the advent of TVA. This next map [not printed in the RECORD] shows the initial area served by the TVA around 1934 having acquired the area indicated from our neighboring company by what amounted to coercion. Note also the 44-kilovolt line (but insulated for 110 kilovolts) running from Tupelo to Batesville. This line was build in 1938 to serve a flood-control project in my company's territory, although we were ready, willing and able to serve this project with its power requirements. Now look at the service area claimed by TVA in Mississippi today. The area indicated in yellow, having again been acquired from an investor-owned taxpaying electric company under threat of competition with the subsidized rates of TVA. Also, note the cross-hatched area where their claimed service area has been extended into and overlaps our service area. True, the suppliers of TVA electricity in our area are the REA co-ops, but the subsidized rates prevail and we are constantly threatened with the loss of customers to this manifestly unfair competition. As late as 1950, TVA through an arrangement with North Central Mississippi Electric Power Association, again expanded into De Soto, Tate, and Marshall Counties with the announced purpose of the co-op of serving not only the rural area, which was already adequately served by Mississippi Power & Light Co. with over 1,000 miles of rural line, but also the towns in these counties as well, as was evidenced by the public statements made by the co-ops in the press and elsewhere.

We do not have time to go into this now except to say that we are having a life-and-death struggle with this co-op, supplied by subsidized TVA power, to keep them from taking this entire area away from us. There are some 15 or 20 cases presently pending in the courts and before the Public Service Commission whereby we hope to protect this part of our service area from this unfair competition. If Senate bill 1869 is passed, not only could our service area which has been overlapped by TVA be taken over by the TVA-supplied co-ops or by TVA itself, but additional parts of 14 counties as well, as indicated by this map [not printed in the RECORD]. Included in the area that could immediately be served by TVA directly or through the REA co-ops supplied by TVA, under the most conservative interpretation of the bill, are 32,710 of our customers (19 percent), $4,401,000 in revenue (15 percent), and $17,994,000 of plant investment (14 percent), to say nothing of the tax loss to the various taxing authorities of over $1 million; and this does not include the additional area possible under the 5-mile extension provision. Too, under the bill, interconnections can be made with other systems. Presently there is pending before the Mississippi Public Service Commission an application from two G. & T. co-ops to build generating plants and transmission lines in south Mississippi and north Mississippi. The information on file with the Public Service Commission indicates that interconnections will be made with TVA. If these plants are built, it is obvious that with the passage of this bill TVA through REA could cover the entire State of Mississippi in a very short time.

In conclusion, I want to submit to this committee that at the present time the only reason there is an excuse for TVA power in the Mississippi Power & Light Co.'s service area is to serve certain REA co-ops. Our company has ample generating capacity and charges reasonable rates to the co-ops for serving the rural customer in our section of the State. We have advised REA officials of our willingness to enter into long-term contracts for the power supply to all the co-ops in our territory from multipoints of delivery on our transmission system, eliminating the necessity of building costly and duplicating transmission lines. The rate would of course be subject to the jurisdiction of the Federal Power Commission. It is my studied opinion that there is absolutely no necessity for the passage of Senate bill 1869 and the further extension of the service area already being subsidized by the electric customers all over the United States. Our company is ready, willing, and able to serve the co-ops and all others at reasonable rates under long-term contracts and thereby relieve the TVA of this load and the need for funds to build additional and unneeded generation.

Address by Hon. J. Dudley Digges

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. BEALL. Mr. President, Charles County in the State of Maryland, which is located just south of Washington on the Potomac, is celebrating the 300th anniversary of its founding this year.

The people of that county have spent the past months arranging a celebration which terminates with a week of festivities during the week of September 13 through September 20 of this fall. Last week, I had the pleasure of attending a kick-off as a prelude to the final events of this year.

The Honorable J. Dudley Digges, judge of the Seventh Maryland Judicial Circuit, gave a very interesting address to the members of the press and guests who were at that press party. Since every Member of Congress has received an invitation to this celebration, I thought it would be of interest to them as well as all their constituents that this address be printed in the Appendix of the RECORD.

Mr. President, I ask unanimous consent that the address be printed in the Appendix of the RECORD, even though it will exceed the usual cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF JUDGE J. DUDLEY DIGGES TO PRESS PARTY AT ROSE HILL, PORT TOBACCO, MD., JULY 19, 1958

It gives me great pleasure to welcome you to Charles County—God bless you. It is particularly pleasing to have you here at this time when we are celebrating our 300th anniversary as a political entity.

Three hundred years is a long time and many things happen and many changes are made. Perhaps the most dynamic of these changes is the capsuling of time and space. As members of the fourth estate you are undoubtedly better aware of this than most of us.

Think back to the days when this was virgin forest inhabited by Indians and later when the first settlements were hewn from these forests. Go back to the days of Colonial America when George Washington and other Revolutionary leaders visited here in Charles County.

Before telling you of some of its history, I should like to locate our county by reference to this map of the Potomac River-Chesapeake Bay area.

You will note that the Potomac River makes what is referred to as a "dogleg" bend, thus creating a river frontage on two sides of the county. On the third side there are two rivers, the Wicomico and the Patuxent. We are bounded on the north by Prince Georges County. Our county is across the river from such wellknown Virginia places as Mt. Vernon, Quantico, Wakefield and Stratford. In fact, it is the only political subdivision from which one may view George Washington's birthplace, his home and the place of his burial.

Charles County was established May 10, 1658. It was named "Charles" in honor of Charles Calvert, young son of Cecelius Calvert, the Second Lord Baltimore. Charles Calvert later became the Third Lord Baltimore.

The first white man known to have visited Charles County was Capt. John Smith who came to Port Tobacco in 1608 in the *Discovery*, one of his three famous ships. He explored the Potomac River and its many tributaries and traded with the Potopacos, Nanjemoys, Pomonkeys, Chiggamuxens, Wicomicos, and Piccawaxens, friendly Indian tribes whose names even now designate our beautiful tidal streams.

Port Tobacco was originally the settlement of the friendly Potopac Indians and early became an important seaport for vessels traveling to and from England, as well as a center of culture in Maryland. It was a thriving metropolis—economically and socially—when Washington was still on the planning boards.

We learn of the importance of this port from the extensive trading carried on, from the importance of the people who lived on the surrounding plantations in the prerevolutionary and revolutionary periods of our Nation's history. That it was important as a center of culture may be gleaned from the fact that the Beggar's Opera, when it first played in this country, was played at Port Tobacco immediately following its performance in Williamsburg. It is hard for us today to imagine that this village, now almost deserted, occupied such an important part in the colonial life of this section of the New World at a time when Washington was but a swamp and Baltimore had but a few crude buildings.

It might be interesting at this point to note that the first census taken in 1790 showed a population in Charles County of about 20,000, which figure was not again reached until the last census in 1950.

Port Tobacco, the original county seat, remained as such until the courthouse was burned in 1892. During its long history it was the scene of many interesting historical events, as well as folklore. It was here that the Potopac Indians were converted to Christianity by Father Andrew White when he baptized the Potopac Indian princess. The burning of the courthouse is said to have resulted from the defeat of a proposal to remove the county seat, based on the argument that it was too expensive to rebuild a courthouse elsewhere. Those who advocated keeping the courthouse in Port Tobacco were shortly relieved of this argument. One night after a poker game a group of men decided to remove the records from the building and set fire to it.

Charles County, lying just north of St. Mary's, cradle of religious freedom in the New World, can boast of many historical places of religious interest.

Old Durham Episcopal Church, the oldest in the county, was erected in 1732. George Washington frequently attended services there with his friend, General Smallwood, and on occasions when he visited his farm located a short distance therefrom.

St. Thomas Manor, overlooking the Port Tobacco and Potomac Rivers at Chapel Point, is one of the oldest Jesuit institutions in North America. The original chapel built prior to 1692, and the present manor house built in 1741, were used in colonial times as headquarters for Jesuit Fathers serving other colonies as well as Maryland. It has had an unbroken chain of pastors since 1662.

Not far up the valley from old Port Tobacco is Mount Carmel, oldest Carmelite monastery in the United States, founded in 1790.

From the date of its founding down to the present time the economy of Charles County and the livelihood of its farm population have depended primarily upon its fertile tobacco fields. Tobacco quickly became the medium of exchange. Our records at the courthouse are replete with references to fines being paid in pounds of tobacco, clergymen receiving their pay in tobacco, and property being transferred in consideration of payment in pounds of tobacco.

Charles County can boast of complete land records and will records, and a more complete series of court proceedings than any other Maryland county. One can learn much of interest from reviewing these records. Typical of which we learn that the most prevalent crime was hog stealing. Hog stealing was not the theft of a hog as one would think today from the use of that term, but resulted from the killing of a branded hog by huntsmen and therefore more comparable to the violation of our present-day game laws. One may see from these records that land was granted by a description which would state a distance in a given direction as far as a man may ride on horseback in a half day, or as far as an arrow would shoot from a bow.

Among these records is a drawing of the first courthouse built in 1674, with deed of conveyance from John Allen to Lord Baltimore in consideration of 20,000 pounds of tobacco, agreeing to construct the courthouse according to the plans attached and to "keep and cause to be kept the said courthouse and prison in good and sufficient repair forever, except their foundations shall happen to decay with rottenness."

Court proceedings show most of the prominent lawyers of their time such as Daniel Webster, William Pinkney, and Francis Scott Key trying cases here.

To speak of history is really to speak of the men and women and their achievements in building our Nation.

Charles County has provided a fair share of citizens whose names have found a place in the history of the founding days of the colony and the days which have followed.

To mention a few, John Hanson of Mulberry Grove, born in Charles County in 1714, was President of the United States in Congress assembled, during the year 1781–82. This should make him the first President of these United States. He was 1 of 2 Marylanders designated by his State when all States were invited to contribute for Statuary Hall in the Capitol at Washington.

Mulberry Grove is about 2 miles from where we are now seated and overlooks the Port Tobacco River and valley.

Thomas Stone, youngest signer of the Declaration of Independence, delegate to the Continental Congress and a member of the committee designated to draft the Articles of Confederation, lived at Habre de Venture which adjoins Rose Hill. It now stands in perfect condition and is of great architectural interest because it takes the form of a crescent at the rim of its gardens fragrant with boxwood and flowers.

Daniel of St. Thomas Jenifer, whose home was Retreat, just west of Port Tobacco, was a member of the Continental Congress and 1 of the 3 Marylanders who signed the Federal Constitution.

To my knowledge, Charles County is the only county which can boast of native sons signing the Declaration of Independence—and—the Federal Constitution.

We further have Daniel Jenifer, nephew of Daniel of St. Thomas Jenifer. He was minister to Austria and later a Member of Congress. He has been described as a great entertainer and frequently had as his guests at his home, Charleston, Daniel Webster and Henry Clay for what has been described as card-playing, hard-drinking house parties. It is said he spoke of these larks as fishing trips. The term may have been a bit equivocal, but it was not wholly inept. They could depend on Jenifer for at least one catch. According to tradition, the party would sit up all night about the card tables. At dawn the host would invite his guests on the landing for a bit of fishing. There were no disappointments with the catch, for at the end

of each line was a large bottle of cool champagne.

William Smallwood, Colonel of the Maryland Line, the first regiment made up of Maryland troops raised in the Revolutionary War, was a close personal friend of General Washington. He rose to the rank of major general and is credited with saving the American Army from total destruction at the Battle of Long Island. Honored by his friends and neighbors, he was three times elected Governor of Maryland. The completion of the rebuilding of his home, Smallwood's Retreat, is at hand and will be dedicated as a park during our tercentenary celebration this year.

I also mention two illustrious men of the medical field in Revolutionary times—Dr. James Craik, of La Grange, and Dr. Gustavus Brown, of Rose Hill, both personal friends and physicians of George Washington, whom they treated on his deathbed. Dr. Craik was Surgeon General of the Revolutionary Army.

I will not further refer to the house at Rose Hill because you are here to see it for yourselves.

One interesting story about Rose Hill is the fact that it was the home during the Civil War period of Miss Olivia Floyd and her brother, Robert Floyd. They were well-known confederate sympathizers and their home was occupied by General Hooker as his headquarters. It is said that on one occasion during General Hooker's stay he was trying to intercept a message he believed Miss Floyd was to deliver across the Potomac. In order to prevent delivery of the message he spent the evening before the fireplace chatting with her. Little did he know that he toasted his feet by the message he wanted to intercept. It was well-hidden in the ball top of one of the fireplace andirons. These andirons are now in the Baltimore Museum of Art.

La Grange, the home of Dr. Craik, located just across the valley from here, is noted for its great outside chimneys and the house formed an appropriate setting for plantation life. Dr. Craik figured with General Washington in every Revolutionary battle fought until the war ended at Yorktown. Among the many prominent military figures he treated was Lafayette at Brandywine.

Most of you I am sure are familiar with the heroic medical services rendered by Dr. Samuel Mudd while in prison after his conviction as a co-conspirator in the Lincoln Assassination trial. His home still stands in Charles County and is occupied by his direct descendants.

Mt. Republic, built in 1792, apparently will last forever with its walls 2½ feet thick. It is another example of a home of gracious living in the Revolutionary period. It was owned by Franklin Weems, a great entertainer of whom it is said kept a poker game going in his home continuously for 40 years. Three times a week he entertained a party of young people and many mornings set out for a fox hunt without having been to bed at all for more than 24 hours. A pack of 100 fox hounds was maintained at Mt. Republic, and many of the best hunting dogs in Maryland have the blood of these hounds in their veins.

In mentioning promiment Charles Countians I should include Robert Hanson Harrison, aide and secretary on General Washington's staff and later chief justice of Maryland. He is said to have declined an appointment to the United States Supreme Court, tendered by his former commander when he became President.

Adm. Raphael Semmes, most famous of the Confederate naval heroes, was also a native son.

Today Charles County is a quiet rural community, whose principal economy is still based on our tobacco fields. Behind the modern front of Route 301 you will find that there still remains in our county much of the same way of life which served our fathers.

The few pictures you have seen are typical of the more than eighty houses built prior to 1800 and still lived in. This gracious manor of Rose Hill is one of these. They are wonderfully preserved as a present-day monument to our famous sons and a way of life which contributed to the foundation building and growth of our Nation.

On behalf of the owners of these homes, as well as the people of Charles County, I extend to each of you a cordial invitation to again visit us and see in more detail our many places of interest.

Conditions in the Middle East

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials which appeared last week in the Boston Herald, regarding conditions in the Middle East.

These editorials state with great clarity the policy decisions which will have to be made in that area, and indicate some types of solutions which may allow us to develop a sturdier foreign policy in the Middle East.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston (Mass.) Herald of July 24, 1958]

MIDDLE EAST SOLUTION

At 3 p. m., on July 15 the United States liquidated a bankrupt policy in the Middle East. That was the moment when the first Marine set foot on the Lebanon shore.

We can now no longer expect to maintain our interests by military alliances propping up ailing governments. We can no longer mass sufficient influence to preserve the status quo against the machinations of ambitious leaders, backed with Russian diplomacy, Russian arms, and Russian money, and exploiting the ferment of nationalism.

Yet we have announced no new policy adapted to the realities in the Middle East. Until we do the future is dark and we must face the sad alternative of an ignominious withdrawal from Lebanon with inadequate guaranties or the even more dangerous prospect of an indefinite occupation.

There is a solution. There is a course which would bring the Middle East into clear step with the West and close that area to further incursions by Moscow.

But this new policy must be adopted at once, and it must be acclaimed again and again and again in clear, simple, and unmistakable terms until it becomes established without question as ours.

We cannot delay this while the United Nations searches out some expedient or while we debate summit conferences and exchange recriminatory notes with Khrushchev. The time is now.

The time is now because we have at last demonstrated that we cannot be cowed by Soviet bluster or diverted by Nasser's guile.

We failed to sink the freighters that brought Soviet bloc arms to Egypt in 1955 in outrageous defiance of the West. We failed even to take effective action in the United Nations against this threat to peace. We backed Nasser against our closest allies without requiring him in return to abide by the United Nations decisions he was flouting.

The implication of American impotence or appeasement fostered by such restraints is now happily shattered. We have proved we have the guts to act.

This must be the foundation of any policy, in the Middle East or anywhere, that we are ready to fight to maintain our vital concerns.

But upon that we can, and should, build a constructive policy which will, within the broad limits of conflicting necessities, merge Middle East objectives with ours. We can do so far better than the Soviet because we have no imperialist aims, and, despite the propaganda, the Soviet has. We have an interest in Middle East stability and the Soviet seeks constant upheaval there. We have a vast market for Middle East oil; the Soviet merely seeks to block that market. We and others in the West have the technical and financial capacity to assist the middle eastern peoples to a higher standard of living and a share in the good things of life; the Soviet, while gaining in such capacity, cannot match it.

The United States must broadcast these facts with more emphasis than we have ever employed before. We must proclaim over and over again that we are prepared to assist in all honest attempts of the Arab states to achieve a peaceful federation. We must announce that we stand ready in company with other nations to supply the wherewithal for the wise development of the resources of these countries.

For this, we must make clear that we require no military alliances, no retention of existing kinds or sheiks, no particular governmental regime. These are decisions we leave to the free choice of sovereign people.

But sovereignty is not absolute anywhere. We shall expect that the governments shall respect their international obligations. We shall not condone subversion by assassination. We shall insist on such safeguards of development funds that they do not support scurrilous attacks such as the Cairo radio has made against us with unremitting zeal. We shall expect those development funds to be expended in ways to advance the welfare of the people rather than the political ambitions of their leaders.

We shall insist on the preservation of the armistice boundaries of Israel and at settlement of the refugee problem.

This is a policy neither of appeasement nor intimidation. It answers the plea for bread with something more nourishing than the stone of military alliances. It brings the West into line with the legitimate aspirations of the Middle Eastern peoples.

It will not always be an easy policy to carry out—there will always be troublesome men like Nasser who prefer adventurism to sound construction. No policy will be easy. But such a policy as this is honest, honorable, and practicable. It is our one hope to circumvent Soviet expansionism in this area.

How such a policy should be instituted and how it might work will be discussed in another editorial.

[From the Boston (Mass.) Herald of July 25, 1958]

MIDDLE EAST SOLUTION

These are the alinements of Arab nationalism today:

A bloody, military dictatorship, with little respect for treaties, using Soviet arms, assassination, subversion and the big-lie technique to strike down other regimes, often somewhat more liberal, which do honor their international obligations.

Therein is the dilemma that complicates the fashioning of an American policy in the

Middle East, the widespread identification of Nasserism with Arabism.

The United States must, as we undertook to explain here yesterday, adopt as part of a new Mideast policy the principle of supporting Arab nationalism. Does that mean we must support Nasser because he is the present representative of such nationalism? Some intelligent Americans are saying so.

If it does mean that, then we must abandon President Bourguiba, of Tunesia, to Nasser's United Arab Republic. Bourguiba has already reported that the Nasser machine is at work on his country.

An American policy that swapped Bourguiba for Nasser would be a self-defeating policy.

In the streets of Cairo are illuminated terrestrial globes showing the United Arab Republic stretching from Morocco to Iraq. There are clear signs that Nasser is also prepared to move on the non-Arab states of Sudan and Iran.

Yet Nasser's own people are no better off than they were under King Farouk—unless it is more comforting to a hungry fellah to have his ruler pour money into armaments than onto dancing girls.

The solution to this dilemma is not to attempt to do business with Nasser on Nasser's terms. We are not obliged to support anything that comes along that uses the slogans of pan-Arabism to whitewash international thievery.

We can support and should support any Arab nationalist move that will accept basic international obligations. And that could include Nasser if he changed his tactics.

The new American policy must abandon appeasement. We must make clear that we shall defend our legitimate ends, through the United Nations, if possible, but by arms, if necessary, as we did in Lebanon. But at the same time we must hold out the prospect of generous and friendly assistance for the stability and well-being of the area.

Only by such a course can the presently independent Arab States find a satisfying alternative to the Nasser type of nationalism.

It will take time to produce results. Our course would have been easier if we could have barred Nasser's intrigues in Iraq. But our course would have been much harder if we had not moved in to preserve Lebanon's power of decision.

Address of Hon. James A. Farley, Former Chairman of the National Democratic Committee, at Jamestown, N. Y.

EXTENSION OF REMARKS

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. DELANEY. Mr. Speaker, the political observations of the Honorable James A. Farley are always of interest, and under leave to extend my remarks, I would like to include the address given by the former Postmaster General at the annual dinner of the Chautauqua County Democratic Committee at Jamestown, N. Y., on July 1, 1958.

ADDRESS BY HON. JAMES A. FARLEY, FORMER CHAIRMAN OF THE NATIONAL DEMOCRATIC COMMITTEE AND THE DEMOCRATIC STATE COMMITTEE, ANNUAL DINNER, CHAUTAUQUA COUNTY DEMOCRATIC COMMITTEE, JAMESTOWN, N. Y., JULY 17, 1958

That great American President, Woodrow Wilson, once said that a man long in public affairs ought to withdraw and meditate for a year to find out what he has learned. In my years of public life, I have been fortunate to have witnessed and to have participated in American politics from Grassy Point to a Cabinet seat in the White House, with a considerable stopover at Albany, as chairman of the Democratic State Committee. Even more fortunately, I have had opportunity to follow the advice of Mr. Wilson. I have had time to weigh and consider the unfolding panorama of the changing American Government, during nearly a half century of what, by common consensus, are the most fateful decades of our history.

It would be strange, indeed, if after reflection, I had not reached some views of the fundamental structure of our body politic. With your permission, these I should like to present tonight. I have concerned myself with the larger methods and patterns of our history, because I believe that even the great personalities of our history are an expression of the great American people. I in no way demean the greatness of individuals, but I think their greatness is derived from expressing the underlying forces of their times. It always seemed to me that a battle of personalities dramatized but, at the same time, obscured the great issues. I have, therefore, avoided personalities. I cannot refrain from observing, however, that those who once, and only a short time ago, presumed to measure the Democratic Party by a deep freeze are now shivering in their vicuna overcoats.

When I started my political career the full impact of the 19th century's industrial revolution avalanched into the 20th century with tremendous pressure upon the then existing methods of government. From the Hudson to the Golden Gate, and from the headwaters of the Mississippi to the Florida Keys Americans knotted at the street corners to discuss the paths the country might take. The forces of national growth were beating like an angry surf on the constitutional foundations of the Republic. It was then, as a young man, that I first learned that that great document had not only a built-in resiliency but a magnificent capacity for expansion. Without affecting its basic construction of the 18th century, it permitted the expansion of government function to fit the incredibly greater forces of the 20th. I noted that not only was our Constitution pliable enough to react to emergency but that the provisional measures often became institutionalized through continuing necessity. I further noted that the two-party system was capable of encompassing that expansion. I conceived of my party as the party of growth, and the Republican Party as the party of stabilization, and for both I have the greatest respect. It is my conviction that their reciprocal action upon each other provides the actual evolutionary dynamics of our political society. I believe, with Mr. Justice Hughes, that a great virtue marks also a great limitation. Having identified the virtues of both parties it occurred to me, in my reflection, that I had also identified their limitations. Obviously, in an expanding age, the party of growth is the better but it must be deeply concerned with the method by which it fulfills its function. The reciprocal action of the great parties has unfailingly supplied the American people with alternates. I relied then, and I rely now, unreservedly, on the American electorate to make the proper choice. That is why I have always supported the two-party system because it, by its very nature, means that an intelligent choice is placed before the American people.

Further, I believe that thees two vehicles, by their competition, perform their function of conveying both the underlying force and the conscious intent of the American people. Now, if I am correct in my theory it will be perceived that my conclusions quite frequently vary from some of the theories accepted today. For example, in that great and exciting campaign of 1912 it was my theory that the forces of growth were raging for expression. The Republican Party refused to yield and the Bull Moose Party of Mr. Theodore Roosevelt was born. Now, if I am correct, please note the difference in conclusion. It is my contention that the Bul Moose Party split the Democratic Party and not the Republican Party. Had not the Bull Moose Party been in existence that vote would have expressed itself in the total for Mr. Wilson and not for Mr. Taft. The Republican Party could not even contain the Republican sources of growth within its own party, which also describes the condition of that party today. This, it seems to me, is a most important distinction which runs to the very nature of the anatomy of the body politic. It is a fundamental conviction of mine that the will of the American people will express itself, as certainly as the Hudson River finds the sea, and that it will instrument its will by that party which offers it best conduit for what it regards as the principal issue or problem. It, in times of decision, is always the Democratic Party.

Now, I have said, in effect, that I believe that the two-party system has the capacity of transmitting the force of the American people to their institutions and that those institutions have sufficient elasticity to give expression to the will of tht people by their own nature, or to create new institutions which will. It is upon this premise that I am deeply, very deeply, concerned about the future of our country. Indeed, it is for this reason that I am seeking the Democratic nomination for the United States Senate. It is because the separation of powers, the tripartite division of our Government is seriously out of balance. Far, far too much permanent power has been delegated to the Executive by the Congress and far, far too much of the legislative power is being exercised by the courts and the great administrative agencies. Let me here make this important distinction. There is nothing wrong with these bodies, as such. They perform great and necessary functions. But to the extent that they are not responsible to the Congress nor, indeed, to the Executive they are becoming a fourth branch of government, more powerful than both executive and legislative and far less responsive to the people.

Let me illustrate. Mr. Chief Justice Taft once urged the judiciary to be most careful in the handling of small matters. The reason, he stated, was that it was here that the average citizen came in most contact with his Government and hence it was here that his faith in that Government must be most upheld. At that time, his description of the facts was true. It no longer is. By contrast, now the average citizen's wages are fixed by Federal law; the food he eats is protected by Federal law; the radio channels which inform him are governed by Federal law; his savings are both insured and protected by Federal law—law administered by semijudicial bodies.

There has been a vast accretion of Federal power. But at the same time that the power was accruing to the Federal Government a further phenomenon was going on within the Federal Government itself. More particularly, the Congress was delegating that power to the executive, on a discretionary basis, which tends to become Government by whim of the deciding personality. Simultaneously, the courts are holding that the discretionary powers of the President are nonreviewable. To compound the problem, delegated powers were amplified into vast agencies responsible to neither. The Supreme Court itself has said that these regulating bodies float between Congress and the Executive, like Mohammed's coffin, suspended between heaven and earth and belonging to neither orbit. It is my belief that this is not ordered

elasticity; it is close to government by sputnik regulating bodies, revolving around the American body politic, yet completely beyond the reach of the American people. I further believe that the point of responsibility for the government of those bodies and for simultaneous and complete responsibility to the American people for the control of those bodies is that branch most responsive to the will of the people, the Congress and more particularly the United States Senate. Unlike Mr. Justice Taft's day, the Government is now a tremendous factor in the daily lives of the American people. For example, practically everybody has at least heard of the income tax. Accordingly, it is with grave alarm that I quote Mr. Justice Roberts that a Supreme Court decision is now like a railroad ticket—good for today and one passage only. If true, it is neither congressional law nor judicial decision. It describes a condition of disorder. If we add to this the warning of that very great jurist, Mr. Justice Learned Hand, a very serious problem is described. Now, can there be any more important task than bringing those new and great regulating institutions under the direct control of the American people? Can we continue to call ourselves a free people unless this is accomplished?

I have stated before, and I state again, that the solution of our problems is in the approach. When Mr. Wilson yielded power in the 1920 elections, it was because the American people believed they wished a stabilization program. Indeed, that was the issue—back to normalcy. No one knew then and no one knows now what normalcy is. But a great governor up at Albany knew even then what it was not. Most emphatically, Gov. Alfred E. Smith perceived that an expanding scientific civilization demanded as near as may be a scientific administration of government. He sought and obtained the assistance of the most dedicated and accomplished people of the community in the name of service to the people of New York. He asked only that they describe the subject, identify the problem, and suggest the solution, and he would do the rest. Can anyone deny the result? Are not the magnificent parkways both ornament and example to the Nation? There was no service he did not expand. For further example, did he not seize the terrible mental-health problem with both of his mighty hands and drag it into the light of day? On this alone, he substituted a community's understanding and care, for a vast area which black ignorance had labeled a family's private shame. In every way, from savings banks and insurance regulation to specialized high schools, the Democratic Governor of New York was pioneering forward to new fields, while the Nation was lulled into eating the Republican lotus bud of normalcy. The result is that New York is today the model State government of the Nation. But further, that bold imaginative approach is the hallmark of the Democratic Party. It, on a State level, was born under Alfred E. Smith, nurtured under Franklin Delano Roosevelt, promulgated under Herbert H. Lehman, and expanded by our present Gov. Averell Harriman.

Now, my point in reciting the method of Governor Smith is that on the fateful day of March 4, 1933, when President Roosevelt stepped into the White House as Chief of State, and I was summoned as chairman of the National Democratic Committee, we had more than a platform of promised result. We had a proven method of attacking the crisis. We brought the best of our forces to the worst point of the country's danger. Mr. Churchill has called the days following Dunkirk England's finest hour. In my opinion, the finest and one of the most courageous acts of any American President was the decision of President Roosevelt to close the banks. With one majestic sweep he both took the American people into his confidence and informed them of the enormity of the crisis. I say that those banks reopened and they have never been closed since. The depositors are insured, and their confidence, and rightfully, exceeds their insurance. He called himself quarterback on that fateful occasion but he was more like a surgeon, a physician to the state, performing a delicate operation on the heart of the Nation. And I was thrilled then, and I am proud now, that the great instrument he relied on was the Democratic Party, of which I was chief. We did not need the exalted statement of President Grover Cleveland that public office is a public trust. The hungry eyes of 17 million decent American men out of work, and their 45 million women and children, hanging on every move of the White House, reminded us. The fact is the party of stabilization had brought the Nation to a point where scarcely a productive wheel was turning.

If the most courageous hour was the closing of the banks the decision which followed is, in my opinion, the proudest hour of the Democratic Party. We decided to risk every dollar in the United States Treasury and all we could borrow on the average American citizen. From the farms to the hills, from the mines to the looms, from the ranches to the boiler rooms, the clarion call rang that the farm wouldn't be lost, that the mine wouldn't be closed, that the loom wouldn't be silent, because the United States Government believed that the best credit risk in the world is an American man ready to trade a pint of his sweat to prevent the tears of his hungry children. This was not hasty jury-rigged, makeshift policy. In fact, it was based on the very foundation of the Democratic Party; in the words of the late great Mr. Justice Brandeis, a basic conviction, that the single greatest asset of the United States is the American people who live in it. Since that time, I have noticed that Mr. Churchill has written that the greatest investment a nation can make is in a bottle of milk for a baby. I cannot refrain from remarking that we not only got the milk into the baby we lifted the mortgage from the cow. And, mind you, all this was done to a rising and ironic wail from the conservative stabilizers, that we were using very good American money to pay back their very bad loans. As the President said to me at the time, the signs of recovery are unmistakable; the financial community has recovered sufficiently enough to start beating its doctor over the head with its crutches. But I learned in hard experience, when the chips were down, what to me is an unfailing axiom, that a party should accept responsibility and then beget confidence by giving it. Indeed, it is true that there is nothing to fear but fear itself. It is the devil's own weapon. Now, it would be strange indeed if a great and good God did not give man a defense against it, and He did. As sure as there is nothing more paralizing than fear there is nothing more contagious and energizing than courage. In 48 years of campaigning, I still regard its power as greater than hydrogen bombs and its magic as greater than the miracle drugs; that mystic combination of heart and brain, by which God gave man his moral courage. Without it, there can be no just and lasting solution, because without it there cannot even be a start. The histories recount the hundred basic pieces of legislation which were placed upon the lawbooks, in those days, and the historians call them among the most significant in our history. At that time, they were called the most daring. But only recently Speaker BAYBURN has pointed out that not one was repealed. On the contrary, all have been augmented, even by the present administration. Again I point out that what was regarded as daring in those days, a dangerous fiscal experiment, is now regarded as a great safety factor in our economy. For example, the purchasing power of our millions of older people drawing social security is a very definite factor in sustaining purchasing power.

My purpose here, however, is not to examine solutions but to call attention to the method by which they were solved. The point is that that legislation was born of the leadership of the Democratic Party, which gave expression to the moral courage of the American people, a combination which was invincible then, and will be again.

Now, I ask your especial attention. You will note that I said I have much respect for the party of stability, the Republican Party. I said I believed it performed a great service. I do. I also believe that it is led by distinguished Americans. I simply disagree with them, and never more than at the present time, for these reasons. Nothing stabilized a ship like running before a storm. The following waves seem to propel the ship, and they do, but in the wrong direction. This is not the way of the Democratic Party. We not only face the storm we refuse to alter course. Our way is forward, and by facing angry waters we pass through them. I decry the Republican counsels of fear. No one can convince me that the best coordinated body in the world, 67 million Americans in a gigantic labor-management team, has any basis to doubt its ability. Its own adaptability speaks for itself. Over 50 percent of our people earn their livings in industries which did not exist in 1900. This represents not only an accomplishment of the past, it describes an expanding circumference of matchless opportunity for the future. The promise of our record is that, in our time, millions yet unborn will earn their livings in industries not yet conceived.

Why then the counsels of despair? Do you think the Hudson Valley of 1758 was any safer than ours of 1958? Why, two foreign armies on American soil fought at Lake George and Ticonderoga exactly 200 years ago, and 173 years ago the young Nation was saved at the Battle of Saratoga. The danger overhead today isn't any greater than the danger of the tomahawk and the rifle at the front door 200 years ago.

What is desperately needed now is some appreciation of the majesty of the soul of the American people, by those who now direct the policies of the American Government. How can they express fears about the fundamental financial structure of the Republic, whether they call it deflation or inflation, when the fact is that the American people have been strong enough to assist other nations in a sum equaling more than four times the national debt of 1932, and all paid in cash since 1945.

Of course I do not claim that the great decisions of the first two Roosevelt administrations were born of New York State alone. We had before us the knowledge that Jefferson was called a fool for buying the whole Mississippi Valley for $15 million; that Seward was deemed irrational for purchasing Alaska for $7,200,000; that in 1637 there were areas in which rebellion threatened because the introduction of the public school system was called socialism. We had all of this before us when we decided to fit our policy to an expanding Nation, and to cease trying to cramp a Nation into the confines of the Republican straitjacket, the traditional fiscal system. That was our position and it is mine. Mammon is not a god, though he is a giant and that giant must be put to work for the American people. Woodrow Wilson bridled him with the Federal Reserve, the 1932 administration harnessed him to the needs of the people and from 1958 onward he is going to pull his fair share of the load. It is always highly significant to note the instrument by which a party measures its obligations. From

time immemorial the Republican Party has used the tariff, the interest rate and the price of steel as its barometers. For the Democratic Party the measuring stick has always been, and I hope always will be, the price of a loaf of bread to the wife of the man who has to earn it to feed their children. The irony of it—the United States Government is paying nearly twice the interest rate today that it did in 1950 meaning, by the financial community's own measuring stock, a Republican administration is nearly twice the risk to the country as a Democratic one.

In that great play of several years ago, High Tor, a mountain in my own Hudson Valley, the wise old Chief advised his tribe that it was impossible to hold back an age with one's bare hands. That is the traditional, and unfortunately, the present policy of the Republican Party. It is why it invariably turns in such a dismal log as directors of the ship of state. The Democratic Party, I repeat, is about to be summoned to the bridge and, thank heaven, it has the tested blue-water captains to man the ship. Twenty-nine governors, led by our own Governor Averell Harriman; a majority of the House and Senate, led by such storm-tested captains as RAYBURN, JOHNSON, RUSSELL, and MCCORMACK.

The party, I believe, is to the Government what the engine room is to a ship, and this I know because of my experience as Chairman of the National Democratic Committee.

Our course is not only set by logic, it is set by both our history and the Nation's necessity. Our course is a 180° turn to face the storms and then full steam ahead.

Now, I have asked that you note the campaign of 1912, and my theory that Theodore Roosevelt's Bull Moose Party diverted the power of growth from the Democratic Party for a precise and present reason. That theory was validated in 1932 when the forces of growth found single expression in the Democratic Party. It was followed by an even greater expression in 1936, when 46 States of the Union endorsed the main causeway of history provided by the Democratic Party. I might say that it is my private opinion that Maine and Vermont did not join the cavalcade because they just couldn't believe it was true. However, my main point is this: Upon my observation in 1912 and my experience in 1932 I ventured to predict the result in 1936, which turned out to be almost mathematically correct. I now predict, based on the same appraisal I used in 1936, equally sweeping Democratic victories in 1958 and 1960. It is this simple. The only instrument of an overdue expansion of American might is the Democratic Party.

If I am correct, and I believe I am, it follows that these great forces of growth are again ready for mighty expansion, and they most certainly are going to choose that trusted instrument, the Democratic Party, as the means of their expression. There is good reason why. As Governor Smith repeatedly said, let's look at the record. Did our risk on the American people pay off? In 1939 the total national debt was only 40 billions. In 1958 the Government's income alone will be 70 billions. But was the secret of our fiscal policies the watching of the stock market? Not at all, as a doctor can take a pinpoint of blood from a finger and have an idea of the general health of a body, we took the smallest possible integer, the family budget. We believed that the average citizen's ability to make both ends meet was as good as a blood count of the health of a nation. We also believed that if that little cell, the family's budget, was healthy so was the Nation's. To switch metaphor, we believed in watering the tree from the roots and be believed that the roots of the Nation were its millions of working families. And again as Governor Smith said, look at the record. The American standard of living has doubled in that time and will continue to expand. I repeat, that is why the Democratic Party will be summoned to power because it alone is the instrument of expansion of the American people. I say to you that as certainly as the American people groped their way to the Democratic Party in 1932 and grasped it to themselves in 1936 they are triumphantly marching to it in 1958.

I mention 1932, in this year of our Lord 1958, became I am thinking of another 25 years hence—1983. I discovered, in my meditations, that it was no accident that providence had placed man's eyes in the front of his head, it was to look forward. From Jefferson and Jackson, through Cleveland, Wilson, and Roosevelt, our party has been the party of vision. Our faith is what has carried us through desperate experience, and our experience has taught us the lessons of adversity. Our vision, our faith, and our experience are about to receive the Nation's call. We have the course and we have the navigators. We must face the challenge of 1983, by answering the call of 1958.

I tell you again, the Democratic Party is about to come to power because the Nation is on the brink of its most majestic expansion. Your best will be enough because, as General Washington said, angels can do no more. In the coming hour of fateful responsibility to the Nation let us not do less.

Eastern Price System Hits Midwest Dairyman

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Eastern Price System Hits Midwest Dairymen," from the St. Paul Pioneer Press of July 25, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EASTERN PRICE SYSTEM HITS MIDWEST DAIRYMEN

A clash of interests between New York-New Jersey milk producers and certain eastern cheese manufacturers has produced significant testimony on efforts to keep Midwest dairymen from selling their products in the East.

The head of a New York company specializing in manufacture of Italian-type cheese said that Wisconsin can produce this same cheese at 4 to 5 cents a pound less than his costs. If a price increase on manufacturing milk sought by New York-New Jersey dairymen is granted, he declared, Midwest cheese will be sold there in larger quantities. This he opposes, and demands maintenance of present low prices on manufacturing grade milk.

The indication of this statement is that eastern dairy product manufacturers are enjoying a subsidy in the form of manufacturing milk prices kept low enough to offset the natural low-cost production advantages in Minnesota and Wisconsin. This is what Midwest dairymen have been saying for a long time.

Eastern milksheds, protected against outside competition, have been able to keep a consistently high price level on fluid milk for direct sale to consumers for table use. These prices promote excess production and at the same time tend to hold down consumption. The surplus milk backs up into outlets for manufactured dairy products, including cheese. The surplus has been sold to eastern manufacturers at prices arbitrarily established below Midwest levels, thus giving an unfair advantage to the eastern interests.

Now that some of the eastern milk producers want to get more money for their manufacturing milk, the situation is being brought out into the open. Midwest fluid milk and cream also are being kept out of eastern and southern markets by direct tariff barriers disguised as local sanitary regulations.

There is no more justice in the rigging of markets in other States against Minnesota and Wisconsin dairy products than there would be in this area's trying to keep out southern fruits, vegetables, and poultry or eastern manufactured goods.

The Middle East Disaster

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. PROXMIRE. Mr. President, an excellent and extremely disturbing analysis of events immediately preceding the President's sending of troops into Lebanon and the effect of this action on our future relations with the Middle East is set forth in an editorial in the July 30 issue of the Christian Century, entitled "Middle East Disaster."

This magazine is widely recognized as a highly responsible religious journal with an excellent staff. The editor, Harold E. Fey, and the managing editor, Theodore A. Gill, are two of the outstanding leaders in religious journalism today.

The Christian Century is now celebrating its 50th year of publication.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MIDDLE EAST DISASTER

Armed intervention in Lebanon because the revolution in Iraq threatened to throw the whole Middle East into the United Arab Republic can have no other consequences than further to alienate that part of the world from democratic influences. It is a disaster. It climaxes a dozen years of indecision, of lack of policy, of playing domestic politics with foreign affairs even when the peace of the world is at stake.

The order to the United States marines to land in Lebanon was not justified by the situation there. The United Nations observer corps in Lebanon was effectively doing the work it was sent there to do. The Christian Century has direct information that earlier on the very day the marines landed an agreement was reached in Lebanon with antigovernment forces to give United Nations observers full access to the whole length of the Lebanese border. We also have information that just before noon on that fateful day an agreement was reached in Beirut between all parties and religious groups that Gen. Fuad Shehab, the Lebanese Army chief, would be elected President when the Lebanese Parliament meets on July 24.

Lebanese President Chamoun was present and reluctantly accepted the agreement. He apparently did not disclose that he had appealed for the landing of United States forces. Perhaps he knew that it was already too late to prevent this unnecessary intervention in his country's affairs. But it is a fact that the two essential points making for peace in Lebanon had already been settled before the marines reached the beach.

This is what was behind U. N. Secretary General Hammarskjold's cold rejection of our action and of the reasons President Eisenhower gave for it. The U. N. Secretary had visited Lebanon and reported that what was in progress was essentially a civil war, that infiltrations from Egypt and Syria had been curbed. Each day's dispatches bore out this view of the situation. The war was dying down. It is the opinion of many men whom the world has made custodians of its peace that the conflict would have been peacefully settled if we had not intervened.

Our armed intervention for the reasons given by President Eisenhower has undermined our moral standing in the world. It has weakened our position in the United Nations, which is presented with a fait accompli and told what it must do to pick up the pieces of a worsened situation. We have so deeply compromised the status and work of the U. N. observer corps that Sweden files a request with the Security Council to suspend the activities of the corps until further notice. The loss to American prestige because of our action in Lebanon may and almost certainly will return to plague us in the future. The stature which we gained by our course during the Suez crisis has now shrunk catastrophically. We shall long rue the day it happened.

Third, our intervention threatens domestic tranquillity in Lebanon. When the presidential election takes place now, its outcome will be overshadowed by the presence of our troops. Whoever is elected will be placed under a cloud. If the new President is prowestern, it will be said that the Lebanese parliament was intimidated. If he is anti-Western, which is most likely, he will probably file an immediate demand that we end the occupation. That will embarrass our troops and our policy. When we withdraw, it will probably take a larger U. N. force to prevent violence and renewed strife.

Fourth, our return to the practice of "brinkmanship" threatens the peace of the world. It puts us on the defensive before the judgment bar of enlightened mankind. Now we can come before the summit conference for which Premier Khrushchev calls only as a defendant to be judged. Our best course is to meet in good faith and to try to live down what we have done. World peace is in too precarious a condition to have permitted us to change from a champion of law and order to an armed offender against that law if it could have been prevented. Peace may be lost before we can return to our former role. Getting out of Lebanon will certainly prove far more difficult than getting in. We may find Lebanon as difficult to leave as Korea was, and more costly to stay in.

The best course appears to be to accept Khrushchev's call for a summit conference, but to hold it at the United Nations. India may object, for India is not now a member of the Security Council. But the summit effort to seek an agreement can be held with India present, and then the Security Council can take action on its own account. If the general European settlement which has been proposed can also be reached, great good can come from what threatens to be irretrievable disaster. But the first claim on conference time must be a settlement of the crisis of the Middle East. The first step in that direction will have to be an agreement to secure withdrawal of British and American troops from countries where they are interlopers.

This editorial must go to press before momentous decisions are reached in the United Nations on the Japanese resolution for a stepped-up U. N. observer corps in Lebanon and in the capitals which are considering a hurried-up summit conference. It is written in one of those moments of history when faith in God is all that really counts. The way ahead is shrouded in darkness. We cannot know what lies ahead but we can reach out for the hand of the Lord of history and pray that men who must make decisions of life and death consequence for mankind may be similarly guided. For it is not God's will that one of his little ones shall perish. His will is life, not death. His will be done.

Price Supports for Ungraded Looseleaf Tobacco

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. THURMOND. Mr. President, the policy of the Department of Agriculture with regard to price supports for ungraded looseleaf tobacco has resulted in much dissatisfaction among the tobacco farmers and warehousemen in South Carolina. The Federal Government offers price supports for this kind of tobacco when it is sold in markets in Georgia and Florida, but it does not offer such supports for looseleaf tobacco brought to market in South Carolina. The farmers in South Carolina believe that this treatment is discriminatory.

I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial from the July 24 issue of the Pageland Journal, of Pageland, S. C., entitled "Congress Should Investigate Tobacco Marketing Dispute," which represents the general attitude of tobaccomen in South Carolina regarding the Department of Agriculture's marketing procedures.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS SHOULD INVESTIGATE TOBACCO MARKETING DISPUTE

Although tobacco is not extensively grown locally, it is no stranger to this section and the problems of tobacco farmers are, in the final analysis, the problems of all farmers and the treatment accorded tobacco farmers either is, or may in time be, the same treatment all farmers can expect at the hands of an increasingly high-handed Government.

Failure of the Department of Agriculture to permit the sale of tobacco in the ungraded, untied state, as it is sold in Georgia and Florida, is as obvious a case of unfairness as one could ask and, despite all the windy equivocation the bureaucrats can generate, it does not and cannot make sense. Grading and tieing tobacco is an expensive, time-consuming process that accomplishes little or nothing, and in fact hurts the farmer, because the price differential allowed by buyers for graded and tied tobacco does not cover the cost the work entails. The tobacco industry wants the arrangement continued because through it, is is getting something for nothing. The Government makes the decision, and the Government acts exactly like it has been sold out to the tobacco industry, at the expense of the farmer.

This is but one of several recent decisions in the Department of Agriculture that have been flagrantly prejudicial to the interests of South Carolina farmers and specifically tobacco farmers. A congressional investigation into the rendering of decisions so lacking in reason and fairness would seem highly in order. If there is not dishonesty behind the situation, there is something that in high places in Government is almost as bad—gross stupidity.

Value of the Exchange Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short article entitled "Heartbeat From India," which was published in Redbook magazine. The article is further evidence of a most persuasive kind of the effectiveness and value to this country of the exchange program. I hope all my colleagues will read this very interesting article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEARTBEAT FROM INDIA

(By André Fontaine)

The boy's heart stopped at 6:10 p. m. He had been on the operating table in a Long Island hospital for 2 hours.

Instantly, Dr. Raj Mahajan, a tiny, dark, Hindu surgeon, took the boy's heart in his small hands and started to pump it. Gently he squeezed the heart, then let it expand, then squeezed again in a slow, steady rhythm.

Dr. Mahajan and another surgeon kept up this artificial pumping for nearly 3 more hours, while others of a team of 15 doctors and nurses completed the operation—an incredibly complicated, delicate one. Today the boy—6-year-old David Fleming of Queens Village, N. Y.—is alive and healthy.

And Dr. Raj Mahajan, an Indian exchange student, has kept an appointment made in a primitive hospital 25 years ago and 11,000 miles away.

His commitment began when he was still a boy in Dalhousie, in the northwest section of India (now Pakistan). One day his best friend, the son of one of his father's servants, did not come to play. Raj, seeking him out, learned that the boy's mother was desperately ill and thus would die; at that time doctors treated only the wealthy.

Raj rebelled. He persuaded his father to intercede and have the woman taken to the hospital. That night Raj sneaked out of bed, stole into the hospital and found the surgeon who had operated on the woman to ask about her condition. The surgeon, a man of rare understanding took the boy into his office, gave him a glass of milk and in the quiet hours of the early morning talked to him about the beauty of surgery, of India's great need for medical men. And he gave the boy a dream.

Raj went to King Edward Medical College at Lahore and interned at Irwin Hospital in New Delhi. While there he applied for a Fulbright fellowship without much hope of being selected, since there were only 14 for

India's total population of more than 300 million. But he made it, came to the United States and studied in Texas, Iowa, New York, and finally at St. Francis Hospital, in Roslyn, Long Island, the largest hospital in the world that is devoted entirely to heart ailments.

David Fleming owes his life to the skill and dedication that were born and nourished in the green and alien hills of northern India. After Raj Mahajan's return to those hills this summer, there will doubtless be Hindu youths who will owe their lives to the skill he perfected in the hospitals of America.

Here we have a glimpse of the real meaning cultural exchange programs. There are about 150,000 young men and women like Dr. Mahajan who travel abroad each year to partake of the educational wealth of another country. Thousands of them are helped by scholarships and fellowships—granted by universities, foundations and governments—that cover almost every field of human knowledge. (If you are interested, you can get more information about the programs from Study Abroad, a publication of the United Nations Educational, Scientific and Cultural Organization available at libraries or for $2.50 from UNESCO Publications Center, 801 Third Avenue, New York City. The book includes a list of sources to which application should be made for specific scholarships.)

About 36,000 of the exchange students come to the United States. With them they bring the richness of their own cultures and their trained minds, and they leave a little of each with every person they meet while they are here. Dr. Mahajan expressed what he feels they take away:

"Each of them goes home with an understanding of the goodness and greatness of America. In 10 years America will begin to profit from this current exchange. For then these people will be the leaders of their countries, and when they are, the feeling they have for America will for you be worth a dozen sputniks."

Harnessing the Brute

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Harnessing the Brute," which was published in the Evening Bulletin of Philadelphia on Saturday, July 26, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARNESSING THE BRUTE

President Eisenhower's letter of yesterday has deftly thrown some stout harness on the wild horse of the Kremlin.

Nikita Khrushchev at the beginning of the week was clearly preparing to declare himself king of the prairie. His snap call for an immediate summit conference had won much support and he was already making up his own guest list, laying down the rules, and assuming the role of world prosecutor against the West.

This wild rampage, he must be surprised to discover, has now led him straight to the corral where, if he chooses to pass through the gate, his own country's behavior will be examined.

The President's insistence on the principle that the talks should be held within the framework of the United Nations was accepted by the Russians with, it appears, the thought that bluster and threats would be as effective there as elsewhere. President Eisenhower has now pointed out with cold logic that acceptance of the basic principle implies that the Security Council will make up the guest list and lay down the rules.

This is no mere debating point in a game of words. It goes to the heart of the difficulties. In the harness of the United Nations, Russia—if it accepts this meeting—must be prepared to defend its own role in endangering the peace of the Middle East, and the world, through the subversion of small nations. The chances improve that this meeting may have fruitful results.

Conditions in the Mideast

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial having to do with conditions in the Mideast, from the Minneapolis Tribune of July 27, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR MIDEAST NEED: NEW POLICIES, NEW CONCEPTS

(By Graham Hovey)

UNITED NATIONS, N. Y.—Some of America's constant supporters in the United Nations and the cold war are insisting that Washington rethink and redefine its policies and objectives in the Middle East.

These diplomats warn that if this country clings to impractical policies and outdated diplomatic concepts, other and greater blows will follow Iraq's coup, which provoked our military move into Lebanon.

By impractical policies they mean the Baghdad pact and those pursued under the Eisenhower doctrine.

By outdated concepts they mean, for example, the notion that our side must never recognize publicly that Russia is a power factor in the Middle East or can have any legitimate interests in that area.

There was lively discussion of this latter point here after news dispatches from Washington purported to give the real reason why any summit meeting with Russia on the Middle East could take place only in the Security Council.

These dispatches explained that the Middle East is already on the council agenda. Any summit meeting on this subject outside the United Nations, they said, would constitute recognition by the West of Russia's "presence" in the Middle East.

Even some members of the United States delegation to the United Nations conceded privately that this kind of reasoning was unrealistic. Other pro-western diplomats used stronger language to describe it. In effect, they said this:

Russia is in the Middle East and everyone knows it and no one will any longer be impressed by western diplomatic maneuvers aimed at denying or ignoring the fact.

Russia would be in the Middle East for reasons of geography and power even if its government were not Communist and expansionist; even though its economic stake in the area, unlike that of the West, may be relatively unimportant.

Russia is in the Middle East with military and economic aid programs and, of course, with a political program.

The West must find ways to parry and counter some aspects of these programs but it cannot wish the programs out of existence.

"In fact," said one western diplomat, "the question is not whether Russia is in the Middle East but whether the West can find ways to remain in the Middle East."

Among the specific questions which many of America's friends with the Eisenhower administration would face squarely in the present circumstances are these:

Have the Baghdad pact and the Eisenhower doctrine proved to be effective instruments for parrying and countering Soviet influence in the Middle East?

In light of the recent events in Iraq and Jordan, will the United States continue its previous emphasis on military aid and military alliances in this area?

Many observers with experience in the Middle East believe that there would have been no major civil strife in Lebanon if President Chamoun had not embraced the Eisenhower doctrine; that Nuri Said would be alive and in power in Iraq had he not taken that Arab country into the Baghdad Pact.

Some go further and contend that it was the Baghdad Pact—and the pressures it represented for nations to stand up and be counted in the cold war—that gave Russia its best excuse and opportunity for penetration of the Middle East.

This is speculation, but by persons with some qualifications to speculate. It leads inevitably to another major question which many diplomats believe the West should confront at this time:

Can the West settle for a neutral Arab Middle East striving for political and economic unity?

There are experienced Middle East observers who believe this would afford the West its best chance—perhaps its last chance—of retaining influence in the area and of insuring the flow of the oil on which Britain and Europe so heavily depend.

Would Russia respect any formal agreement to remove the Middle East from the cold war arena? It would be unrealistic in the extreme to expect Moscow to cease all political activity in so promising an area.

The point that many of the our U. N. supporters make, however, is that our present policy is not working; that it may, by its military emphasis, its pressures on small nations to join formally the western camp, be making Russia's job easier in the Middle East.

If the Russians encroached on any agreement that the Middle East should be neutral at least the Arab resentment now directed at the West might refocus on them.

There was little joy at the United Nations over the news that Secretary Dulles would fly to Europe to shore up the Baghdad Pact. Some of our best friends believe his objective instead should be to liquidate it—as quietly and gracefully as possible.

Admission of Confessions in Evidence in Criminal Cases

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. THURMOND. Mr. President, the Supreme Court's ruling in the Mal-

lory case, which rules out the validity of confessions obtained by Federal officers if there was a delay between arrest and arraignment, has caused widespread confusion throughout the country. There is great doubt among Federal law enforcement officers and Federal judges as to what confessions may be admitted as evidence in Federal criminal proceedings.

On Sunday, July 27, the Sunday Star, of Washington, D. C., carried a news story entitled "Mallory Rule Impact Wide," in which was recorded the results of a survey conducted by the Star. The survey showed a grave need for immediate legislation to clarify the Mallory rule.

I ask unanimous consent that this outstanding article, written by Miriam Ottenberg, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MALLORY RULE IMPACT WIDE—EFFECT OF DECISION FELT OVER NATION

(By Miriam Ottenberg)

Despite contentions that the District alone is affected by the Mallory decision, the impact of the Supreme Court's ruling is now being felt all over the country, a Star survey showed yesterday.

The disclosure was prompted by a recent proposal from Senator CARROLL, Democrat of Colorado, that any legislation clarifying the Mallory decision should apply only to the District and a statement from Senator LANGER, Republican of North Dakota, that when Congress considers Mallory legislation, it is acting largely in its capacity as the District's city counsel.

Their comments have come while a Senate Judiciary subcommittee, headed by Senator O'MAHONEY, Democrat of Wyoming, has been holding hearings on House-passed legislation to clarify the Mallory decision. The windup of these hearings has been set for Wednesday at 10:30 a. m.

WIDE REPERCUSSIONS

The Supreme Court's 1957 ruling that a confession must be excluded from a Federal trial if there was a delay between arrest and arraignment has produced these results outside the District, the Star survey showed:

In at least five cases, confessions have either been excluded because of the Mallory decision or convictions have been set aside because the confession should have been excluded.

Three appellate courts have joined the District in decisions stressing strict adherence to the Mallory ruling.

Several prosecutors have reported declining to prosecute cases because they knew the confessions would be excluded and they needed these admissions to bolster their cases.

A February poll of prosecutors made by the Justice Department at the request of a Senate Judiciary subcommittee showed that 14 prosecutors at that time either expressed fears about the impact of the decision in their areas or specifically recommended clarifying legislation. Three more prosecutors told the Star last week they now believe legislation is necessary.

CASES TELL STORY

These cases tell the story:

In a routine search of the French ship *Liberte*, customs inspectors discovered packages containing 600 watch movements under the floorboard of a locker in a ship musician's room. Customs agents were called and awaited the return of the musician.

When the musician came to his cabin, it developed that he spoke only French. The chief musician was then called to act as interpreter. The musician at first denied he was trying to smuggle the watch movements, but, according to the evidence, he admitted the smuggling plan after 30 minutes of questioning. Within 90 minutes, the judge was later told, the musician gave a written statement to the captain.

A New York Federal judge ruled in April that both the oral and written statements had to be withheld from the jury because of the Mallory decision.

In Jacksonville, Fla., a man was arrested and turned over to the Secret Service at 8:30 a. m. for questioning on a charge of forging a Government check. According to Secret Service agents, he orally admitted participating in the forgery and furnishing handwriting samples. At 10:30 a. m. he was turned over to the United States marshal to await a hearing before the United States commissioner.

DISMISSAL ORDERED

When the case went to trial in April, the defense moved to exclude the confession and the handwriting sample on grounds of the Mallory decision. The judge did exclude them. At the end of the Government's case without the key evidence, the judge granted a defense motion to dismiss the case.

In a Baltimore case, the court declined to admit a written statement but allowed the jury to hear an oral statement. Another Baltimore case involving the Mallory decision is pending.

In a Dayton (Ohio) case, the Federal judge set aside the conviction on the ground the confession should have been excluded under the Mallory decision. Although he made the decision at least 6 months ago, he has never set a date for the retrial. Court circles theorize that he is waiting either for clarifying legislation or a clarifying opinion.

In a Massachusetts court, the judge ruled that the Mallory decision was involved and set aside the jury's guilty verdict in an immigration case.

CONFESSIONS REJECTED

An appeal has been filed in a Chicago case. A man accused of stealing diamonds from an interstate shipment was arrested at 1 p. m. According to the evidence at the trial, he confessed in 45 minutes and thereafter agreed to a search of his apartment. He was brought before a committing magistrate the next morning.

At his trial, the defense cited the Mallory decision and argued there had been unnecessary delay between arrest and arraignment and the confession should therefore be excluded. The Government cited the opinion of District Court Judge Alexander Holtzoff here allowing a jury to hear a confession made within 30 to 45 minutes after arrest. The Chicago judge allowed the confession to be used but the appellate court is yet to rule.

The position of the fourth circuit was made clear in a decision handed down in May. A man was picked up by Norfolk police while trying to cash an altered postal money order. He was then questioned by postal inspectors from 5:15 p. m. to 10:30 p. m. when, according to the court review of the case, he confessed.

He pleaded guilty in May, 1957—a month before the Mallory decision was handed down. In November 1957, he moved to get the guilty plea set aside, arguing the Mallory decision.

THERE'S A DIFFERENCE

The appellate court ruled that the confession added nothing to what the court knew from other evidence. The court, however, made it clear that under the Mallory decision, the confession would not have been admissible if the case had gone to trial.

Appellate decisions in both the fifth and sixth circuits have stressed that the defendants—bank robbers and kidnapers—would have had their confessions excluded if they had been made to Federal instead of to State or local officers. In one case, the appellate court allowed a conviction to stand although the defendant was held 13 days before he was turned over to Federal agents.

An appellate decision in a Texas case, which made it clear that the confession would have been tainted if Federal officers had done what city police did, noted the disagreement over interpretation of the Mallory decision in these words:

"That there is not complete agreement by the courts as to the outer limits of the Mallory decision is apparent from the five different opinions of the Court of Appeals of the District of Columbia in *Trilling* v. *United States*."

In the Trilling case here, the opinions of the nine judges ranged from those who believed all of a series of admissions should have been barred to those who believed all the admissions should have gone to the jury. What became the majority opinion represented the thinking of only two of the judges—one of whom then recommended clarifying the question through a change in the rules or by legislation. Out of the 7 counts in 3 different cases, the appellate court majority agreed to affirm the conviction on 1 count.

Similar disagreement as to what the Mallory decision means has also shown up among the district court judges. In Washington, district court judges have barred written confessions in cases where prompt oral confessions have been admitted. In a Georgia case the court criticized the agents for not getting the defendants arraigned more quickly but the judge held that the written confession could become part of the evidence because the oral confessions had been made promptly after the arrest.

With appellate decisions making it clear in four circuits that the judges are expected to adhere closely to the Mallory decision and appeals pending in several other circuits, both prosecutors and Federal law-enforcement agents polled by the Star and earlier by the Justice Department expressed a variety of concerns with the effect of the decision on law enforcement. These were typical:

A West Virginia prosecutor: "Enforcement officers, particularly Alcohol and Tobacco Tax Unit officers, are seriously handicapped because there is no opportunity for questioning defendants between time of arrest and arraignment, especially in obtaining information about other participants in crime."

Asked about that statement, Thomas Bailey, the Alcohol and Tobacco Tax Units Chief of Enforcement, said the decision was being felt by his officers all over the country. The Unit averages between 11,000 and 12,000 arrests annually.

"The decision," he said, "prevents us from questioning defendants in order to ascertain their confederates and the degree of guilt or innocence."

A Colorado prosecutor said some arrests occur 8 hours' driving time away from the nearest United States Commissioner. He expressed fear that admissions made during that 8 hours would be excluded.

An Illinois prosecutor reported defense attorneys are now aware of the decision and he expects its use in every future case where a confession has been obtained. He feared the impact of appellate decisions from the District will influence judges to bar confessions.

An Indiana prosecutor said one way to get around the decision was to be sure confessions were completed before prisoners were turned over to Federal officers "but if Federal officers make the arrest, we're stuck." He added: "The worse the crime, the more we need the confession."

The Economic Situation in India

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a recent editorial from the Providence Bulletin regarding India's needs for economic assistance from the United States and other Western nations.

Also, I should like to have printed with this excellent editorial two recent commentaries on the economic situation in India. The first was published in the July issue of the Guaranty Survey, published by the Guaranty Trust Company of New York; the other is published in the July 12 issue of the Economist.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Providence (R. I.) Bulletin of July 23, 1958]

A FAILURE TO HELP INDIA MAY CAUSE GRIEVOUS HARM

India's request for an emergency loan of $600 million within 6 months and a total of $1,200 million by the end of 1961 should be read in the light of the crisis that American policy faces today in the Mideast, where troops rather than a community of interest now insure the Western presence.

Although the sums requested are large and the request frank to the point of desperation, the situation confronting India warrants both the urgency and the increased estimate of foreign exchange needed.

India, like the nations of the Mideast and wherever peoples are seeking to lift primitive impoverished economies into the 20th century, is in the middle of a political economic revolt that the West can ignore only at its peril.

The West can haggle over the amount one society should be called upon to provide in order to pull another and, in the good sense, alien society from the trough of an historic depression. But both the times and the cold war make help on an adequate scale imperative if Soviet communism is not to undercut democracy in India as it is subverting the Mideast.

In the Mideast, the West failed to identify itself with the legitimate and inexorable surge to a better standard of living which science and technology could make possible for the Arab nations, if only the resources made made available.

The reasons for the West's failure are not by any means entirely attributable to parsimony. The fanatic Arab enmity toward Israel was perhaps a primary cause that led to America's withdrawal from the Aswan Dam project and to the collision course that followed.

But in India, where the average per capita income of its 360 million people is only $56 a year, false economy could lead to the failure of the democratic West, there, too. The Soviet Union is busy selling its brand of altruism to Indians on one hand, while the Indian Communist Party is trying earnestly to prove itself with a reform program in the Indian state of Kerala.

And India, whether the United States or Western Europe like it or not, is the moral leader and the bellwether for southeast Asia and Africa, the principal suppliers of raw materials without which the West could not live. As India goes, so will go Asia and Africa.

Humanity then is wedded to self-interest in assisting India to break the chains created by its population explosion and world inflation.

This breakthrough cannot be achieved at bargain prices, either for India or for the West, as Senators JOHN KENNEDY (Democrat, Massachusetts) and SHERMAN COOPER (Republican, Kentucky) showed they appreciated in their proposal for a billion-dollar Marshall plan for India to be financed cooperatively by the Free World nations.

India needs massive aid to prevent the revolution of rising expectations from turning into a Red revolution of frustrated hopes, and it is time the West acknowledged that fact. If the United States and the West fail the task in order to spite Indian neutralism or as a result of inertia, the West most certainly will lose a critical and perhaps the decisive battle of the cold war.

[From the Guaranty Survey of July 1958]

INDIA SECOND 5-YEAR PLAN SUBSTANTIALLY REDUCED, BUT FOREIGN-EXCHANGE DEFICIT STILL LARGE—FOOD-GRAIN PRODUCTION INADEQUATE

Attention in Indian financial circles is focused on what might well be called an "agonizing reappraisal" of the Second 5-Year Plan. Debaters can be roughly divided into two camps, with the strength of each shifting continuously as the hand-to-mouth process of finding enough foreign exchange to cover the commitments of the months ahead looks more or less possible. No one denies that the plan is an ambitious one, but there are those whose sentiments about it may be characterized as "the least that is necessary to get over the hump" and, on the other hand, those who talk in terms of near bankruptcy and "fatal fascination with steel." India, though a poor country, has an economic potential which challenges the imagination, and it is in no way surprising that many different routes to a higher standard of living are being presented. The route which the Second 5-Year Plan represents is is no doubt the hard one, but the Indian Government is gambling on its also being the most effective one.

High taxes, deficit financing, depletion of the country's sterling reserves, and incurrence of heavy foreign debts are being used during the 5-year period for a complex of heavy industrial projects, mainly in the steel, mining, transport, power, and irrigation fields. The official aim is to develop "basic industries and industries which make machines to make the machines needed for further development," because such industries will save the country vast amounts of foreign exchange after they start production. At prices then prevailing, it was calculated that the foreign-exchange cost of importing 1 million tons of steel was not much lower than the foreign-exchange cost of a steel plant with an installed capacity of a million tons a year.

The great majority of these costly projects, however, provide no returns in the form of increased output for several years. This is the crux of India's present financial problems, as regards both domestic and foreign resources. One British economist recently noted, "nothing is so greedy of steel as work to make steel."

DEFENSE OF THE PLAN

During the budget debate of last March, Mr. Nehru gave his response to the critics of high taxes and mounting foreign debts. The Prime Minister described the problem of India as that of an underdeveloped country somehow breaking the barrier and crossing into the position of a dynamic and self-progressing economy. "We are making four steel plants, machine-forge foundry plants, and other things. It is only when these come into being and start functioning that your speed becomes faster and faster. So long as you have to rely on steel from abroad, you are helpless, as we are today. You may have steel—that is one big step forward—but if you have to rely on machines from abroad you are helpless. It is only when you are making your own machines, not petty machines but big machines like iron and steel plants, that you are well on the road to progress. It is hard work, but it brings results."

Almost from the start the second 5-year plan has been in trouble as costs, both in foreign exchange and rupees, have increasingly exceeded the original estimates. In addition, the plan made inadequate allowance for the growing imports of raw materials and spare parts required as general industrial production increased, and no account was taken of rising defense imports or the need for larger imports of food grains due to bad monsoons.

As the situation now stands, the plan has been cut back to only the hard core, which includes the three steel plants being built by the state, the expansion of the private Tata Iron & Steel Works, and a reduced number of mining, transport, and power projects. Even with this sharp pruning, the Government estimated its foreign-exchange deficit for the plan's remaining 3 years at $1.47 billion last December and further stated that, owing to a bunching of external commitments over the next 18 months, a large part of the deficit will arise during this period. The United States loan of $225 million and extra shipments of surplus wheat have improved the situation. But the country's sterling balances are now below $500 million (as compared with $1.5 billion at the end of 1955), the stringency of import licensing is hurting existing industry, which needs more raw materials, and the foreign-exchange crisis, a major topic in the press, is not being helped by the currently unfavorable markets for major Indian exports.

THE PROBLEM OF AGRICULTURE

During the first 5-year plan, the monsoons were favorable, but last year they were not, and widespread food shortages have again become the principal fact of life. The Government has acted quickly in arranging more imports, preventing speculative hoarding, and seeing to orderly distribution. But the general consensus is that the increases in output previously achieved with the help of good weather caused a certain amount of complacency. While the various large irrigation projects under construction and planned will make a big difference in the future, programs designed to teach better methods, introduce minor irrigation, and make other simple improvements must be intensified, as they can have a more immediate and widespread effect. In addition, it is felt that uncertainty surrounding land reform is holding down incentive and that this situation should be clarified faster.

Even if more large-scale foreign aid is forthcoming, the next few years will admittedly be difficult. Much will be heard of the phrases "behind schedule" and "below the target." It must be remembered, however, that whether three-fourths or only half of the 5-year plan is completed in 5 years, much will have been accomplished in setting up a basis for further development without relying so heavily upon huge imports of capital equipment.

[From the Economist, London, England, of July 12, 1958]

INDIA'S URGENT NEED

India's crisis of foreign exchange grows more desperate week by week. The exchange deficit in the remaining period of the second 5-year plan, that is, until April 1961, is estimated at some £420 million, after making

allowance for normal export proceeds (which, contrary to some suggestions, do not appear to have been adversely affected in the balance by price movements). Moreover, more than half this sum will be needed before next spring, to meet commitments for goods that have been ordered. India's sterling balances at the end of 1955 were well over £500 million, but they are now below £160 million, and falling at the rate of, roughly, £15 million a month. Under the present legislation some £64 million of the sterling assets, and also the £80 million of gold held by the Reserve Bank of India, must be provided as a cover for the note issue, though these limits may be encroached upon for a period of 6 months without new legislation. But a reduction of the cover requirement can now provide no significant further relief. The resources are not there, and unless India can find them, and find them quickly, its economy will face violent disruption.

India's high officials have, accordingly, undertaken a new world search for aid. Mr. B. K. Nehru, Secretary of the Economic Division of the Finance Ministry, has moved on from London to Washington, and the new Minister of Finance, Mr. Morarji Desai will come to London at the end of next month en route for the Commonwealth conference in Montreal. India will have further opportunity to press its demands at the subsequent meetings of the IMF and the World Bank in New Delhi. Thus far, India has succeeded in securing a certain amount of help from the United States and Germany, but this has been of limited use because it has not been in free currency. America's loans through the Export-Import Bank, as always, have been tied to purchases of United States goods (at prices substantially above the world market level) while Germany has simply postponed repayments. India is now making a new approach to London. The British Government is anxious to help, but after the strains of the past few years it is difficult to see how it could agree to make available any significant amount that would place a further burden on the dollar pool. Any concession will presumably be linked to British exports.

Americans, Have You Forgotten?

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an article which appeared in the July 1958 issue of the publication Hungarian Freedom Fighter and is entitled "Americans, Have You Forgotten?"

AMERICANS, HAVE YOU FORGOTTEN?

Your country, for generations a British colony, was set free at the end of the 18th century by your forefathers. Less than a hundred years later slavery was abolished in the States by upright citizens, many of whom gave their lives to eliminate an immoral remnant of the past, unworthy of a progressive country. Freedom is a household word in your country where many have died for it.

In 1956 a nation of 10 million back in old Europe, once more in the course of its history, revolted against its oppressors. Settled for over 1,000 years at the outpost of the western world, it has upheld many attacks of eastern conquerers, or Tartars and Turks. Many times has their country been ransacked, their men killed or maimed, their women raped and driven into slavery together with their children who were trained to become the enemies of their own kind. All the while, Europe was building her magnificent culture of thoughts and deeds, a culture which is yours, too, here in America. And civilization could develop and reach unparalleled heights in your country where its prerequisites: Political, economic, and personal freedom were given in fuller measure than anywhere else.

In the fall of 1956 you heard and read of another fight for freedom of the Hungarians. Your reaction was magnificent; you lavishly gave money, clothing, medical help for thousands of refugees all over Europe, for the sick, the wounded, the destitute back in Hungary. The gates of your rich and happy country were opened to many of those who had to leave their homes to save their lives, they were fed and clothed, housed and given work. Yes; you did all this and more, because you are good and warm-hearted, and have been taught to help those who need help.

But did you, or do you now, understand? No, you could not. Nor did we in Hungary when frightful things were said to be going on in Russia in the years between the two wars. All this could, of course not happen in a civilized world. We understand now. We have seen or suffered ourselves the incredible horrors of Nazi persecution—just another aspect of relentless dictatorship—we know all about destroyed homes, dispersed families, concentration camps, cruelty and tortures. Hungary suffered all the miseries of political and military warfare—and when the nightmare was over, when western Europe could, at last, dress her wounds and get a new lease of life, this unhappy country found itself enslaved, as never before for many centuries. It was all very cleverly done, slowly, by degrees, in the course of 3 years, by those well-trained Russians using the most dangerous of all hidden weapons: hypocrisy, lies and promises they never meant to keep, by efficient methods inherited from the czarist secret police.

In 1956 you helped the victims of a desperate bid for freedom of the Hungarian people. Many were saved, thanks to you, but Russian tanks again conquered the land. Thousands are dead, thousands have been deported to forced labor camps, to deadly mines in Siberia and elsewhere. Religion is heavily persecuted once more, free thought and speech mean loss of job, jail, perhaps death. This is the balance for Hungary.

And for you? You will realize that in 1956 one of the last opportunities of curing a steadily growing menace to the civilized world has been missed. Instead of taking decisive steps at a moment when Communist parties were collapsing all over the world, when the Trojan Horses, called Fifth Columns, were rapidly disintegrating, western leaders remained passive because western peoples, and above all, you Americans did not and could not understand. Your wars fought for liberty are too far back, your country has been involved in wars since, but has never experienced the horrors of total warfare in the hinterland.

Last fall a sputnik stunt was a hundred percent success for the Soviet propaganda—1 year after the massacres of Hungary. So are the social activities of elegant, well-groomed Mikhail Menshikhov, the smiling diplomat. Van Cliburn's outstanding talent had to be discovered in Moscow by those who consider themselves to be cultural leaders of the world. And who else but Russians could have a dance group like Moyseyev's?

All the while, secret trials were and are going on in Hungary, and the shocked world has now learned of the execution of leaders of the revolution. Once more facts are speaking for themselves. Are you Americans, who live in a free, democratic country, again going to disregard the sharp weapon of public opinion which is yours by right? Can you still not read the Mene Tekel Upharsim on the wall? We, Hungarians, are no more asking for help; we now warn you to save yourselves. A new tide of tyranny, a brute force is threatening the civilized world, the underdeveloped countries as well as rich and prosperous ones. This is an invasion which a handful of oppressed Hungarians can no more stop, as did their ancestors in former centuries.

War? No. We know what it means, perhaps better than you do. But the cold war we have been fighting now for over 10 years is not peace, and peace cannot be attained by peace conferences staged by those to whom this beautiful word means the death-like silence of a world conquered by them. There is no need to bring the horrors of atomic war on mankind. Just do this: live up to one of your slogans in a slightly different wording. Instead of saying "Trade, not aid" say: "Trade is aid, do not trade."

Do not trade with a country (and its satellites) which is bound to use your substantial credits for means to kill democracy. Do not sit down to talk with representatives of a system based on slavery, forced labor and other medieval methods. Do not negotiate with members of a government which ruthlessly murders all those who want to be free, whose minions arrested Imre Nagy and his group after they had been granted safe conduct on leaving their place of refuge. Which disregarded the age-old custom of never touching an envoy, by seizing Gen. Pal Maleter. See the flaming words on the wall. Think of the incidents of American airmen in Soviet Russia and East Germany. New alarming symptoms can daily be detected by those who know that the international political situation has gotten far beyond the scope of commissions and conferences.

Civilized society does not fraternize with burglars and murderers, it jails them and eventually sentences them to death. Why then try to be friendly with burglars and murderers, just because they were sly and strong enough to seize power over a steadily growing number of human beings. The only way to bring freedom to these unhappy victims, to avoid the worst of wars, is to remember that they cannot and will not start wholesale murder of mankind if they lack the machinery and raw materials they need for armaments. For God's sake: Do not give it to them.

One cannot but be horrified at the idea of Western powers now lifting embargoes on commodities which, very wisely, had been barred for many years from export to the Soviet bloc—you did not and could not understand. But try to understand now, before it is too late for all of us; let us start a natoinwide movement sponsored by all who have learned the bitter lesson: Trade is aid—do not trade.

The Friendly, the Courageous, the Miracle City: Johnstown, Pa.

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SAYLOR. Mr. Speaker, a recent edition of the official publication of the

Pennsylvania League of Cities contains an article entitled "Johnstown, the Friendly, the Courageous, the Miracle City." Because the history of Johnstown is an integral part of the history of the United States, I believe this article needs to be included in the CONGRESSIONAL RECORD.

The story of Johnstown, written by Michael M. Chudy, city assessor and zoning administrator, points out the courage, determination, and industry of a stricken people rising above tragedy to build anew and keep pace with a growing and progressive America. It provides an incentive to individuals and communities alike. Today's Johnstown is a monument to the faith of a resolute and devoted populace, an inspiration to victims of catastrophe.

In asking that this material be inserted in the RECORD at this point, I urge my colleagues to read the tribute to a great city. I also invite you to visit Johnstown, the largest city in my district, during your travels. I am sure you will find its hospitality something that will make you return again and again.

BRIEF HISTORY OF JOHNSTOWN [1]

Johnstown was named after Joseph Johns (Josef Shantz), a native of Switzerland, who at the age of 19 came to this country in 1768. On September 13, 1793, he purchased 249 acres of land, for which he paid 435 pounds, 15 shillings. This parcel embraced what is now the central portion of the city. In 1800 he laid out the village, which then was known as Connumah or Conemaugh Old Town.

Prior to the invasion of the white man, the site of Johnstown was occupied principally by the Shawonese and Delaware Indian tribes.

Johnstown remained largely an agricultural community until the late 1820's, when the construction of the famous Pennsylvania Canal was undertaken and the city began to grow. The canal system of transportation extended from Pittsburgh to Johnstown. In 1852, the Pennsylvania Railroad purchased the canal from the State; and continued operations until 1863, when the canal was abandoned; and the system gave way to the more rapid means of transportation—the steam railway.

The town did not attain any considerable growth, however, until the Cambria Iron Co., the predecessor of the Bethlehem Steel Co., located in this area in 1840, attracted by the vast amount of available timber; and the presence of an iron-ore vein of commercial value in the surrounding hills. Later, augmenting the employment opportunities in this locality, another steel company located here. It is now the subsidiary of the United States Steel Co., known as the Carnegie Illinois Steel Co.

Since that time, the town had a consistent growth; that is, until May 31, 1889, when one of the most appalling disasters in all history befell Johnstown. This tragic flood, which comes to mind when Johnstown is mentioned in any civilized country in the world, cost more than 2,200 lives and a property loss of $17 million. With distinctive pluck and courage, the surviving inhabitants, with the aid of money from all over the world, soon rebuilt the town.

Aside from the great flood of 1889, the history of Johnstown has been for the most part devoid of world-startling events. After the rehabilitation of the town, more and more people moved here. Numerous industries settled here. New business blocks sprang up. More and more beautiful residential districts came into being.

Then came March 17, 1936. Again floodwaters placed Johnstown in the national limelight. When the waters receded 8 persons were dead and property damage stood at almost $41 million. Hardly had the waters subsided when again the Johnstown people began to demonstrate their perseverance and courage. Within a short period of time they had pulled themselves out of the muck and mire and were busily rebuilding the city into the fine modern community it is today. From the wreckage of two major floods, and frequent lesser ones, Johnstown has risen each time as a newer and brighter city.

The people here no longer live in dread of the heavy rains and rising rivers that plagued their valley for centuries. Today Johnstown is flood-free. On August 23, 1938, work was begun on the river channels of the Conemaugh and the Stonycreek Rivers, removing millions of tons of rock and dirt from the beds of the rivers; and thousands of tons of cement was poured to make river walls, rising above the natural river banks. The Federal Government financed this project. Over $8 million was spent in the widening, deepening, and paving of 9 miles of river channel.

Johnstown is principally a steel town. The Bethlehem Steel Co. and the Carnegie Illinois Steel Co. are the two major industries in the area. Within a 50-mile radius of Johnstown approximately 40 percent of the world's best bituminous coal is mined. In addition to these basic industies a goodly diversification exists and is being enlarged as time goes on.

JOHNSTOWN TODAY

Someone once remarked: "Anybody can tear down, but it takes craftsmen to build."

For several years Johnstown's city affairs were hampered by internal discord. Today city council is working diligently, harmoniously,and productively. Public confidence has been restored. The labor unions, the chamber of commerce, all business, service and fraternal groups are in full accord with the ambitious program of the administration.

At one time the city of Johnstown had a $5 million debt. By mid-June 1958, the city will entirely wipe out the last of its bonded debt. Now Johnstown is really ready to move forward—something that was not possible until the financial elements of the municipality were cleaned up.

City council recently let a contract for the preparation of a master plan for Johnstown. This master plan will cover such things as needed public improvements, streets and highways, downtown land use, zoning and land subdivision regulations.

The completion of the master plan is necessary before Federal aid can be gotten for the urban redevelopment program now under way.

Action also has already been taken to eliminate traffic bottle necks in the downtown area. Professional help has been hired to assist local engineers in making a traffic survey, to determine what factors are contributing to traffic snarls, and to recommend the proper remedies.

An authority is now being planned for the completion of the sanitary sewer system and the construction of a disposal plant. The disposal plant will be large enough to take care of the needs of adjoining boroughs and townships.

The administration is planning to purchase substantial parcels of substandard property in the area adjacent to the business section for public parking.

Low wages and long hours of city employees have been improved to bring them in line with private industry—a step that did much to improve the morale and services of city employees. It is further planned to give job stability to city employees, in order to insure employment on the basis of merit and ability, and not on the basis of political activity.

In recent years, personnel and equipment in the police department have been greatly expanded. Johnstown is well below the crime average for cities of her size.

Fire department personnel also has been considerably increased. New modern equipment was purchased. Establishment of a three-platoon system is being considered.

Comprehensive park and recreation programs have been developed.

Action already is being taken looking toward the annexation and consolidation of surrounding boroughs and townships.

Plans are underway for a new municipal garage.

A strong improvement policy has been undertaken for streets and alleys.

Other projects which are now on the drawing board include an addition to the city hall; the improvement of fire hall facilities both through remodeling and new construction.

Aside from these various municipal projects, civic accomplishments have also taken a remarkable spurt in Johnstown.

In 1950 the Cambria County War Memorial was erected at a cost of over $1,500,000. This new arena contains facilities for sports activities and banquet hall.

The Memorial Hospital in 1954 built a $2,500,000 addition to its property. In 1952 the Mercy Hospital erected a 9-story addition at a cost of $2,500,000. The Lee Hospital is now in the process of building a 6-story addition at a cost of $1,500,000.

In recent years a municipal music shell of fine native cut stone was built; conforming in design to the world's best shells.

Within 4 miles of city hall, Johnstown has an airport, which is the fifth largest in Pennsylvania. It is located on 330 acres, at an altitude of 2,280 feet above sea level. Allegheny Airways offers connections with all principal cities.

In 1954, after 5 years of construction, Johnstown's river channel flood-control project was completed. The Federal Government spent $8,670,000 on this project. According to Army engineers, this is the biggest and the best channel improvement undertaken anywhere in the United States.

Since 1926, 1,160 new homes have been erected within the corporate area of Johnstown. These new homes cost approximately $16 million.

During the same period new commercial buildings, and other nonresidential structures were erected to the tune of $25 million.

The Bethlehem Steel Co. in 1956 erected a new general office building costing about $2 million. The steel company also remodeled and renovated its other office buildings at a cost of several hundred thousand dollars.

The city owns a nine-hole golf course within easy reach of the central part of the city. A modern clubhouse was recently erected.

Johnstown has 511 low-income housing units. Recently plans were approved for the erection of 450 additional units at a cost of $6,740,000. All this valuable property will eventually revert to the city, free of all encumbrances.

Johnstown has a million-dollar stadium, which seats 17,000 people.

The elected Johnstown officials who direct the destiny of the city, all have a fine back-

[1] The Johnstown Story was written by Michael M. Chudy, Johnstown's city assessor and zoning administrator. He is also president of the Municipal Assessors' Association of Pennsylvania; Pennsylvania chairman of the National Association of Assessing Officers; and a member of the Advisory Council of the State Tax Equalization Board. He has written several articles on municipal affairs.

ground of civic performance; and well represent the people whom they serve.

Mayor Walter E. Rose is an attorney by profession. Only 5 years after graduating from law school, he was elected to the State house of representatives.. He was majority whip in Harrisburg when he interrupted his term to enter the Navy. He is the only Johnstown mayor ever to have been elected for three consecutive terms.

Daniel J. Shields, director of finance, has many years of municipal service to his credit. He was the youngest school board president in the history of Johnstown. He served as a member of the bicameral council before the adoption of the commission form of government. He served as mayor of the city during some of its most trying times—the depression, and the flood of 1936. He served as member of city city council for three different terms, including the present. He was director of highways, director of public safety, and now director of finance.

Raymond B. Johnson, director of streets and highways, is a newcomer to the Johnstown political scene. However, he brings with him a fine background of civic accomplishments, and business know-how. He is a graduate of Lebanon Valley College and did graduate work at the University of Maryland and the University of Pittsburgh. He was an instructor of history and social science at Cochranville High School. He was purchasing agent of United States Navy installations at Lukens Steel Co. He was also office and sales manager for the same company. At the present time he is owner of the Johnson heating and air-conditioning establishment.

Louis Saylor, who heads the department of parks and public property, is a member of many civic organizations. He has been an alderman for 34 years. For many years he served as city police magistrate. He was president of the Cambria County unit of the Pennsylvania Magistrates Association; and for 3 years he was director in the association of Pennsylvania Squires and Constables.

Raymond E. McDermit, director of public safety, is a retired employee of the United States Steel Co. He was president of the local political action committee; and head of the local United Steel Workers of America. He was a member of the Pennsylvania General Assembly. He had also served as a member of the Johnstown School Board.

James E. Parks, city treasurer, is a pharmacist by profession. He was a partner in a Johnstown meatpacking plant. He is active in many local as well as national civic and fraternal organizations.

Emil C. Schwing, city controller, is an accountant by profession. He was formerly an alderman. He was also a referee of the State workmen's compensation board; and is active in many civic organizations.

STATISTICAL REVIEW

Population (1950 United States Census): Johnstown (corporate limits), 63,232; Greater Johnstown (area within 3-mile radius of city hall), including 10 boroughs and 8 townships), 110,180; city and suburban area (metropolitan district set up by Bureau of the Census), 291,354; Johnstonw marketing area (territory within radius of 30 miles of Johnstown), 450,000.

Area: Johnstown, 5.76 square miles, 3,688.94 acres; Greater Johnstown, 13 square miles; Johnstown marketing area, 1,198 square miles.

Altitude: Business and industrial section, 1,162 feet above sea level; principal residential areas, 1,700 feet; municipal airport, 2,280 feet.

Parks: 15 sites, 598.22 acres; total valuation, $5 million.

Public recreation: Municipal stadium in heart of city, seating 17,000; municipal golf course, 9 holes; Roxbury Park, baseball diamonds, tennis courts, skiing and tobogganing courses, band shell; municipal swimming pool; 16 school basketball halls; $85,000 music pavilion; $1,500,000 War Memorial Arena.

Assessed valuation (corporate limits): Real estate, $74,693,230; tax rate, $15 per $1,000; tax duplicate, $1,053,409; bonded debt, $555,107; cost of government, $2,199,908.

Municipal services: Fire department, 7 stations, 12 piece of equipment, 105 men; police department, public safety building, 15 pieces of motor equipment, 80 men.

Streets: Total street mileage, 94.21; miles paved, 61.5; miles of sanitary sewers, 98.2; miles of storm sewers, 77.5; number of streetcar lines, 6; length of streetcar lines, 24.5 miles single-track, 38.5 miles double-track.

Education: University of Pittsburgh Junior College; Cambria Rowe Business College; Johnstown College of Music; 27 public schools, including Central High School and 3 junior high schools; 11 parochial schools, including Catholic High School; public-school teachers, 393; parochial school teachers, 110; assessed value of public school property, $73,232,115, parochial, $548,000; public school enrollment, 10,000; parochial, 4,500. Greater Johnstown public schools, 49, including 8 high schools; 11 school auditoriums, the 2 largest seating 1,300 and 2,000; total enrollment, 25,000.

Steel and coal: Steel and soft coal are the dominant industries of Johnstown. About 85 percent of the industrial workers of the geographic city are employed in mining and steel manufacture, in secondary iron and steel industries, and in the making of clay products. The greatest resource is low-volatile coal. In the marketing area of Johnstown are mined over 40 million tons of soft coal yearly. This represents about one-seventh of the bituminous coal output of Pennsylvania and one-twelfth of that in the United States. Approximately 35,000 miners are employed.

General information: The major employment for the 130,000 workers in the Johnstown area consists of farming, coal mining and steel making—3 groups which have consistently shown in national surveys as having gained most in income since 1940. The manufacturing and industrial payroll in 1947 was over $191,860,000. Gross farm income is in excess of $34,457,000. Added together, these amounts provide a well-rounded market, averaging yearly in Johnstown over $1,240 per capita in retail sales. Sales Management's 1953 Survey of Buying Power estimated the effective buying income of the Johnstown area to be $364,470,000.

Our Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. BYRNE of Illinois. Mr. Speaker, a most interesting editorial dealing with the subject of the foreign aid program appeared on Monday, July 28, in the Chicago Daily News.

I particularly wish to call attention to the last paragraph of the editorial. It reads as follows:

Any country that wants American capital in developing its productive capacity need only offer honest protection against confiscation and harassment, and private money and skills will flock to the opportunity.

Mr. Speaker, this points up a problem that for al ong time has plagued efforts to encourage private capital to assume part of the burden of our enormous foreign aid program, and thus give some relief to the taxpayers. Industry cannot be expected to risk capital in countries in which the threat of confiscation, expropriation or nationalization exists.

The Government's foreign investment guaranty program falls short of providing the necessary protection. The answer lies in action among the nations of the world themselves.

An important step in this direction was taken last fall at the International Industrial Development Conference in San Francisco, at which the distinguished German banker, Hermann Abs, proposed a world Magna Charta for foreign investment that would seek to protect it against seizure and expropriation. The proposal would reinstitute the international rule of law in the field of foreign investment. It has been received with widespread interest throughout the world. A similar plan was advanced last February by Charles S. Rhyne, president of the American Bar Association, who called for "a world law to protect world investments."

Mr. Speaker, these proposals are worthy of most serious consideration if we desire to encourage private capital to play the dynamic role that it should be playing in the campaign to offset the Communist economic offensive abroad.

Under unanimous consent, I include the text of the editorial in the Chicago Daily News in the Appendix of the CONGRESSIONAL RECORD as part of my remarks:

WE SHOULD TAKE NEW LOOK AT OUR FOREIGN AID GOALS

The House is apparently fighting a losing battle to trim $872 million from President Eisenhower's vast foreign aid request of $3.5 billion. The Senate is solidly supporting the President's plea that the cut would weaken our fight against communism, although he is as completely unable to document this contention as he would be if he also argued that foreign aid would cure cancer.

Inevitably, the Middle East turmoil has been advanced as an additional argument for more aid. The purpose of previous aid to Arab countries, of course, was to prevent precisely such turmoil. But the spenders seem to regard foreign aid in the same way some people look at prayer—if it doesn't work it only shows you didn't pray hard enough, not that what you sought was unreasonable.

The Iraqi rebels used American arms to win their revolution. Our aid to Nasser has hardly turned him into an American firster. Even the Germans, whom we have assisted bountifully, are balking at support of our Middle Eastern adventure.

In brief, men and nations everywhere are acting in what they deem to be their own interest. Where their interest may happen to coincide with ours we are the gainers, but neither men nor nations sell their loyalty or their determination to seek their own advantage.

Foreign aid is undoubtedly being supported by many who are skeptical of its value in choking communism. Many shrewd individuals see great future advantage in developing backward countries to the point of becoming customers for American goods.

A hardheaded program of foreign aid for this latter purpose makes sense. Perhaps the House budget cutters would have more success if they candidly emphasized this purpose of economic assistance, and de-

manded that the aid program be brought into line with this goal.

Such a policy would block the government-to-government form of aid now being followed. It has been shown repeatedly that this folly, at the worst, leads to corruption, and at the best to unwise or wasteful use of the money.

The change in policy, furthermore, would check the use of American money to promote socialism, which—in addition to being an inefficient system for developing a nation—we properly regard as the heart of the Communist ideology.

No better illustration could be found than India, which has received upward of $200 million in direct help, plus large amounts of credit and gift-farm products. Socialism is the declared pattern of its society, and it has been implemented by the nationalization of much of the basic industry.

This can hardly be unrelated to the neutral position of India in the contest between communism and freedom. If this fence sitting so often seems to be neutrality on the side of communism, it is because, ideologically, socialism feels more kinship with the Soviets than with America.

A nation that is hostile to private capital is not going to become an admirer and defender of the American system, and any aid that we extend to give socialism a false appearance of accomplishment merely serves to weaken, rather than strengthen, our position.

Any country that wants American capital in developing its productive capacity need only offer honest protection against confiscation and harassment, and private money and skills will flock to the opportunity.

Address by Hon. James A. Farley, Former Chairman of the Democratic Committee, at Tupper Lake, N. Y.

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include the following address by the Honorable James A. Farley, given at the annual dinner of the Franklin County Democratic Committee at Tupper Lake, N. Y., on July 22, 1958:

ADDRESS BY HON. JAMES A. FARLEY, FORMER CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE AND THE DEMOCRATIC STATE COMMITTEE, ANNUAL DINNER, FRANKLIN COUNTY DEMOCRATIC COMMITTEE, TUPPER LAKE, N. Y., JULY 22, 1958

It is somewhat surprising to me to witness the current rediscovery of the north country of New York State, occasioned by the opening of the St. Lawrence seaway. I say rediscovery because I was born and brought up in the Hudson River Valley which, with the Mohawk and Champlain Valleys, was the acknowledged key to the continent for 200 years. The two giants of Europe, Britain and France, battled for its control even before we were a nation, at fateful Ticonderoga. And in the Revolution, excepting that General Washington succeeding in holding the valleys from West Point to Saratoga, and by force of arms, the two invading British armies from Montreal and New York City, would have crushed out the life of our Nation before it began.

It has been said that the seaway opens what is called the fourth coast of our country. Actually, this so-called fourth coast for us who have lived by its shores is hardly second to the Atlantic coast in being the first coast of our country; a coast which had to be defended in two full-fledged naval battles, the Battle of Lake Champlain and Lake Erie. It was also pointed out, and correctly, that there were new products to be expected from New York's north country. But, though it wasn't mentioned, this region's oldest and most famous product is fiercely independent American men and women. As certainly as Virginia and North Carolina are the parents of Tennessee, the pioneering stock of New York is the forebear of Ohio, Michigan, Indiana, and the upper Middle West.

Now, I think you stand upon new and world frontiers. It is my firm conviction that your boundless energies are about to find new expression, because of the tremendous new tools in your capable hands. More particularly, I predict that the St. Lawrence Valley is on the threshold of becoming one of the historic valleys of the world. As the Nile measures ancient Egypt, as the Tiber the Christian era, as the Mississippi the 19th century, the St. Lawrence will measure the 21st century. Thomas Jefferson's purchase of the whole Mississippi Valley was considered a wild extravagance of fifteen millions. Yet that sum would not buy a city block of St. Louis, Minneapolis, or Des Moines—cities yet unborn. Great cities, great mines, great commerce, and great universities will crowd this valley to the sea. The north country is about to become a tremendous Gibraltar of western civilization.

I, as a United States Senator, would hope not only to accelerate this growth but to see that only one unchanging factor goes with it, the spirit of the people who have maintained it until now.

Now, in this forthcoming development many, many problems will arise and most of them will be of considerable Federal complexion. While it is axiomatic that special location attracts specialized capital, as for instance, oil investment to Texas, this area is of such widely diversified resources that the development will be broad and general. Its general pattern will follow that of the lower Mohawk Valley, from which the city of Schenectady emerged as an industrial giant, rather than that of our early western areas, such as Dodge City, where the principal specialization was cattle.

Permit me, if you will, to outline a few of the aspects. Firstly, the power developed is subject to four jurisdictions—the United States, Canada, Ontario, and New York State. Additionally, the general jurisdiction of New York State will be divided into the concurrent jurisdiction of the counties. This is a formidable array of sovereign powers, each with undeniable constitutional jurisdiction. It has been my experience that the balancing of these various rights exacts the highest brand of statesmanship. In less than expert hands, the duty to govern could easily become the power to paralyze. Accordingly, the problem must not only be estimated in its entirety, it must be so administered.

The problems arising will be not too dissimilar from those arising between the Federal Government, the ports authorities, and the several States. But these, I submit, are matters which in addition to vision in their conception require daily expert attention.

Since the Canadian power is already inadequate for the crying needs of Canada it may be assumed that the American side will feel the impact of tremendous acceleration almost immediately. Here again, the Federal jurisdiction will be almost beyond human comprehension.

Obviously, the seaway itself comes under the heading of navigable waters. Since that law has been widely extended by Supreme Court decision, it may be expected that the Federal interest will extend far inland. It seems to me that concurrent Federal jurisdiction connotes equal responsibility. Since the Federal Government will be a great beneficiary through this development, I think it only fair that Federal credit, through the various appropriate agencies, assist mightily in this development. In point of fact, it will be an enormously profitable venture for all parties; but broad lines of credit, varying from the building of port, river, and canal facilities to very low discount mortgage rates for home building will be some of the channels in which the Federal Government can assume its fair share of the expansion.

I might say that it has been my experience that this type of investment is almost without parallel in its success. The development of previously unproductive areas, aside from the self-liquidation features of the improvements, yields in income taxes alone, and independently, resulting from the general growth, in returns, many times the original investments.

The fact is that with an international waterway in the very center of such unparalleled natural resources a mushrooming of population may well be expected. In this connection, it is to be noted that the great natural gas reserves of both Canada and the United States are approaching the region in unprecedented volume. Further, north of the border, the American pattern is being revised; the fuel is being brought to the ore, not the ore to the fuel. Centers of great industrial energy invariably attract the human skills to guide them. If, then, we may expect a tremendous development of heavy industry, never was there greater premium upon careful planning. More than conservation of national resources, we must plan for the lives of the population to come. Industrial valleys, from the Saar to the Monongahela, can be ugly and uncomfortable places for human beings to live unless full and adequate precautions are taken. In this facet of the problem, as a Democrat I have always adhered to a fundamental principle, that the principal resources of any area are the people who live in it.

This new acceptance of challenge by the north country, and the many insistent problems which will arise, necessitates a definition of the role of United States Senator. A United States Senator has, of course, a national status. The Constitution places in that body, as a body, a great responsibility in the conduct of the Nation's affairs, particularly foreign affairs. But at the same time, the representative nature of the American Republic is unimpaired; if, indeed, we be the United States then a Senator is the ambassador of his State to the Federal Government. Now, it is a basic tenet of American foreign policy that there be a continuity of that unexampled testimony of mutual trust and friendship with our good neighbor to the north, Canada. Since you people of the north country are engaged in an unparalleled interstate and international enterprise, through New York State and the Province of Ontario on power, and the two nations on the seaway, it follows that few people in public life will have greater opportunity of serving both State, Nation, and the American people than the next United States Senator from New York. I believe that not only a mighty valley, almost beyond the comprehension of man, is about to be realized, but that a new and tremendous example of international cooperation by its extraordinary accomplishments, will set an example of cooperation which may well light the way to the permanent peace of the world. The Rhine, the Danube and the Nile may never again run blood when this noble interstate and international enterprise functions. In my opinion, its moral promise is even greater than its industrial potential. I confess that as a man who has lived by its streams and in the shadow of its mountains that the challenge of the north country is one of the important rea-

sons why I wish to represent it in the United States Senate.

I have never minced words. My reason for grateful acceptance of your invitation to speak to you is to advance for your consideration those reasons for which I hope you will wish me to represent you.

In over 45 years of public life I have seen and taken part in the prototypes of these tremendous developments before. Armed only with the validation, territorially, of Jefferson's expansion, I, as national chairman of the Democratic Party, was entrusted with the task of transmitting that expansion industrially through congressional legislation. I have had more experience than average in dealing with these vast projects—experience ranging from the Matanuska Valley in Alaska to the huge reclamation projects in the South and West. We dammed the rivers; we irrigated the lands; we ran cheap power into the farmers' homes, to an ear-splitting din that we were Socialists or Reds. History has already rendered its verdict. The irrigated lands alone have more than paid for the dams, aside from the money return of the power. That great and successful experiment, the TVA, has transformed the energy of lonely and isolated areas into the raised beat of the mighty pulse of the Nation. Ironically enough, if Oak Ridge and its atomic production be any index, it is the very bulwark of defense of the free-enterprise system, which was slandered by its shortsighted opponents as scheduled to destroy. I believe the Democratic Party has always stood for conservation by use. Having seen, as head of the party and as a Cabinet officer, the desert blossom and the hidden Appalachian valleys pour forth their undeveloped wealth, I should be less than human if I did not wish to see this translated to my own New York State.

A government in the final analysis is the chief means of expression of the will, character, and energies of its people in terms of the hopes they hold for a better world for their children. Great problems, as well as greater accomplishments, are on the threshold of the north country, and I hope to be a part of it as your United States Senator.

Coyness has never been part of my nature. I have held many public offices, but I never expected my fellow citizens to pine away if I showed indifference, nor did I engineer synthetic draft movements, as a means of compelling action I yearned for in the first place. The office of United States Senator is far too important to go begging to the door of any man. It is the strongest bulwark in the American system of government. From the time I was town clerk of Stony Point to my term as Postmaster General and chairman of the national committee, I never patronized the position I occupied or pretended that it was something I didn't want. I wanted the positions I held and I took off my coat and worked for them. I am of the opinion that it is a reflection on the common sense of the American people and the majesty of public office to do otherwise.

Neither General Washington, nor Presidents Jackson, Lincoln, Cleveland, Wilson, Franklin D. Roosevelt, and Truman ever apologized for their desire to serve the American people, nor do I now. I have always desired to serve my country in any position where I felt I could do so best. I believe that I can render real service to our State and country and to the free world by representing New York in the United States Senate. I hope I shall have your support toward that end.

Before I conclude my remarks, I should like to talk about the New York State situation. The fateful banks of the Hudson, where I was born, are woven deep into the fabric of our Nation. From that Hudson River Valley have come governors and Presidents. It affords me the deepest personal satisfaction that this tradition of the valley is unflagging and all of us who have lived there or live there now have much reason for additional pleasure and pride because that very area produced our great Governor, Averell Harriman. Governor Harriman has given the people of the State of New York an outstanding administration. His wise decisions and just conclusions, his sound and humane policies, have all followed in the tradition of Govs. Alfred E. Smith, Franklin D. Roosevelt, and Herbert H. Lehman.

I have no doubt that Governor Harriman and his associates on the Democratic State ticket will be elected next November. But that is not enough. From now until the polls close on November 4 everyone here tonight and thousands like you in every county in the State must work continuously to the end that this victory for Democratic State candidates will be comparable to those of Smith, Roosevelt, and Lehman.

As certainly as I reported to Governor Roosevelt in November 1930 I report to you tonight that the call to our party is coming again from the Nation. From your hearts must come your answer, as Democrats and as Americans.

Industry Is Providing Leadership for the Future

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the National Defense Education Act of 1958, H. R. 13247, will impose new heavy financial obligations upon the Federal Government. All of us certainly are in favor of assisting worthy individuals who wish to embark on a scientific career. There can be no question but that America's greatest asset is trained and dedicated manpower. Our schools and colleges which train the engineers, scientists, and managers of tomorrow are in a sense the most important suppliers to both American industry and the Federal Government.

However, before we authorize a program of Federal scholarships 100 percent greater than President Eisenhower recommended, it is well to review some of the existing efforts to assist worthy students in the development of higher education which are now sponsored by private enterprise.

Recently I was gratified to learn of the support which has been given to the Nation's liberal arts colleges, science and engineering institutes, public and private universities, medical schools, other educational associations, and groups by the United States Steel Foundation, Inc. This foundation was established by the United States Steel Corp. It shows that industry is ready and willing to assist in training tomorrow's citizens. In fact, it has already taken on the job.

Under leave to extend my remarks in the RECORD, I include a statement of the activities of the United States Steel Foundation, Inc.:

United States Steel Foundation, Inc., announced grants of $2 million to 655 of the Nation's privately supported liberal arts colleges, science and engineering institutes, public and private universities and medical schools, and to several educational associations and groups.

In announcing the foundation's 1958 program of aid-to-education, Roger M. Blough, chairman of the board of trustees of the foundation, said: "The action of the trustees represents an effort to provide assistance to as many institutions as possible and to help maintain the vigor of the leading private institutions through substantial grants. The trustees also sought to allocate available resources so as to best serve the changing requirements of higher education and to provide, to the extent feasible, continuity of aid. Moreover, they hoped to encourage quality improvement of education and provide opportunity for individual development of scholars through fellowships."

In furtherance of these objectives, the foundation's seven-part program included:

I. OPERATING GRANTS, $630,000

Operating aid was afforded the 451 accredited 4-year institutional members of all the State, regional, and national liberal arts college fund-raising groups in the amount of $458,000. These fund-raising groups, Mr. Blough emphasized, have been supported since this foundation's initial program in 1954 and the trustees have been impressed with their continued growth. The sum of $88,000 additionally was provided for 80 selected nongroup colleges. Forty-two universities, science and engineering institutes received operating grants totaling $84,000. Although all of the operating grants were unrestricted, the trustees expect that most of the operating funds will be applied toward teaching improvement, faculty, and staff development and incentives.

II. CAPITAL GRANTS, $950,000

After designating $335,000 of the authorized total capital payments for prior commitments, new capital or major grants amounted to $615,000. Of the $615,000, the sum of $455,000 covered 28 grants, ranging in size from $5,000 to $20,000, for liberal arts colleges, women's colleges, regional universities and colleges, and engineering schools. The 28 institutions included were Dartmouth, Earlham, Wooster, Reed, Redlands, Colgate, Union (New York), Willams, Bryn Mawr, Wellesley, Barnard, Sweet Briar, Smith, Mills, Clark, Massachusetts), Temple, Susquehanna, Assumption (Massachusetts), Athens (Alabama), Miles (Alabama), Worcester Polytechnic, Bucknell, Brooklyn Polytechnic, Pratt, Clarkson Technical, Bradley, Rose Polytechnic, and Norwich. Of the balance, the sum of $100,000 represented initial provision for new commitments to five private universities and science institutes, as part of a program of assistance begun in 1955.

Under a program of assistance to leading centers of learning which is subject to periodic review and approval, financial support for a number of such institutions is planned for a term of years on a sustained and substantial basis. This replaces, with respect to individual institutions, consideration of the separate needs of departments, divisions, and other units, or the need for capital as contrasted to the need for other purposes. The sums becoming available will be for the unrestricted use of recipients for major requirements as they deem most prudent and timely.

For a 5-year period, and payable in installments or otherwise as determined, a total of $100,000 each was committed for the following institutions: Massachusetts Institute of Technology, California Institute of Technology, Cornell, Johns Hopkins and Harvard Universities. These 5, together with 9 other universities—Chicago, Columbia, Northwestern, Pennsylvania, Stanford, Vanderbilt, New York, Princeton, and Yale—all of which

have been designees of major grants in recent periods, are among the influential leading private institutions which, thus far, have been recognized under the program.

In commenting on the foundation's major grants, Mr. Blough said: "Such aid, when provided by many sources, could well be the means of assuring for the future of America those intellectual conditions required to meet both our hopes and responsibilities. For the tasks ahead, we shall need both our great public and our great private institutions; and since the public universities have substantial regular sources of income to cover many of their needs, providing support for the leading private universities becomes in these times an urgent concern.

"The leading universities and science institutes are more than regional in their import. They provide national and international leadership; they are the pace setters for educational standards; they contribute heavily to the advance and use of knowledge; they are an abundant source of teachers and quality teaching; they train many for public affairs; they offer preparation for all the professions; they perform many other basic tasks for the Nation and the world. Since the leading private universities and institutes have outpaced, through extension of their services, their traditional sources of support, our times require that new corporate and other donors must come forward with reasonably sustained unrestricted aid in dollar volume generously designed to help close the gap between their resources and their needs."

III. TEACHING AID, MEDICINE, $110,000

Each year the trustees have authorized sums for the advancement of programs in one or more pioneering or especially difficult teaching areas. This year sums were provided for advances in medical teaching. In addition to $75,000 of sustaining aid for the member institutions of the National Fund for Medical Education, 2 institutional teaching aid projects were assisted. One was for the general teaching program of the new Seton Hall College of Medicine and Dentistry in the amount of $25,000 and the other, for $10,000 as part of a matching grant program, was for teaching of industrial medicine to undergraduates at the Yale University School of Medicine.

IV. STUDENT AID (FELLOWSHIPS), $150,000

The foundation's graduate study program, generally at the doctoral level, was expanded by a total of 12 new fellowships, bringing to 42 the number of such 2-year study grants available through designated public and private institutions. Each foundation fellowship carries maximum benefit of $7,200, inclusive of a marital supplement allotment. Fellowships are available in the sciences and humanities at the following institutions: Social sciences—California, Chicago, Amos Tuck School of Dartmouth, Harvard, Indiana, M. I. T., Michigan, New York, Northwestern, Pennsylvania, Pittsburgh, Purdue, Stanford; physical and other sciences—Alabama Polytechnic, Alabama, California Tech, Carnegie Tech, Cornell, Duke, Georgia Tech, Illinois Tech, Illinois, Iowa State, Johns Hopkins, Lehigh, Michigan State, Minnesota, Ohio State, Pennsylvania State, Southern California, Syracuse, Vanderbilt, Virginia Polytechnic, Yale; humanities—Colorado, Columbia, Fordham, Notre Dame, Princeton, Texas, Tulane, and Wisconsin.

V. PROJECTS AID GRANTS $50,000

Project aid was in three categories: (1) Assistance of $30,000 was again made available to about 100 college libraries, for collections and other requirements, via the Association of College and Reference Libraries which, through a jury system, makes the specific awards upon institutional application; (2) assistance in the orientation process for foreign students resident or traveling in America under reciprocal arrangements, via grants of $5,000 each to the Institute of International Education and the Eisenhower Exchange Fellowship Program; and (3) assistance totaling $10,000 to other projects in specific areas. The latter includes grants to the American Council of Learned Societies to assist its publication of scholarly works activity, aid for the general program of the Humanities Center, headquartered at the University of Massachusetts, and support of the future scientists program of the National Science Teachers Association.

VI. QUALITY IMPROVEMENT GRANTS, $35,000

Grants were authorized for administration through the Association of American Colleges to those institutions affiliated with the Council for the Advancement of Small Colleges. These 60 colleges are not yet fully accredited but seek to provide improved quality of community service. Grants made under this program in earlier years have assisted certain colleges to become fully accredited regionally.

VII. ASSOCIATION SUPPORT, $55,000

Recognizing the important roles, as to both educational objectives and fund raising, performed by certain key associations and groups, the trustees this year increased the total of such support over the prior year. A second annual grant of $25,000 was made to the American Alumni Council for a plan of awarding monetary prizes to stimulate alumni giving as well as for its general activities. The value of the activities of the Association of American Colleges and the American Council on Education also was recognized in grants of $5,000 each for general or project use. The national headquarters of the 39 State and regional liberal arts college fund-raising groups (operating as the Commission on Colleges and Industry) also was granted $10,000. The important function of the 650 public and private junior or 2-year community colleges was recognized by the trustees with a grant of $10,000 for research by the American Association of Junior Colleges.

No additional general aid-to-education grants are scheduled by the foundation for 1958. Notification has been given to all participants in the program.

Retiring Secretary Folsom Calls Attention to Needs in Fields of Education

SPEECH

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, July 28, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, I should like to call to the attention of my colleagues a recent statement by the retiring, and much respected, Secretary of the Department of Health, Education, and Welfare, Marion B. Folsom. Mr. Folsom urged Congress to act now, in the closing weeks of this session, on the bill H. R. 13247. He called attention to the emergency needs in the field of education which underline the need for action, and urged all who really want to improve education to unite in vigorous support of action now.

Mr. Speaker, it is hard to argue with these sentiments, and many of us hope that legislation can be enacted at this session. The need is pressing, and the opportunity for action still exists. Nonetheless, unless immediate steps are taken there will not be sufficient time for legislation to be enacted.

On July 2, almost 4 weeks ago, this bill, H. R. 13247, was approved overwhelmingly by the House Education and Labor Committee. Unfortunately no progress has been made since then. The Rules Committee late last week was reported as willing to hold hearings, but as of now no date has been set for hearings. Unless a rule is granted and the House can be given an opportunity to consider this legislation, nothing will materialize.

A subcommittee of the Senate Committee on Labor and Public Welfare has just this week reported out a similar bill, but one containing provisions different from the House bill. Even if this body should pass the bill approved by our committee, the other body is likely to desire certain changes in the language. That obviously would necessitate a conference committee, with almost certain delay inevitable.

Time, therefore, is obviously of the essence, Mr. Speaker. The legislation involves a field of considerable complexity, and differences of opinion about suitable action are to be expected. For these reasons, if we hope to achieve enactment of legislation, we must take prompt steps to bring this about.

The Soviet's launching of their sputnik last October was followed by many demands for improvements in our own educational system. Surely the need for action is still imperative. If Soviet technological advances prove nothing else, they should make us aware that we cannot afford to ignore the inadequacies of our own educational system. There may be no cause for panic, but surely there can be no excuse for complacency about our educational deficiencies.

Views of Union Members on Labor Legislation

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include another series of comments which I have received from individual union members. I believe the Members of the House will find these comments on possible labor legislation to be of considerable interest and will serve to give the Members some indication as to the feelings of individual union members.

Our labor laws: A State without the right-to-work law is nothing but a Socialist State and is fast on the way to communism. In my opinion a good union member cannot be a good Christian and a good Christian cannot be a good union member. A good Christian is a good citizen but a good union member resorts to mob violence when it suits his purpose and that is anti-Christian and antilaw

and order, and is anti-Americanism. (Machine operator.)

We need unions but we need good, honest leaders with the right understanding of the businessman's problems.

Most union leaders try to instill hate of the men for management. (Patternmaker.)

Under labor legislation, I think something should be done to curb Walter Reuther and others of his like. In my estimation, he and the other labor leaders with their harebrained theory of economics are responsible for business conditions as they are today—a Lenin of the labor movement, one might say.

As to unions, I think all elections, great or small, should be balloted in secret with the Federal Government officiating over them to insure an honest vote of the working man, and that "we" vote on whether "we" want the unions to deduct money for strike funds and other assessments. This deal where a group of delegates whom we don't even know take a vote on whether we pay $10 a month out of our check for a strike fund, I am against. I personally am against such unconstitutional voting by a few in the unions.

We can vote for the President of the United States but we can't vote for the president of our labor union. (Lathe operator.)

I believe that unions should have a certain amount of control imposed on them just the same as management. I believe that as sure as management owes certain things to labor, labor owes as much or more to the company he works for, and the union owes more to its members. Unions should be made to account for the money they receive. In regard to unions in politics, I feel that a Republican shouldn't have to contribute to the Democratic Party. When I was a member of the CIO I had to contribute to the PAC and Mr. Hillman, with whom I disagreed. There was no way to get out of it because when we signed up for the union we had to agree to let them deduct our dues and any special assessments through the payroll department. Now I belong to the teamster union local, and, although I believe in unions, I do believe they should be restricted, that their power should not get out of hand. (Truckdriver.)

Vacant Beds in Veterans' Administration Hospitals

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1958

Mr. TEAGUE of Texas. Mr. Speaker, the attached editorial from Army Times, Vacant Beds and the VA, accurately sets forth the nature of the problem confronting the House Veterans' Affairs Committee. The committee does not agree that the present law regarding the use of Veterans' Administration facilities for the care of eligible veterans is inadequate; nevertheless, it is our intention to seek enactment of such additional language as is necessary to bring an end to the outside interference which is now prohibiting Veterans' Administration from carrying out the policies set forth by Congress regarding care of veterans in Veterans' Administration hospitals.

VACANT BEDS AND THE VA

Veterans' Administrator Sumner Whittier, in his several appearances before the House Veterans' Affairs Committee to date, has failed in his attempt to shift the blame for the unavailability of some 5,000 VA hospital beds from the Budget Bureau to Congress.

In his opening remarks to the committee last week, the Administrator declared that the beds in question were not withdrawn at the direction of the Bureau "or at anyone else's direction."

He told the committee that "the beds were just not withdrawn at all," explaining that most of them have been in the system since certain hospitals were taken over from the Armed Forces, and have never been in use.

The Congressmen heard the agency chief tell how the vacant beds, which veterans' groups and lawmakers feel should be used to the maximum, "have been in standby status for many years, and their inclusion in VA rated bed capacity gives a distorted picture."

But sympathy for and acceptance of the Whittier thesis, based on his stated reasons why the beds aren't used, is decidedly lacking on the part of the committee members and other Congressmen who have come to the hearings to issue regional complaints and learn the facts.

The legislators have not challenged Whittier's contentions that in many hospitals it is difficult to recruit adequate medical help to handle increased patient loads, and that construction or maintenance developments force shutdowns and transfers. But his third point—that the vacant beds are not required to meet the current operating plan—has stirred up a veritable hornet's nest.

In an elaborately prepared statement, complete with charts and diagrams, the agency chief has sought to show the committee that the real bone of contention must be resolved through congressional action in writing more specific policy to guide VA in the future. The differences between rated bed capacity and operating bed capacity provide the proverbial fly in the ointment, Whittier contended.

Regardless of VA's documentary of why the controversial beds remain closed, and its attempt to alleviate the pressures by charging that misunderstanding is the key to the situation rather than differences of opinion, one fact remains outstanding, and it has yet to be denied.

That is that there are 25,144 veterans on the admittance waiting list, almost 5,000 beds gathering dust, and that a quarter of these ex-GIs could be accommodated if VA made a concerted effort to bring this about.

The House committee has listened patiently to VA's official explanations, and it has given the Administrator and his advisers every possible avenue for elaboration and recommendation. But the Committee obviously hasn't accepted the agency's statistical doubletalk as justification for keeping the beds empty; and the Budget Bureau, with its tight hold on the purse strings of appropriations, is more clearly than ever the real culprit.

In his effort to illustrate the general accord between the Budget Bureau and VA since he took over 7 months ago, Whittier said that if he were in disagreement with a policy of the Bureau "on a matter I considered vital, I would not hesitate to take my case beyond them."

The only possible conclusion to be drawn from this matter-of-fact statement is that he hasn't, up till now, considered the vacant beds as being sufficiently vital to warrant carrying the matter to the highest forum—the White House.

Committee members may well agree, once the hearings end, that in light of the projected rise in non-service-connected ailments among veterans, new legislation is most advisable so as to spell out in specific terms how far VA should be prepared to go in coping with the expected patient increase.

The wording of the law is indeed loose in this respect now, and Whittier's appeal for specific language to solve what will undoubtedly prove a headache to future administrators is a valid one that should be acted upon early in the next Congress if not in this one.

But for the present the issue revolves not around 1986, but 1958, and how to open beds which aren't doing anyone any good, and can't be allowed to grow rusty because someone's statistical analysis shows they're not needed.

VA's first responsibility is to solve the present problem so that 5,000 eligible veterans can receive the medical care they need and Congress intended them to have.

Charles Porter, Ambassador of Good Will

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mrs. GREEN of Oregon. Mr. Speaker, from time to time I have sought to bring to the attention of my colleagues some of the press comments on the reception received—the good will generated—by Mr. Charles Porter's recent visit to Caracas, Venezuela.

Under unanimous consent, I include in the CONGRESSIONAL RECORD an editorial from the Louisville (Ky.) Courier-Journal for Sunday, July 13, 1958, entitled "The Kind of Men the House Needs":

THE KIND OF MEN THE HOUSE NEEDS

Representative CHARLES O. PORTER, an Oregon Democrat, has just made a trip—a triumphal trip—to Caracas, capital of Venezuela. The warmth of his welcome was in sharp contrast to Vice President NIXON's reception in the same place in May. The difference was no fault of Mr. NIXON's. It simply happened that upon his unfortunate and, in this case, blameless head were visited the longtime sins of United States official policy in dealing with South American dictatorships, including notably Venezuela's recent and hated Jimenez.

It happens, on the other hand, that Mr. PORTER personifies in the Latin American mind the strong feeling that exists in North America against any brand of political tyranny. As a member of the House, Mr. PORTER has busied himself in behalf of the liberties of peoples under the heels of such heels as—for a conspicuous current example—the Dominican Trujillo. The Oregon Congressman has won a hemispheric reputation as a friend of man, and thus in Venezuela one popular ovation after another.

When a member of Congress wins international celebrity, he is usually a Senator rather than a Representative. The Senate, which must ratify treaties, has a special international interest. But for many reasons the members of the House, whose powers profoundly affect all of our world relations, ought not to neglect the field. The good will Mr. PORTER has won for his country abroad is excellent evidence.

Thus we are glad that Chester A. Bowles will apparently be the Democratic nominee from a Connecticut district where, judging from history and current events, a Democrat ought to stand a good chance this year. Mr. Bowles, a former ambassador to India, has experience that would make him an ideal member of the House Foreign Affairs Committee. At this distance we cannot be presumptuous enough to advise the voters of the Second Connecticut Congressional District. But we are free to hope, in the national interest, that so superbly qualified a man as Chester Bowles is elected.

The House needs more Porters—and more Bowleses.

Hon. Amintore Fanfani, Prime Minister of Italy

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. MACDONALD. Mr. Speaker, the Honorable Amintore Fanfani, Prime Minister of Italy, arrived in the United States yesterday on a state visit. The Prime Minister will be engaged in discussions with the President, Secretary Dulles, and other important representatives in our Government.

Last year it was my great privilege and pleasure to personally meet and visit with our distinguished visitor who represents a proud and a free people. Premier Fanfani has always manifested his stanch friendship for the United States and continues to do so. I realized after talking with this great statesman that his loyalty to the democratic ideals in which we so strongly believe is of the very highest. He truly represents a people who are determined to remain free. I am very pleased that he is making this visit to our country because I feel that he will make a great contribution in suggesting ideas to ease the social, economic, military, and political problems causing tension in the Middle East and throughout the world. His support of the United States was quick, unequivocal, and solid during the most recent flareup in that section of the world.

Mr. Speaker, the Boston Herald published in their July 26 edition, an editorial which points out the importance of Premier Fanfani's visit to the United States. I agree wholeheartedly with this timely editorial and wish to take this opportunity to bring it to the attention of my colleagues in the Congress.

The editorial follows:

VISITOR FROM ITALY

The much ballyhooed visit of Soviet boss Nikita Khrushchev to the United Nations headquarters here has tended to overshadow another and more welcome international visit.

Premier Fanfani, of Italy, has accepted an invitation to confer with President Eisenhower and Secretary Dulles in Washington next Tuesday and Wednesday, and the visit is expected to draw the governments of the two countries even closer together than they now are.

Although Mr. Fanfani has been in office only a few days, he is the true heir of Alcide de Gasperi, the great Christian Democratic leader who brought Italy into the western alliance and established her firmly in the course she has followed ever since.

Opponents of the new Premier have been urging a more neutral line for Italy in the struggle between East and West. They have said that the great powers were taking Italy for granted and that a show of independence would strengthen her world position. Mr. Fanfani, however, has stood firm, and the Washington invitation on the eve of the summit talks has vindicated his position.

Washington is right to cultivate this spokesman of Italian liberalism, as it is right to cultivate Italy, a key partner in the Atlantic alliance. The Communists, who, with the left Socialists, control a third of the Italian Parliament, have not given up hope of subverting this western bastion. Mr. Fanfani, with his youthful energy and zeal for social reform, has a good chance of wooing the Socialists away from the Reds and providing real stability at last for a Rome government. This in turn would mean added strength for NATO and for the free world cause in general.

We should encourage the Christian Democratic leader in every way we can, and we should also listen to what he has to say about the Middle Eastern situation. He has been studying it closely and he may well have some ideas we could use.

Mr. Fanfani is a welcome visitor here, as his predecessor was. May his talks be fruitful.

Nedlog Co., of Chicago, Typifies Small Business Progress

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SHEEHAN. Mr. Speaker, on Monday, July 28, Mr. Abe Golden, president of the Nedlog Co., of Chicago, presented Congressman WRIGHT PATMAN, chairman of the Select Committee on Small Business of the House of Representatives, with a gold bottle cap to commemorate the billionth bottle of fruit drink which his firm had just produced.

In his remarks to Congressman PATMAN, Mr. Golden stressed the idea that the Congress must expand its attention to small business.

Mr. Golden's remarks follow:

Congressman PATMAN, it is a great honor for me to meet you and be able to present you with this small token—the gold bottle cap from the billionth bottle of fruit drink which my firm has just produced.

It seems to me that while this achievement is minor when compared to the output of our industrial giants, this billionth anniversary for the Nedlog Co. is a symbol for all of us of what it means to be an American.

Mr. Congressman, let me tell you a little about how this anniversary came about and what it means to me, the son of a poor immigrant. This is a story that could not come true anywhere except in this great country of ours.

I was born, of Polish immigrant parents, on New York's East Side. As a child, I helped my father with his pushcart which earned our family its meager livelihood. When we moved to Chicago, it was still with the pushcart, but we found opportunity such as no other nation could ever offer.

Over the years, I was able to save up some $500, and in 1930—even though we were in the middle of a real depression—I was bold enough to start a small beverage firm, manufacturing a noncarbonated fruit drink.

We have been able to prosper over these past 28 years, and now have reached the point of production which this bottle cap represents. This is not so much my personal achievement as it is a symbol of how small business can develop in these United States. Although there have been many great lawmakers, you, Mr. PATMAN, have been the guardian angel, trying to protect the best interests of millions of small-business men who represent the backbone of our economy.

Spurred by such lawmakers as you, our Government for many years has focused its attention on the importance of small business to the Nation's welfare.

Certainly we hope that you and others like you will continue to be active in this work. For it seems to me that we will need more of your help in these days when the trend to bigness seems to have invaded every field: Our cities are getting bigger; giant shopping centers dot the countryside around them; in almost every industry a handful of leaders have all but blotted others out of the picture. Yet there is no doubt that the small town will always be a vital part of our national life, and the small-business man will continue to contribute his vital part to our national economy.

The Congress, I think, must expand its attention to small business. With leadership like yours, I hope it will consider some measures which seem to me, as a businessman, to be a vital, six-point program, needed if small business is to continue making its contribution to the Nation's overall welfare:

1. Concerted action by the appropriate Federal agencies, bolstered by whatever legislation is needed, to fight new attempts at evading long-standing statutes which bar monopolies and collusion. No matter how these combinations are concealed, they must be uncovered and dismantled before they swallow up their smaller, independent competitors.

2. To aid small firms which have occasion to seek financial aid, the machinery of the Small Business Administration should be geared, I believe, to provide speedier action. While my firm has never needed such assistance—and I don't foresee that we will—I understand that many firms which have needed financial assistance have been hurt by long delays.

3. Field offices of the Small Business Administration should be staffed with consultants and experts in management techniques, accounting, production methods and the like, who could actually go into a manufacturing plant which needed their advice and help to solve on-the-spot problems.

4. Formation of a pool from which small firms could draw the electronic calculators and other equipment which no one, small plant can afford to maintain, but which would be invaluable in a clearinghouse arrangement. Such physical assistance as this, incidentally, seems a natural extension of the thinking behind the Government's advisory program for small business, and it is needed to bolster that activity.

5. Tax relief, in the form of attention to small business lest it be lost in the shuffle of any tax realinement. Revisions are needed which will balance the small firm's tax contribution in comparison with that of large industry. As Americans, we are willing and anxious to support our Government, but we do not want to do so on the basis of a tax structure weighted in favor of the giants in the business world.

6. Continuation and expansion of Federal efforts to coordinate Goverment needs with the capabilities of small firms, many of which offer a flexibility in production which their larger counterparts cannot achieve. For this

reason, they can often fill Government contract requirements most expediently and economically if information continues to be available as to Government needs; certainly the cataloging of small business facilities is, also, a vital activity in terms of our national defense.

These are some of the things we hope for, Mr. Congressman. They would help insure that a man can start a business on a shoestring, as I did, and still hope to succeed to the point of being able to pay his employees adequately, to provide them with some type of future security, to send his youngsters through college and—if he's fortunate—to reach the kind of milestone which this billionth bottle represents to me.

Thank you for your time, sir, and your interest in our problems. You have been for years a real inspiration and hope to small-business men, and I sincerely hope you will be able to continue this important work for many years to come.

Congressman PATMAN responded to the presentation as follows:

Mr. Golden, I am deeply touched by your tribute. And I am honored to take part in celebrating your achievement—Nedlogs. I know that such an achievement does not come easy.

It proves again that individual initiative is the greatest resource this country has; and our future strength—both our economic strength and, I think, our moral strength depends upon what we do now to keep opportunity open for independent enterprise.

We have a great capitalistic system in our country and that is the system we want to keep. I, too, am disturbed by the trend toward giantism, because we all know that this trend stifles individual initiative and even shrinks our freedoms.

We have not always done everything we should to safeguard equality of opportunity for the independent businessman. But progress is being made in this direction, and there are signs of a growing recognition in Congress and on the part of the people that steps to preserve opportunity must be taken, and taken promptly.

For example, just in this past session, Congress has taken at least three important steps to help small business. It made revisions in the Federal tax laws to remove some of the important discriminations and hardships which these laws were placing on small firms. In this session, Congress also passed legislation to make the Small Business Administration a permanent agency of the Government, and gave it increased authority and money to assist small firms.

And, most important of all, Congress has taken a landmark step to assist in the creation of a new private financing system which will give small firms access to venture capital. This step is in the best tradition of our Federal Government in opening new frontiers to private enterprise. Certainly, we are not a capital-short Nation. Yet for a Nation that is determined that the capitalistic system will outperform and outlast all others, we have been badly remiss in allowing small business to become capital starved. Where is the market where small firms may obtain equity capital and long-term loans such as big business obtains in the control stock and bond markets? There is none. But Congress is now well on the way to correcting this, and this correction will be made in the free-enterprise way—which is to assure no one that he will succeed, but to make sure that everyone has an opportunity to succeed.

These steps do not go as far as they should, but they are long steps in the right direction. Together they make up the most substantial accomplishment for small business that any one Congress has made in my 30 years here. This is most encouraging. It shows that Congress wants to maintain an opportunity for small business, which means that the people at home want this.

Mr. Golden, I accept this gold cap symbolizing the achievement of your small-business firm with all humility. It is accepted as the symbol you present it to be, what opportunity for independent enterprise means to America.

Army Salutes Anniston

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. ROBERTS. Mr. Speaker, the Army's high award to civilian groups has been presented to the Anniston, Ala., Chamber of Commerce's military affairs committee and to the Anniston Star.

Col. William T. Moore, commanding officer of Fort McClellan, at Anniston, presented special certificates of achievement to the two groups in behalf of Secretary of the Army Wilber M. Brucker, in ceremonies at the fort last week.

Receiving the awards were Col. Harry M. Ayers, publisher of the Star; Joe H. Rutledge, president of the chamber of commerce; and Marshall K. Hunter, Hunter, chairman of the military affairs committee.

These awards were kept secret until the time of presentation and they were received by a surprised body of men. However, it is no surprise to those of us who know these men that they should be singled out for this high honor.

In Anniston, there exists a close cooperative spirit between the civilian and the military communities. In this fine city there is exemplified how both civilian and military personnel can live and work in harmony and cooperation.

Of course, the outstanding daily newspaper and the active and alert chamber of commerce have had much to do with this, and it is fitting that they were saluted.

The Star and Publisher Ayers were cited for "outstanding and dedicated service to the United States Army and more particularly Fort McClellan, Ala., in a concerted effort to enhance the prestige of the military service and to further public understanding of the Army and its role as a member of the United States defense team."

EDITORIALS, REPORTING LAUDED

Through editorials and factual and fair news articles, the Anniston Star has aided the commanders of Fort McClellan in successfully accomplishing the mission of the installation and it has been a most effective instrument in furthering and maintaining a harmonious relationship among the citizens of Anniston, its industry and the military.

The citation also noted a special edition of the Star in 1955 upon the dedication of the Women's Army Corps Center and support of the Armed Forces Day celebration this year.

The Military Affairs Committee was cited for "its devoted interest in the progress and accomplishments of Fort McClellan and "invaluable assistance to commanders of that installation by its vitally important work of assisting in obtaining housing for military personnel, and enlisting the support of the local citizens in the current military housing construction program."

OTHER FACTORS NOTED

Also noted was the committee's work in sponsoring publication of the Serviceman's Guide to Fort McClellan and Anniston, a program that resulted in Calhoun County school bus facilities being extended to transport children of military personnel to Anniston schools, active liaison between military police and civilian law enforcement bodies and support of Armed Forces Day activities.

By taking such profound interest, the Military Affairs Committee has demonstrated its effectiveness as an instrument for rendering unusual service to the public and the United States Army—

Said the citation.

We Are International

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. BOLAND. Mr. Speaker, the reciprocal trade agreements extension legislation which recently passed the Senate, as amended, has now gone to a Senate-House conference committee. One of the main differences between the Senate and House passed bills is the element of time, the Senate version calling for a 3-year extension while the House earlier provided for a 5-year extension in accordance with the request of President Eisenhower. Despite the differences in the legislation, the reciprocal trade agreements extension received overwhelming support in both bodies.

An editorial printed in the Holyoke (Mass.) Transcript-Telegram on June 11, 1958, points out that—

Any barriers that are erected ostensibly to protect us will hurt us in the long run by keeping the things we make from the people who want to buy them.

Under leave to extend my remarks, I ask that this editorial entitled "We Are International" be printed in the Appendix of the RECORD:

WE ARE INTERNATIONAL

There are a good many familiar names in the impact study list of the Massachusetts firms that lead in exports. The administration, in its drive to push the reciprocal trade bill through Congress, emphasized that trade is a two-way affair, and that we should stop worrying about what comes into this country and start thinking about how much we send out, and how many jobs this means.

Statistics amassed to back up this argument show that Massachusetts derives $332.6 million annually from export trade, which represents jobs for at least 22,231 workers,

with what it does for our farmers coming in extra.

Among the leading Massachusetts exporters are listed General Electric, Worthington Pump, Westinghouse, Bosch, Hercules, Berkshire Hathaway, and Eaton Paper. Machinery is a big item in Massachusetts' contribution to foreign trade, but a lot of other locally made items figure in the picture, too.

This is a story that doesn't have to be told to Holyoke. Exporting Holyoke-made goods is nothing new. Holyoke firms have enjoyed a brisk foreign trade for several decades, and local working people know that many of their customers are south of the Equator or east of the Atlantic. Holyoke's business offices have always made stamp-collecting easy for local youngsters.

We have felt the rivalry of cheap foreign labor and we have been hurt by world slumps in things like textiles. Yet the figures show that we live on what we sell all over the world. We are not living off our own farm, and any barriers that are erected ostensibly to protect us will hurt us in the long run by keeping the things we make from the people who want to buy them. In this sense Holyoke has been international for a long time.

Panama Canal Trouble

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. ABBITT. Mr. Speaker, I am fearful that the American people do not actually realize the true state of affairs in Central or South America.

There appeared a very enlightening editorial in the Hopewell News on Monday, July 21, 1958, pointing out the situation in Panama. Mr. A. Robbins, Jr., editor of the News, is an astute scholar of government and problems of today that confront our people.

In the hopes that this editorial will be read by a number of our people who do not realize the situation in Panama, I desire to include it with my remarks and I congratulate Mr. Robbins on his editorial.

The editorial quotes a portion of a letter written by Mr. William R. McCann, of Hopewell, Va., to Representative DANIEL FLOOD, of Pennsylvania. I commend Mr. McCann on his outstanding knowledge of the Canal Zone. He was an engineer during the construction of the canal. He has been a close and astute student of that section of the world for many years. He is intensely interested in this problem and I am sure his knowledge of the facts in the case will be of tremendous help to those of us who are interested in the welfare of this hemisphere.

PANAMA CANAL TROUBLE

Representative DANIEL FLOOD, of Pennsylvania, has spoken several times recently on the dangers that confront us in Panama, where agitation is mounting to have the United States turn over the canal to Panama, or at least admit Panama to 50–50 ownership and control.

In a recent speech in the House, Mr. FLOOD pointed out there was an organized raid on May 2 to plant Panama flags in the Canal Zone and that more recently there had been public disorders in both Panama and Colon. He stated that the campaign to create anti-United States feeling has increased in volume.

In this speech Mr. FLOOD read a letter written by William R. McCann, of Hopewell, as typical of the many letters he had received. Mr. FLOOD said:

"This letter is from William R. McCann, of Hopewell, Va., whose long residence in the Canal Zone, where he was an engineer on Panama Canal construction, his record of subsequent achievement and lifetime interest in Isthmian problems enables him to speak with authority." The letter follows:

"DEAR MR. FLOOD: Before me lies CONGRESSIONAL RECORD of June 9, 1958, containing your address in the Congress, pointing out 'Panama Canal—Latest Developments.' Your masterful diagnosis and presentation of this most acute international situation commands my utmost admiration.

"Your address, coupled with others of your pen earlier this year, constitute adequate warning to the people of this country that the defeat of the British and the French at Suez 2 years ago, in history, will prove infinitesimal compared to the impending defeat of America at Panama.

"Ignored by press, columnists, the administration, and the Congress, the Panama cauldron merrily bubbles along, hotter and hotter each day, headed for an explosion that will shake the world. Meanwhile, like Nero and his fiddle while Rome burned, we dabble with an Adams and his hotel bills, for the headlines and leading editorials.

"Each day I meditate whither do we wander at Panama. No longer should the United States today delay taking a firm stand before the world. We should state plainly and decisively, even provocatively, that we will brook no interference whatsoever with the sovereign rights of America in its peaceful possession of the Canal Zone. And House Concurrent Resolution No. 205, introduced by you June 6, 1957, is unquestionably the first step in making clear our position.

"House Concurrent Resolution 205 should be approved—and promptly."

There can be little doubt but that Panama has become a storm center of hostile propaganda against the United States, as Mr. FLOOD pointed out in his speech. There can be little doubt but that we should take a firm stand, as Mr. McCann points out in his letter. The question is when will the Congress act?

The Financial Institutions Act Is Harmful

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. MULTER. Mr. Speaker, the Financial Institutions Act is harmful to many segments of our economy. I direct the attention of our colleagues to the following letter, dated July 24, 1958, which I received from Joseph Pollack, president of Local 19, Insurance Agents' International Union, and in which Mr. Pollack points out that the act would be detrimental to insurance agents.

LOCAL 19, INSURANCE AGENTS' INTERNATIONAL UNION,
New York, N. Y., July 24, 1958.

Hon. ABRAHAM J. MULTER,
Brooklyn, N. Y.

DEAR CONGRESSMAN MULTER: We are writing on behalf of our nearly 2,000 members of our local who are insurance agents and many of whom reside in your district.

We are writing to strongly urge that you vote against the financial institutions bill S. 1451 which has already passed in the Senate and is before the House. This bill was best described by the Honorable WRIGHT PATMAN, of Texas, in his speech on June 5 in the House of Representatives.

On the basis of that factual analysis and the threat that passage of this bill would be to our members and their families, we respectfully urge you, on behalf of our members who reside in your district, to vote against this special interest bill, which is obviously detrimental to public interest, organized labor and insurance agents.

We would appreciate any active participation on your part to help to prevent this harmful bill from passing.

Sincerely yours,

JOSEPH POLLACK,
President.

Middle East Peace

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. McDONOUGH. Mr. Speaker, the importance of the State of Israel as an equalizing force in the troubled Middle East should not be underestimated and deserves special attention in the formulation of our policy in that area.

Recently Mr. Harry Groman, president of the Groman Mortuary of Los Angeles, Calif., and a prominent southern California civic leader, spent several months in Israel where he served as a business consultant to the Government of Israel and had an opportunity to observe the situation in the Middle East and to appraise at first hand the strategic and vital importance of the State of Israel to the free world.

Mr. Groman has made a concise and revealing survey of the important position of the State of Israel with relation to resolving the critical problems of the Middle East and protection of the territorial integrity of the nations in that area.

The following is Mr. Groman's analysis as reported in the B'nai B'rith Messenger which I feel deserves the attention of the Members of this Congress:

HARRY GROMAN SEES ISRAEL KEY TO WORLD PEACE

"It is prophetic that almost by Divine Providence tiny Israel is today in a strategic position to protect the territorial integrity of the Middle East and, perhaps, the peace of the world."

Having recently returned from Israel where he spent several months as a business consultant to that country's government, Harry Groman, president of the Groman Mortuary and prominent southern California civic leader, in the above words appraised the vital importance now in international affairs of this 10-year-old Jewish homeland.

Lebanon and Isarel, both friendly to the anti-Communist world, Groman pointed out, are the key, militarily and economically, to containing the major world crisis touched off by the present army revolt in Iraq.

"Bagdad, the Biblical site of the Garden of Eden, and cradle of civilization, can be

viewed as only part of the divine plan to save the peoples of the world against self-destruction," Groman says. "Israel, a strong and dynamic small nation as compared to equally small but weak Lebanon, emerges now as if the Lord meant it so, a military bulwark at the hub and center of the ideological conflict between Russia and the Western nations over world domination.

"Situated on the map as they are, Israel and Lebanon separate pro-Russia Egypt and Syria, isolating them from each other and forming a well-protected open corridor for the Western powers, the United States, England, and France, through which to pour troops and military supplies by way of the Mediterranean Sea which is now controlled by anti-Russian nations. It is plain to see on the map of this area that Russia could not if it desired, threaten Western control of the Middle East as she has no port of entry through the Dardanelles or over the hostile territories of Turkey, Iran, and Iraq to reach the potential Middle East theater of war. Therefore Israel upsets Russian military timing and mobility in any possible military showdown between the East and the West.

"But more important than the strategic geographic placement of Israel is the fiber of its people and the moral courage of its army. Israel is about the size of Rhode Island and has a population of approximately 2 million. Its army of 400,000 with a possible 60-percent draft of trained men and women from the civilian population is tough, seasoned, and feared by Nasser and his pan-Arab expansionists. Despite the seeming numerical weakness of Israel's fighting force, the fine, well-trained, and disciplined men in it demonstrated that the Egyptian forces were no match for them. While in Israel, I was impressed by the determination and attitude, similar to that of our frontier days pioneers to withstand aggressive attack in the face of great odds and little support or comfort from the rest of the world.

"Now it should be apparent to all the western world, and especially Europe, which stands to lose its vital middle eastern oil resources to the Russians, that tiny Israel is the real Little David standing between chaos and freedom and against the Russian Goliath."

Investigation of Red Atrocities

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. LESINSKI. Mr. Speaker, I have today sent letters to the chairman of the House Committee on Foreign Affairs, Secretary of State John Foster Dulles, and United Nations Delegate Henry Cabot Lodge, requesting that an investigation be made into the crimes and atrocities committed by the Communists against individuals.

In my letters I have pointed to the rising tide of communism as illustrated in the recent Middle East situation. We are quite aware that the agitation in the Middle East is being fostered and fomented by Communist elements, and, in particular, by Nasser of Egypt, a Communist-oriented and supported dictator. Let us not delude ourselves that Nasser is merely an Arab nationalist, for his career is closely paralleling that of Mao Tse-tung who at one time was looked upon as a mere agrarian reformer. The Soviet Union helped the Chinese Communist leader with arms, ammunition, military technicians and cash to take over the country. Similar aid has been sent to Egypt. As a result, not only does communistic rule extend to the Pacific but also, Russia has after centuries of diplomatic and military endeavors to reach the Mediterranean finally succeeded in doing so. We must, therefore, keep ever alert and act firmly as President Eisenhower did in the Middle East, and as President Truman did in Korea. Over and above such actions, we must engage in other activities which are designed to preserve and protect freedom and liberty.

I believe that one effective means by which we can stem the tide of communism and forestall any loss of freedom and liberty in the world is to show clearly to the nations of the world that freedom and liberty do not, and cannot, exist under Communist rule. To that end, I recommend that the United States through the House Committee on Foreign Affairs and the United Nations institute an investigation into the reports of atrocities and crimes against the individuals who are so unfortunate as to live under Communist rule.

Two recent examples of Communist duplicity and viciousness emphasize the need for an investigation of this type.

In June of this year the entire world was shocked and revulsed upon learning of the execution of Imre Nagy and other leaders of the Hungarian revolt against the Russians in 1956. What, in the eyes of the Communists, was the unforgivable crime? Following the initial success of the revolt, Imre Nagy widened his government to include non-Communists, promised free elections, declared Hungary a neutral state, repudiated the Warsaw pact with Moscow, and placed Hungary under the protection of the United Nations. The Communists, knowing that their system of government cannot exist in the bright light of freedom and truth, hold those principles to be crimes. Congress has adopted a resolution urging that the President and United States delegate to the United Nations seek adoption of the report of the Committee on the Hungarian Revolution and work for measures to bring about freedom of captive nations, and I believe that the investigation I am proposing would carry out the intent of Congress as set forth in the resolution.

Let us provide a forum for such people as Father Cyril Wagner, a priest of the Franciscan order, who after long imprisonment by the Chinese Reds, recently arrived in this country. Upon arrival Father Wagner said that for 5 years he and other Catholic priests were not allowed to talk or even move their lips. The Reds charged they repeated rumors that Chinese Catholics were punished because they associated with Americans.

But I know they shot one Chinese priest who was over 70 years old—

He said.

The Reds turned our churches into courthouses and beat five people to death. So much for the rumors. I want them to know over there I am telling about it now.

I believe all those who have suffered at the hands of the Communists should be given an opportunity to tell the actual story of life under Communist rule, so that the lies and half-truths of the Communist propaganda machine will be shown in their true light and the cause of freedom will be served. If we do this, and expose the evils of communism, we will, I am sure, gain the support and gratitude of all freedom-loving people in the world.

The National Wool Act Is Essential To Survival of Sheep and Wool Industry

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. BERRY. Mr. Speaker, those who have opposed a Government subsidy or a Government purchase program instead of tariff protection and a free market and free enterprise system in this country have argued that it is unsafe and unstable and too much of a risk for those engaged in the subsidy business because the value of their property and their business is dependent upon the will of Congress.

Proof of this is being demonstrated in the Congress today. The National Wool Act which expires early next year is absolutely essential to the survival of the sheep and wool industry unless tariff protection is provided.

The sheep and wool industry cannot survive, it cannot expand, it cannot grow without the extension of the National Wool Act.

If the act is allowed to expire, both the support program for wool, for lamb, and for the wool promotion program will die. This great industry cannot long survive under these conditions. Wool is entirely different from other agricultural commodities because it is in short supply rather than in surplus. We produce domestically only about one-third of the wool we actually use in this country. The wool program was established to support and increase production, not to decrease or control production.

Woolgrowers all over the Nation have placed their wholehearted trust in Congress to maintain an equitable and stable program for wool. Many of these people depend upon their sheep for a large part of their income. The woolgrower has a big investment in animals, special fencing, feed, and equipment. It is not possible for him to go out of the sheep business and switch to another crop without taking a tremendous loss.

The only excuse for not passing this extension of the National Wool Act is a political excuse. The law is effective, it is functioning extremely well.

This, Mr. Speaker, is a most glaring example of what can happen and what will happen when a great industry is forced to depend upon political whims

and when it is forced to depend upon the will of Congress.

My question, Mr. Speaker, is this: Are we of the 85th Congress going to crucify the sheep and wool industry and the sheep and woolmen of America on the cross of petty politics?

Better Health Care Due for the Aged

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. METCALF. Mr. Speaker, the growing awareness that the unmet needs of our middle-aged and elderly pose serious and economic problems was attested to by the amount of testimony presented to the Committee on Ways and Means on behalf of proposals to write health insurance into the Social Security Act.

The older we get, the more medical care we need—and the less the income with which to pay for it.

There are about 15 million Americans past the age of 65. It is estimated that by 1975, that number will rise to 22½ million. On the average, these people use more than double the amount of hospitalization required by the whole population. Their needs for other medical care are likewise greater. Most of them are living on small, fixed incomes. Only about one-third of them are covered by any kind of health insurance. Most companies do not sell individual health insurance to persons past 60. If they do, the premiums are very high and the benefits comparatively low. Some companies, which do continue policies on persons past the age of 65, chop the benefits when they are needed most.

Some of these older people get charitable or public care. Others neglect illness, at a greater cost later on. Others pay for needed medical care by sacrificing other essentials of healthful living—for example, they cut down on their food.

The mounting number of older persons being admitted to mental hospitals is one evidence of the effects of worry and lack of medical care. An expert in the field says many elderly persons are beset by fears of becoming ill, and not being able to pay for medical care.

Enactment of Congressman FOGARTY's H. R. 9822, to provide for a White House Conference on the Problems of the Aging, which cleared the House today, will point up these and other problems and develop solutions.

The current issue of Montana Health, bimonthly publication of the Public Health League of Montana, carries an excellent article on the subject by Dr. Thomas L. Hawkins, of Helena, liaison representative of the Montana Medical Association to the American Medical Association.

In that article, Dr. Hawkins, speaking for those charged with the guardianship of the Nation's health, accepts the challenge of providing better health for our older citizens.

I know my colleagues will be interested in Dr. Hawkins' excellent article on the purposes of the Joint Council To Improve the Health Care of the Aged. The article follows:

BETTER HEALTH CARE DUE FOR THE AGED

(By Thomas L. Hawkins, M. D.)

Because of recent advances in the control of diseases which shorten life, a greater number of Americans than ever before have survived into the retirement years.

There is no valid reason why old age should not be the best years of human existence. Instead, we find today that millions of our aged are being shelved as a surplus commodity. Their experience, wisdom, and know-how are a vast national resource which has largely gone to waste. Lack of meaningful activity has led to emotional frustration and physical breakdown. This crowds our hospitals and swells the cost of public and private support. Millions of our senior citizens have become burdens on themselves, on their families, and on the population as a whole.

While the medical sciences were busily concentrating on the more urgent problems of infectious diseases among the young and middle aged, the problem of our older citizens and their chronic illnesses has burgeoned in our midst. Today, it poses serious social and economic problems.

Since improved medical and hsopital care has increased life expectancy, those of us in the field of health care must accept the primary responsibility for enriching the lives of those people whom we have enabled to live longer.

While the population of our Nation has about doubled in the last quarter century, the number of senior citizens has increased fourfold, and may quadruple again in 25 years. The average man of 65 now has a 50–50 chance of reaching age 80; the average woman of 65 will survive to age 85. By 1975, 1 in 10 Americans will be 65 or over. Instead of 15 million citizens over 65 as today, we can expect an estimated 22.5 million.

Better health for this large segment of our population is a major challenge to those who have been charged with the guardianship of the Nation's health. We accept that challenge. We know that we possess the knowledge, the facilities, and the will to make a better, more healthful life possible for our 15 million citizens over 65.

For this purpose, the hospital administrators of America, the nursing home administrators and proprietors, the dentists and the physicians, through their respective associations, have pooled all their vast body of knowledge, talent and resources to form the Joint Council to Improve the Health Care of the Aged.

Through the council all of the organizations which speak with experience and authority in providing health services will combine their research and best ideas in the field. Behind this council is the full weight of the people who have the most intimate knowledge of the problem, through a lifetime of work and the availability of millions of cases for comparative study—the American Dental Association, American Hospital Association, American Medical Association, and American Nursing Home Association.

The joint council will work to bring into being more medical facilities with costs tailored to the limited means of the aged. It will counsel with the insurance industry and the Blue Cross and Blue Shield to make more and better health-insurance coverage available to oldsters. And it will be the clearing house for the research necessary to find solutions to the medical problems of aged persons and the aging process.

The council has adopted a broad program. Its primary goal must be to eliminate the handicaps that attend the elderly. Its efforts are aimed at bringing about a healthy, dignified, and useful old age for our senior population.

The joint council will depend heavily on local action, on community service agencies, and on the individual for its success. We need first to explore ways to bring better health care to our aged who are ill. Visiting nurse, homemaker, and home-care services at the community level are vitally needed so that the chronically ill aged can be properly cared for in surroundings best suited to their care—at home or in facilities near home and loved ones.

Second, we need to revise our thinking about the aged, whom a fast-paced and youth-oriented society has prematurely handed the rocking chair. The prevalence of this attitude, and the ill-considered acceptance of compulsory retirement during the productive years, probably are the chief underlying factors in a majority of the disabling illnesses of our senior citizens.

The joint council and its members have adopted a positive, optimistic approach to the problem. We refuse to accept the disabilities of senescence as inevitable and unavoidable.

We feel we should offer the aged hope for a better life, not a crutch. We should offer them a return to their rightful position in the family and the community. We should offer them a return to usefulness and self-respect, not a one-way trip to isolation and limbo.

The United States Department of Labor's Bureau of Employment Security has a number of studies which show that older people can maintain production standards, can meet physical requirements, and are often more efficient than the average younger worker.

We are beginning to learn that there is rarely such a thing as true senility—that senility is a condition of the mind and body that follows rejection by the family and community, loss of interest in daily activities and lack of specific motivation—such as a job, however small. When a person loses his job through an arbitrary retirement policy, he often enters a period when his life situation contributes to poor health, and eventually senility and total dependence on his family, his community, and the entire Nation. We can no longer afford, for the economic and physical welfare of our Nation, to follow the patterns of the past by shelving our aged.

Medical investigators have been tirelessly exploring the fundamental problems of the biology of aging. Thanks to some of their recent findings, the day is close at hand when physical and mental deterioration will no longer accompany the aging process. The joint council pledges its best efforts to spread knowledge, at the community level, of the known preventive measures that slow the aging process, of the beneficial use of regular exercise, proper diet, and periodic examinations to forestall serious illness. A greater emphasis on preventive medicine can do as much for the aging as it has done for the younger element in our society.

Reducing the cost of health care for the elderly is one of the major aims of the joint council. This has been done in some areas through concerted community effort, and it can be done elsewhere. We know, for example, that in various communities, successful efforts have been made to (1) shorten hospital stays for the elderly, (2) lower costs for the aged who require prolonged health care, and (3) bring the working potential of many retired people back into the community mainstream.

We now propose to study these experiments, among a great many others, so that we can benefit by the best of them and encourage other communities to take similar action.

Our past experience has taught us that more hospitalization for more aged people may not be the solution. There are many people in our general hospitals today who would be far better off, at one-third to one-half the cost, in nursing homes, domiciliary homes, or in their own homes, if community home care programs were available that were tailored to their needs.

In fact, it is probable that most aged patients could be cared for best at home during much of their illness, and would prefer care in that setting, under the supervision of their personal physician. In spite of this, there has been a marked lack of community planning in this direction.

Khrushchev at the U. N.—Propaganda Circus or Constructive Conference?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. LANE. Mr. Speaker, the imminent visit of Prime Minister Khrushchev of the U. S. S. R., to the United Nations headquarters in New York to participate in a meeting of the Security Council for the principal purpose of easing Middle East tensions, has everybody in a quandary.

As a guest, he deserves every protection and courtesy. At the same time, he must expect that, in a free country people have a right to express their opinions, and we know that many of them will not be flattering to Nikita, because of the blood bath he engineered in Hungary, among his many other acts of political terrorism.

We know that he is in a hurry to exploit every propaganda advantage out of this forum, but there is also the possibility that his efforts will backfire. In any event, there is suspense. The Pilot, which speaks for the archdiocese of Boston, Mass., balances these and other unknown consequences that may flow from this summit meeting within the U. N. I call your attention to the editorial on this subject from the July 26, 1958, issue of the Pilot, under unanimous consent to reprint it in the CONGRESSIONAL RECORD.

RED VISITOR

The possibility of an American visit by Khrushchev has already started a buzz of excitement on nearly every level of American life. In a sense, the Premier is not visiting the United States at all but merely the United Nations headquarters which happens to be in New York City. All the same, Americans will get their first view of the strange, harsh, changeable dictator who on one day approves the murder of Imre Nagy and on the next pinches playfully the cheeks of little children.

Between now and the time of his arrival we will be treated to many lectures, official and unofficial, on the appropriate manner of receiving the Premier and on our responsibilities in his regard. It is possible surely to distinguish between Khrushchev the Premier of the U. S. S. R. and Khrushchev the Communist Party boss. In the first capacity he is a head of a state which is recognized as a friendly power, in the second he is an international manipulator and conspirator, as well as a dictator with hands bathed in blood. It is possible for Americans, even when they make this distinction in their minds, to reflect it in their actions during his presence in this country?

On this point we must recall that Khrushchev is visiting America for the first time and we may hope that his personal view of the world's greatest democracy might have some effect on his attitudes and might even change notions long ingrained in his mind. There will be of course no immediate about-face—this is too much to hope, but we may be fortunate enough to provide certain new insights which could bring light into dark areas of the Premier's mentality. Any American mistakes in his regard, on the other hand, will only serve to bolster prejudices already held and will be magnificient propaganda for the Soviet machine. In this sense the American public—not to mention the officials of Government—is somewhat on the spot.

It would be effective if American etiquette during the Premier's visit were scrupulously polite—is not this required when even the greatest of barbarians is here at our request and so a guest in the country? But what of protests? What of all those who have felt the Khrushchev wickedness and whose families and friends still suffer under his bitter yoke? Surely these can appropriately express themselves. Violent demonstrations which would tax police efforts and embarrass our national hospitality would doubtless be out of place, but it would be an infringement on American liberty to suppress all demonstrations or make it appear that such expressions have been forcefully prohibited.

No one knows, of course, how much will be accomplished at this summit meeting, or, at this writing, indeed if the conditions set down by the Soviet will be met. It can be a portentous council which may set the direction of the history of many years to come and it may strengthen the U. N. in a manner that could not have been hoped for earlier. All of this will become clearer as the meeting itself comes into closer focus. It would be a great pity on the international scene if American intemperance toward Khrushchev (or indeed toward Nasser or any other visitor) marred the proceedings and distracted world attention from the large realities which will be discussed there.

We have time now to think over seriously the implications of the forthcoming meeting and we should do so with mature reflection and a consideration of all the issues involved. Our first thoughts may not be the best ones and our earliest reactions not the most prudent. War and peace, survival and destruction may be riding in this caravan and we must prepare its path with a care that matches the value of its burden. This is no easy task.

Should the Power To Tax Include the Right To Censor Advertising?

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the Internal Revenue Service has promulgated rules barring tax deductions either for political contributions or for lobbying purposes.

This is an entirely proper function of the Internal Revenue Service. However, they must be administered impartially.

Frequently we find private enterprise is prevented from using its tax-free funds to present its story so that it can continue to exist and pay taxes to the Federal Treasury. I am disturbed when I see that no comparable effort is exerted to curb the flagrant use of tax-free funds by unions and many foundations who are constantly advancing positions on legislative issues.

This problem has been highlighted by the decision of the Internal Revenue Service with respect to advertising by the group of public utility companies which call themselves America's Independent Light and Power Companies. Recently the issue was well expressed in an editorial which appeared in the Saturday Evening Post.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include this provocative editorial:

SHOULD THE POWER TO TAX INCLUDE THE RIGHT TO CENSOR ADVERTISING?

Few taxpayers know the extent of the authority that has been conferred on the Internal Revenue Service and even less of the added authority which that bureau has assumed for itself by means of administrative rulings and regulations which Congress probably never thought of.

For example, it is hard to believe that the Nation's lawmakers meant to give tax collectors the right to decide that American business or industry should be penalized for stating its case and defending its right to exist, in the face of Government sponsored competition, by means of paid advertisements. But that is what the tax authorities are doing, acting under a new interpretation of one of their own regulations, which declares that money spent on advertising "for lobbying purposes, for the promotion or defeat of legislation or for the development or exploitation of propaganda" cannot be considered "ordinary and reasonable expenses" deductible for tax purposes.

The victims of the most recent interpretation of this ruling are a group of public-utility companies which call themselves America's Independent Light and Power Companies. These companies have for many years sponsored "institutional advertisements"—mostly in magazines, including the Saturday Evening Post—which promote the wider use of electric power and occasionally indicate a preference for investor-owned utility companies as against Government owned plants supported by the taxpayers. Most of the advertisements indicate in some way the advantage of being served by an independent power company. If this is propaganda, it certainly represents an attitude acceptable to some millions of Americans.

Nevertheless, the companies participating in this advertising campaign are being informed that they may not deduct its cost from their taxable incomes. As Senator ESTES KEFAUVER put it, "They can continue to propagandize as much as they want in their advertisements. * * * They can no longer charge the taxpayers and the ratepayers for their own brainwashing."

Of course this does not mean that the taxpayers will be relieved of the cost of being brainwashed by TVA and public power generally. Inasmuch as public power pays little in taxes and indeed is supported out of taxes, deductibility is a small matter. The net of the IRS's ruling is that the private-utility industry, already forced to meet tax favoritism and vast public appropriations for public power, must jump over another hurdle.

Supposing that all the advertisements in the series dealt with the public-power issue, it is difficult to equate them wih an effort to influence legislation, or to lobby or, if propaganda is the charge, to do more than defend what has long been considered the normal way for Americans to do business. Surely if an electric power company may engage in propaganda against competitors who sell gas, or coal, or atomic energy; it ought not to be penalized for defending itself against competition which threatens its ability to stay in business at all.

This editorial will arouse the ire of public-power advocates who will be quick to point out that the Saturday Evening Post has a financial interest in the matter. This is true, although the amount received by the Post from these advertisements constitutes much too small an interest to justify courting the lambasting we shall probably get for intervening in the controversy.

But the principle involved requires a frank statement of what such rulings can mean to freedom, not merely for public-utility advertising, or even advertising in general, but for freedom to express any views which tax bureaucrats—perhaps stimulated by political demagogues—decide to penalize.

This is the crux of the situation. We have tax authorities, who are assumed to be raising money for public needs, undertaking to dictate to individuals and corporations how they shall carry on their businesses.

Nor is this threat confined to public-utility companies. Other types of business live in jeopardy from the same ukase, including one company which undertook to explain its side of a threatened strike by means of newspaper advertisements.

Like many other aspects of the income-tax law, this effort to censor free expression calls for clarification by Congress. If the people think American corporations and individuals require governmental supervision of the way they state their case in open advertisements, the way to accomplish that dubious objective is to pass a law—not to pass the buck to the Internal Revenue Service.

Constituents Ask for Liberalization of Old-Age and Survivors Insurance Program

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mr. BERRY. Mr. Speaker, many people in my State of South Dakota have written me expressing their concern over pending legislation to liberalize the old-age and survivors insurance program. With considerable justification, they question the wisdom of making any changes at this time, and point out that Congress, in adopting the 1956 social-security amendments, provided for the creation of an Advisory Council to study the entire program and report back to Congress by January 1, 1959.

My constituents have raised some important questions. They ask, "Does it not seem a little premature for Congress to consider an increase without first considering the report of the Advisory Council?" Others inquire, "Does it not seem the social-security program is being made a political football, with election-year increases that could threaten the stability of the entire program?"

Typical of the letters I have received is one from Lloyd L. Harden, secretary-treasurer of the Sioux Falls, S. Dak., District Life Underwriters Association. His letter is in part as follows:

Perhaps it would appear that we would be concerned for selfish reasons. This is perhaps true, since the stability of OASI, which is a vital part of any well-planned life insurance program, appears to be in danger. Thus, any life insurance program which uses social-security benefits as a foundation, whether it be benefits to a widow and children, or retirement for an old couple, is also subject to the stability or instability of OASI.

Under the present deficit program of OASI, the counsel of an underwriter is in jeopardy each time he must commit himself in planning an income program made up of both OASI benefits and life insurance benefits, since he is more aware of the current economic condition of OASI than the general public. Yet he is almost forced to combine these benefits because of their similarity in the welfare of every family.

If you do make a conscientious study, there is no doubt in our mind that you will understand why life underwriters are deeply concerned over any election-year giveaways via OASI, until the present program can be made financially sound. We simply cannot afford to jeopardize the financial security of American families, for a few votes.

Where We Stand Now

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Joseph Alsop which appeared in the New York Herald Tribune of July 25, 1958:

WHERE WE STAND NOW
(By Joseph Alsop)

WASHINGTON.—This is a moment when it is important to know just where we stand now; and for this purpose, it is essential to note the great gap at the very center of the picture. We have troops in Lebanon. The British have troops in Jordan. But the United States and Britain do not have a Middle Eastern policy.

That is the only way to sum up the unhappy results of widespread inquiry in authoritative quarters. You cannot get an answer to the question: "Where do we go from here?" or rather, you only get vaguely mumbled prayers that somehow or other, some day or other, the combination of the Marines and special Ambassador Robert Murphy will achieve a political compromise in Beirut.

A good many people seem to believe that this is a workable Middle Eastern policy, fit to compete with the cruelly shrewd, arrogantly bold policy of Nikita Khrushchev. But this widespread belief is only a testimonial to the administration's success in blurring or concealing all the facts that count.

It is hard to believe that President Eisenhower purposely misled the congressional leaders, at the July 14 meeting when he first revealed his intention to send troops into Lebanon. A President who leaves the entire day-to-day task of policy-making to his Secretary of State can quite easily misconceive the choice he has to make, when he must suddenly make a very hard choice with great speed. At any rate, the misrepresentation of the Middle Eastern situation was begun by the President himself, at this first moment of disclosure.

Three different kinds of false impression were conveyed to the Congressional leaders. The President first of all said that he had received an "ultimatum" from President Chamoun, threatening the effective abdication of the Lebanese Government if the Marines were not sent "within 48 hours."

In reality, President Eisenhower had long since promised President Chamoun to send troops to Lebanon, if the Lebanese Government desired him to do so. Now Chamoun had simply requested Eisenhower to keep his freely given promise. He had also warned that the seismic shock of the coup d'etat in Baghdad would quickly destroy the government in Beirut, unless the American promise were quickly kept. Being on the naked brink of immediate defeat, he had asked for the American answer within 2 days. This was the Chamoun ultimatum.

Secondly, both the President and Secretary of State briskly threw Allen Dulles to the wolves, by intimating that they had been taken by surprise by the coup in Iraq. Hence the Senate is now busily investigating the CIA.

But in reality the President and Secretary of State had long been warned that indecision about Lebanon would lead to a coup in Iraq. The warnings had come, not only from the CIA, but also from the murdered Iraqi leader, Nuri Pasha, from the Governments of Pakistan, Iran, and Turkey, and from many other sources. All the CIA failed to do was to say: "On this particular day, in this particular regiment, a military coup will be organized." This was the extent of the surprise, and this much surprise all governments must expect.

Finally, and perhaps worst of all, the President also indicated to the congressional leaders that the American problem centered in Lebanon, rather than in Iraq. It was true, of course, that he had to make an immediate choice between keeping his promise to Chamoun or dishonoring this country's word. That was the first part of the problem, which could only be solved as it was solved.

But the heart of the problem lay, and it still lies in Baghdad rather than in Beirut.

The British and American Governments jointly decided not to attack the heart of the problem in Baghdad. The consequences of this decision must be faced, therefore, before the two Governments can fill the great gap in the center of the picture, which is their present lack of any real Middle Eastern policy.

The first consequence concerns Lebanon and Jordan. No matter what compromise is reached in Beirut (and a successful compromise seems unlikely) it can only afford a pretext for the withdrawal of our troops. After Nasser's triumph in Iraq, no government in Lebanon can survive his pressure, once the marines go out. By the same token, King Hussein cannot survive in Jordan, if the British paratroops depart. And Saudi Arabia and the gulf coast sheikhdoms are also sitting birds for the next conspiracy Nasser chooses to hatch.

In these circumstances, only three courses of action deserve the name of a Middle Eastern policy. We can defy Khrushchev and deal sternly with Nasser himself. Or we can defy world opinion, and get ready to hang on by our toenails to the oil in the fairly easily defensible Persian Gulf area. Or we can take the bold and painful measures inside the Western alliance, which may protect the West against the worst effects of Nasser-nationalism's onward march. Those are the choices. Take your pick.

The 4–H Clubs of Michigan

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I would like to include in the Appendix of the RECORD two editorials commenting on some recent statements of Mr. August Scholle, president of the Michigan AFL–CIO. Mr. Scholle has never hesitated to call any organization with which he disagrees, an organ of the Republican Party. Mr. Scholle is entitled to his opinions. However, it is difficult to understand how he formed this latest opinion. He has now accused the 4–H Clubs of Michigan of being an organ of the Republican Party. This charge is as absurd as it is untrue. It is my feeling that Mr. Scholle owes the farm youth of Michigan and their leaders an apology.

[From Clinton County, Mich., paper of July 17, 1958]

GUS SCHOLLE IS OFF BASE WITH HIS 4–H COMMENTS

Gus Scholle, the fiery labor zealot who is president of the Michigan AFL–CIO, wandered far off the reservation last week when he branded the 4–H Club program in Michigan as a "brainwashing" setup for youngsters sponsored by such rascals as members of the State and county extension services, the Farm Bureau, and the National Association of Manufacturers.

Scholle links the 4–H program to political education—Republican Party political education. He says that 4–H youths are indoctrinated with Republican philosophy through the Farm Bureau.

This is just plain hogwash, and a well-informed guy like Scholle knows it.

If 4–H members are generally Republican in their views, it is largely because their parents think that way.

Kids brought up on the farm are usually members of a close-knit family circle. They hear politics discussed and form their own opinions, just as the children of Scholle's union members do.

We won't dignify Scholle's statements by further comment. How silly can you get, Gus?

[From the Gratiot County Herald (Ithaca, Mich.) of July 17, 1958]

BRAIN IMPROVEMENT, NOT BRAINWASHING, CARRIED ON BY GRATIOT 4–H LEADERS

Labor leaders in this country have been able to hoodwink thousands of their union members into doing their beck and call. They have used the workingman as a pawn with Walter Reuther and his cohorts calling the play. Jumping the rope so often whenever these leaders have spoken is slowly sapping out all the individuality from the rank and file members, leaving a vast majority of them with no personality of their own.

A snag might have been struck this week, however, when August (Gus) Scholle, president of the Michigan AFL–CIO started on the warpath against the 4–H youth program of this State. Claiming that they are dominated by political forces which he terms as "satellites," he hopes to disturb their orbits with verbal and written rockets until he either brings them under his control or crushes them altogether.

Scholle says, in effect, that they are being brainwashed against unions.

The 4–H program, he declares, is a satellite of the Farm Bureau. And, he adds, the Farm Bureau is a satellite of the National Association of Manufacturers.

Then, with extreme anguish he charges that the brainwashing is being done with taxpayers' money because the 4–H program is supported by taxes. Taxes pay for county agents who supervise the program. A State headquarters also is maintained at Michigan State University.

He links the 4–H program to political education—Republican Party political education.

The 4–H youngsters are indoctrinated through the Farm Bureau, says Scholle.

"The Farm Bureaus are political organizations. I think the primary function of Farm Bureau ever since its inception has been to aid the Republican Party," Scholle declares.

His charges immediately brought forth emphatic denials from both the Farm Bureau head and from Michigan State University officials.

Jack F. Yaeger, head of the Michigan Farm Bureau, calls Scholle's arguments ridiculous.

Yaeger declares "this absolutely isn't so." As far as 4–H clubs are concerned, they are a function of Michigan State University's cooperative extension service.

"We don't run Michigan State University and it doesn't run the Farm Bureau," says Yaeger.

The Farm Bureau leader, who has his offices in Lansing, says that his members have no interest in 4–H other than that which parents have in any of their sons' and daughters' activities.

"We are no more interested in 4–H than we are in Boy or Girl Scouts, and only as parents," Yaeger declares.

Yaeger also pointed out that in recent years 4–H clubs have expanded into the larger cities such as Detroit, heart of the union movement in Michigan.

D. B. (Woody) Varner, vice president of Michigan State University in charge of extension activities, also disagrees with the labor leader, pointing out where his accusations are just not true. Varner said, "The Farm Bureau has no connection with MSU cooperative extension other than the same help which the university offers all farm groups."

The Michigan Grange and the Michigan Farmers Union receive exactly the same treatment which the Farm Bureau receives, says Varner.

Varner says nothing presented to 4–H groups has political implications. "Oh, I suppose if you were looking for it you could find political meaning in almost anything that's said," he added, "but it's certainly not meant to be there."

Varner added that he never before had heard of any charges like Scholle's. "This is the first time I have ever heard that the 4–H program is politically oriented."

If Gus Scholle is really interested in the youth of America and wants to find out how wrong he is about its leaders he might come to Gratiot County and study the 4–H program. He will find that the leaders of these farm youths are coming from every walk of life, from both political parties, and from many religious faiths. Yes; he will even find many shop workers among them and members of his own union.

They are a cross-section of young adults and older men and women with a common interest—the youth of Gratiot County. They have no ax to grind, they are fostering no political party and no farm organization.

Perhaps, Mr. Scholle, you have been mixed up in fighting management for so long that your eyes have become blurred and your mind a bit foggy. A trip into Gratiot County where you can come into contact with people interested in giving service, for the good that it might do others rather than selfish personal gain, would clear your mind and erase some of the suspicion and mistrust.

For the past year we have been carrying a series of articles on the 4–H leaders of Gratiot County. We think we have become pretty well acquainted with their thoughts and ideas about the 4–H youth and their responsibilities in helping to train them.

They are not carrying on a "brainwashing" program but a brain-improvement program and one which the people of this county, regardless of their political affiliations, are proud of.

Proceedings Following a Luncheon Given by the National Historical Publications Commission in the Old Supreme Court Chamber, United States Capitol, June 17, 1958, the Honorable Franklin Floete, Administrator of General Services, Presiding

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. MILLER of California. Mr. Speaker, I had the pleasure of attending the luncheon given by the National Historical Publications Commission on June 17, in which a most distinguished list of guests participated.

Many members of the Supreme Court, the Senate, and House of Representatives in their presence indicated their interest with the work of the National Historical Publications Commission and its accomplishments.

The highly respected Chief Justice of the Supreme Court, Hon. Earl Warren, and the lovable and distinguished Speaker of the House of Representatives, Hon. SAM RAYBURN of Texas, were present.

I am privileged to make the proceedings following the luncheon part of these remarks:

PROCEEDINGS FOLLOWING A LUNCHEON GIVEN BY THE NATIONAL HISTORICAL PUBLICATIONS COMMISSION IN THE OLD SUPREME COURT CHAMBER, UNITED STATES CAPITOL, JUNE 17, 1958, THE HONORABLE FRANKLIN FLOETE, ADMINISTRATOR OF GENERAL SERVICES, PRESIDING

Mr. FLOETE. Chief Justice Warren, Speaker Rayburn, Justice Frankfurter, members of the commission, distinguished guests, ladies and gentlemen, may I extend personally on behalf of General Services Administration a most cordial welcome.

This luncheon and the conference are being held in honor of the sponsors, patrons, and editors working with the commission. When I was talking to Dr. Grover last week about what possible qualifications I had for addressing or presiding at so distinguished a meeting as this, he admitted he had no idea. "Since they are historians," I said, "maybe if I told them that a long time ago I had been a student of Prof. Frederick

Jackson Turner, that would explain my presence." He alleged that that was very good, but maybe not enough. So then I told him I had had the great pleasure of going to a tea at Professor Turner's house with his very delightful daughter. "Well," he said, "that fully qualifies you."

We in GSA are very grateful for the fact that we are participating in the splendid work of this historical commission. We fully support its activities and are very proud and happy that we are charged with the responsibility of preserving the important historical documents of our Government and of making them available for purposes such as this. We know that the support this commission's program has is very widespread. It has the strong support of the President, the Congress, and countless Americans in all walks of life. Its progress has been notably fast, far beyond what was expected at the time the commission was first organized. This sympathetic approach has been largely responsible for this progress.

I would like to digress a moment, for I feel that it is appropriate to do so. I am sure you have all been inspired when, in going to the great hall of Archives, you have been able to see our charters of freedom—the Constitution, the Declaration of Independence, and the Bill of Rights. That opportunity, however, does not extend to the millions of Americans who do not come to Washington. Therefore, we thought it would be very appropriate if we installed in each of the new Federal office buildings we are building throughout the land a dignified type of case to display facsimiles of these three precious documents. We feel this will do much to make it possible for many, many more Americans to see these basic papers.

The purpose of the commission's program is to assemble, edit, and publish the important historical documents and papers of our Government and the writings and works of prominent Americans who have participated in public life. Its objective is to make these papers readily available to historians and the public generally, thus resulting in a broad comprehension of the basic philosophies and principles of our Government. Such comprehension is particularly important at this time when the United States has the difficult role as leader of the free world, of endeavoring to resolve the serious issues of peace and freedom. For this reason we are most grateful to all of those who have participated in this work, the editors, the sponsors, and all of the other organizations that are a part of it. You all deserve great credit.

It is impossible for me to introduce all of the distinguished people who are in this meeting. Therefore, I will confine myself to those at this table. First, I would like to introduce the editors who are the spearhead of this important work. Will you please rise as I call your name?

Dr. Julian Boyd, editor of the Jefferson Papers.

Dr. Lyman Butterfield, editor of the Adams Family Papers.

Dr. Leonard Labaree, editor of the Franklin Papers.

Dr. Harold Syrett, editor of the Hamilton Papers.

Dr. William Hutchinson, coeditor of the Madison Papers.

I am happy at this time to announce the start of a new project in this series—a project to publish a documentary history of the ratification of the Constitution and the Bill of Rights, under the editorship of Dr. Robert Cushman. Dr. Cushman, who retired from the political science department of Cornell University in 1957, brings to his editorial position an exceptional knowledge and understanding of the Federal Constitution acquired over more than 40 years of study, teaching, and writing. His Leading Constitutional Decisions is considered a basic work in its field. He served as advisory editor of Cornell University's Studies in Civil Liberties from 1943 to his retirement. He was president of the American Political Science Association in 1943, and was a member of the board of editors of the American Political Science Review from 1923 to 1948. Dr. Robert Cushman.

Associate Justice Felix Frankfurter was one of the earliest members of this commission, and has given without stint to its many accomplishments. He has given of his energy and his brilliancy and has played a very important part in this program. Justice Frankfurter.

We would like to convey our very sincere thanks to the many organizations that have made this work possible, and these I will name: the Massachusetts Historical Society, the American Catholic Historical Association, the American Philosophical Society, the Tennessee Historical Commission, the Woodrow Wilson Foundation, the South Carolinian Society, Clemson College, and the Universities of South Carolina, Kentucky, Yale, Harvard, Columbia, Princeton, Chicago and Virginia. Likewise the success of this program would hardly have been possible without generous gifts from donors. The sponsors actually rely, must rely, on gifts of this nature. Among these very public-minded organizations who have made such contributions are: The Old Dominion Foundation, the Lilly Endowment, Inc., the Rockefeller Foundation, the Ford Foundation, Time, Inc., and the New York Times. The commission is deeply indebted to each of these.

We are most fortunate today to have with us a representative of one of the great branches of our Government. This man has served longer as Speaker of the House of Representatives than any man in our Nation's history. When Mr. RAYBURN first came to Congress, he was going home to Bonham, Tex., one day. On the train was Champ Clark, then Speaker of the House. Mr. Clark said to Mr. RAYBURN, "Young man, you can be a leader in these United States." Mr. RAYBURN asked how he might accomplish this high purpose, and Mr. Clark said, "I will give you a list of books to read." Whereupon he gave him the list, which included the biographies of all of the prominent people in public life at that time. Mr. RAYBURN had read some of these books, but he proceeded to read them again and reread them, until he became firmly familiar with them. It is said that he carried that list in his wallet for more than 30 years. I think this illustrates Mr. RAYBURN's basic philosophy—that essentially the development of organizations in the Government are based on humanistic factors and that actually the record of the accomplishments of our Government are, in effect, a study and a record of the people. Mr. Speaker.

The SPEAKER. Mr. Floete, Mr. Chief Justice, members of the commission, and your guests here today, a while ago I looked over there and I saw a thing that looked like a television outfit, and I said, "They can't do that." Then somebody said, "This is the Senate end of the Capitol," and I said "Oh." So I had to give up, much to my regret.

I have lots of fun going about over the country to various places. I can walk into any hotel lobby in the country with my hat on and nobody recognizes me. But if I take it off, they say "I saw you at the convention."

I am happy to be here with you folks today and to say to you what a great work I think you are doing. George Miller of the House and Mr. Grover of the Archives, have kept me pretty well briefed upon what you are doing.

Now, about United States history and its founders and their writings. I am visited in my office by thousands of schoolchildren every year. I always tell them that they are smarter than I was because they have a better opportunity to be smart than I had. It is a long cry from the one-room country school down in Texas with a teacher with about a second grade certificate to the teachers they have now, the buildings that have been built for them, and the instruments inside of them, to demonstrate to them what their teachers are trying to make them understand. And I tell these children that they should study United States history and government in the grade school, in the high school, in college, and in university, and then the rest of their lives. I have been doing that all of my life, and I am frank to say to you that I feel like I have just touched the fringes of those great fundamentals and the great writings of the men who made this country great. And for you to preserve these things for the generations that are to come, with all of the explanations that you can get together for the actions of the early Congresses, is to me a work that is monumental and will serve this country and its citizenship and the citizens of the world, for that matter, for ages to come.

Nobody can know too much about the formation of this Union. To me it is most interesting that 59 men, most of them young men, by the way, gave us our Constitution. There was only one real old man in the Constitutional Convention, and that was Benjamin Franklin at 81. George Washington, full of his honors, who had led a life that seemed long, was only 55. James Madison, who wrote more of the Constitution than any other man, and who went to the Convention having read every constitution that had ever been written, so they tell me in history, was only 36 years of age. Alexander Hamilton was only 30, Pinckney of South Carolina came to the Convention a young man of 29 years of age, with a completed proposal for a constitution in his pocket. And to think that those people went into a room and locked themselves up. How much hell would be raised today if anybody, anywhere—even a committee of Congress—went off and locked themselves up and said we are not going to let anybody in here until we bring this bill out. But they locked themselves up, and in 4 short months they brought forth this document.

Now there are some people, when something is done by the Court, or by Congress, that they don't like, who say we have changed the form of government, that we are going to the bow-wows, and all this, that, and the other. In all of the amendments that have been adopted to the Constitution of the United States, not one of them touches the fundamental purpose that those people had in mind when they brought forth this Constitution, and that was to have a representative form of government. It was then, it has been, and it is now. Everybody in the United States has an opportunity to change their Representatives in the House of Representatives every 2 years, the Senators each 6 years, and their President every 4 years. You could not be freer than that. There couldn't be a more representative government in the world than that.

So I congratulate you on the wonderful work you are doing. In saying this, I stand with George Miller over there, who is a great historian, and Wayne Grover. And I could not leave out Karl Trever, because I have one of the greatest libraries in the world down in my home town of Bonham, and Karl Trever came down—Wayne Grover loaned him to me—and stayed 3 months, to set that library up. It has as complete a historical background of America in it as any library you can find, because I have all of the published records of the Congresses from 1789 down to now, and then I have the lives and the writings of everybody in those days who made this country great, and the lives and the writings of those who have helped to keep it great. So I congratulate you, I am

glad you are here. You are doing a great work, and from a grateful heart, I thank you.

Mr. FLOETE. We sit today in a room that is hallowed by the great events in our Nation's history which have transpired here. This room was occupied by the Senate from 1800 to 1860. During that period, the Louisiana Purchase Treaty was ratified in this room; the treaties ending the War of 1812 and the Mexican War were ratified here. Webster, Calhoun, and Clay debated and talked here; and Clay and Calhoun were buried from this room. From 1860 to 1935 the room was occupied by the Supreme Court. Many of its important decisions were rendered from this room. The framework and foundations of our form of government were continued and strengthened from such decisions; and as we look back upon it the names of these illustrious Chief Justices come immediately to our minds: Taney, Chase, Waite, Fuller, White, Taft, and Hughes. Under them the judicial branch of the Government continued to be strong and independent, and under them the basic concept of the separation of powers was further established. It continues to do so under the inspired guidance of the present Chief Justice of the United States, whose record of selfless public service is known to all of us—the Chief Justice of the United States, the Honorable Earl Warren:

The CHIEF JUSTICE. Mr. Floete, Mr. Speaker, Members of the Congress, members of the Commission, distinguished editors of the historical projects, and ladies and gentlemen, it is always a thrilling experience for me to be in this room. I like to come here at times and sit on the side of the room and conjure about the things that have occurred here in days gone by. But this happens to be the second time that I have ever raised my voice in it in other than a conversational tone. So this is really a thrilling experience for me. The first time was about 28 years ago, when I was admitted to the Supreme Court of the United States and argued my first case before it. At that time the revered Oliver Wendell Holmes was on this Bench. I argued my case—I think it was the last case on Friday afternoon—and the next Monday morning, I am told, he laconically remarked to his secretary, "I won't be here tomorrow." When I got home, the word of the retirement of Mr. Justice Holmes had preceded me, and my associates met me with this kind of a greeting: "Now see what you have done. You have driven that dear old soul off the Supreme Court. For 50 years, 30 years of it on the bench of Massachusetts, 20 years of it here, he has seen all kinds of lawyers. He took one look at you and said, 'I quit.'"

I am glad to be able to participate today in activities designed to make better known to the American people the national program for the publication of historical documents that the National Historical Publications Commission is sponsoring. They have a very vital interest in its success. Two Presidents of the United States and the Congress of the United States have endorsed this program. It deserves our continuing support. The Commission is a relatively new agency on which are represented the three branches of the Government of the United States, and historical and other related organizations outside the Government. I am not a member of the Commission, but we have with us today my distinguished colleague, Mr. Justice Frankfurter, who represents the Supreme Court on this Commission, and I think we have a majority of the Court here. There are six members of the Court present, and I think I need not labor the point that it is always a pleasure to have a majority of the Court with me.

The Commission's main purpose, I understand, is not itself to write history but rather to cooperate with and encourage other appropriate Federal, State, and local agencies and nongovernmental institutions in collecting, preserving, editing, and publishing documentary materials, chiefly in manuscript, that are important for an understanding and appreciation of the history of the United States. At its first meeting, a little more than 7 years ago, the Commission recommended strongly the preparation and publication of comprehensive and scholarly editions of the papers of the following 5 leaders in the early period of our national history: John and John Quincy Adams, Benjamin Franklin, Alexander Hamilton and James Madison. The Commission had in mind as a model the edition of Thomas Jefferson's papers that was already in progress at Princeton University under the editorship of Julian Boyd, himself a member of the Commission. Within a very few years projects for the publication of the papers of these five men, under distinguished sponsorship and with able editors at their heads, were underway. (George Washington's papers were not included because there had recently been extensive publication of his letters by the Federal Government). The number of projects within the broad framework of the Commission's program has increased steadily over the past few years, as you may note by reference to the program before you.

To the extent that the program is now in operation it represents participation by the Federal Government, State governments, colleges and universities, historical societies and other learned institutions, foundations, business organizations and individuals in what may be looked upon as a common enterprise but operating with each project in the nature of an autonomous unit. This is as it should be.

The commission has planned for execution under its direct supervision two very important projects: One, a documentary history of the ratification of the Constitution and the Bill of Rights, and the other, a documentary history of the work of the first United States Congress. It is with respect to the first of these that I wish now chiefly to address my remarks.

It will be noted that the commission has concentrated much of its attention on the papers of great national leaders in the formative period of our Republic. After independence had been won, it was all too clearly evident that the weak government under the Articles of Confederation was inadequate for the infant United States and even more inadequate for the great leader of the free world that this infant was destined to become. A new and stronger government was clearly needed—one that could defend itself against foreign and domestic enemies and provide for the welfare of all its citizens while at the same time assuring the conduct of that government in accordance with the will of the people; reserving to the States certain governmental authority that might most properly be exercised by them, and protecting the individual against violation by either the National Government or the State governments of the basic rights of free men.

Out of recognition of this need grew the demand for a new constitution. After many days of debate and arduous labor and compromise, the Convention of 1787 in Philadelphia hammered out a constitution that it proposed for ratification by the several States. There then followed the great debate on the nature of government, the relationship of citizens to government, and, in particular, the advisability of ratifying or rejecting the proposed constitution. On the outcome of this debate hung the destiny of our country. As the editor of the Papers of Thomas Jefferson has so eloquently said: "We * * * demonstrated to the world the force of an idea in our philosophy of government, and we carried on * * * one of the most elevated public debates on the nature of free institutions that any country has ever produced."

As we all know now, victory went to the advocates of the new Constitution, but the margin of victory was not great. Much of the opposition was based on a belief that certain rights of individuals were inadequately protected. That was remedied when the First Congress proposed amendments and the States ratified 10 that are well known now as the Bill of Rights.

It is important to us and to the world that we know as completely as possible what was done, what was said, and what was thought in the course of that great debate. For information about the framing of the Constitution, we are fortunate to have Dr. Max Farrand's monumental four-volume work on the Records of the Federal Convention of 1787. I am sure it may be found, dog eared from use, in many law offices throughout the country. But for the contest over the ratification of the Constitution by the States and the addition to it of the first 10 amendments there is no comparable work. That is a situation which the commission proposes to remedy.

Information about the ratification exists in many different forms and is widely scattered. Much of it has never been published and much that has been published exists in such few issues of fugitive character that it is exceedingly difficult to find. There are the official records of the Continental Congress, in submitting the proposed Constitution to the States and in taking necessary steps to set up the new Government after the new Constitution had been ratified. There are the official journals and official and unofficial reports of debates of the State conventions that decided whether to ratify or not. There is much information in the many contemporary newspapers that were published from what is now Maine to Georgia and to the Far West that is now Kentucky.

There are many pamphlets resulting from the war of ideas, among them the well-known Federalist Papers, but others of importance, though of lesser note, and numerous broadsides that were used in the attempt to influence voters. There are letters by leaders of the opposing forces that provide information or a record of arguments that were used. There are entries in diaries, sermons, and other discourses that reveal attitudes and actions we need to know about and understand. The commission proposes to print, in some 6 or 8 volumes, all of these sources of information comprehensively and with careful attention to the exactness of reproduction and explanatory annotation. With the generous assistance of the Ford Foundation, the commission expects the publication will be completed within the next 5 years.

These volumes will be of very practical value to the Supreme Court of the United States and to other courts and to members of the bar appearing before the courts in cases involving matters of constitutional law. They will throw light upon what those who ratified the Constitution and the Bill of Rights understood those documents to mean. They will take us back to the climate of opinion and to the vocabulary in which the Founding Fathers thought and spoke. It is frequently necessary for the Supreme Court to take these matters into consideration when making decisions that affect the lives of many people. The need to do this has existed throughout the history of the Court and can perhaps be best illustrated by the case of *Chisholm* v. *Georgia* in 1793. That case involved the interpretation of article III of the Constitution as to the jurisdiction of the Federal courts where a State is a party. There was little information available then, although there is much now on what both the framers and the ratifiers of the Constitution intended. The decision sanctioning

Federal jurisdiction created a furor, and it required the adoption of the 11th amendment to clarify the atmosphere.

In many cases the Supreme Court finds it necessary to take into consideration the history of a particular clause of the Constitution, going back to contemporary sources in an attempt to determine what was meant by the framers and ratifiers who put a particular clause into the Constitution. The President's power to remove executive officers, for example, was involved in the case of *Myers* v. *United States* (1926). These very long opinions, both majority and dissenting, are devoted largely to a discussion of the history of the removal power. This involved extended analysis of what the framers meant by "executive power" in article II and whether it included the power of removal.

The question of separation of the church and state was involved in *Everson* v. *Board of Education*, the School Bus case. The central issue in the case was what the framers of the first amendment meant by the term "no law respecting an establishment of religion". There are various ways in which the phrase could be interpreted. Did the framers mean no aid at all to religion, or did they mean no preference of one religion over another? The purpose of the documentary history would be to throw light on such nebulous issues.

This project will have even broader values, of course. It will be of inestimable benefit to students of constitutional history, constitutional law and other aspects of our national development, and the understanding that these persons obtain from their use of the records at first hand in these volumes will pass down in books that they and others write to an ever-broadening level of our reading public. There should thus result for the great majority of our citizens a better understanding of the principles upon which our Government today is fundamentally based.

What I have said about the value of this projected compilation of documents on the ratification of the Constitution and the Bill of Rights applies also to the commission's proposed documentary history of the work of the First Congress of the United States. It was this Congress that took the Constitution as it had been drafted and ratified and put it effectively into operation. It established the judiciary system, which the Constitution had authorized; it established the first executive departments; it provided money for the operation of the new Government; and it took much other action about which we need to have such complete information as the commission proposes to assemble and publish. And much the same can be said for the records of other early Congresses that are not now conveniently available for use.

With respect to the commission's whole program, let me say again that I think it highly desirable to press forward with it as energetically as possible, not solely on behalf of scholarship or of the needs of our Nation's bench and bar and legislative assemblies, but also out of consideration of the interests of all of our people and the protection of the democratic society in which we live against hostile ideologies. I am especially glad to note the cooperative character of this program and the extent to which some leading business organizations and foundations have given it support. This is one of the admirable characteristics of this free country in which we live. The costs are high in terms of the thousands of dollars that the various projects will require but we are a great and wealthy nation and the profits that we will receive from this program, tangible and intangible, will be many times worth their cost.

Mr. FLOETE. It is my great privilege and pleasure now to read a letter from President Eisenhower:

"DEAR MR. FLOETE: It is good to learn of the advancing work of the National Historical Publications Commission. This Commission has made splendid progress toward enlarging the basic stock of source materials of American history.

"Written history is as important to civilization as human memory to an individual. The free world must have histories written by men and women in search of the truth—not by those seeking to rewrite the records of the past to their own advantage. This underlines the essential need of a broad and incorruptible supply of our Nation's documentary resources.

"Incidentally, I have ask the Director of the United States Information Agency to consider placing in our overseas libraries the documentary publications resulting from the Commission's work. There is no better way to gain a true understanding of America's traditions and objectives than through a direct study of the writings of our national leaders and the records of our free institutions.

"Please give my congratulations and best wishes to the members of the Commission and to the historical editors assembled in conference here next week. At that time, I want you to give special thanks to the sponsors and donors who are helping in this program.

"Sincerely,

"DWIGHT D. EISENHOWER."

Irwin S. Rhodes, of Cincinnati, chairman of a special committee of the American Bar Association, has an important announcement to make. Mr. Rhodes, will you please come to the microphone?

Mr. RHODES. Mr. Chairman, Mr. Chief Justice, Mr. Speaker, ladies and gentlemen; Mr. Charles S. Rhyne, president of the American Bar Association and the American Bar Foundation, has asked me to announce the sponsorship by the American Bar Foundation of the John Marshall papers project. Thank you.

Mr. FLOETE. Ladies and gentlemen, this concludes our formal meeting. The conference of editors will resume in the Archives Building.

Win Freund's Great Reporting Job

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, July 29, 1958

Mr. PROXMIRE. Mr. President, most Americans were shocked by the story of the use of three United States Air Force airplanes to bring Dr. Milton Eisenhower and his daughter from Land O' Lakes, Wis., to Washington a short time ago.

The story was given to the public by the diligence of Win Freund, city editor of the Wausau, Wis., Daily Record-Herald. Mr. Freund got a tip that something was afoot at the Wausau Airport and he went there with his camera. Despite obstacles placed in his way by Air Force officials, he got the facts.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the letter which I wrote to Mr. Freund congratulating him upon his news story.

There being no objection, the letter was ordered to be printed in the Appendix of the RECORD, as follows:

JULY 29, 1958.

Mr. WIN FREUND,
City Editor, Wausau Record-Herald,
Wausau, Wis.

DEAR WIN: I want to congratulate you on the splendid job you did covering the story of Milton Eisenhower's trip from Land O' Lakes to Washington in Air Force airplanes. I had read the story, without knowing that you wrote it, and my immediate reaction was that this was exactly the way the story should be handled. It is a job of perfect objective reporting, which lets the facts speak for themselves. I don't see how you could have improved on it.

I have learned that you got the story in spite of real obstacles placed in your way by Air Force officials. I am glad that you persisted, like the first-rate reporter you are, and got the facts. There is no excuse for secrecy in the conduct of government. Every time you defeat secrecy in government you have performed a public service.

With warmest regards,

Sincerely,

WILLIAM PROXMIRE,
United States Senator.

Refugees From Communism Should Be Granted Asylum Here

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. DINGELL. Mr. Speaker, the United States, a traditional haven for those oppressed by tyranny and dictatorship, has closed her doors to a young seaman who sought asylum here. This is a strong indictment of the United States and a worse indictment of Gen. J. M. Swing, Commissioner of the Immigration and Naturalization Service.

The seaman, Richard Eibel, is a Polish national, aged 24, who jumped his ship, the freighter *Fryderyk Szopen*, when she docked at New York a week ago yesterday. He stated that he did not wish to return to Poland and wanted asylum in the United States. He has made it clear that he faces persecution and heavy punishment for his attempt to flee Poland, and that because of his anti-Communist activities in Poland even his life might be at stake.

It would be well for Commissioner Swing to read the tablet inside the main entrance of the Statue of Liberty on which are engraved the words:

> Give me your tired, your poor, your huddled masses yearning to breathe free, the wretched refuse of your teeming shore. Send these, the homeless, tempest-tost to me. I lift my lamp beside the golden door.

He might then have a better understanding of our policy of accepting all who seek asylum here. If we accept such unsavory persons as the former dictator of Venezuela, Perez Jimenez, certainly we can do the same for an honest refugee from communism.

The most serious indictment of Commissioner Swing and the Immigration and Naturalization Service is that no

hearing was accorded the young man before he was returned to his ship. Only one chance remains for America to redeem herself and that is to remove this young man from the ship, as the British authorities did in 1954 with Antoni Klimowicz, who was permitted to remain in Great Britain as a refugee. If England does this, surely we can do no less.

For Those Growing Old

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mrs. BOLTON. Mr. Speaker, Cleveland has been one of the pioneers and one of the most aggressive communities in the Nation in attempting to provide adequate housing for its citizens. In 1934 the city of Cleveland began the first low income public housing projects. Some 21 years later, through the foresight and planning of Ernest J. Bohn, director of the Cleveland Metropolitan Housing Authority, we opened a 14-story, 156-unit apartment building for primarily elderly persons needing low income housing. A home atmosphere, rather than that of an institution, pervades this building since some young families with children are being placed on each floor with the thought that association with younger couples has a healthy psychological effect on the senior citizens.

Mr. Bohn recently announced that new golden-age projects will be undertaken. Nearly 400 of the 817 dwelling units on the Cleveland Metropolitan Housing Authority's drawing boards will be for persons 65 years and older. Under leave to extend my remarks, I include an editorial from the Cleveland Plain Dealer of July 24 entitled "For Those Growing Old":

FOR THOSE GROWING OLD

When considered against the age patterns of Cleveland's population and the trends forecase in the next 2 decades, the new golden age projects just announced by Ernest J. Bohn for the east side take on some additional significance.

Nearly 400 of the 817 dwelling units on the Cleveland Metropolitan Housing Authority's drawing boards will be for persons 65 years and older. In view of the increasing numbers here of those in the above 65 year bracket and the best guesses of population experts that those numbers will ascend sharply, it's not a question of whether these 400 units will be needed, it's a question of how many more such dwellings will be required if the proper job is to be done.

The units which Bohn has announced for his CMHA, along Ansel Road at Hough and at Wade Park Avenue, will to a certain extent be patterned on his pioneer golden age center at Cedar Avenue and East 30th Street.

These quarters also will be specially designed for older tenants. There will be some suits for young families, so the older residents will benefit from the lift of watching children grow.

But in addition, the new units will take advantage of a change in the Federal law which permits them to be built specially for single persons (that is, unmarried persons and widows and widowers), and there will be space for a clinic so tenants' ailments may be diagnosed quickly without the harsh necessity of carting them off to a hospital.

A geriatrics study, with funds from the Ford Foundation, has been underway at the Golden Age Center with the help of Western Reserve University. The new projects with their special clinical facilities should be worth continuing research helpful to medicine and to other communities.

We naturally should like to see this type of project undertaken by private financing rather than with Federal help, but it's a job which must be done now to meet a growing condition, the fact that an increasing proportion of our population is living to 65, 70, and beyond. Perhaps at a propitious time private interests will get into the work, too. It appears that if rents are kept reasonable there will be plenty of prospective customers.

For Suspension of Nuclear Tests

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. PORTER. Mr. Speaker, the American people are becoming increasingly aware of the urgency of suspending nuclear tests. Under leave previously granted, I am inserting in the RECORD two letters I have just received and which speak for themselves and all mankind:

AMERICAN FRIENDS SERVICE COMMITTEE, INC.,
Portland, Oreg., July 28, 1958.
Congressman CHARLES O. PORTER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PORTER: We are happy to send you the enclosed copy of an appeal addressed to President Eisenhower, Secretary Dulles, and John A. McCone. This appeal, signed by 145 Oregon clergymen, urges immediate efforts to end United States nuclear-weapons tests in the Pacific and to reach an agreement for their suspension with the other nuclear powers.

This project was initiated by the American Friends Service Committee with the cooperation of the following ministers: John L. Anderson, chaplain, Lewis and Clark College; Harold Glen Brown, First Christian Church, Portland; J. J. Clow, Mount Olivet Baptist Church, Portland; Albert F. King, Bethel Congregational Church, Beaverton; and George G. Roseberry, First Methodist Church, Medford. You are free to use this information in any way you wish, though we have agreed that there will be no general circulation or publication of the list of appeal signers.

Sincerely yours,
WILTON HARTZLER,
Executive Secretary.

JULY 23, 1958.
President DWIGHT D. EISENHOWER,
The White House, Washington, D. C.

DEAR PRESIDENT EISENHOWER: We, the undersigned Christian ministers of the State of Oregon, are deeply concerned with the moral implications of continued testing of nuclear weapons by our country or any other country.

We are disturbed by the mounting evidence of radioactive fallout and by the widely held opinion of scientists that harmful effects will be visited upon unborn generations.

We deplore the perfecting of weapons capable of total and instant annihilation of millions of people in one blow.

We are saddened that the world believes it can sow the seeds of peace by using implements of destruction.

We direct this message to President Eisenhower, Secretary of State Dulles, and John A. McCone, Chairman of the Atomic Energy Commission. We appeal to each of you to bring an end to the United States tests in the Pacific. We urge you to bend all possible efforts to secure an agreement with the other nuclear powers which will suspend all nuclear weapons tests.

Sincerely yours,
(145 Oregon Clergymen.)

In Defense of Americans for Democratic Action

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. CELLER. Mr. Speaker, the RECORD shows that on Monday, July 21, 1958, the gentleman from New York [Mr. DEROUNIAN] addressed the House on the subject of Americans for Democratic Action. I have great respect for the gentleman with whom I have served for a number of years, but that respect does not blind me to the shortcomings of his remarks to which I must take exception. I offer these remarks in kindliness, yet with conviction. Among other people connected with ADA, he took issue with the policies and proposals advocated by ADA to bring a speedy end to the recession into which the Republican administration has plunged this country. While I do not necessarily agree with all of the recommendations in this program, I have the greatest respect for such people as Mrs. Eleanor Roosevelt, David Dubinsky, James B. Carey, India Edwards, Thomas K. Finletter, and Robert R. Nathan, who are among the signers of this resolution. I know these dedicated citizens and I have worked with them and others, including former Senator Herbert H. Lehman, on legislation for the good of this country. I especially remember how they have given of their time and their energies in the fight for legislation to protect civil liberties and civil rights and for economic and social security. I have found them to be zealously devoted to the cause of democracy in our country and I am proud to have had the privilege of working with them.

The gentleman from New York has allowed himself to imagine that, as he said:

ADA'ers are morbidly fascinated by the U. S. S. R. and anything accomplished by the Communists is acclaimed by the ADA as superior to anything accomplished by the United States of America. They are saying, right now, that the Russian economy is superior to ours.

Mr. Speaker, this is exactly the opposite of what ADA is saying. For a long time Mr. Robert R. Nathan, who is the

national chairman of ADA, and other leaders of the organization have been trying to arouse the people of the United States and the Congress of the United States to the great threat posed to the United States by the rapidly increasing rate of production in the Soviet Union and in their increased emphasis on infiltration of neutral countries through technical and economic aid. Second only to our system of personal freedom and individual liberty, the American economy is our most important asset in the long-drawn international competition with communism. The ADA does this Nation a service in calling attention to the need to keep the American economy vigorous and growing in order to provide the vital means of meeting that competition. If the gentleman from New York [Mr. DEROUNIAN] considers this activity is pro-Communist, then he must also consider it pro-Communist when the Columbia Broadcasting System devotes an hour of its program time, as it did a week ago, to probing in depth the increasing threat of Communist technical and economic assistance, under the title of "The Ruble War." It is a credit to the understanding of the leaders of the ADA and their devotion to the cause of democracy that in these activities they have placed such great emphasis on measures like mutual security and reciprocal trade designed to strengthen the position of the United States and of the free world. ADA's 11-year history of anticommunism, nationally and internationally, is a matter of record—from their support of the Truman doctrine and the Marshall plan to their support of NATO and mutual security.

It will be a sad day for the United States when recognition and awareness of the widening and deepening Soviet economic offensive and the peril it poses for the free world brings down cries of pro-Communist on those who recognize this and are aware of it. Surely nothing would help the Communists more than smothering this kind of awareness and discussion in the United States. In fact, anyone who closes his eyes and his mind to this Soviet threat is unwittingly helping the Communists. I believe that ADA and others deserve a vote of thanks for the work they have done in bringing these developments and their implications to the attention of the American public.

My esteemed colleague is absolutely right when he says that ADA is devoted to a program of full and steady employment and production and an expanded program of social security. I wonder if he wishes us to infer from his comment that he does not believe in these programs. I am sure he can find many Members of the House who would be pleased to debate with him the importance of such programs.

But the gentleman from New York is misinformed when he says that ADA has recommended economic aid to Communist China or its admission to the U. N. What ADA has recommended is that this Government initiate negotiations looking toward diplomatic recognition of the Chinese Communist government not, as the ADA says, "as a gesture of moral approval—which the Chinese Communist obviously do not merit—but as a means of establishing the normal channels of communication between the two nations." There can be wide differences of opinion on this question and these diferences can be the subject of reasonable debate among reasonable men. The ADA's position was taken because they felt that such a policy would be in the best interests of this country and for no other reason. I am sure that my colleague from New York agrees that this should be the governing criterion in any such question of foreign policy.

If he would take the trouble to examine the record, I think the gentleman from New York would find that the ADA is precisely what it says it is:

A nationwide, independent anti-Communist political organization dedicated to a program for making liberalism a more effective force in the United States.

I might say that if the gentleman from New York and the Republican Party would stop wasting their time berating the ADA and spend more time on the great issues confronting this country, they would do their country and their party a service.

Frankly, most of the projects and tenets of the ADA I personally espouse and am pleased to make this public acknowledgement thereof. It may be that some of its principles and actions I may not approve, but by and large it is a stimulating, wholesome organization and the gentleman from New York [Mr. DEROUNIAN] does not do himself proud, indeed, in attacking it.

Clarifying Law on United States Flag

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. CELLER. Mr. Speaker, on Monday, July 28, 1958, I introduced a bill, H. R. 13552, to clarify the law relating to the design and dimensions of the United States flag.

There is no Federal statute which fixes the proportionate dimensions of the flag, including the size and arrangement of the stars in the union of the flag. I have been advised that these matters have been regulated by custom. However, a study of past actions on the design of the flag each time a new State was admitted to the Union, discloses no established procedure. For example, in 1912 when Arizona and New Mexico were admitted, a joint board of Army and Navy officers recommended a plan of the union of the flag and thereafter President Taft, by executive order, approved its action. However, when Oklahoma was admitted in 1907, the arrangement of the stars in the flag was decided without Presidential Executive order. The Navy simply wrote the War Department, suggesting that officers meet to recommend a design. When these Departments approved a design, other agencies adopted it.

Prior to these last two changes in the flag, the military services arranged the stars without executive order or legislation, but followed, generally, the basic law of 1818 which required the addition of a star on the 4th of July next succeeding the admission of a new State. In 1947, when title 4 of the United States Code was enacted into positive law, the 1818 law—Third United States Statutes at Large, page 415—which was reenacted as sections 1791 and 1792 of the Revised Statutes of the United States, was repealed—act of July 30, 1947, section 2; Sixty-first United States Statutes at Large, page 646.

The 1947 act, however, contains a possible ambiguity. Section 1 expressly provides that there "shall be 48 stars" in the union of the flag. Section 2 of that act, though, provides that on the admission of a new State "one star shall be added" to the union of the flag. We have, then, an apparent conflict, one section limiting the number of stars to 48 and another section providing for additional stars on the admission of new States.

While I think these sections can be reconciled, I nonetheless feel that the law should be clarified. Certainly it will be necessary to amend the law after Alaska is admitted into the Union, in order that the provision providing for 48 States can be changed to 49 States.

Furthermore, there should be a Federal statute setting forth standards to guide those who are given the responsibility for rearranging the component parts of the flag. Today there is no set precedent for them to follow. My bill would place this important duty under the direction of the President of the United States.

There is an act authorizing the Army to design flags and other insignia for the military departments only and to advise other agencies on matters of heraldry—Public Law 85–263; title 10, United States Code, section 4595. However, this act gives no express authority for the Army to design or rearrange the flag of the United States—see Senate report 1115, 85th Congress.

My bill contains flexible provisions and is so drawn that it will require no change if and when additional States are admitted to the Union. At the same time, it establishes clear standards for the guidance of those who will be charged with the responsibility of providing additional stars as new States are admitted.

A bill providing for the design of the flag of the United States

Be it enacted, etc., That sections 1 and 2 of title 4, United States Code, are amended to read as follows:

"§ 1. Flag; design.

"The flag of the United States shall have 13 horizontal stripes of the same width, alternate red and white, with a union consisting of as many white stars on a field of blue as there are States in the Union.

"§ 2. Same; additional stars; dimensions.

"(a) Whenever a new State is admitted to the Union, the President shall cause a plan to be made setting forth the positions of the stars in the union of the flag. He

shall also cause to be fixed the proportionate dimensions of the constituent parts of the flag.

"(b) The addition of each new star to the union of the flag shall take effect on the fourth day of July next succeeding the admission of a new State.

"(c) All flags of the United States on hand on the 4th day of July next succeeding the admission of a new State may be continued in use until unserviceable, but all flags manufactured for use after that date should conform to the design and specifications adopted pursuant to this section."

SEC. 2. Items 1 and 2 of the chapter analysis of chapter 1 of title 4 are amended to read as follows:

"Flag; design.

"Same; additional stars; dimensions."

A True American

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. PATTERSON. Mr. Speaker, I had the pleasure last Thursday of renewing my friendship with a distinguished and patriotic American, Maj. Gen. Julius Klein, retired, of Chicago. The occasion was the appearance of General Klein as a witness before the Joint Committee on Atomic Energy, which is considering the International Agreement between the United States and the European Atomic Energy Community. General Klein, who recently returned from a 2-month series of conferences with prominent officials in Western Europe, made a very excellent statement. It is certainly one we can take into serious consideration, and I am happy to note that the complete text appeared in the Appendix of the CONGRESSIONAL RECORD of July 24. I commend it to the attention of my colleagues.

Mr. Speaker, I knew General Klein in the South Pacific. I knew him as a lieutenant colonel, colonel, and a general. I have known on many occasions where he has served his country. One occasion that comes to my mind was when General Klein, at his own expense, conducted a study mission in Europe as a consultant to the Committee on Appropriations of the Senate. That was in 1954, and General Klein visited England, France, the Federal Republic of Germany, the German Democratic Republic, the Saar, Austria, Italy, Belgium, Switzerland, Holland, Spain, Luxembourg, Scandinavia, and the Vatican. He talked to literally hundreds of men and women in all walks of life, seeking information of value to his country. The report he later made to the Senate committee was hailed by Democrats and Republicans alike as of outstanding importance in the study of our Military Establishments and needs abroad.

A man of General Klein's caliber and ability is certainly well qualified to speak to us of the vital place that Euratom occupies in the efforts of the free world to promote the peaceful uses of atomic energy.

We all have a right to be proud of the long and distinguished record of General Klein's service to our country. Army officer, leader of veterans' organizations, war correspondent, editor, public-relations counsel, motion-picture executive, investigator of subversive activities in the United States, adviser to both executive and legislative branches of government, General Klein has, indeed, given many lives to his country.

He was the youngest American war correspondent in World War I, after which he enlisted in the Army. In 1933 while the country was at peace, General Klein joined the Illinois National Guard, where he headed the investigation of subversive activities in the Middle West in 1933 and 1934. He again entered active Army service in 1941, and spent most of World War II in the south Pacific as a colonel under General MacArthur. He was twice decorated for heroism. He was separated from the Army in 1946 after serving as special assistant to the Secretary of War. Not satisfied with a well-earned period of leisure, General Klein became the commanding officer of an important unit of the Illinois National Guard. He achieved the rank of major general for his dedicated and valuable work in the National Guard since 1946. Included in his many postwar activities is his participation in the American Legion, Disabled American Veterans, AMVETS, and Jewish War Veterans (national commander).

It is no exaggeration to say that the future welfare of this country depends upon our ability to produce leaders of the caliber, integrity, and dedication to public duty of Gen. Julius Klein.

Conqueror of Gaillard Cut, Panama Canal

EXTENSION OF REMARKS
OF
HON. JOHN J. RILEY
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. RILEY. Mr. Speaker, the Army engineer who was one of the key men in the construction of the Panama Canal was born in Sumter County, S. C., the county in which I now live. His family is distinguished throughout the history of the United States for its contributions to the development of America. David DuBose Gaillard gave his life in carrying out his assignment in the construction of the Panama Canal. I beg to insert herein a history of this distinguished South Carolinian:

DAVID DUBOSE GAILLARD, CONQUEROR OF CULEBRA CUT, PANAMA CANAL

(By Kathleen Lewis)

This August 8, 45 years ago, Col. David DuBose Gaillard, conqueror of Culebra Cut in the Panama Canal, sailed for the United States, never to return, and never to learn that he had accomplished one of the gigantic engineering tasks of all time.

With his wife, his son, Pierre, and Dr. Charles Mason, he landed in New York August 16, and shortly thereafter was admitted to Johns Hopkins. Following the diagnosis of an intercranial growth, Colonel Gaillard was operated on at Peter Bent Brigham Hospital in Boston, where he was admitted September 1. The operation by Dr. Harvey Cushing produced no beneficial results, and he was returned to Johns Hopkins October 1.

For 3 months he was totally unconscious, dying December 5.

The Nation was stung with pity and sympathy for Colonel Gaillard as the story of his work was unfolded by the press following his departure from Panama. The climax was reached in October as President Woodrow Wilson pushed a button in Washington, applying the spark to blow up the rock and earth embankment of the dam at Gamboa, letting the waters of Gatun Lake rush into Culebra Cut.

After this event the press clamored that Culebra Cut must be renamed, and that it should bear the name of the man whose battle against slides, floods, tropical heat had cost him his life.

Now passengers of ships passing through the canal may notice a plaque 100 feet above the water, overlooking the cut. It says, "In Memory of D. DuB. Gaillard, Builder of Gaillard Cut, 1907–1913." The memorial, which is located on Contractor's Hill, is the work of James Earle Fraser, and was erected by his family and the Third United States Volunteer Engineers, of which he was the regimental commander during the Spanish-American War.

April 28, 1915, at the White House, President Wilson signed the Executive order renaming the cut, stating that "the portion of the Panama Canal through the Continental Divide heretofore known as 'Culebra Cut' shall hereafter be named 'Gaillard Cut' in honor of the late Lt. Col. D. D. Gaillard, Corps of Engineers, United States Army * * * I deem it a fitting recognition of Lieutenant Colonel Gaillard's services to the country to rename in his honor, the scene of his life's triumph."

Though digging the cut was a task of immense magnitude, probably Colonel Gaillard's most difficult work was in learning how to control the slides. According to his wife, he spent many sleepless nights figuring out new methods to counteract the capricious layers of mud and rock bed which rose from the depths of the canal during the night to undo a whole day's work.

During the early stages of the work, slides gave little trouble; but in later years, it was the factor which threatened successful competition of the canal.

The first slides were caused by slipping of the top layer of clay or earth upon a sloping surface. These varied in thicknesses from 10 to 40 feet.

The largest of this type was the Cucaracha slide on the east bank, below Gold Hill. Its movement was like that of a mud glacier, moving completely across the canal, its toe advancing for the first 10 days at a uniform rate of 14 feet in 24 hours.

Later, as the depth of the cut increased, so did the trouble with the slides, bringing out all Colonel Gaillard's ingenuity devising ways to prevent recurrences.

The largest slide covered an area of 75 acres. Up to October 1, 1912, over 7,500,000 cubic yards of the slide material had been removed, with 2 million more to be removed. They were an ever-present source of annoyance and expense. They covered up railroad tracks, demolished roads, broke drainage and water mains, all of which had to be restored or repaired as quickly as possible. The slides too, accounted for about 22 million cubic yards of extraneous material that had to be excavated.

From 1907 to June 1, 1913, total material excavated under Colonel Gaillard's direction was 104,800,873 cubic yards. About half that was necessary for the total excavation (212,504,138 yards). Eighty-eight million cubic yards came from Culebra Cut.

In addition, 5,419,751 cubic yards of rock were supplied and hauled over 30 miles to build the Gatun Dam. The relocated Panama Canal was furnished over 4 million cubic yards of material which had to be hauled over 8 miles. Over 151,000 cubic yards of hard rock were transported from the cut to the mole at Colon, 35 miles away.

The dike from the mainland to Naos Island across a part of the Panama Bay was furnished 1,121,233 cubic yards of rock. The dam at Miraflores and the back fill for the Pedro Miguel lock were also supplied with over 175,000 cubic yards of material.

Cost of excavation to the Government for Colonel Gaillard's work, after he took over the division April 12, 1907, were as follows: 1908, 72 cents; 1909, 55 cents; 1910, 54 cents; 1911, 49 cents; 1912, 47 cents. The annual excavation had been roughly 17 million cubic yards; thus a saving of 1 cent per cubic yard for a year meant a saving to the Government of $170,000.

The spectacle of 6,000 men working at first in Culebra Cut attracted engineering experts from Europe and Japan; geologists from many countries came to see the section. It was the world's greatest curiosity.

Maj. David Gaillard was appointed a member of the Isthmian Canal Commission, March 22, 1907, following service in Cuba as Assistant to the Chief of Staff, and Chief of Military Information Division, Army of Cuban Pacification, Marianao.

After it had become pretty evident that civilian engineers would never finish the task of cutting the Panama Canal, President Theodore Roosevelt decided to turn the job over to the Army engineers. He conceived the idea of appointing a trio, instead of one head, so the work would not be interrupted should one be removed for any cause.

The control was vested in Lt. Col. George W. Goethals, Major Gaillard, and Maj. W. L. Sibert, a giant of a man, former classmate of Gaillard's at West Point. Sibert and Gaillard were known at the Point as David and Goliath and spent many pleasant hours together as roommates and later as coworkers on the canal. Colonel Goethals remained as Chairman of the Commission to the completion.

The three men set to work immediately to tackle the job that had baffled engineers for too long a time.

Gaillard, who made the cut through Culebra Mountain, was peculiarly fitted for this work. Before the Spanish-American War he had assisted in determining two international boundaries, the Mexican and Alaskan. And, after the war, he had been engaged extensively in river and harbor work, most noteworthy those at Jacksonville and St. Augustine, Fla.; the Great Lakes; the Washington Aqueduct; and the Portland Channel (Canal), Alaska, the latter said to be a mission of international significance.

In addition, he was a competent leader, having served as the regimental commander of the Third United States Volunteers, helping in the regeneration of Cuba in 1899.

Gaillard had made great and lengthy studies of water, waves, and tides, and had compiled numerous articles on these subjects. One, Wave Action Upon Engineering Structures, brought him considerable fame.

All this experience brought the right man to the most difficult task in the construction of the Canal; conquering Culebra Cut.

The main construction work had been divided into two departments by Col. Goethals. Major Sibert took over locks and dams.

Gaillard was assigned the Department of Dredging and Excavation, which was composed of two dredging divisions, and one dry excavation division. The Pacific Dredging Division handled the work at the south end of the Canal from the Pacific locks to the Pacific Ocean; the Colon, from the Gatun locks to the Atlantic Ocean; and the Culebra Division, the dry excavation work through 9 miles of solid mountain, the backbone of the continent.

Major Gaillard—later made lieutenant colonel on April 11, 1909—was described by those who knew him, as being of high character, ability, indefatigable industry, genial disposition, uncannily accurate observation and intuition, and good humor—a good teller of stories.

When he arrived on the scene, he was appalled at the high costs of excavation—one of his very first observations—and immediately set the machinery (and his brains) in motion to reduce them.

Many wanted to discard the expensive French machinery, and advised him lengthily on the subject. But Major Gaillard was hardheaded, too, and pointed out their former usefulness by Frenchmen in having excavated 24 million cubic yards of material in Culebra Cut. So, he transferred the machines to the Chagres River division, where he thought their utilization would be more beneficial. This proved to be true.

He put to use a dozen new American steam shovels; but kept the 46 old French locomotives and cars to do most of the hauling. These were supplemented by three, modern locomotives, all he could obtain at the time.

July 1, 1908, under a reorganization plan put into effect by Goethals, he became head of the central division, which amounted to all the excavation work between the Atlantic and Pacific locks. Now—it was Gaillard's job to perform the marriage of the oceans.

This new division extended from Pedro Miguel locks to Gatun dam and locks, 33 miles, and embraced the entire summit level of the Panama Canal. The Culebra Cut was the greater part of the dry excavation. Of the 9 miles, over 7½ had a bottom width of 300 feet and a depth of 45 feet. The remainder of the canal had a width in excess of 300 feet.

Over 1,000 loaded and empty trains were handled in the division during the 9-hour workday, and an average of 2 miles of water and air pipe were laid and 2 miles taken up for every working day in a year.

Before Colonel Gaillard assumed command, the maximum monthly output in the division was 815,270 cubic yards. His increase was 152 percent, as evidenced by the figures for March 1909 when 2,054,088 cubic yards were removed. The greatest number of shovels in use at one time was only 43.

Transportation of this material required 115 locomotives and 2,000 cars. Although the cut was just 9 miles in length, the track required for the operation of the trains was about 100 miles, or an average of nine, parallel tracks.

The maximum number of drills in use was 337, of which 221 were tripod, and 156, well drills. About 90 miles of holes were drilled in a month.

To reduce deaths and injuries from dynamiting, Col. Gaillard had all holes wired in parallel in contrast to the in series method formerly used. Over 20 million pounds of dynamite were fired in 3¼ years under his direction, with the loss of 8 men. Three of the men failed to remove themselves to a safe distance; two miscounted the shots, returning too quickly.

When Colonel Gaillard filed his last annual report in July 1913, he did it as he had done the work on Culebra Cut; methodically, painstakingly, and accurately. There was very little left for anyone else to do: Culebra Cut was conquered, and all needed now was for the explosives to be laid, the mine drilling made, and a button to be pushed, blowing into destruction the last barrier which traversed the Isthmian waterway from bank to bank.

The building of the canal had been David Gaillard's cherished dream, and his constant concentration of mind and body to that task had finished both his job and himself.

On December 8, 1913, following services at St. John's Episcopal Church in Washington, he was entombed at Arlington at services befitting a soldier and a great engineer.

For 5 minutes during this solemn service, miles away at the site of his former labors, 20,000 men still working in the cut stood in tribute to their coworker.

As the final words of the ritual were pronounced by the Reverend E. S. Dunlap, three volleys were fired by the engineer battalion and taps were sounded by Chief Musician Frank J. Weber, who was band leader of Gaillard's regiment, the 3d Engineers.

BIOGRAPHICAL DATA

David DuBose Gaillard, son of Samuel Isaac Gaillard and Susan Richardson DuBose Gaillard, of Huguenot and English ancestry, was born September 4, 1859, at the summer home of his parents, Fulton Postoffice, Sumter County. His early childhood was spent at Pinola, the plantation home of his maternal grandfather, David St. Pierre DuBose. This home, in Clarendon County, was burned. Later, the family lived at The Rocks in Eutawville, in the home which is still standing.

Because the schools of that day were rather poor, David Gaillard in 1872 left Clarendon County and went to Winnsboro, where for 3 years he was a student at the "Light on the Hill," Mount Zion Academy. In Winnsboro, he lived with his grandmother, Mrs. David Gaillard, and worked as a clerk in the general store of Fleming McMaster.

Under the tutelage of Prof. Means Davis, who had accepted the principalship of Mount Zion, young David explored all avenues of knowledge. Later Professor Davis was to become his brother-in-law.

He received appointment to West Point through a vacancy in the congressional district of Hon. J. S. Richardson, Sumter County, following the competitive examination. After preparatory school at Highland Falls, he entered West Point as a cadet in September 1880, the fifth of his name to enroll there. He graduated in the fifth position in a class of 31, said to be among the more brilliant classes to come from the Army school. He was commissioned second lieutenant of engineers September 15, 1884.

In 1887, Gaillard, at the age of 28, married Miss Katherine Ross Davis, Prof. Means Davis' sister. Their only child, David St. Pierre who was born January 25, 1890, is an electrical engineer, now lives at The Rocks (named for the ancestral home), in Washington.

Mrs. Gaillard died at her home, 1661 Crescent Place, Washington, December 30, 1937, and was buried beside her husband at Arlington.

Colonel Gaillard has two living grandchildren: David DuBose Gaillard, of Washington; and Monica Gaillard who is married to Frederick Taylor Peck, now attaché at the United States Embassy, Guatemala, and formerly attaché in Peru and Colombia.

One grandson, David St. Pierre (Peter) Gaillard, who attended The Citadel, died some years ago.

S. 1869 Should Not Pass

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I would like to

insert a copy of the statement which I made earlier today before the House Committee on Public Works in opposition to S. 1869, a bill to amend the Tennessee Valley Authority Act. The statement includes a newspaper item which tells the story of how West Virginia recently lost a $75 million industrial plant to the TVA region. The newspaper article was included as a part of my testimony before the House committee. The statement and newspaper story follow:

STATEMENT OF ROBERT C. BYRD IN OPPOSITION TO S. 1869

Mr. Chairman, I am opposed to S. 1869 for a number of reasons, which I shall very briefly state:

1. The bill removes the Tennessee Valley Authority from the provisions of the Government Corporation Control Act of 1945.

That act states that the TVA, as a wholly-owned Government corporation, shall cause to be prepared annually a budget program which shall be submitted to the President through the Bureau of the Budget. The act also provides that the budget program be transmitted by the President to the Congress, and that it shall be considered and, if necessary, legislation shall be enacted making available such funds or other financial resources as the Congress may determine.

Under this bill, therefore, there would be no annual budget program submitted to the President through the Bureau of the Budget nor would there be any budget program transmitted to the Congress by the President as a part of the annual budget required by the Budget and Accounting Act of 1921.

2. This is not the only statutory congressional control over TVA that would be eliminated by S. 1869. The bill would also remove the TVA from the scope of the Government Corporations Appropriation Act of 1948. That act states: "None of the power revenues of the Tennessee Valley Authority shall be used for the construction of new power-producing projects (except for replacement purposes) unless and until approved by an act of Congress." So, here we find that this bill removes the requirement for approval by the Congress of new projects as stipulated in the portion of the act that I have just read. On the other hand, inaction by the Congress is to be taken as implied approval, under this bill, of any new power-producing projects for TVA, and any disapproving action is restricted to a 90-day period. I think we all recognize that many things can happen through inaction that would certainly not be consummated if action of an affirmative and positive nature were required.

Both statutory bases for congressional control of the Tennessee Valley Authority are thusly removed by this act.

3. Then, Mr. Chairman, I object to this bill because it tacitly invites, or encourages, an expansion of the Tennessee Valley Authority into areas that are now being adequately served by investor-owned power companies. It is my understanding that there are about 11 power companies, privately owned, now servicing the areas which would be encompassed by the expansion permitted under the provisions of this proposed legislation. Three of the 11 power companies are wholly operating within the new territory that could be added. This, I submit, is an unwarranted excursion into the realms of private and free enterprise. Some individuals take the position that inasmuch as there is now no statutory limitation upon the amount of territory that can be serviced by TVA it could be presently expanded to include an area of 200,000 square miles, whereas it is only serving an area of 80,000 square miles. I wish to respectfully make this observation however, Mr. Chairman: Under the present law and the existing provisions for congressional control of appropriations Congress would be advised of any such expansion and would have the opportunity to determine whether the financing necessary for such expansion would be approved. Therefore, while TVA might now theoretically expand, from a practical standpoint it must still subject itself to the review provided by budgetary and legislative processes. Under S. 1869 no such congressional approval would be necessary to permit TVA growth beyond its present service area. This would obviously run counter to the opinion of the Budget Bureau as expressed yesterday, it being the position of that agency that the TVA should be restricted to the territory now served.

4. My fourth objection to this bill lies in the fact that the present 40-year period of amortization is extended to 120 years by setting the repayment sum at $10 million annually. Yesterday we heard the Under Secretary of the Treasury, the Comptroller General, and the representative of the Budget Bureau express opposition to this feature of the bill. Each of the agencies went on record, I believe, as stating that 120 years would be too lengthy a period of amortization, that the power revenues of the TVA are such that a much shorter period of time would be both feasible and advisable, and that a higher figure than $10 million as repayment on the appropriation investment is well within the earning capabilities of the Authority.

5. A fifth objection which I wish to state, Mr. Chairman, is that the interests of the taxpayers of the country are being subordinated to the interests of the bondholders. Before any payment or return can be made on the appropriation investment, the operating costs plus the payments to the bondholders must be made. It is possible, then, that the taxpayers of the country would not receive any return on the appropriation investment in a given year, and, as a matter of fact, the bill provides for payments to be deferred for as much as 2 years when, in the judgment of the Board of Directors, such payment cannot feasibly be made because of certain conditions set forth in the act. One might add at this point that there is no provision for adding the unpaid interest to the debt for subjection to interest in later years. Also, there is no provision for repayment or interest on an additional $470 million of retained earnings which have been reinvested in power facilities, a sum which is, in my judgment, a part of the taxpayers' investment.

Mr. Chairman, I wish to ask permission to include in the RECORD an article which appeared in the Wheeling (W. Va.) News Register on February 20, 1956. The article bears the caption, "$75 Million Plant Lost by West Virginia to TVA Region":

"[From the Wheeling (W. Va.) News Register of February 20, 1956]

"VALLEY TAXPAYERS 'GIVE' INDUSTRY TO ALABAMA—$75 MILLION PLANT LOST BY WEST VIRGINIA TO TVA REGION

"(By Naze Cochran, News-Register staff writer)

"Ohio Valley residents help pay to keep a new $75 million aluminum industry from locating in West Virginia.

"They didn't realize it—but, even if they had, they couldn't have done anything about it.

"The decision was made in Washington.

"It's the age-old story of Government subsidy versus free enterprise and fair competition.

"The News-Register learned today that the Reynolds Metal Co., the second largest aluminum company in the United States, decided to locate a huge aluminum plant in TVA territory rather than along the Ohio River, south of Point Pleasant, probably because of the cheaper Government-subsidized power available at Lister Hill, Ala.

"Philip Sporn, president of the American Gas & Electric Service Corp., told the News-Register his firm was working on locating the new industry in West Virginia.

" 'We were not successful. Reynolds told us that our power rate was too high. I can't say that is the real basis but it was one given.'

"Sporn said the AGE gave Reynolds a good rate, the same rate we offered to Kaiser Aluminum and Olin Mathieson. 'But,' he added, 'there was a large tax component in the AGE rate.

" 'They (the Reynolds officials) told me the TVA rate was lower.'

"Further evidence of the manner in which the Reynolds plant was lost to West Virginia because of a Government-subsidized power project is found in a letter sent West Virginia Senators Matthew M. Neely and Harley M. Kilgore by M. C. Funk, vice president of the Applachian Electric Power Co., a member firm of AGE.

"In his letter, Funk points out that 'I feel sure you will be interested in knowing about the latest instance of the putting of industries into TVA territory. This case greatly concerns West Virginia.'

"According to Funk, the Appalachian Co. has been approached by Reynolds Metal Co., now the second largest aluminum company in the United States, with regard to a proposed aluminum plant in the Ohio Valley.

" 'The required 225,000 kilowatts of electric power was to be furnished by our company. Of course, power is a principal element in aluminum cost.'

"Funk pointed out that the site of the Reynolds Aluminum plant was to be at Apple Grove, W. Va., some 10 miles below Point Pleasant.

" 'In the meantime, however,' Funk told the Senators, 'the Reynolds Co. was negotiating with TVA. We know this and did our utmost to land the business for our system and West Virginia.

" 'In fact,' he stated, 'our quoted price for power exceeded the TVA price by only one-third of the difference between the taxes which we have to pay and the grant tax contribution which TVA makes.

" 'Nevertheless,' Funk's letters to NEELY and KILGORE continue, 'the Reynolds Co. has announced that it will locate in Alabama, with power to be supplied by TVA. It is reported that this new Reynolds plant will cost about $75 million.'

"In concluding his letters to the Senators the power firm official notes that as a consequence, TVA will now somehow have to get the money for and to build more steam electric power—which, of course, will enable it to do more of the same sort of thing.

"And the same sort of thing will mean that tax dollars, from residents of the Ohio Valley, West Virginia and Ohio, as well as the rest of the Nation, will aid the TVA cause.

" 'Competition in which a substantial portion of the tax component is eliminated can be very deadly,' Sporn commented.

"The AGE president pointed out that 20 cents out of every dollar private electric firms receive for power service goes to the Government.

" 'Excluding the tax component, we can give them (industry) a better rate than TVA or any of the public power installations. The people are being asked to develop the power in TVA.

" 'When it comes right to the point,' the head of AGE stated, 'West Virginia is going to have to fight for industry.'

" 'But the State shouldn't have to fight an agency which has the weapons.'

"He explained that the TVA, through Government subsidy, has the weapons to attract

industry in the area around such installations.

"'Why should the Government so equip other States?' he asked.

"Sporn pointed out that West Virginians should naturally be against Government power projects. They are in the disinterest of the State.

"The power official pointed out that West Virginia today is in wonderful shape to attract new industry with its abundant availability of coal and manpower but it is going to have a tough time meeting Government subsidy.

"There has been other instances of new industry being lost to the Ohio Valley and West Virginia because of Government-subsidized power projects. The Reynolds plant is merely most recent.

"In an address delivered as part of the Cooper Foundation Series at Swarthmore College in 1954—but which is as valid today as on the day it was made—Sporn pointed out that a basic difficulty with public power is that it is subsidized power and that cannot be in the public interest.

"'The most common form of subsidy of public power is the tax route. Interestingly enough, it is now being claimed that public power operation is more desirable because it can be carried out without paying taxes.

"'It is quite clear that tax savings as such do not exist.

"'So-called savings, by going to a Governmental setup, merely result in the general taxpayers, rather than those benefitting from the project, paying in additional taxes the subsidy granted the tax-free power project. A general application of the tax-free subsidy principle would result in complete disorganization of all Government.'

"Sporn labeled the tax differential an irresistible magnet which draws industries requiring particularly heavy quantities of electric energy from other locations that but for taxes are equally as well situated and might perhaps otherwise be even more favorably situated."

Editorials From Newspapers of the Fifth District of Kansas Concerning the Mideast Situation

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I would like to call attention to the following editorials concerning the Mideast situation; which were published in some of the leading newspapers of my district. I feel that these editorials are an excellent example of a cross-section of the thinking on the foreign situation.

I am proud to present these editorials from the following newspapers of the Fifth District, Kansas: The Wellington Daily News, Wellington, Kans.; Pratt Daily Tribune, Pratt, Kans.; the Southwest Daily Times, Liberal, Kans.; the Dodge City Daily Globe, Dodge City, Kans.; the Tiller and Toiler, Larned, Kans.; the Hutchinson News, Hutchinson, Kans.:

[From the Wellington (Kans.) Daily News of July 16, 1958]

EAST VERSUS WEST

As United States frustration and indecision in the Middle East finally ends and action takes over, one gets the sense of relief that is expressed by "at last we're doing something."

But, while we are still in an emotional state in which we can look at things objectively, we should consider some of the broader and more foreboding aspects of the entire situation.

This immediate crisis would seem to be part of a larger crisis which goes beyond any conflict between capitalism and communism—it seems to fit, rather, into that gloomy and titanic pattern of East versus West, painted by the German historian, Oswald Spengler.

The Arab World denounces us for intervention—they claim that they would never embrace communism, that all they seek is independence and nationalism. But, every move they have made, for whatever reason they assign to it, has strengthened the hand of Russia and weakened the military and economic position of the West.

With the balance of power becoming so clearly and rapidly in favor of Russia, the United States—after a long and futile display of patience and fumbling—had to move, if it was ever going to move short of total war.

But now the lines are more sharply drawn between West and East, and they are likely to be more and more bitterly opposed as time and events march on. A tragic showdown may be approaching.

One alarming and unhappy factor of the larger picture is the geographical and racial position of Russia. Poised between East and West, Russia can turn either way. It is such a half-world mixture that it has been able to cast its lot successfully either with the Western World or the Eastern.

Russia now casts its lot with the East, giving thrust and hope to the ambitions and hates of people who feel that they have been pawns long enough. In the excitement of their fight for independence, they have closed their eyes to the reality of the ruthless Russian bear, waiting to crush them when the time is right into a condition of abject servitude far more bitter and complete than any they have yet experienced.

But emotion is in the saddle now, and the frightful possibility of a mighty stuggle between West and East looms over all of us.

[From the Pratt (Kans.) Daily Tribune of July 17, 1958]

"DRIZZLING" REVOLUTIONS

In the old days, rebellions were like downpours. A big storm came up fast and then it was over. Lately, however, some seem to be more like drizzles.

Run through the list. In Indonesia, anti-government forces in the scattered islands have been pecking away for months and months. The sharp phase of the revolt, in Sumatra, may have been curbed, but the harassment goes on.

In Algeria, it is now years since the Algerian rebels began their campaign for independence. As the French mow them down, others spring up to carry on.

In Cuba, all the efforts President Batista has made have failed to suppress Fidel Castro's sustained assaults. The bold seizure of many Americans is merely the latest evidence of Batista's inability to halt the annoying drizzle.

The revolt in Lebanon is still relatively new. But if it should be fed steadily by Nasser of Egypt, further emboldened by the Iraq revolt, it too, could drag on endlessly, even in the face of a United Nations police force.

One of the remarkable things about most of these uprisings is the way a quite small minority of dissidents can go on jabbing a government's sides for month after month without being snuffed out.

Some governments, it appears, have lost the capacity to crush even the smallest uprising. In each case, the circumstances differ, but the overall result makes a pattern.

In all these instances, the unending assaults have had a terribly wearing effect upon the governments under siege. There is the drain of men and money, and the diversion from other vital tasks.

The rebels seem to be operating on the theory that what they cannot accomplish by great numbers in a major explosion they may achieve by an unbroken series of modest attacks, with time as their principal ally.

The probability that they may bring it off is real. Already the Algerian revolt has produced reactions that toppled the Fourth Republic. Earlier this year the Indonesian Government was on the brink. Batista today faces the bitter truth that his countering moves are a failure.

The nuisance value of the tireless troublemaker never seemed higher.

[The Southwest Daily Times of Liberal, Kans., July 18, 1958]

HOLD THAT POWER

Up to a late hour last night the U. N. was hearing speeches on the result of events since the call had been made to the United States to help stop the riot that had been created which threatened the rights, privileges of a free government of the people of Lebanon. President Eisenhower first sent 5,000 Marines and later, when Russia moved in troops close to the borderline, more American troops were sent over and a few warships went to the Middle East.

Moscow has told the United States to remove the American troops or take the consequences. The demand is not heeded. It is known that the Middle East has been tagged a vital region for many years. Germany had designs on it in both World Wars and was denied possession after a great cost. Today Communist Russia has the same design. It desires more territory, in fact it would control the world.

At present the United States and its allies hold the balance of power and so long as that power remains, there will be some free people, some free enterprise, and the right to serve God and this country without the aid of communism.

So we must continue to hold the balance of power.

[From the Dodge City (Kans.) Daily Globe of July 17, 1958]

HELP FOR LEBANON

The marines have landed in the little Near East nation of Lebanon, and what it will lead to—if anything much—remains to be seen. Some persons have been comparing the landing with that which the British and French made nearly 2 years ago in the Suez Canal region to keep the Egyptians from taking the waterway.

Linking of the two landings incidentally raises the question of whether it might have been advisable at that time to have found some justifiable reason for letting the British and French go ahead with their project. The United States was instrumental in getting them to call the thing off and there is no sign that our high-minded action at that time won any friends among the Arabs.

However, the Suez episode is ended and most persons want to know what will happen in Lebanon. The landing is different from others of its kind in that the Government of Lebanon asked the United States for help. This help should be enough to enable the Government to stand.

The landing may also further alienate Gamal Abdel Nasser, Egyptian dictator and leader of the Arab nationalist movement. Nasser operates with the encouragement of international communism, although he claims to be opposed to communism. Some observers think he wants to be a "neutral" and accept what handouts he can get from

Communist Russia without delivering anything in return. Others, and they are more numerous, think the further expansion of Nasser power will lead to domination of the Near East by the Reds.

One thing seems sure for the time being. Because there are no Soviet forces in the area, the United States troops are not likely to become engaged in a police action similar to that in Korea. This situattion could be changed if the Russians decide they are ready for world war III and move their forces into nearby nations which are more or less friendly to Russia. The consensus of opinion is that such a move is unlikely.

[From the Larned (Kans.) Tiller and Toiler of July 17, 1958]

WHY MIDDLE EAST OIL IS IMPORTANT

Not only had the Eisenhower doctrine committed the United States to intervention in the Middle East if Arab nationalists and their pro-Communist leaders threatened to gain control of the area, but it was also a practical necessity, as has been pointed out by Maj. George Fielding Eliot, the military analyst. Major Eliot sums it up in the following language:

"There are three arsenals in the world: The United States, Europe, and Soviet Russia. In the case of the United States and Russia, the fuel for the arsenals comes from within the country.

"But the fuel for the arsenal of Europe is oil from the Middle East. Without this fuel the arsenal of Europe becomes negligible. And without the arsenal of Europe, the West loses its thin edge of superiority over the Communist bloc."

Iraq itself is the sixth largest producer of oil in the free world. The loss of its field to the West will be a heavy blow in itself.

But of far graver import is the threat Iraq's fall raises against the fabulous sheikdom of Kuwait on the Persian Gulf, third largest producer of oil in the free world; to Saudi Arabia, fourth largest; and Iran, fifth-ranking free-world producer; as well as the lesser sheikdoms of Qatar and Bahrein.

Not only from that but most of the pipelines from these fields cross Syria and Lebanon. So far Nasser has allowed the oil to flow unchecked through Syria. But if his movements should control the sources of supply as well as these arteries, they could choke off the lifeblood to Europe at any time.

Of course the United States could get along without Middle Eastern oil, but Europe can't. This country cannot afford to have an ally rendered powerless. Losing the fuel for the middle arsenal, as Eliot calls it, would tip the balance of power in favor of the Soviets.

That's why the United States has troops in Lebanon and the British are landing in Jordan.

When we had the opportunity it would have been far better to have permitted little Israel to do a job for which that nation was ready and was eager.

[From the Hutchinson (Kans.) News of July 16, 1958]

INTERVENTION

(EDITOR'S NOTE.—The marines have landed and the situation is well in hand. Temporarily. The fact changes none of the validity of the following argument, written minutes before the announcement of the direct involvement in Lebanon.)

At the moment our country seems on the verge of armed intervention in the Middle East, either directly or through the United Nations. If it takes this action, it will have made one of its gravest mistakes ever.

Should our country send its forces into Iraq, Lebanon, or Jordan, it would not be fighting communism, as it was in Korea. It would be fighting history.

It would not be supporting democracy, but the opposite. The governments it would endeavor to maintain or restore are doomed to fall despite whatever the United States might do. Its armed aid in the Middle East would only invite the outbreak of world war III.

Primarily two forces are stirring this area today. Arab nationalism plus the determination of the Arab masses to rise above the state of semistarvation in which their past and present governments have kept them for centuries. No expeditionary army can keep those forces from ultimately reaching their goal.

Egypt's Nasser is the person around whom these forces are rallying. Rather than resisting at every point as this country has been, it would be wiser to encourage them to rally. The expansion of his United Arab Republic to include all the other Arab States offers the only hope of stability in our time.

It will be said that Nasser is incapable of making such a grouping function as a nation. Perhaps he is. But 2 years ago the West was convinced that he was incapable of maintaining even the Suez in operation.

Such an Arab nation naturally would be anti-Western. Not to such a strong degree, however, that it would become a Communist satellite. More likely it would drift into a neutralism of an Indian sort, taking all the economic aid it could obtain from both sides.

Despite all this, the Western alliance may send its troops into these internally torn nations anyhow. If it does so, while its pretenses will be otherwise, its real motivation will be oil. It will have convinced itself that access to these rich reserves which underlie the Middle East is essential to the maintenance of its present economy.

Perhaps that is true. But it doesn't follow that the success of Nasser and Arab nationalism would deprive the West, more than temporarily, of this oil.

The West, and Europe in particular, must have this oil. But revenues from the sale of this oil are even more vital to the success of a new, united rule in this area. And the West is the only possible purchaser for this oil.

The spirit of crisis, however, again fills the air. The mood in Washington, London, Paris, and even the United Nations is not for calm reasoning. The attitude is that something must be done before it is too late. The painful fact is it was to late at least 10 years ago.

[From the Hutchinson (Kans.) News of July 17, 1958]

THE GAMBLE

Last week United Nations observers on the scene reported they could find no evidence to support the charge of the United States that the United Arab Republic was guilty of a "massive infiltration" of Lebanon with men and arms.

On Sunday the New York Times in its Review of the Week stated: "The possibility of action by the UN or the United States of America and Britain on the Beirut government's behalf has virtually disappeared. The feeling grows that it is up to the Lebanese themselves to end the turmoil in their country."

On Monday the Associated Press declared, under a Beirut dateline: "Both President Camille Chamoun and the rebels warring against him are reported in agreement today on the man to take over the Lebanese government and attempt to end this nation's 66-day-old rebellion."

On Tuesday out of the blue and without prior warning, the American marines landed on the Lebanese shores, not far from Tripoli.

To put it mildly, on the basis of the record presently available, the justification for the action is somewhat less than complete, so far as Lebanon itself is concerned.

But on Monday a so-far successful revolution in nearby Iraq also broke out of the blue. It was led by those who boast of being pro-Nasser. So it can only be surmised it was Washington's calculated gamble that the physical presence of the Marines would prevent the entire area from falling into the arms of the United Arab Republic, past the point of separation.

[From the Hutchinson (Kans.) News of July 18, 1958]

MEETING THE SITAUTION; WHATEVER THE CONSEQUENCES

Marines from the 6th Fleet continue to pour into Lebanon. Other marines have been flown to Europe to backstop them. Additional amphibious task forces are being readied for deployment to the Mediterranean.

The Strategic Air Force has increased its alert posture on its bases strewn around the world. A striking force of the Tactical Air Command has departed for an undisclosed overseas destination. Army and Navy leaves have been canceled. The alert has spread to our forces throughout the Pacific on the other side of the world.

This at least quasi-mobilization is the implementation of President Eisenhower's statement to the people on Tuesday evening: "We must be prepared to meet the situation, whatever be the consequences."

To put it in the bluntest possible manner, the United States has taken an action which has in it the calculated risk of precipitating world war III, and is immediately preparing itself as best it can to meet the possibility.

But in complete contrast to the American actions, so far as the outside world knows, Soviet Russia up to this point hasn't turned a single military hair. Should this latest Middle East crisis blow itself bloodlessly out, consequently, to the nonwhite world inevitably it will appear that the United States is the warmonger.

The Crucial Near and Far East—An Appraisal

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. PATTERSON. Mr. Speaker and my distinguished colleagues, once again the ruthless leaders of the Kremlin have sponsored a holocaust in international affairs that has thrown the entire world into a state of profound fear. In my judgment the President of the United States has acted wisely and forthrightly in calling the Soviet bluff by his speedy action in dispatching United States marines to Lebanon in response to the urgent request of President Chamaun.

I would like to briefly outline several reasons why the Near East and the Far East are explosive areas at the present moment, and why the Kremlin is conducting a relentless crusade to spread international communism into those areas.

Now, Mr. Speaker, the Near East crisis has been far more serious than the average American, Briton, Frenchman, or even Russian would like to admit.

In the Near East, oil has telescoped a thousand years into 20, and the entire area—from the Arabian Sea to the Black Sea—from the Caspian Sea to the Red Sea—has become the most explosive powder keg in the entire Eastern Hemisphere. However, the overshadowing factor of oil is not the only reason for this.

For generations, czarist Russia and more recently, Soviet Russia, have trained their sights on two principal objectives that nature itself has denied the Soviet Union. One objective is an ice-free port south of the Soviet Union; the other is adequate supplies of oil for industrial and military purposes. A glance at the world map will indicate that Russia's only suitable outlet to the Mediterranean Sea is through the Bosporous-Dardanelle Straits which are controlled by Turkey. Passage through that outlet is as expensive as the Turkish Government wishes to make it, and shipping through the straits can also be subject to censorship and restrictions by the Turkish Government. Thus Turkey has been an important target of the Communist world revolution, and its importance ranks with that of the Near East and its oil.

Now Mr. Speaker, it has been said that the Near East is the lifeline of the British and French Empires, and there is much truth in that observation. Throughout the years, Great Britain and the United States have applied their capital and engineering talents toward developing Near East oil. The Arab States lacked both the engineering ability and the necessary capital for such development. The result has been huge outlays of British and American funds in the form of foreign investments. This has assured Western Europe of adequate sources of oil and, in turn, has greatly enhanced the standard of living throughout the entire Arab world, just as the standard of living has been raised immensely in Venezuela because of American investments in oil in that South American country.

So important has the Near East become to British economy, that loss of the area to the Soviet bloc would very likely destroy the British Empire and the French Empire as well. This is one reason that the Kremlin has infiltrated the Arab world with Soviet agents since the end of World War II. These Soviet agitators have proved effective as was demonstrated by the recent revolt in Iraq which touched off the present crisis.

In its far-reaching goal of completely engulfing the Near East into the Soviet bloc, the Kremlin has used Egyptian President Nasser as a stooge. Nasser's goal is to form a so-called United Arab Republic and this strange alliance, as has been proven, would eventually become completely subservient to the Kremlin, even though Nasser refuses to admit this. If this goal could be achieved, the entire Arab world would then be under Soviet domination, just as the satellite states of East and Central Europe are today. It was for this reason, among others, that President Eisenhower responded to the Lebanese President's urgent plea for American troops to preserve Lebanon's independence. There can be no doubt that, without American assistance, Lebanon and perhaps Jordan and others would have soon met the same fate as Iraq, and the Kremlin would have made another gigantic step in its ultimate goal of Near East domination.

In the relentless struggle between Western and Soviet ideologies—particularly since the end of World War II—the United States has exerted every possible effort to preserve world peace and avoid the use of war as an instrument of policy in settling international disputes. At the same time we have worked unceasingly for the independence and national self-determination of all members of the United Nations. The friendly hand of America has been extended in all directions in the hope that military conflict with the Soviet Union could be avoided.

But it was because we believe in the integirty of free men and nations, in world peace, and because we are dedicated to the Charter of the U. N. which supposedly seeks to assure men and nations of those rights which are cardinal in the vast whirlpool of international affairs.

At the same time we earnestly hoped and even prayed that Kremlin leaders would cooperate with the Western World and join us in a sincere and genuine crusade that would assure the world of everlasting tranquillity and international economic stability. Instead, the Kremlin forced its domination over nine East European nations, communized the Chinese Mainland, and sponsored a war in Korea. In addition, Moscow has conducted a ceaseless campaign designed to impose communism in every quarter of the free world, thus undermining Western nations with the ultimate goal of dominating the entire earth.

And then, finally in July 1958 came the Kremlin-inspired all-out attempt to engulf the Near East into an orbit alien to the Western World and its security. At the same time, the Western World recognized the urgent necessity for taking instant action that would check this Soviet infiltration in the Near East. In a sense, the time arrived to call the Soviet bluff, and that was precisely what President Eisenhower did when he dispatched American troops to Lebanon.

The President's action immediately placed the Kremlin in the most embarrassing position that it has been in since the end of World War II, and here are several reasons why:

First. Moscow leaders, to whom Arab Nationalists such as Nasser have looked for guidance, are faced with the ugly problem of saving face in the present crisis. The so-called United Arab Republic must naturally expect Soviet military intervention if the situation grows much worse—for example, if an effort is made to liberate Iraq from the revolutionary junta which recently seized control of the country. Yet, Moscow knows that Soviet military intervention in the Near East could very well touch off world war III. In addition, geographic factors make it impossible for Soviet forces to enter the Near East without crossing a country that is friendly to the West. Soviet intervention, therefore, would constitute an invasion and thus a direct act of aggression.

Second. Soviet Russia does not want to engage in world war III at this time, because she is not ready industrially or militarily for an all-out conflict with the West. One reason for this is that 40 percent of total Soviet production comes from the satellite and Baltic States, and in those captive nations the Kremlin has not yet achieved the proper stability that is desired, as was evidenced by the Hungarian Revolution in 1956 and the Poznan revolts in Poland. Moreover, if Russia should now engage in all-out war, there is a strong possibility that full-scale revolts against the Kremlin would occur in every captive nation under Soviet domain, and these would obviously cause Moscow to lose 40 percent of her total industrial production.

Third. President Eisenhower's action in dispatching troops to Lebanon could well prove to be a great and unprecedented source of encouragement and confidence to people behind the Iron Curtain, and Moscow knows that this could have far-reaching implications in the satellite states where there is great unrest and indignation among the populations over the miserable conditions imposed by Communist regimes. Competent experts have thought all along that a concrete show of force by the United States and Britain against Soviet infiltration in the Eastern Hemisphere could very well touch off revolts behind the Iron Curtain of a magnitude equal to the Hungarian revolution. The perpetual unrest in the satellite and Baltic States is a source of constant worry to the Kremlin during normal times, and is naturally intensified during the current crisis.

Thus Mr. Speaker, the President's action in dispatching troops into Lebanon could very well prove to be the very factor that saved the Middle East from Soviet domination. Moreover, it might well turn the tide of world opinion against the international Communist movement, and halt its rapid progress in the Eastern Hemisphere. Under any circumstances, it now appears that the Kremlin will suffer a tremendous loss of prestige both in the Arab world and within the Soviet Union proper and satellite lands.

And now Mr. Speaker, turning to the Far East, let me warn of the dangers of complacency at this time, and also of Soviet designs in the Far East.

While world diplomatic attention is sharply focused on the Middle East, astute Western statesmen should not take their eyes off the Far East, particularly the Korean and Formosan areas. The Kremlin is noted for its ability to divert world diplomatic attention from one area and then strike at another area that is not under observation. This happened in 1949 when Soviet leaders managed to focus diplomatic attention on the notorious Berlin blockade, and in what the Western World thought was a major engagement in the cold war.

While this was happening, the Kremlin struck in another highly strategic area. The area was Red China—the result was that some 400 million Chinese fell under Communist domination.

Another example occurred in 1947–48, when diplomatic attention was keenly focused on China while General Wedemeyer was there conducting a hectic inspection tour. High-pressure Soviet propaganda placed the country in the center of world diplomatic attention. Precisely at that moment the Kremlin struck in another area that was concealed from the attention of the free world. The area was Czechoslovakia which was added to the Soviet domain in early 1948 an another satellite.

Thus the Western World should keep the Far East under close observation and pay careful attention to each Communist maneuver in that area. For example, North Korea has increased its army by 100,000 men during the past several years, and has built up its air force to tremendous proportions—all in violation, of course, of the so-called armistice agreement signed between the U. N. forces and the Reds in 1953.

Mr. Speaker, the Far East, particularly Korea and Formosa, are of utmost importance to the Kremlin in its far-reaching goal of world domination. From a geographic standpoint, Korea points like a dagger toward the heart of the Japanese Islands, and Japan is presently a target of Red China. Thus full control of the Korean Peninsula and adjacent islands would place the Reds in the best possible position for a military assault on the Japanese Islands. That was one underlying reason why the Korean war was fought.

Geographically, the Japanese Islands and Formosa form important links in a somewhat circular chain that extends from the Philippine Islands on up to the Kamchatka Peninsula. This chain is what strategists call America's Southwest Pacific Defense Screen. Since 1949 the Reds have been trying to break this screen, and thus make the North American Continent vulnerable to a military assault that would emanate from Far East origin. Contained also in the Pacific Defense Screen are the Pescadores Islands, the Ryukyu Islands, and even the Marianna and Caroline Islands. These islands are what is known as "stepping stones" throughout the Southwest Pacific. Their importance was well demonstrated during World War II. The Kuril Islands, which should also be a part of this screen are, unfortunately, under Soviet domination.

Formosa itself is perhaps the most strategic link in our Pacific defense screen. Red forces could use Formosa as a jumping off point in either of two directions—toward the Philippines or the Ryukyu Islands. Occupation of the Philippines by Red forces would place in mortal danger all of Indonesia, including New Guinea, Sumatra, Borneo, and this in turn would pose a serious threat to the security of Australia. Or from Formosa, the Reds could use the adjacent islands groups as stepping stones to the Japanese Islands, perhaps with a coordinated attack from South Korea. For these and other reasons, Korea and Formosa are both extremely vital to the United States in our outer Pacific defense screen.

Thus the tremendous military buildup in North Korea and in Red China is an alarming signal and the West should watch this very carefully. The far-reaching and long-range strategy involved is actually nothing new.

For example, during World War II Hitler alined himself with the Japanese warlords and took Western Europe while the Japanese occupied practically all of the Far East and southeast Asia. The long-range goal was total domination of the entire Eastern Hemisphere with dictatorial control from Berlin. The same pattern has been and is being followed by Soviet leaders in Moscow. However, the idea of making China the "villian of the Far East" is nothing new and was not copied after Hitler's strategy of making Japan the dominating force in southeast Asia during World War II.

For example, Mr. Speaker, as early as 1923 Moscow had opened schools of revolution for the "Toilers from the East" for the express purpose of eventually Sovietizing China and other Far East areas. And true enough, the very Communist leaders of Red China that are in power at this moment were trained in Moscow as early as 1923.

This is not unusual, however. For the most prominent Communist leaders of every country on earth received revolutionary training in Moscow at some time or another, including Earl Browder and William Z. Foster, who have spent years and years undermining the United States Government. So far as China was concerned, the rewards to Moscow were immeasurable—in 1949 the Moscow-trained students seized control of China and imposed the yoke of international communism on 400 million more victims.

Thus it was that at an early date the Kremlin designated China as the "revolutionary key to Asia"—a key that would some day unlock vast areas of the Far East and southeast Asia that are rich in raw materials and strategic geographical advantages.

Included in these areas and slated for doom, of course, is the Malayan Peninsula—the world's only commercial source of natural rubber, and the world's largest source of the element tin. Indonesia with its multitude of important islands contains many important natural resources over which Moscow some day hopes to gain control. Immediately after the end of World War II, vast amounts of Communist propaganda began circulating in the Philippine Islands, indicating the Kremlin's interest in that strategic Pacific outpost. At the present moment there is great unrest throughout all of Indonesia, which is well known to be Communist-inspired, and which is creating upheaval in the comparatively young Government of President Sukarno. In Bangkok, Thailand there is presently an enormous number of Soviet personnel, far in excess of legitimate diplomatic needs.

Because of these and other reasons, then, Red China with its growing military strength is posing an ever-greater threat to the Western World, particularly to the United States. It is from Red China that vast hordes poured into North Korea during the recent war in that country. It is Red China that has been constantly harassing the Island of Formosa and adjacent areas including Quemoy and Matsu. And it is Red China that intends to some day break the Southwest Pacific defense screen of the United States. There can be no question about this, whatsoever.

Therefore, the United States must remain militarily strong in the Far East. We must continue to assist Japan, militarily. Because Japan, with its tremendous population—approximately 100 million—can play an important role in combatting the ever-growing menace of direct and indirect aggression of Red China in the Far East.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

High Cattle Prices

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. HRUSKA. Mr. President, on July 28 there appeared in the Wall Street Journal an article entitled "Riches on the Range: High Cattle Prices Bring Boom to a Cow Town." The article was written at Valentine, Nebr., which is the county seat of Cherry County, in one of the very splendid cattle-raising areas in the sand hills. The article reads, in part:

The cattlemen are only one of the more prosperous segments of a generally booming farm economy, of course. Federal farm men expect hefty harvests, as well as handsome livestock receipts, to push farm income to $12.4 billion this year, the loftiest level since 1953 and 15 percent above last year's postwar low.

That figure has been raised to the figure of $13.3 billion to which I adverted a little while ago in my report on farm income.

On the theory that we should like to be informed about things that are happening in agriculture, and also on the theory that the American people like to hear something factually cheerful and something that shows progress rather than a constant repetition of gloom and pessimism, I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of July 28, 1958]

RICHES ON THE RANGE: HIGH CATTLE PRICES BRING BOOM TO A COW TOWN—RANCHERS SPLURGE ON PLANES, CADILLACS, DIAMOND RINGS; BOOST SIZE OF THEIR HERDS—BUT PRICES MAY DROP IN 1959

VALENTINE, NEBR.—"That is one of our prosperous cattlemen up there," says local Airport Manager Clayton Ellington as he points to a red-winged Piper Cub circling the asphalt runway for a landing. It is not unusual for ranchers around here to commute to town via air.

High cattle prices have brought prosperity to cattlemen throughout the Great Plains. Prosperity is particularly pronounced here in western Nebraska and southern South Dakota. This area escaped the lengthy drought that withered grazing grass through most of the Plains States.

Unable to feed their stock during the drought, many ranchers in other areas began breaking up their herds, shipping huge quantities of underfed steers to market—pushing prices sharply lower. Although ranchers around here felt the general price decline, their cattle, fattened on the still-lush grasses of this area, brought better prices than most. So few ranchers here saw any need for distress selling.

The drought ended in mid-1957, and ranchers generally started rebuilding their herds. Rebuilding, of course, meant cutting the flow of cattle to market; this, in turn, brought rising prices that more than offset the drop in volume. The result: Higher incomes for cattlemen.

As herds are rebuilt, ranchers will begin to step up marketing of cattle. Sooner or later, this is likely to lead to lower meat prices: Farm men expect cattle prices next year to be below this year's levels. Until then, however, consumers will be paying more for steaks, roasts, and even hamburger than they did a year ago.

The cattlemen are only one of the more prosperous segments of a generally booming farm economy, of course. Federal farm men expect hefty harvests, as well as handsome livestock receipts, to push farm income to $12.4 billion this year, the loftiest level since 1953 and 15 percent above last year's postwar low.

SPREADING AFFLUENCE

As the cattlemen prosper, so do they spend, spreading their affluence to others.

White-faced Herefords grazing in lush, knee-high grass on the edge of town are the key to Valentine's prosperity. This western town, founded by trail-riding Texans in 1883, has never outlived its dependence on cattle. Lean cowmen with straw sombreros and riding boots stroll along the town's wide streets, or talk about high cattle prices in the lobbies of the Jordan or Marian hotels. Before heading home via plane, pickup truck, or Cadillac, they usually leave some of their money with local merchants.

"Our volume this year is up 75 percent over 1957," says Stan Jordan, owner of Jordan Jewelry, as he stirs a cup of coffee in a leather upholstered booth of the Marian Hotel coffee shop. A serious, heavy-set fellow, he grins as he explains: "We're in a luxury business so I'm the first to feel effects of any changes up or down in cattle prices. One rancher came in not long ago and bought a $5,600 diamond engagement ring. Another bought a $175 Hamilton electric wrist watch for a high school graduation gift."

"When cattle prices are off ranchers won't spend anything on lightning insurance for their cattle," says Ray Ballard, operator of a real estate-insurance agency under his own name here. "Last year, I had to sell hard to interest ranchers in insurance," he says, "but this year they're coming in to my office and asking about it."

Arch Mullins, owner of the local International Harvester and Pontiac dealerships, can be found in the shop on his establishment wiping greasy hands on a rag. He leads the way into his air-conditioned office, checks figures in a ledger and says: "Our farm implement sales this year are nearly double what we did in the same period last year. We sold 45 cars and trucks this year too, and that's nearly double what we did in the same period of 1957."

DUNNING DELINQUENTS

Further down the street, Lawrence J. Clements proudly leads the way through his 32,000 square foot Midwest Furniture Store. Stopping beside a display of modernistic furniture he says: "Our sales so far this year are up 24 percent over last year, and our net profit is up 19 percent." With everybody doing so well, he says, "we started a program 2 months ago to bring all our delinquent accounts up to date, and we've already put 50 percent of them on a current basis."

"People in this community don't even know there's a recession," says Richard L. Davenport, president of the Nebraska State Bank on Valentine's main street. "Our deposits at the end of June were up $500,000, or nearly 18 percent, over the year earlier level," he notes.

Good weather, lush grazing grass, record feed grain supplies and favorable cattle prices all are responsible for the cattlemen's prosperity, and their good fortune looks as if it will continue for some time to come.

"I've never seen prospects for feed crops and grass as good as they are this year," says Herman C. Aaberg, livestock expert with the American Farm Bureau Federation in Chicago. "Ranchers everywhere seem to be trying to buy calves from each other to put out to grass."

"When you have a lot of feed the only way you can get any good out of it is to feed it to cattle," says Harold Fisher, proprietor of the J. W. Yeast & Son hardware store in Valentine, and a cattle buyer during the height of the fall shipping season.

Claude V. Lamoureaux, a tanned, bespectacled rancher who went broke in the 1930's, drives his gray, 1958 Cadillac sedan through a field of yellow clover on his 12,000-acre Antelope Ranch, 27 miles north of Valentine, points to stacks of alfalfa in an adjacent field, and says: "I got 1.5 tons to the acre on the first cutting, and a ton to the acre is considered very good here." Easing by some of his 1,300 head of Herefords, he reports he has so much feed on hand that he isn't even going to bother taking the usual second cut of alfalfa. "I'll let it go to seed," he says.

The Arnold Cattle Co., which has nearly 4,000 head of cattle on 80,000 acres northeast of town, has a carry-over of 4,000 tons of hay from 1957. This year it will cut another 5,000 tons, but anticipates only 3,000 tons to 5,000 tons of that 9,000 tons of feed will be needed this winter for the present cattle herd.

The same story of abundant feed is reported in practically every segment of the cattle-raising industry, from the western range country to midwestern farms where critters are fattened on corn and other grains. Production of feed grains, including corn, probably will slip below 1957, but when added to the carryover from past years, the supply for 1958–59 livestock fattening seems likely to reach a record 198 million tons, up 5 million tons from a year earlier.

"In Montana, Wyoming, Colorado, California, Texas, and just about everywhere else where cattle are raised, conditions are just about right this year," says Homer R. Davison, president of the American Meat Institute.

Cattlemen find prices to their liking, too, when selling animals.

FIVE CENTS MORE PER POUND

"I can't understand what keeps cattle prices so high," says Olin Ravenscroft, owner

of the Ravenscroft Cattle Co. in Valentine, which has 60,000 acres of land and nearly 6,000 head of cattle at three locations. He reports recently selling 300 head for fall delivery at 27.5 cents and 28 cents per pound, 5 cents a pound more than he would have received for the same type of animals only 6 months ago.

Sitting in the grandstand of the home baseball park as the Valentine Hearts thump the Rapid City Chiefs under the lights, one hefty rancher says: "I just sold a hundred short yearling steers for $29 per 100 pounds, or $5 a hundred pounds more than what I got last year for similar steers." After glancing around at the boisterous crowd in the stands he whispers: "Please don't mention my name. I also do some buying for feedlots back East, and I don't want anybody throwing that price back at me when I try to convince them they should sell for less than that."

On the drive through his ranch, Mr. Lamoureaux points to some whitefaced calves browsing in tall grass. "I sold 93 of these calves for October delivery at $27 per 100, 60 heifers for the same price, and 100 yearling steers for $29 per 100. That's $4.50 to $5 a 100 better than what I got last year," he avers.

In the headquarters of the Sand Hills Cattle Association, Frank J. Sibert, the group's chunky, 29-year-old manager, says: "Generally, prices are running about $3 to $4 per 100 pounds higher than last year at this time. The yearling steer that brought $23 a 100 last year brings $26 to $27 now, with top-quality animals bringing a little more."

Quite a few ranchers who are not presently running cattle at close to capacity on their spreads are planning to boost the sizes of their herds to take advantage of higher prices.

"We'll probably add 1,000 head this fall," says W. B. Quigley, a local attorney who has 1,400 head of cattle out on shares with different ranchers, or on his own place. He expresses confidence that the cattle market will be good for the next several years, then explains how his pasture is being expanded through planting of corn, rye and grasses. "For $10 an acre," he says, "I'll be able to double the weight of the cattle I raise."

RISING COW DEMAND

The impact of the overall cattle buildup is clearly felt here in rising demand for cows. Average cows which can be used for breeding are bringing $200 today, up from $80 to $100 a year earlier for the same type of animal.

Cattle markets around the country note this demand for cows through declines in the number being offered for slaughter. Cattlemen are holding onto their cows and turning them out to pasture with the bulls. Heifers also are being withheld from market so they can be raised for breeding purposes, while calves are being retained and fattened up on the abundant feed.

The number of calves slaughtered this May totaled 716,000 head, 11 percent below April and 24 percent less than in May 1957, the United States Department of Agriculture reports. The 1958 commercial calf slaughter in January through May totaled 4,059,900, down sharply from the 4,937,700 killed a year earlier.

When cattlemen are rebuilding their herds, it shows up through a decline in cow slaughtering and in the supply of lower-grade meat used for hamburger, stewing and the like. In May, for the 10th consecutive month, the number of cows killed for market ran under the figures for a year earlier. In that month, there were 374,000 cows slaughtered versus 450,000 in May 1957.

Marion B. Folsom, Secretary of Health, Education, and Welfare

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the senior Senator from Alabama [Mr. HILL] at a dinner held at the Cosmos Club, in this city, on Tuesday evening, July 29, 1958, honoring Secretary Marion B. Folsom, of the Department of Health, Education, and Welfare.

The address by the Senator from Alabama was an eloquent tribute to the qualities and achievements of Secretary Folsom.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR LISTER HILL AT DINNER HONORING SECRETARY MARION FOLSOM, OF HEALTH, EDUCATION, AND WELFARE, COSMOS CLUB, JULY 29, 1958

Mr. Chairman and friends of Marion Folsom, during my years in Congress, and more recently as chairman of the Senate Committee on Labor and Public Welfare, I have had the privilege of working for the accomplishment of common objectives with many men and women from private business, from the professions, from the executive branch of Government. During these years I have found Marion Folsom unequaled in his capacity and his will to work in harness with the legislative branch for the solution of a common problem. Always he has brought to the executive-legislative relationship the love of fact, the sincere desire for a constructive solution, the devotion to the public interest that has been so productive and so fruitful for the American people.

I like to think that one reason for this human approach to governmental problems lies in Marion Folsom's birthright—in his beginnings in the South. For so many of our problems in social security, in health and education and public welfare, are still more urgent in the South than in some other sections of the Nation. We recall that Marion Folsom was born in McRae, Ga., the birthplace of that renowned Georgian, Eugene Talmadge, famous for his red galluses. Now, I do not know whether Marion Folsom wears red galluses. But he is so human that I have often felt that our honored guest still has a little of that red Georgia clay between his toes. Need I say that it's a long road from that little Georgia village to a place in the Nation's Capital as the head of a great Department of our Government and a member of the Cabinet of the President of the United States.

Long ago, it was written, "Where there is no vision, the people perish." Marion Folsom is a man of vision. For more than 30 years—in service to forward-looking American business, in service to his Government and to the people of the Nation—he has looked to the far horizons, he has been a man ahead of his time.

He has seen emerging social needs before the needs have been generally apparent. And he has been a pioneer in the development of social programs to meet those needs.

He was one of the chief architects of the original Social Security Act in 1934, as a member of President Roosevelt's Advisory Council on Economic Security. But even then he was already a veteran in social programs. For he had developed in 1928 the trail-blazing plan of life insurance, retirement and disability benefits for employees of Eastman Kodak Co.

Here is a man who divines coming events and steps forward to serve before the time of need. Even before World War II he had become a member of the National Advisory Defense Commission, and during the war he served as a manpower executive. He was a leader in preparing the Nation for the postwar period—as organizer of the Committee for Economic Development, the business group concerned with a dynamic national economy. He served in this period as the adviser to the House Committee on Postwar Economic Planning and Policy, and as the adviser to the Senate Finance Committee on postwar need for changes in social legislation.

When the Communist world moved from cold war to hot far in Korea, he was already laying out the plans and the stratagems of the National Advisory Board for Mobilization Policy.

Later, as Under Secretary of the Treasury, although deeply involved in complete revision of the tax laws for the first time in 79 years, Marion Folsom looked again to the future. He saw the rising United States population among the aged. He brought his experience, his knowledge, and his vision to the aid of the Department of Health, Education, and Welfare in developing a program of extended coverage and liberalization of benefits in old-age and survivors insurance.

I have worked closely with Marion Folsom in recent years, since he became Secretary of Health, Education, and Welfare, and we know of his splendid efforts for improving the health of our people, advancing the cause of education, and strengthening the programs for crippled children and maternal care, for vocational rehabilitation and the blind, for the great programs for social welfare.

I do not doubt that as America looks to new social problems, to new areas of human needs and human concerns among our people, we shall again find Marion Folsom in the vanguard.

When we consider the great needs in international health and medicine—the need for assistance, care, and guidance to the peoples of the underdeveloped nations, the need for a vigorous new thrust forward in international medical research—I am convinced that America in furtherance of our foreign policy and in fulfillment of our Christian ideals and obligations must play her part. When the time comes I shall be looking forward, Marion, to your return among us here in Washington. I shall be looking forward to your advice and guidance, your humane sympathy and understanding, your informed and tested wisdom.

Throughout your years of devoted service, you have been ahead of the trend. You have foreseen the changing times. You have anticipated the people's need. And done much to shape the pattern for fulfillment of their need and to build the strength of our Nation.

You have been ever the man of vision, with the courage to move promptly, the wisdom to act constructively, the humanity and the patriotism to serve without partisan ties. This is the peculiar setting of your genius. We pay tribute to you—the builder, the patriot, the prophet, the great American.

The Economy of the United States

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by the Industrial Union Department of the AFL–CIO expressing its analysis and observations on the state of the American economy. The views and conclusions expressed in this statement represent challenging and constructive thinking on the current economic situation. I find myself in substantial agreement, and wish to commend the Industrial Union Department of the AFL–CIO for this clear, thoughtful, and sound examination of our economy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON THE ECONOMY

For the past year, the United States has been afflicted with a serious economic recession. Despite the official optimism of the Eisenhower administration and the rose-tinted viewpoint of most of the press, the recession still continues and there is small indication of any sustained upsurge in the immediate future. At best, there is a flattening out of the economy at levels substantially below the peak of economic activity that the Nation must achieve to assure employment opportunities for our growing workforce.

Industrial output has fallen sharply and despite a recent feeble upturn is still 12 percent below peak levels. Steel production, after turning upward in response to an anticipated price increase, is once more in the doldrums. Auto output is far below last year and full recovery in the industry seems to be far off. The capital goods industries are seriously affected and even the most optimistic see no return to high levels of capital goods production for a year or more.

Billions of dollars of output have already been lost forever. Once again the Nation is confronted with the paradox of idle manpower, idle plant, and lost wealth, all of which could be used to build the living standards of the people at home and throughout the free world.

Unemployment now is almost 5.5 million and there is no reason to expect substantial improvement in the months to come. Predictions of 5 million or more jobless workers during the coming winter are commonplace. Unemployment has brought with it needless privation which will grow worse if the slump is permitted to endure.

Joblessness will remain high even when past peaks of economic activity are again achieved. Such levels can no longer sustain full employment because of the growth of the labor force and because of the impact of improved technology.

There is a need to restore economic expansion in keeping with our growing labor force and the promise of our new technology. Past experience has shown that the Nation can achieve a growth rate of at least 4 percent annually, although such expansion has not been achieved throughout the term of the present administration.

While the Soviet Union has a long distance to go before catching up with the United States, its economy has been growing at a rate of at least 7 percent annually, while ours has been stagnating. Restoration of maximum economic growth, therefore, is imperative if the Soviet challenge is to be met and overcome.

The Eisenhower administration has temporized with the recession and has substituted soothing syrup for action. While it has called upon the consumer to buy, the administration has led a battle against tax cuts that would have put billions of high velocity dollars into the purchasing power stream. It has also rejected wealth-creating public works projects, although the manpower and material have been readily at hand. It has substituted a balanced budget for a balanced economy and achieved neither. Nor has the Eisenhower policies halted inflation which today is accompanied by an oversupply of goods and by idle manpower.

While the prime leadership responsibility for meeting the recession rests in the executive branch of Government, Congress cannot escape its responsibility. To date, unfortunately, the Congress has not lived up to its responsibility and has too willingly on important issues followed the administration lead on the economic front.

The problems of ending the present recession, of restoring adequate economic growth and of preventing further recessions still confront the Nation, as does that of an inflation caused largely by monopolistic price administration. These problems will not go away simply because of administration wishes. They will still be with the Nation when the next Congress goes into session. They must be met and the sooner they are met the better for all.

The Employment Act of 1946 mandates Government to play a positive role in sustaining economic progress. This law is being neglected and misinterpreted although its intent is clear.

Failure of Government to utilize its power for the welfare of the Nation cannot long be tolerated. It is time to recognize that taxes are as much a weapon for economic progress as for governmental income. It is time to recognize that an expanded, long-term public works program is essential to prosperity and the national well-being. It is time to recognize that the one deficit the Nation cannot afford is a deficit in employment opportunity.

It is obvious that the Soviet Union is shifting increasing emphasis on programs of economic penetration followed by political subversion and that this is the area in which America must meet the increasing Soviet challenge. A strong America as a part of a strong free world alliance will be equal to meeting the Communist challenge on both the military and economic fronts only if we fully mobilize the economic resources of the productive power of the American economy. Getting America back to work and getting the American economy in high gear on a full employment, full production basis is the most important and top priority job that needs to be done. This will require bold and adequate leadership and action from both the executive and legislative branches of our Federal Government.

Federal Reserve System To Undertake Study of Existing Boundaries

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. NEUBERGER. Mr. President, more than 4 decades have passed since boundaries of the 12 districts of the Federal Reserve System were fixed. Since that time many shifts have occurred in population, industrial expansion, and economic needs of the various districts. At present, the 12th Federal Reserve district encompasses a vast area of the West—from Texas to the Canadian border, north of the States of Washington and Idaho. With the addition of Alaska as the 49th State, this district becomes all the more unwieldy as an integrated economic unit.

Because of this situation, I have conferred with William McChesney Martin, Jr., Chairman of the Board of Governors of the Federal Reserve System about undertaking a survey of the feasibility and soundness of existing boundaries of the 12 districts. I have been assured by Mr. Martin that such a study will be accomplished in the near future in connection with approval of statehood by Alaska. In connection with my remarks, I ask consent to include in the Appendix of the RECORD an editorial from the Oregonian of July 24, 1958, entitled "Federal Reserve Study."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FEDERAL RESERVE STUDY

The rapid growth of population and the shifting tides of residence have brought realization in several sections of the United States that the boundaries of the 12 Federal Reserve Bank districts established 44 years ago are no longer realistic.

In fact, it is contended, sound management of the fiscal and credit resources of the country is being hampered by the distorted composition of the districts.

Senator RICHARD L. NEUBERGER, of Oregon, has joined his voice to those seeking immediate study of Federal Reserve boundaries. In a letter to Secretary of the Treasury Robert B. Anderson he questioned, specifically, the boundaries of district 12, which extends from the border of Texas to Seattle and has headquarters in San Francisco.

The impending addition of the new State of Alaska, plus growth in the Northwest, should justify creation of a new Federal Reserve district embracing the four Northwest States (Montana now is allied with the Midwest in district 9) plus Alaska, with headquarters in Portland or Seattle, Senator NEUBERGER reasons. Certainly, consideration of Federal Reserve boundaries is long overdue.

Conditions in India

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in yesterday's Boston Herald. The Herald's editorial page has vigorously and perceptively commented on Indian and Asian affairs for many years. This editorial is another excellent analysis of current problems in India.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Boston Herald of July 29, 1958]

CASHLESS INDIA

Vast, inefficient, underdeveloped India has been making astonishing progress in her race toward industrialization and great power status. Between 1951 and 1957 her industrial production index rose by 37 percent, a more rapid rise than even the United States could boast. And this has been accomplished without interrupting an equally determined drive to improve health, literacy, and living conditions generally for the Indian masses.

But there have been hitches. India's second 5-year plan has had to be cut back not once but several times because of overambitious quotas. And right now India is facing a major exchange crisis.

B. K. Nehru, a cousin of the Prime Minister, is in Washington trying to raise $300 million urgently needed to pay for goods which both the public and the private sectors of India's economy require from abroad. The imports are needed to maintain the pace of industrial expansion, and there just aren't enough exports at the moment to pay for them.

Doubtless this sum will be made up either by us or by the International Monetary Fund or by some combination of lenders, and India will move on again. The danger is, however, that this crisis will be followed by another, and by a third after that, and that some one of them will eventually prove too much, bringing the whole effort down around India's ears.

We cannot let this happen. The free world has a stake in seeing India's growth program succeed. If India fails in her democratic, capitalistic approach to industrialization, other underdeveloped nations will look to Red Russia and China as their models.

A new United States policy is called for. It is no longer enough that we supply emergency aid when the program falters. We should be thinking in terms of a major and continuing infusion. Senators KENNEDY and COOPER almost won congressional approval for such action earlier this summer. Our State Department should now take up the challenge.

Mr. Nehru should get what he needs immediately. But the United States should send a team of experts to India to find out what the country's long-term needs are. Ideally it should persuade other lending countries to join in the survey. And when the facts have been canvassed a consortium of Western nations should be set up to underwrite India's heroic and exciting effort.

Indian aid will cost us less this way, because it will be planned aid, aid that is calculated to get the maximum possible return. And for such an approach we will almost certainly get the enthusiastic cooperation and assistance of our major allies.

India has the potential of a great and self-supporting industrial nation. Here is an investment opportunity which can bring not only great financial returns, but also great political and human ones. We dare not pass it up.

United States Congressman From Asia

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. MILLER of California. Mr. Speaker, one of the most interesting stories that I have been privileged to read for a long time will be published in this week's Saturday Evening Post and is entitled "United States Congressman From Asia."

Milton MacKaye has done an outstanding job in writing about our colleague, Judge DALIP SAUND of the 29th District of California.

Judge SAUND's presence in this House testifies to the world that the people of America are interested in sincere, intelligent, and loyal service on the part of their elected officials rather than their antecedents.

I am happy to have the privilege of serving on the California delegation with DALIP SAUND and serving in the Congress of the United States at a period when, in keeping with its ancient precedent, it opened its door to him.

Judge SAUND's acceptance by the people in his district is best indicated by the very heavy vote given him recently in the California primary, where he was a candidate for reelection.

The article follows:

UNITED STATES CONGRESSMAN FROM ASIA

(By Milton Mackaye)

One of the most colorful personalities in the 85th Congress is a stocky, swarthy, bushy-haired Californian whose very presence in Washington is a practical demonstration of the workability of the American dream. Not too many years ago his neighbors in the Imperial Valley—if called to sit in sober judgment—would have had to vote DALIP SINGH SAUND the politician most unlikely to succeed. His career handicaps seemed insurmountable.

First of all, SAUND was not a citizen and, under then existing law, could not become one. A farmer by profession with a living to make for his family, he was forbidden by the same law to own or lease property. Although a graduate of two great universities, he was a member of an unpopular—and sometimes despised—minority group; a later political opponent was to describe him, perhaps ungenerously, but fairly accurately, as an "immigrant Hindu."

DALIP SAUND was, indeed, born near the city of Amritsar, India, 58 years ago, and today is the only Member of Congress of Asian origin. He came to this country as a student in 1920 and did not return to his native land until 37 years later. Last autumn, accompanied by his American-born wife and one of his two daughters, he made a 6,000-mile tour of Asia that was not only a personal triumph but a solid contribution to improved relations between East and West.

SAUND, a realist by necessity, painted no pretty pictures for the multitudes who crowded schools and public squares to hear him speak. He did not deny that prejudice and discrimination against Japanese, Chinese and East Indians had existed in California when he chose to make his life there; the Alien Exclusion Act effectively barred them from any real participation in public affairs. As a matter of fact, SAUND helped write the law which, passed in 1946, permitted East Indians to qualify for citizenship. He became a citizen himself in 1949.

"I told my audiences," SAUND said recently, "that prejudice thrives in all countries and all climates; parochialism has no flag. But in a democracy things can change and people do change; I explained that things had changed greatly in the United States since World War II. As an example of the new winds blowing, I cited my own election. The fact that I had been an outcast, that I had fought my way up, worked for me rather than against me. The proof of change was the fact that in a district traditionally ultraconservative I somehow made the grade."

The Congressman's graceful statement, however, gave the people of Calcutta and Delhi and Amritsar no hint of the high drama of the campaign 2 years ago in California's sweltering 29th district. This district, 200 miles long by 100 miles wide, is composed of Riverside and Imperial Counties and stretches from the Mexican border to the outskirts of Los Angeles. Temperatures reach astronomical heights in summer and early fall, and one weary eastern reporter who followed SAUND in the desert for 48 hours paraphrased Gen. Philip Sheridan's remarks about Texas when he (the reporter) finally holed up in an air-conditioned motel.

"If I owned both hell and the Imperial Valley," said the reporter, "I'd rent out the Imperial Valley and cool off in hell."

There were many reporters; no congressional campaign in recent years has received so much national publicity. And for obvious reasons, SAUND's opponent, personally endorsed by President Eisenhower, was a world figure—the dynamic and glamorous aviatrix, Jacqueline Cochran Odlum. Jackie, a truly great flier who still holds many national records, organized the WASPS in World War II, served her country in many ways, was and is the friend of admirals and generals and industrial titans. Yet Jackie fought her way up too; at the age of 12 she was a barefoot orphan in a Georgia cotton mill. She ended as the owner of her own cosmetics business. Her husband, who spends his winters on their 1,000-acre ranch at Indio, is well known in the world of finance; he is Floyd B. Odlum, one of America's richest men.

The contrast in candidates provided the drama. SAUND, the educated but obscure Sikh from the rawboned small town of Westmorland, was running as a Democrat in a district which had never failed to send a Republican to Congress. For a time the odds against him seemed overwhelming; one observer described the rivalry as that of the lioness and the mouse.

SAUND kept calm; he shared the limelight created by the prominence of his adversary, and he campaigned shrewdly and to good effect. He knew that the rancors of a bitter primary battle had disaffected many Republicans who ordinarily would have been in Jackie's camp. On election day, Eisenhower carried the district overwhelmingly, but SAUND achieved a major upset. When the last ballots were counted, he had defeated Jackie by a few thousand votes.

Many Californians still regard SAUND's victory as a political accident; that controversy will be resolved when he comes up for reelection this fall. Recently I toured Imperial and Riverside Counties and I can report that he is running strongly and that he is not running scared. The victory was a quick and spectacular one, but the real story behind it began in the village of Chhajalwadi, a good many years ago and miles away.

DALIP SAUND is often described by his friends as completely American in appearance, manner and thought. He is outgoing, indefatigable, and his background is in our pioneer tradition. It is significant that his family were Sikhs, a religious group which separated 500 years ago from the Hindus, who predominate in India.

SAUND's grandfather was a village blacksmith who, in the Congressman's words, "had no assets but five husky boys." The boys left home to better themselves, and SAUND's father and two of his uncles became well-to-do government contractors, builders of canals and railroads, owners of big houses and large tracts of land.

"Neither my father nor my mother could read or write," SAUND told me, "but they were passionately interested in education for their children and the children of our village. They furnished the quarters for the local primary school and they paid the salary of the teacher. It is a western delusion that women occupy an inferior position in India; actually my mother was always the boss of

the family. My father died when I was 10, and this long afterward my mother's admonitions are compulsions. 'Always wash your hands before eating.' Today I find myself sneaking down to the men's room before a banquet at the Waldorf-Astoria. 'Make friends everywhere and no enemies.' I have tried all my life, but have not always been successful. 'Respect religious men.' I still am incapable of entering a room ahead of a minister or a priest."

SAUND attended grammar school and high school in Amritsar and was graduated with honors from the University of Punjab in 1919. A normal next step for a bright Sikh was a position in Britain's Indian civil service. But SAUND was already a follower of Mahatma Gandhi and an enthusiastic Indian nationalist; the newspapers had introduced him to Woodrow Wilson, who wanted to make the world safe for democracy, and Wilson's speeches had introduced him to the writings of Abraham Lincoln. He was America-inclined. At about this time Gandhi and Nehru went to prison, and SAUND's elder brother decided DALIP would be safer at the University of California than in Amritsar. DALIP had expansive ideas—he would study the canning industry in the United States and return to set up a profitable business in his homeland.

A few months later he found himself in Berkeley, domiciled at the residence clubhouse of the Hindu Students' Association with about 80 other Indian students. (One of them, Pratap Singh, he met again last year; Pratap Singh is now chief minister of the province of Punjab.) SAUND enrolled for several agricultural subjects, and also learned that if he took a few mathematical courses it would be comparatively easy to get a master's degree. He went on, during the next 4 years, to win his doctorate in mathematics. The title of his thesis, he remembers, was, On Functions Associated With the Elliptic Cylinder in Harmonic Analysis.

By that time his British-accented English had absorbed both American idiom and campus slang, and he frequently spoke before student and church groups to eulogize Gandhi—whom he never knew or met—and to lambaste British rule in India. His family warned him that the authorities back there had a complete dossier on his anti-British tirades. SAUND was confused about his future. After his elder brother died, there were no more checks from home and he was strictly on his own.

"Like Stephen Leacock's hero," he told me, "I was riding off in all directions. I wanted to write a history of India, be a teacher, return to India as a political fighter, make a fortune. I was adrift in a country where I could not become a citizen, and my first job after earning a doctor of philosophy degree was as foreman of the sirup department in a fruit cannery. I never used my math again."

SAUND had abandoned the traditional Sikh turban, cut his hair, and begun shaving early in his Berkeley years. But he still went to the Sikh temple at Stockton, in the San Joaquin Valley, to celebrate religious days. There he met Hindus, many of them illiterate, who drove big motorcars; they were farmers in the rich, irrigated Imperial Valley. He decided to go there too. So the second job of the doctor of philosophy from Berkeley was that of foreman of a cottonpicking gang near Holtville. He made good money, saved it, planted a good celery crop by sharecropping—and lost his shirt.

The Imperial Valley is like that. There are certainties there; two crops can be harvested annually, sunshine is inevitable, and irrigation water from the Colorado River will wander down your own cared-for ditch. But the market is unpredictable. Farmers make a fortune on onions or watermelons one year, and go in debt the next. SAUND was to place his bets on this agricultural roulette wheel for a good many years, but he also had to get a book out of his system. It was an answer to Katherine Mayo's best seller, Mother India, which Indians considered an outrageous and ill-reported picture of India's backwardness.

Bachelor SAUND went up to Los Angeles to complete his research and there met his future wife. Actually, although they did not remember it, they had met before; Marian Kosa, then 10 or 11, and her mother had been passengers on the vessel which brought SAUND to the United States. One night in Los Angales, Emil Kosa, Jr., a young artist who had heard SAUND speak at the First Unitarian Society of Hollywood, brought him home to dinner and introduced the Indian to his sister. Marian, born in Cape Cod to parents of Czech origin, was then a freshman at University of California at Los Angeles. The SAUNDS were married in 1928. His book and their son, Dalip, Jr., appeared in 1930. The book, My Mother India, was close to Marian's heart because she had typed it so many times, but it was not a financial success.

So it was back to the Imperial Valley and farming and some rather rigorous pioneering. Neither SAUND nor his wife was afraid of manual labor; like their neighbors, they lived in a shack because they could afford nothing better. And in the 1930's the Valley was visited by pestilences. One year it was crickets, the next year mildew. Then it was blackbirds. Mrs. Saund recalls a crop season when they planted maize; it was her duty to stand in the corner of a field and fire a .22 rifle under the clouds of blackbirds as they descended on the ripening corn. It worked too. The blackbirds did not get the corn.

The future Congressman did most of his farming around Westmorland, a once-thriving but now sleepy town which boasts that its geographic location is 180 feet below sea level. He tried everything in his time—alfalfa, melons, onions, celery, cotton; he was one of the first to grow sugar beets and Punjab flax, now important crops in the Valley. Because he could not own or lease land, he often took leases in his wife's name; she, of course, was an American citizen. Or he sharecropped by oral agreement or some other subterfuge. Also he knew what it was like to line up outside a bank for a $50 loan and not get it.

The Saunds prospered enough to buy a new car every year, to take July-August trips to the coolness of Yosemite with their 3 children; they played tennis and hiked, and Marian was active in the Parent-Teacher Association. In the midthirties SAUND hit the jackpot one year with alfalfa. Optimistic—a Valley farmer has to be optimistic—he sank his $8,000 profit in bigger holdings, borrowed $10,000 more, and the next season the bottom fell out of the hay market. SAUND did not take bankruptcy. ("In India," he told me, "a man who takes bankruptcy must keep a coal-oil lamp burning in his window as a symbol of his shame.") But it took him a number of years to pay off his debts.

In the congressional primaries in 1956 a Democratic opponent put into the record the fact that seven judgment suits had been filed against SAUND by creditors. As campaign material it backfired. "What the hell," an El Centro supporter said to me a few weeks ago. "Everybody goes broke in the Imperial Valley sooner or later. Doc SAUND, for all his education, was a dirt farmer like me and he knows what we are up against. He's been broke like the rest of us and he paid what he owed."

Aubrey Lee, a Westmoreland grocer, believes that the Congressman got his first propulsion toward public life in a Current Events Club organized by a group of thirty-odd businessmen in Westmoreland and nearby Brawley. Their monthly meetings were serious affairs; members, turnabout, were required to research and present a paper on one phase of world happenings. "Why, we had it figured out how the war would be fought before it even began," said Lee. SAUND was a stanch supporter of Franklin D. Roosevelt and an articulate one. At the Current Events Club he strove to improve his platform manner, and succeeded. He joined the Toastmasters' Club, eventually won its regional speechmaking competition and became the district governor.

Like many another Congressman, SAUND has had a long romance with his larynx—which incidentally needs no amplifier. Even in a private conversation the effect is oratorical, and his rather high voice reverberates from one office wall to the other like the roar of breakers by the sounding sea. Long before he became a political campaigner he was a frequent speaker before service clubs and civic groups, usually with India as his subject. "It wasn't so much that those sunburned men wanted to hear about Gandhi," said a friend. "Some of them didn't even like Hindus or Democrats. It was more that SAUND was always available."

In 1942, physicians made family life more difficult. They told Marian Saund that she could no longer live in the Imperial Valley; her allergy to Bermuda grass made her battle with asthma insupportable. She moved back to Los Angeles and returned to college. She was graduated in 1945 and since that time has been a teacher in the elementary schools of the Fairfax District. It was a curious, divided life. War years were prosperous years in the valley; SAUND batched it and farmed, and drove up to Los Angeles weekends to see his wife and children. On Mondays he took off at 3 a. m. for the desert to make sure the irrigation ditches were properly opened in the early dawn.

It could have been a lonely life, but SAUND filled his odd hours and his evenings with activity. For one thing, he helped to organize the India Association of America, which pushed for legislation to make his 3,000 fellow countrymen eligible for citizenship. He went to Washington, and Clare Boothe Luce, a Republican, and Emanuel Celler, a Democrat, sponsored the bill; in 1946, when President Truman signed it, the bill became law. SAUND got his final papers 3 years later. Books—SAUND still reads himself to sleep every night—were also hedges against loneliness. The political worker who will really work, who is always on call, means money in the bank for any party. When SAUND became a citizen, he was appointed immediately to the central committee of the Democratic Party in Imperial County and later became chairman.

When he decided to run for town judge, however, several of his close associates thought he was unwise. "Doc," said one of them, "a lot of people here came originally from Arkansas, Oklahoma, and Texas. I'm afraid your skin is too dark." But some of those people, prosperous after earlier hardships, felt they, too, had met with discrimination when they came to the valley as penniless Okies and Arkies. SAUND passed the examination required by the State—although he was not a lawyer—and won the election. Immediately five Westmorland citizens petitioned for his disqualification because he had not been a citizen for a year. He did not oppose the petition.

The county board of supervisors had to appoint a judge. Hundreds of Imperial County residents signed a round-robin asking that SAUND get the January appointment; his year as a citizen would then have been completed. The supervisors instead appointed Frank Lyall, long-time Westmorland resident. SAUND defeated Lyall in the following year's election and went on the bench.

Actually this judicial post was similar to that of justice of the peace in many com-

munities, and when his congressional campaign literature referred to him as "D. S. (Judge) SAUND," some of his opponents remarked that he was getting rather handsome mileage out of a position which didn't require a legal education or a great amount of his time. Nevertheless, two Imperial County district attorneys, Arthur Lockie and Don C. Bitler, have described him as an able, alert, conscientious judge who cooperated fully with the law-enforcement agencies. They refer to the cleanup of Westmorland's now ghostlike Fifth Street, which was then one neon-lighted honky-tonk after another; prostitution, narcotics vending, and gambling prospered on the wages of itinerant fieldworkers who, brought in from Mexico, were literally men without women.

For several years SAUND had been doing only part-time farming. He handled farm contracts for the American Fruit Growers, a packing firm, and also was a fertilizer salesman for the Agro Phosphate Company. Then he set up his own chemical-fertilizer business. Thirty-odd tanks labeled "SAUND" currently supply valley farms; the business grosses about $250,000 a year. A. C. Faubion, who was once SAUND's boss at American Fruit Growers, supervises the SAUND business operations in his absence.

There was one thing obvious about the 1956 congressional campaign. The Democrats were united and the Republicans were divided. True enough, SAUND had a rival in the Democratic primary, but he beat him handsomely; five Republicans sought office, and they lashed one another. John S. Phillips, in Congress for 14 years, did not run; he supported Jackie Cochran Odlum. Fred Eldridge, a former newspaperman and president of the Farm Bureau in Riverside County, was her principal rival; he was also a World Federalist. Fur flew. An Indio editor described the campaign as the most literary bloodletting in history; three candidates had made the mistake of writing books. Jackie had written her autobiography; Eldridge, who had served with distinction under Gen. Joe Stilwell in Burma, had written a defense of Stilwell's China policy. Even SAUND's book, remaindered a quarter of a century before, was resurrected to establish him as a dangerous radical because the British Government in India had barred its importation.

Mrs. Odlum beat Eldridge in the primary by a close vote; there seems litle doubt that some of his supporters, indignant over what they felt to be unjust atacks on their candidate, voted Democratic in the fall. And just to prove that anything can happen in California, Fred Eldridge, who refused to endorse Mrs. Odlum, who was personally endorsed by Eisenhower, became the Eisenhower manager in Riverside County. Is that confusing enough?

Sober Republicans this long after are not sure that party division was solely responsible for the Democratic victory; they have done their own intensive researches. Riverside and Imperial Counties, once almost feudally controlled, are changing. Riverside County in particular has grown enormously in population; the rich smell of citrus groves is giving way to housing developments. Democratic workers in 1956 set themselves a goal of registering 10,000 new voters, and probably made it. Impartial observers say the Saund family deserves a hefty share of the credit. Mrs. Saund and her younger daughter, Ellie, moved into an apartment in the city of Riverside, where the candidate was not well known, and began ringing doorbells as fulltime campaigners. Other family members and in-laws were available on weekends.

Mrs. Saund said recently she had spent a lifetime trying to dominate her children and had never succeeded. Dal, Jr., a combat lieutenant in Korea, won a couple of Bronze Stars and was wounded in action. He was graduated this year in mechanical engineering at the California Institute of Technology; he has a pretty wife and a 6-month-old son. Julie, the elder daughter, was president of the YWCA at UCLA, went to work for the engineering department of Convair Aircraft. She met and married Dr. Fred Fisher, a young physicist who specializes in underwater sonics; they now live in Cambridge, Mass., where Fisher is doing research work at Harvard. Ellie will be a senior at University of California at Los Angeles this fall and expects to become, like her mother, a schoolteacher.

The Congressman got heavy support among his district's minority groups—Mexican-Americans, Negroes, and a few East Indians—but there are not enough of these voters to swing an election. He won the farm vote and also did well in the cities. One observer described his achievement as the "skilled selling of a pleasing personality." Another said, "His background as a dirt farmer and his civic activities made the people in the district feel closer to him, despite his foreign origin, than they did to the brilliant Mrs. Odlum."

"I believe," SAUND himself said the other day, "that many, many people just thought it was an opportunity to demonstrate that they believe in democracy and fair play."

When the Congressman brought his bright nimbus of publicity to Washington, the Democrats promptly placed him on the powerful House Foreign Affairs Committee. It was as a one-man subcommittee that he made his extraordinary expedition to the Orient—technically to investigate the mutual security program, actually to improve relations between the United States and Asia. The trip began last October 22 and ended January 3. Everywhere, as telecasts and films revealed, the SAUNDS were met by tremendous crowds—in Japan, in Hong Hong, in the Philippines and Burma and, of course, in India.

In Calcutta, in New Delhi, in his native Punjab, they were garlanded with marigolds, mobbed by schoolchildren, lionized at meetings. SAUND's American wife and daughter were of particular interest to the crowds; in one city, when he appeared at a reception without the tired ladies, he was hustled back to his hotel by car to recruit them. In New Delhi he addressed the Parliament for 2 hours, and Prime Minister Nehru—whom he had met the year before in Washington—was host at a private family luncheon. In the Punjab the SAUNDS traveled in a private railroad car provided by his brother Karnail, a graduate engineer who is a member of the five-man board which controls India's railroads. Just the summer before, SAUND had attended a traditional Sikh wedding in Ottawa when Karnail's son married the daughter of the Indonesian Ambassador to Canada.

The Congressman spoke either in Punjabi or English, asking his audiences to choose. Even after an absence of almost four decades, his Punjabi was fluent, but his daughter was told guardedly that he spoke with an American accent. He talked frankly and vigorously about America's position in the postwar world vis-a-vis communism; he willingly discussed such sore issues as Little Rock, Goa, Kashmir, and Pakistan, often using Indian stories and parables to make his point. Returning to his native village was perhaps his most affecting experience. There the 30 trees he had planted as a youngster—in India an act of virtue—were full grown and provided pools of shade. Under the trees a Sikh poet sang elegiac verses which—and here the Congressman found himself in tears—included SAUND's mother's dying words.

SAUND's opponents have accused him of a certain ineptness as a working Congressman, but he showed no ineptness as a goodwill ambassador. When I toured his district, I discovered that the Indian expedition had made him new friends, particularly among women voters interested in peace and good international relations. But he still is a controversial figure; those who like him like him very much, and those who dislike him are eloquent about it.

SAUND has done some floundering as a Congressman, but most freshmen in Washington do. His colleagues have given him friendly help in matters concerning his district and probably will give him more before election time. A great many of the large growers in the valley oppose him, but, on the other hand, he has in the past had the support of such men as Jack H. Benson, one of the largest farm operators; wealthy rancher John J. Elmore; and James Simons, president of the Imperial Valley Beet Growers Association. "In another term or two," Benson predicted recently at his office in Brawley, "he will be one of the outstanding men in Congress. He has education, energy, and brain power."

Personally, SAUND is spirited, well informed and engaging. Of necessity, he early learned to get along with people. "Even in the first days, when things were harder," he told me, "I never had a fist fight or cussed back a man who cussed me. That's what Gandhi taught, and it was the way my mother raised me." His own son has described him as the most patient man he ever knew; in a lifetime, he said, he has never seen his father lose his temper. At 58, SAUND looks 10 years younger; his blue-black hair is only faintly graying; he is well dressed in a public calling where wrinkle and rumple are often a trademark. He does not drink or smoke, but is unstuffy about people who do. As a onetime New Dealer, he supports most so-called liberal causes and last year won an Urban League award for bettering race relations. Yet he is an odd combination of meditative idealist and shrewd crossroads politician. He makes political errors, but rarely repeats them. A generous man himself, he is as rapacious for his district as any string-tie Claghorn from the peanut-growing belt. Like most Congressmen—where their homefolks are concerned—he regards the Budget Bureau as the sworn enemy of man's highest hopes.

Mrs. Saund took a sabbatical year from schoolteaching when her husband went to Congress and now makes frequent trips east. But she still pursues her chosen schoolteaching career. The Saund home in Los Angeles is on a steep slope in the Hollywood hills; Mrs. Saund bought the lot because of the view. Her husband and son in 1950 built the 3-bedroom modest white house with a minimum of professional help and a maximum of effort; most of the building materials had to be hoisted aloft by cables. A celery crop, which had proved so disastrous when SAUND first went to the valley, this time paid the bills. The roulette wheel always turns. In Washington the Saunds make their home in a Connecticut Avenue apartment.

The Republicans in the 29th District this time have taken careful aim at the man from Chhajalwadi. Party lesions have been salved and wounds bandaged. All substantial factions of the party are supporting John Babbage, a 42-year-old lawyer from Riverside who has made his mark in many ways. Born in New York, he worked his way through the University of Southern California and won a scholarship to the Columbia University Law School. For 6 years he was a special agent for the FBI, spending 3 of the war years in South America. After coming to Riverside as a deputy district attorney, he went into private law practice. He was elected to the California Legislature in 1948 after receiving both Republican and Democratic nominations in a primary (remember, California is that State which allows crossfiling in a primary) and spent two terms there. In an evening interview at the famous old Mission

Inn at Riverside, I found him an affable, ambitious, and intelligent young man.

But for all the self-examination of Republicans in Imperial and Riverside Counties, DALIP SINGH SAUND may not be an easy man to beat. Let his wife have the last word.

"DALIP is the optimist in our family. I am the worrier and brooder. He is optimistic about things turning out well and, astonishingly enough, they often do."

The St. Lawrence Seaway: How It Stimulates Wisconsin's Industrial and Commercial Growth

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. WILEY. Mr. President, I was pleased to read in the June 1958 issue of the magazine Torch, published by the Milwaukee Advertising Club, an excellent article devoted to the constructive impact of the St. Lawrence seaway on the State of Wisconsin.

A great many articles have appeared on this general subject, as might be expected.

But the unique features of Torch magazine, with its graphic presentation of maps and photos, makes this, like other articles in Torch, particularly impressive.

The fact that the article's author is Harry Brockel, municipal port director of Milwaukee, an expert Badger who probably knows from firsthand experience the meaning of the seaway in terms of Wisconsin as much as or better than any other single man in my State, further contributes to the article's great value.

I may say that Torch magazine in its own right represents one of the most brilliant printing jobs which it is my pleasure to see. I know of few publications anywhere in the United States in the graphic arts-advertising field which do a better job, in black and white and in full color, than does this outstanding monthly magazine, representative of an outstanding ad club. It is no accident that it appears in Milwaukee—one of America's greatest graphic arts centers.

I send to the desk the text of the article and ask unanimous consent that it be printed in the Appendix of the RECORD, preceded by a list of the editorial staff of Torch, and the officers of the Ad Club, because I believe that they are to be congratulated for their contribution to the progress of the advertising profession.

There being no objection, the list and article were ordered to be printed in the RECORD, as follows:

OFFICERS OF MILWAUKEE ADVERTISING CLUB, 1957–58

Officers: President, James W. Murphy, Allis-Chalmers Manufacturing Co.; vice president, Burton E. Hotvedt, Klau-Van Pietersom-Dunlap, Inc.; secretary, Peter W. Olsen, Olsen Publishing Co.; treasurer, Homer J. Bendinger, the Milwaukee Journal.

Board of governors: Carl N. Becker, Becker Electrotype Co.; Franklin G. Beezley, Bert S. Gittins Advertising, Inc.; Frank V. Birch, Klau-Van Pietersom-Dunlap, Inc.; Walter G. Cruice, Pohlman Studios, Inc.; Walter J. Kessler, Pabst Brewing Co.; Joel Kursel, Hoffman & York, Inc.; H. Ellis Saxton, Saxton Agency; Robert C. Slater, Slater-Rost Studios, Inc.

STAFF OF THE TORCH

Editor, Winston C. Williams, Klau-Van Pietersom-Dunlap, Inc.; art editor, Robert C. Slater, Slater-Rost Studios, Inc.; industries feature editor, Robert F. Buntrock, Milwaukee Association of Commerce; graphic arts feature editor, Carl N. Becker, Becker Electrotype Co.; graphic arts news editor, Edward O. Goetz, Olsen Publishing Co.; Torch-Lite Parade editor, Robert W. Maercklein, Maercklein Advertising; meetings editor, Kenneth W. Gredler, Andrews Agency, Inc.; social events editor, H. Kendig Eaton, Mathisson & Associates, Inc.; business manager, Robert E. Schulz, Nordberg Manufacturing Co.; associate business manager, Earl J. Holsen, Frank H. Bercker Studios, Ltd.

THE ST. LAWRENCE SEAWAY: HOW IT WILL STIMULATE WISCONSIN'S INDUSTRIAL AND COMMERCIAL GROWTH

A new $85 million integrated aluminum processing plant, first of its kind, built by Reynolds Aluminum Co., on the banks of the St. Lawrence River near Massena, N. Y. Next door, a gigantic new aluminum foundry for General Motors. Ready for launching at Detroit, the largest bulk freighter in the entire history of the Great Lakes, built by Northwestern Mutual Life Insurance Company of Milwaukee. At Bay City, Mich., a shipyard humming with the building of 4 guided-missile destroyers for the United States Navy, with a contract value of $70 million. Along the Ohio shore of Lake Erie an impressive array of new chemical, petrochemical, electronics, rubber, food, and metal processing industrial plants. In the Indiana sand dunes at the south end of Lake Michigan, Bethlehem Steel's acquisition of 3,500 acres of lake shore which Mr. Eugene Grace said was not being acquired for a "bird sanctuary."

In business papers, the New York Central Railroad, arch enemy of the seaway project, inviting industrial development in the valley of the St. Lawrence to take advantage of a development which the New York Central bitterly fought for 40 years. One thousand and five hundred miles west, the State of Nebraska advertising the advantages of new industry in Nebraska, served by the seaway.

In Milwaukee and all major lake ports, the ringing sound of piledrivers and the clatter of dredges, and bustling activity on the waterfront as industrial brokers and real estate agents survey the opportunities for industrial sites served by deep water. Along Milwaukee's river and lake channels new manufacturing plants, ship repair enterprises, warehouses, truck terminals, and a huge new electrical power installation to serve the rising demand for electrical energy in the harbor area.

SEAWAY ALREADY BENEFITING STATE

These are some of the already visible industrial impacts of the St. Lawrence seaway. In Wisconsin, industry has already benefited tremendously from this great project which our State so long and vigorously advocated. Wisconsin asserted its political leadership throughout the long fight for the seaway, and it was singularly appropriate that the seaway bill finally passed by Congress after 35 years of debate carries the distinguished name of the senior Senator from Wisconsin, the Honorable ALEXANDER WILEY.

Wisconsin also made its contribution to the building of the seaway. Lou Perini, a giant in the contracting industry, and one of the principal builders of the seaway, estimates that Wisconsin-built equipment to the value of $50 million, has gone into the building of the seaway. The great power dam at the International Rapids, the second largest power producer in the world, will have Milwaukee-built turbines and transformers and Wausau-built gate lifters. The great names of Wisconsin's industry are to be seen everywhere in the earth moving, construction, and electronic phases of the seaway.

HUGE PROJECT NEARS COMPLETION

The St. Lawrence seaway and power project, the subject of national controversy for 30 years, is moving rapidly toward completion. The turbines in the great new power stations at the International Rapids are scheduled to start spinning in August of 1958, adding 13 billion kilowatt hours to the annual power output of New York State and the Province of Ontario.

In April of 1959, the great new locks of the St. Lawrence project will open to lake and ocean ships. For the first time in history, the largest lake vessels will be able to move from the Great Lakes to tide water, and some 80 percent to 90 percent of the world's shipping will be able to sail past Montreal, the former head of salt water navigation, and to make lake ports into sea ports. The benefits of low-cost water transportation will apply for the movement of industrial raw materials, farm produce, and finished goods of all kinds.

ECONOMIC IMPACT TO BE TREMENDOUS

It has been said that the North American continent is not likely ever to see again an engineering project as huge in scope and in cost as the building of the seaway. As this monumental engineering task nears completion, industrialists, transportation experts, writers, economists, and Government officials, all the way from the Atlantic seaboard to the Rocky Mountains, are busily analyzing and projecting the economic impact of the St. Lawrence seaway upon ways of life and methods of business throughout the Middle West. Canadian public opinion is unanimous that the seaway will prove to be the greatest single force in the development of Canada and her resources. Shipping executives throughout Europe and South America are forecasting and planning for the seaway.

The seaway may well prove to be a decisive factor in future patterns of industry and commerce in Wisconsin, and throughout the Great Lakes area generally. Healthier population growth curves, and the indices of manufacturing production, show clearly that the Great Lakes region has emerged from the economic doldrums which retarded the area throughout the 1930's and 1940's. The Great Lakes area has much to offer in the way of natural resources, climatic advantages, skilled populations, and the world's largest regional concentration of industrial and agricultural development. The Great Lakes themselves have been a great unifying force, offering an almost inexhaustible supply of fresh water, and the lowest-cost mass transportation found anywhere in the world. The natural highway offered by the Great Lakes brought together the region's rich resources of coal, iron ore, and limestone. This union developed the greatest concentration of steel production and manufacturing enterprise found anywhere in the world.

WHAT SEAWAY MEANS TO WISCONSIN

How will the seaway affect industry in Wisconsin and the foreign and domestic commerce of this State?

A flourishing ocean trade is already developing on the Great Lakes, in spite of the limitations of the present 14-foot seaway route, soon to blossom out as a 27-foot system of navigation from tidewater at Montreal all the way to Chicago, Milwaukee, and

Duluth-Superior. For example, 25 regular lines of ocean steamers are now serving the port of Milwaukee with perhaps 250 ocean sailings chalked up for the port in 1958. In 10 years ocean traffic at Milwaukee multiplied 40 times in volume. Cargoes have moved directly from Milwaukee to a hundred overseas ports on 4 continents since 1946.

The west bank of Lake Michigan is undoubtedly the most strategic single area in relation to the St. Lawrence seaway, because of the deep and rich hinterland served by west bank Lake Michigan ports. It is a striking and favorable omen that the 3 ports of Chicago, Milwaukee, and Green Bay handle 60 percent of the ocean commerce of all Great Lakes ports combined. No better evidence could be developed to show how favorably Wisconsin is situated to take advantage of the seaway; to serve the trade territory between Lake Michigan and the Rockies; and to prosper from freight rate savings which already range from $5 to $30 per ton of cargo by use of direct ocean shipping as compared to the rail-ocean combination through seaboard ports. An infinite variety of raw materials, manufactured goods, and farm produce are already utilizing the seaway route to link Wisconsin with overseas markets. Impressive shipments of Wisconsin-built machinery, engines, automobiles, manufactured goods of many categories; and hides, meats, lard, grain, and dairy products from Wisconsin farms are much in evidence on the docks of Milwaukee's outer harbor.

TONNAGE OF SHIPPING TO SKYROCKET

The United States Department of Commerce and the Dominion of Canada estimate that the St. Lawrence route, fully developed and utilized, will serve from 50 to 80 million tons of new commerce each year. From 50 to 60 million tons will consist of iron ore, grain, petroleum, and other bulk traffic. Estimates indicate that up to 10 million tons per year of the traffic moving on the seaway will consist of high-grade, high-value general cargo. This valuable general cargo traffic will be attracted to large commercial and industrial centers, and to the best developed ports of the Great Lakes region.

Wisconsin ports should be prime beneficiaries of the seaway project. A substantial new commerce in general cargo will move through our lake ports with added business for railroads, truck lines, stevedores, warehousemen, brokers, banks, ship repair and supply firms, and all of the colorful and varied enterprises associated with maritime activity and world trade.

NEW INDUSTRY EXPECTED

The seaway should act as a magnet to bring new industry to the Wisconsin area, because exporters shipping to foreign markets, or importers seeking raw material from abroad, will desire the most advantageous locations. Water front sites, both for industrial and terminal purposes, will be in demand.

The construction of the St. Lawrence seaway and power projects has been in itself a considerable stimulant to Milwaukee industry. It is noteworthy that the first contract awarded for railroad construction in connection with the St. Lawrence power project was awarded to a Milwaukee firm. Heavy machinery and earth-moving equipment, for which Milwaukee is famous, is being used in great quantities on the work, and Milwaukee equipment is making a major contribution to one of the world's great construction projects. Milwaukee and Wisconsin firms are participating in the equipping of the great power stations which will harness the rushing waters of the St. Lawrence River, and put them to the service of mankind.

The project will open a new chapter in Wisconsin banking history, with great expansion of foreign trade financing in Milwaukee and throughout the Middle West. The seaway will mean new foreign trade opportunities for Milwaukee and Wisconsin industry, and new markets for the grain, dairy goods, and produce of Wisconsin farms.

MILWAUKEE'S PORT TO BE IMPORTANT ASSET

With a well-established port development, and with ample room for growth, Milwaukee will become a gateway, through which will flow much of the foreign commerce of the Midwest. Milwaukee is recognized in shipping circles as having the most modern port facilities and handling equipment in the entire Great Lakes area. Steamship lines and shippers will utilize this well-equipped gateway. Milwaukee will be one of the principal ports to serve the territory between the Great Lakes and the Rocky Mountains, as far north as the Canadian border and as far south as Denver, Omaha, and Kansas City. The port of Milwaukee serves import and export traffic of 120 cities in 18 western States between Wisconsin and the Rocky Mountains. Since 1946, Milwaukee, by direct ocean shipping, has served 98 major overseas ports, all the way from Rio de Janeiro on the south to Kirkenes, Norway, which hugs the Arctic Circle.

Milwaukee's modern harbor terminals on the lake front and in the Kinnickinnic Basin are especially designed to accommodate vessels of the class that will serve world trade and the Great Lakes, when the St. Lawrence route is in operation. The Milwaukee municipal outer harbor docks are accessible to the largest ships. They are provided with modern handling equipment, and excellent rail and highway connections. The 25 feet of water now available at Milwaukee's outer harbor treminals will be readily deepened, at nominal cost, to the 27-foot draft required to accommodate maximum draft seaway vessels. Milwaukee and other Wisconsin ports are currently making recommendations to the United States Corps of Engineers and are seeking congressional approval for deepening of harbor channels to meet the future needs of deep draft seaway shipping.

In brief, the St. Lawrence seaway will mean for Milwaukee, and probably for other Wisconsin ports, the expansion of port facilities; the growth of rail, water, and truck traffic; greatly increased waterfront activity of all types; vital growth as a trade and banking center. There will be a proportionate expansion of payrolls and community income. The seaway in 1959 will open the door to new economic activity and a new era of prosperity and growth, with Wisconsin strategically situated on America's fourth seacoast.

It should be understood that a maximum development of the type outlined may not occur immediately following the opening of the seaway in 1959, but is certain to develop as shipping, trade, and industry orient themselves to take advanatge of one of the most dramatic shipping developments in the history of the world.

MILWAUKEE ALREADY IMPROVING PORT FACILITIES

To assist industry and business in taking advantage of the new trade facilities which the seaway will stimulate, the city of Milwaukee through its board of harbor commissioners is carrying out an $11 million municipal port improvement program which will significantly enlarge Milwaukee's already excellent public port facilities. Some of the port communities of the Great Lakes have been paralyzed by indecision, unwilling to build too far in advance and yet reluctant to pass up the trade opportunities of the seaway route. No such indecision has cramped Milwaukee's style. Having been confidently building its outer harbor for lake and ocean shipping for the past 30 years, Milwaukee has learned that it can serve industry, and at the same time stimulate job opportunity and community income, by intelligent port planning and building. Two major new outer harbor piers; a large land reclamation project; new highway and railroad facilities; all offer assurance that Milwaukee not only will be ready to dock the seaway ships but to move cargo efficiently to and from inland trade zones. As Milwaukee's port facilities grow physically, so has there been a healthy growth of port service agencies, headquartered in Milwaukee, to serve the special needs of a great foreign-trade center and international shipping port.

Realistic studies indicate that not all of Wisconsin's port cities will become ocean-terminal ports. The smaller port cities do not have the concentration of manufacturing and population to attract ocean-liner services. In many instances, the smaller ports will lack adequate channels and port facilities for the handling of ocean ships and cargo, and it may not be possible for such communities to finance major new port facilities. However, the outports may legitimately hope for substantial benefits from the seaway development in the form of industrial plants seeking port locations; by shipbuilding and ship-repair opportunities; and other fringe benefits which the seaway will bring to our area generally in the way of economic stimulus.

Utopia will not automatically arrive for Wisconsin with the opening of the seaway in 1959. However, practically every economist in Canada and the United States, and many in Europe, are convinced that the opening of a fourth seacoast along the boundary waters between the United States and Canada will signal a new era bright with promise for the Great Lakes region.

It seems indisputable that the opening of the seaway will strongly stimulate waterborne commerce, port activity, shipbuilding, and maritime enterprise throughout the Great Lakes; that it will encourage healthy growth of steel production and allied metal manufacture; that it will open new and productive markets for Midwest agriculture. Opportunity both for the individual and for new commercial enterprise will be larger and more diversified in the Great Lakes region than ever before because of the many new fields of endeavor which the seaway will generate, and the new openings for specialized services as industrial lake ports become metropolitan seaports.

Industrial expansion should logically march hand in hand with commercial expansion. With its reputation for fine industrial craftsmanship, clean government, and good productivity, Wisconsin, westerly terminus of the seaway route, will have a powerful new selling point for the attraction of industry and for continued healthy growth and expansion of Wisconsin factories and farms which have already made for this State a tremendous impact in world-trade circles.

Challenging Study of Outdoor Recreation Resources

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30, 1958

Mr. NEUBERGER. Mr. President, the establishment of the National Outdoor Recreation Resources Review Commission has been greeted with understandable enthusiasm in my home State of Oregon where outdoor values are held in high regard. As a member of the

newly appointed Commission I am highly pleased by the reception given to the work soon to be undertaken, and also that our able Member of the House from the Second District, AL ULLMAN, is to be on the Commission, too.

Outdoor recreation means different things to different individuals and the cataloging of various outdoor resources and developing recommendations to meet the requirements for their future use is both a challenge and responsibility. I am sure that all members of the Commission recognize the grave impact which results of the study will have on future generations of Americans. It offers an excellent vehicle for making the United States a better place to live. Some of the possibilities for preserving our outdoor resources for maximum benefit of the Nation were outlined recently in an excellent editorial in the Mail-Tribune of Medford, Oreg., written by Mr. Eric Allen. I ask consent to include with my remarks in the Appendix of the RECORD the editorial of July 21, 1958, entitled "Outdoor Recreation Survey."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Medford (Oreg.) Mail-Tribune of July 21, 1958]

OUTDOOR RECREATION SURVEY

The outdoor recreational resources of the United States are in for a searching survey. And high time, too.

The Congress recently completed action on a bill providing for such a study, the President signed it, and some of the members of the Commission who will do the job have been appointed.

Among them, appropriately, is Senator RICHARD L. NEUBERGER, of Oregon, one of the Senate's stanchest supporters of conservation and the values of the outdoors.

The Eugene Register-Guard, in commenting on NEUBERGER's appointment by Vice President RICHARD NIXON, said it showed "good judgment," and that "the Senator, who has been deeply interested in conservation for many years, will be a trenchant spokesman for those who fear the day that the recreational potential of America's great outdoors is exhausted."

The 15-man Commission—including 4 Senators and 4 Representatives, plus 7 non-Congressmen to be named by the President—will have a big job, and 3 years in which to do it. They will have up to $2,500,000 to conduct the survey, and will be assisted by an advisory committee of the head of each of the Federal agencies dealing with recreation, plus 25 persons appointed to represent geographical areas and citizen interest groups.

What's the purpose?

Basically, it is to find out, authoritatively and for the first time, just what the United States has in the way of outdoor recreational resources, whether they are sufficient, and what will be needed in the years to come.

Anyone who is at all interested in some form of outdoor recreation (and who isn't?) knows there is increasing pressure on the rivers, streams, lakes, beaches, forests, and mountains which so many of us use these days to revive ourselves from the strains of everyday life.

Consider what it is now, with 174 million population. Then consider what will happen in 1976 (population estimate, 225 million), in 2000 (population estimate 300 million), and so on. Consider what it will be as the 4-day week succeeds the 5-day week, and the 3- or even 4-week vacation succeeds the 2-week vacation. And consider what will be the effect of the vast new network of good roads now abuilding, which will make the outdoors more accessible than ever before.

For example:

In 1926, 6 million visitors went into the national forests. In 1962—only 3½ years away—some 66 million visitors are expected. The National Park System was designed to handle 25 million visitors annually, but it had 59 million last year, and expects 80 million by 1966—the date for the completion of Mission 66 program to bring it up to a point to meet the demand.

But the forests and national parks are not enough. They must be expanded, added to, and supplemented if Americans are not to be as crowded in the outdoors as they are in the cities.

(Oregon is fortunate in that the State owns all its ocean beaches. But of the 3,700 miles of the United States coastline along the Atlantic, only 240 miles are open to the general public.)

Meanwhile, there are many things that must be done before it is too late.

The States must expand their systems of parks and recreational areas. So must the counties and cities, before the land best suited to that purpose is gone beyond retrieving. The areas we have now must be protected and preserved for future as well as present use.

Anything less will be a betrayal of the people these local governments serve.

The Federal agencies, generally, are aware of the demands, and are doing what they can to meet them. Both the National Park Service and the United States Forest Service have increased funds for recreation, and are using them to good advantage. But the appropriations are not, even now, adequate to meet the need.

If progress is continued for the next 3 years and the Commission comes up with a sound, feasible program, there is hope that the Nation's outdoor recreational needs will be met—at least insofar as they can be in a land which already has lost forever much of the land most admirably suited to the need.

Water Diversion

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. KNOX. Mr. Speaker, at the present time the Senate Public Works Committee is holding hearings on the very serious matter of diverting water from Lake Michigan into the Chicago Drainage Canal.

Under unanimous consent, I include in my remarks a statement I made before the Senate committee on Monday, July 28, 1958. The statement follows:

STATEMENT OF CONGRESSMAN VICTOR A. KNOX, REPUBLICAN, OF MICHIGAN, SENATE PUBLIC WORKS COMMITTEE, JULY 28, 1958

Mr. Chairman, I appreciate this opportunity to appear before the Senate Public Works Committee this morning in order that I may express my views relative to water-diversion legislation.

I am opposed to this legislation. Our Government has a treaty with the Canadian Government which sets up an International Joint Commission with full authority to control the water levels of the Great Lakes. These controls are determined by a series of gages in Lake Superior. When water falls below a certain level known as the curved rule, the flow is cut back in order to maintain proper levels for shipping purposes.

The 11th Congressional District of Michigan, which I represent, alone has approximately 1,000 miles of shore line. My people are greatly concerned over this legislation and what it would do if it were enacted into law.

In March of 1957 the curbstone rule used to determine the water level of Lake Superior, and which may I stress is the natural area of feeding the lower lakes, had gone to a point where it was necessary for the International Joint Commission to cut off 10,000 cubic feet per second of water from Lake Superior into the St. Marys River and then on down to Lake Michigan and Lake Huron. This disrupted the industry in my district. In Sault Ste. Marie, my hometown, the Union Carbide Co. has a contract with the Federal Government for 28,000 cubic feet per second of water for the turning of their turbines in order to furnish the necessary power for company operations.

This cut off also affected the Federal power plant at the Soo Rapids. They had to discontinue what they call No. 10 unit because of the low water levels in Lake Superior and this powerplant furnishes the power for the operation of the Soo Locks.

To me it would be disastrous at this time to enact legislation that would divert water from the Great Lakes area into the Chicago drainage canal. As far as the Chicago drainage canal is concerned, it has been said that they are going to use it for flushing purposes. That may be true to some degree; but—if we are going to be consistent in legislation which we have passed whereby we have appropriated millions of dollars to assist in the construction of sewage-disposal plants—for what purpose? To clean up our streams, our lakes and our rivers. So why should we start to divert water for flushing purposes? In my opinion, I think it is about time that all of the States along the Great Lakes and connecting waters should take advantage of the legislation that Congress has enacted, and get their houses in order and stop the pollution of the streams, rivers, and lakes of our Nation.

Lake Michigan, as are the other lakes, is part of a complicated drainage basin which affects the welfare of 7 States and 2 nations. No change should be made in the operation of the basin without due and careful consideration of the interests of all parties concerned.

I have been going back to my district much this session of Congress, and have seen the low levels especially of Lakes Superior, Michigan, and Huron. All the levels of the lakes have dropped in the last 4 years, and I am told there has been a 3-foot drop alone in Lake Michigan. A diversion of additional water from Lake Michigan to the Chicago drainage canal would directly affect this already drop of 3 feet.

The effect of this legislation also brings up some other very serious problems, and I refer especially to the question of the St. Lawrence seaway. Any diversion of water would have a tendency to lower the water levels in the connecting channels of the Great Lakes, which would require additional dredging at a great cost to the Federal Government in order to have the 27 feet that is required under the law.

Many cities in my district have contacted me opposing the diversion of Great Lakes water into the Chicago drainage canal. I can see why the people of the Chicago drainage canal area are greatly interested in the diversion because of the sanitation question that is involved. But to take an additional 2,000, 3,000, or 5,000 cubic feet per second

from the Great Lakes would greatly aggravate the grave conditions that already exist.

Do we want to continue to divert these waters so we will have to appropriate additional funds in order that we may be able to maintain the 27-foot depth of the seaway?

In addition, I have many harbors in my district, and we are having difficulty in all the harbors along the shores of the lakes. There once again we would be called upon to appropriate funds for the deepening of these harbors so the ships may be able to get into the harbors to load or unload.

I must oppose the legislation and ask that you give serious thought and consideration to the many additional problems that will face us if we divert the waters of Lake Michigan to the advantage of a single community, and without regard to the interests of all others concerned.

Thank you.

Resolution of Sheboygan (Wis.) Typographical Union, No. 710

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. PROXMIRE. Mr. President, the Sheboygan Typographical Union, No. 710, has adopted a resolution in regard to the handling of the case of the Mobile, Ala., Typographical Union by the National Labor Relations Board. I believe that one of the functions of a representative is to present the views of his constituents in the national forum.

Therefore, Mr. President, I ask unanimous consent that the resolution of the Sheboygan Typographical Union, No. 710, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the Appendix of the RECORD as follows:

SHEBOYGAN TYPOGRAPHICAL
UNION, No. 710,
Sheboygan, Wis.

Senator WILLIAM PROXMIRE,
United States Senate.

DEAR SENATOR PROXMIRE:

"RESOLUTION

"Whereas the NLRB and its agents while pretending to administer the Labor-Management Act of 1947, is engaging in activities contrary to the provisions of said act and the intentions of Congress when it was adopted; and

"Whereas the Board, its General Counsel, and its agents, who are paid public servants, have interpreted the act in such a manner as to amend the law adopted by Congress; and

"Whereas agents of the NLRB have gone to an extent previously unheard of except in totalitarian countries, having questioned and intimidated certain members of the Mobile Typographical Union, Mobile, Ala., by invading their places of employment and their homes: Therefore, be it

"*Resolved*, That Sheboygan Typographical Union 710, meeting this 3d day of July, 1958, wishes to protest this invasion of the sacred rights of the American people, guaranteed them by the Constitution of the United States; and further protests this use of methods which are contrary to the American way of life; and be it further

"*Resolved*, That a protest be made to the Congress of the United States with an offer to prove by sworn affidavits that the administrators of the infamous Taft-Hartley law have committed such acts without reason or legal authority; and be it further

"*Resolved*, That we protest the unwarranted persecution of the International Typographical Union by the NLRB; and be it further

"*Resolved*, That copies of this resolution be sent to Members of the Congress, and to the International Typographical Union."

Very truly yours,

SHEBOYGAN
TYPOGRAPHICAL UNION, No. 710.

David B. G. Rose: A Splendid Citizen

EXTENSION OF REMARKS
OF
HON. JOHN M. ROBSION, JR.
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. ROBSION of Kentucky. Mr. Speaker, on the 21st of June, 1958, in Louisville, Ky., there occurred the death of David B. G. Rose, one of the most outstanding business and civic leaders the City has ever known.

Mr. Rose was 84 years old and for more than a half century had been widely connected with the business and civic affairs of Louisville and the Louisville region—including the other so-called Falls Cities, of New Albany and Jeffersonville, Ind.—and he was also interested and influential in the public affairs of the entire State of Kentucky. During all of his long period of activity, as a business man and civic leader, Mr. Rose evinced the finest character of public spirit and vision. He was always in the forefront of all movements to develop the Louisville region, and the memory of his services will always endure.

In fraternal circles—especially those of Masonic character—Mr. Rose rose to the highest eminence. He was a Mason for 64 years, and for 50 years a 33d degree Scottish Rite Mason and a member of the Louisville Kosair Shrine Temple. Indeed, in the great, beneficient and patriotic field of Masonry, he was truly a master of the craft.

Further, Mr. Rose, during his career, had been active in newspaper and business activities, achieving fine success in these fields. A few years ago he wrote an essay on Henry Clay, which won for him a substantial cash prize in a radio contest. That essay, which constitutes a splendid condensed history of the life of the Great Commoner, found its way into the CONGRESSIONAL RECORD.

In keeping with his expressed wishes, his remains were cremated and the ashes cast into the air above the Ohio River, from the Clark Memorial Bridge, which connects Louisville, Ky. with Jeffersonville, Ind. In life he had done much to aid in the movement to improve the Ohio River and the Ohio River valley region, and the services in this connection doubtless led him to decide to request that his ashes be scattered over this great river.

Under leave accorded me, I include as a part of these remarks a news story which appeared in the Courier-Journal of Louisville of June 22 concerning the life, activities, and the death of this eminent citizen and public benefactor, who was indeed a friend to all:

DAVID B. G. ROSE, BUSINESS AND CIVIC LEADER IN LOUISVILLE FOR MANY YEARS, IS DEAD AT 84—ONCE CONNECTED WITH 26 FIRMS, HEADED SEVERAL

David B. G. Rose, whose meteoric career in business, community, and political affairs spanned more than 50 years, died at 12:38 p. m. yesterday at Norton Memorial Infirmary.

The 84-year-old former owner of Standard Printing Co. suffered a stroke Monday.

He retired 11 years ago. He lived at 2002 Murray.

At one time he was connected with 26 corporations here. Besides Standard Printing, firms he headed included Bradley & Gilbert Co. and Standard Gravure Corp.

HEADED STATE PRINTING

For 25 years he was circulation manager of the old Louisville Post. For a time, he was State superintendent of public printing. He was chairman of the old Louisville Board of Public Works.

One of his ventures was the development in the 1920's of Rose Island, an Ohio River picnicking and resort spot near Prospect.

He had an interest in the Falls Cities Ferry & Transportation Co., which operated ferries between Louisville and Jeffersonville before the opening of Clark Memorial Bridge in 1929.

Rose, a Mason since 1894, was almoner of the Scottish Rite's Grand Consistory of Kentucky. He had been a 33d-degree Mason and a member of Kosair Shrine Temple for 50 years. He once edited the Masonic Home Journal.

NICHOLASVILLE NATIVE

Rose was born in Nicholasville, where his first business venture was an 8-year-old newspaper vendor. Three years later he had saved enough money to buy a newspaper agency for Louisville, Cincinnati, and eastern papers and managed it until he was 13. He worked as a clerk in stores at Nicholasville and moved to Louisville when 17.

He worked in the Louisville post office and was secretary to Postmaster John Barret. Then in 1893 he became circulation manager of the Post, and in his 25 years built its circulation to equal that of any paper in the State.

HELPED FOUND NEWSBOYS HOME

He helped found a newsboys home on Third near Walnut in the 1890's to provide recreational facilities for newsboys here. He also helped found the International Circulation Managers Association and was its president twice.

Rose founded Standard Printing Co. in 1901, beginning with $75 in cash. In 20 years he expanded it to a million-dollar concern, the largest in the South.

After resigning from the Louisville Post, he served as public-works chairman of the city for 18 months. He caused establishment of Riverside Park at 33d and River, the first public swimming pool (opened in Shelby Park), and was known as the father of daylight-saving time here.

APPOINTED BY QUIN

He was a member of the first disbursing committee of the Louisville Foundation, appointed by the late Mayor Huston Quin. Quin established the foundation 36 years ago so contributions could be made by citizens to a fund for benefit of the city. Years

later, Rose published a booklet of the foundation's history to revive interest in it.

Rose founded the Southeastern School of Printing in Nashville. Among his other business connections were Falls City Tin Tag & Lithograph Co., Inland Miller Publishing Co., Louisville Linotyping Co., Frankfort Elevator Coal Co., and the National Laundry Company of Atlanta.

OFTEN CALLED CAPTAIN

He was a Kentucky colonel, but friends often referred to him as Captain Rose when he commanded a boat on the Ohio named the *Henry Watterson* in honor of the editor he admired.

Once he offered Louisville electric lights for 10 city blocks, hoping to set an example for others of wealth to create a white way of street lights for the city.

He helped organize the Recreation League, forerunner of the city parks system. He was an authority on waterways improvement and campaigned for canalization of the Ohio so the river's inland ports could have access to all parts of the world by water.

WAS IN NUMEROUS CLUBS

He was a member of the Loyal Order of Moose, High Twelve Club, Lincoln Club, Elks Lodge, Kentucky Historical Society, and Douglass Boulevard Christian Church.

In the first campaign of Grover Cleveland for President, Rose was president of the Young Men's Democratic Club. Later he voted as a Republican in elections of George Weissinger Smith as Mayor of Louisville and E. P. Morrow as Governor of Kentucky. He remained active in the GOP afterward.

In 1896, he married Miss Esther Goldnamer, Springfield, Tenn., and for many years before she died in 1947 they lived at 2301 Boulevard Napoleon.

SISTER, BROTHER SURVIVE

Surviving Rose are a sister, Mrs. Belle Drabble, Springfield, Mass., and a brother Charles Mann Rose, Westfield, N. J.

The family requested that expressions of sympathy take the form of donations to the Kosair Crippled Children Hospital.

Rose's body will lie in state at the Scottish Rite Temple, Brook and Gray, after noon tomorrow. The Roscroix Service will be held there at 7:30 p. m. tomorrow, after which the Rev. Thomas M. Giltner will conduct the church service. Cremation will follow.

Honorary pallbearers are Albert Sales, Louis Mayer, Morris Jones, Richard B. Crawford, Goslee Geiger, Circuit Judge L. S. Grauman, D. P. Jones, Sam Gold, and G. Harry Kunzman.

Self-Employed Individuals' Retirement Act of 1958

SPEECH

OF

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. BELCHER. Mr. Speaker, will the gentleman yield?

Mr. REED. I yield to the gentleman from Oklahoma.

Mr. BELCHER. Mr. Speaker, I want to congratulate the gentleman from New York [Mr. REED] on a very fine statement. Also I would like to congratulate the authors of this bill, and on behalf of the professional and self-employed people of my district I should like to express our appreciation to the committee and to the leadership for bringing this bill to the floor. I think it is a good bill and I hope it will pass unanimously.

Mr. REED. I thank the gentleman from Oklahoma.

Philippine Gratitude

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. MARTIN. Mr. Speaker, state visitors come and go, but it is important that we record in this House what I consider a good example of gratitude from one of our recent visiting dignitaries.

When President Carlos P. Garcia, of the Philippines, returned to his homeland, upon his arrival at the Manila Airport where he was greeted by thousands of his fellow countrymen as a returning hero, he made a speech in which he expressed his deep appreciation and that of his people for the warm welcome that we gave him here.

Under leave of the House, I include his address in my remarks:

My fellow countrymen, my heart is full and words cannot adequately express my appreciation and that of Mrs. Garcia for this warm welcome. I return to you today from a strenuous 2 weeks in the United States where I scarcely had a minute to myself. I am happy to report to you that I carried out my hour-to-hour schedule without a hitch and that the American people showered us with kindnesses and tendered us hospitality that have moved me deeply. I do not have to tell you that the cordiality of their welcome was not so much for me as a person as it was for our people for whom they have real affection.

I understand I am in tomorrow's program for an address in which I expect to make my Fourth of July speech and report on the result of my mission. Suffice it for me to say now that our people have every reason to rejoice that we have a true friend in the United States and that there is respect and gratitude in the American heart for our contributions to the cause of freedom and democracy. President Eisenhower made patent to me his sincere friendship for me and a sympathetic understanding of our problems. The leaders of the United States Congress of both parties are true and tested friends of our people. The Congress itself heard my appeal with sincere sympathy and hearty regard. The manifestations of love and affection on the part of the American people towards us are more than I can describe in words.

The words Home Sweet Home are never more meaningful than when you go abroad and upon returning you are greeted as we are greeted today with this demonstration of your regard and affection. With gratitude in my heart to America and with a greater determination to dedicate myself to the service to our people, I return to our beloved Philippines happy to report to you: mission accomplished. To you all, our heartfelt thanks—Mrs. Garcia and mine—for this very warm and enthusiastic reception.

It is not always that we get such sincere expression of gratitude from those who visit us. It seems to be typical of the Filipino people that they should be so thoughtful and considerate and that they never fail in showing their courtesy and gentility. We Americans appreciate such thoughtfulness and courtesy and it makes us all the prouder to have the Filipinos as our friends and allies.

President Garcia left the United States after having rendered American-Philippine friendship a real service. His public pronouncements here were all well received by the American people. His was, indeed, a successful mission. We are happy he came and his people and ours are really the richer for his having visited us.

The communique that President Eisenhower signed jointly with President Garcia shows unequivocally the eminent position that the Philippines occupies in American official evaluation. Because it is an important document bearing on the relations between our two countries and because it is a state paper of far-reaching significance in our foreign relations, I include it in my remarks.

Following is the full text of a joint statement issued by President Garcia and President Eisenhower at 7:30 a. m., Friday, June 20, at the conclusion of the Philippine Chief Executive's 3-day visit in Washington, D. C.:

The President of the United States and the President of the Republic of the Philippines today concluded the valuable discussions they have held over the past few days on matters of interest to both countries. These talks centered chiefly on United States-Philippines relations, but they also included an exchange of views on matters of international significance to both countries with special emphasis on Asia.

During his 3-day visit President Garcia addressed a joint meeting of both Houses of the Congress, and he and members of his party conferred with the Vice President, the Secretary of State, individual Members of Congress, and other United States Government officials. After leaving Washington, President Garcia will visit other parts of the United States and will meet governmental, cultural, and business leaders.

I

The two Presidents reviewed the long history of friendship and cooperation between their countries and they expressed confidence that their respective people will continue to benefit from this close association in the future. Moreover, they recognized that similar cooperation among the nations of the free world had been effective in recent years, in preventing overt aggression in the Far East and elsewhere in the world. The two Presidents pledged themselves to maintain the unity of strength and purpose between their countries and the other countries of the western Pacific in order to meet any threats to peace and security that may arise.

The two Presidents reaffirmed their adherence to the principles and purposes of the United Nations Charter. They recognized that through dedication to that Charter the nations of the world can progress toward the attainment of the universal ideal of peace with justice based on the dignity of the individual. With this objective they will continue to support and encourage the activities of the United Nations organization.

They noted that great progress has been achieved under SEATO in the strengthening of the free world's defenses against Communist imperialism in Southeast Asia. They concurred that in the light of the continued threat of Communist military power in Asia, SEATO's defensive capability must be carefully maintained. Toward this end the United States will continue to assist in the development of the Armed

Forces of the Philippines, in accordance with mutual-security programs jointly approved with the Republic of the Philippines.

They reviewed, in this connection, the important role played by the Mutual Defense Pact between the Philippines and the United States. They agreed that the aggressive intention and activities of communism in the Far East and in Southeast Asia render the maintenance and strengthening of these defensive arrangements an absolute necessity. President Eisenhower made clear that, in accordance with these existing alliances and the deployments and dispositions thereunder, any armed attack against the Philippines would involve an attack against United States forces stationed there and against the United States and would instantly be repelled.

In the spirit of these alliances, and with particular reference to the problems affecting the military bases operated by the United States in the Philippines, they expressed mutual confidence that these questions would be resolved to the satisfaction of the two countries, having regard to the principle of sovereign equality and the vital requirements of an effective common defense.

II

The two presidents reviewed progress toward economic development made in the Philippines over the past several years and examined the current economic problems with which that nation is faced. Economic discussions were also held between Philippine officials and representatives of the State and Treasury Departments, the Export-Import bank and the International Cooperation Administration. The Philippine officials outlined a long-term program for economic development. In view of the inability of the United States to anticipate accurately financial availabilities and relative requirements beyond the next 12 months, immediate emphasis was placed on meeting the initial requirements of the Philippine program.

For these initial requirements the Export-Import bank informed the Philippine Government that it will establish a new line of credit of $75 million for financing private and public development projects in the Philippines.

The Philippine Government was also informed that, subject to congressional action on the additional appropriations being requested, the Development Loan Fund would examine specific projects submitted to it to determine whether they would merit Development Loan Fund financing in an amount not to exceed $50 million.

III

In the course of their talks, the two presidents were deeply aware of the special significance of their meeting as the heads of state of two countries, one of which through the revolutionary process and by mutual agreement obtained its independence from the other. They realized that, in the context of present events, their meeting would provide a valuable object lesson on the relations of mutual respect and equal justice most appropriate to two countries, great or small, which share a common faith in freedom and democracy.

IV

President Eisenhower and President Garcia concluded that the understanding reached, as well as the personal relationships established during this visit, will contribute significantly to the mutual good will and friendship which traditionally support Philippines-United States relations.

C. P. GARCIA.
D. D. EISENHOWER.

Aside from the reference to the development loan which he succeeded in getting, despite the many demands upon our Government, the communique stands out from similar documents in that it underscores the unique and special relationship obtaining between the United States and the Philippines.

Two important statements have impressed me as revealing in a new way our close attachment to the Filipino people. The first one is the statement that "any armed attack against the Philippines would involve an attack against the United States and would instantly be repelled."

The other statement is more significant in that it shows that the American people are not willing to deny to others what they claim for themselves. This statement, in referring to "the problems affecting the military bases operated in the Philippines," expressed the mutual confidence of the 2 signatories that such questions would be resolved to the satisfaction of the 2 countries "having regard to the sovereign equality" of the United States and the Philippines. "Sovereign equality" are key words that the American people respect and hold as vital in their relationship with the Philippines.

Life magazine was correct when it headlined the fact that President Garcia had charmed the American people. He achieved this by his forthright utterances, his dignified mien, his statesmanlike approach to world problems. He certainly projected to the American people with his winning personality the best in Philippine life and in achieving this he showed that the expectations of the Philippine electorate in electing him as their national leader were fully justified.

In continuing Gen. Carlos P. Romulo as Philippine Ambassador to the United States, he has shown that he is not swayed by partisan politics but only by what he believes will best serve Philippine welfare, and this is another reason why he made such a favorable impression in Washington. For those of us who know Ambassador Romulo have seen the dedication and loyalty with which he has served his people, the effective leadership that he has exercised as the head of Philippine representation in this country, the persistence and determination with which he has espoused the cause of the Philippine guerrillas and veterans—and nobody knows this better than we do in Congress—and that is why he has won our admiration and respect. We who have heard his well reasoned and convincing pleas for the Philippines appreciate his effectiveness and value as Philippine spokesman in Washington and cannot but congratulate the Filipinos and President Garcia for having such an able and worthy ambassador. No country is better represented here than the Philippines.

Mr. Speaker, the United States faces grave problems in its international relations. We are confronted today by a crisis in the Middle East. There will be others in the future. Our actions will be misrepresented and our national purposes misunderstood by those bent on misrepresenting and misunderstanding us. But while we can evoke sentiments of gratitude such as that so eloquently expressed by President Garcia and while we can articulate feelings as noble as those epitomized in the communique signed by our President and the President of the Philippines, we can look to the future with calm confidence, assured that our Republic will continue to have the good will and friendship of a free and decent world.

The Pros and Cons of Tobacco

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. ABBITT. Mr. Speaker, the anti-tobacco fanatic, because of the justified national fear of cancer, has been seeking to place tobacco as the cause. This charge has never been proved, and it would be well for us to ponder the merits of both sides of the controversy before helping to destroy an industry that pays $2,500,000,000 into the tax coffers of the United States, supplies the livelihood, in whole or in part, to 17 million people, and brings comfort, relaxation and enjoyment to many.

The pros and cons of tobacco being very much in the public eye right now, I thought it would be interesting to include in my remarks the following news items and editorial viewpoints:

[From the Washington (D. C.) Evening Star of July 10, 1958]

NEW CIGARETTE REPORT

A new report from the National Institutes of Health has added statistical corroboration to previous warnings about the association between heavy cigarette smoking and high death rates.

Its major finding, from a study of 200,000 veterans, was that the death rate of cigarette smokers during a 2½-year period was 50 percent higher than the rate among nonsmokers. The more cigarettes smoked a day, the higher the rate. Among former smokers, fatality rates were lower than those for heavy smokers, but still greater than the nonsmoker rates. In lung-cancer deaths, as previous studies also have found, victims who had been cigarette smokers outnumbered nonsmokers 10 to 1.

These are impressive figures. The trouble, however, is that they are nothing more than figures. As a purely statistical study, the NIH project added no new medical proof of the alleged pathological dangers of cigarettes. Still missing is positive clinical substantiation of the degree to which smoking might have caused, or even contributed to, any of these deaths. And until this substantiation is provided, there is not likely to be any final resolution of the cigarette controversy.

The great need, therefore, is unremitting research, both public and private. Virtually every cigarette company has instituted ambitious projects, aimed mainly at the development of more effective filters to remove tars and nicotine, and some of these are producing dramatic results. But once again, there is no unanimity on whether there actually are carcinogenic or other harmful agents in the tars and nicotine. The true answer to the cigarette question may come only from basic research into the causes of cancer; heart disease, and other ailments in

which the cigarette is pictured as a villainous ally.

Where does all this leave the smoker? It leaves him with one more reason for concern about his smoking, but still with no firm basis for deciding whether to continue, to taper off, or to quit entirely. It is encouraging, therefore, that Surgeon General Burney is aware of the need for further public explanation and education by the Public Health Service which should help the smoker interpret the existing facts.

[From the Daily News of New York July 9, 1958]

Cigarette smoking on the strength of another of those allegedly scientific reports asserted to show that cigarettes cause lung cancer.

The Health Service concedes that this belief is backed up by statistics only, not by laboratory experiments.

Thus, a Government agency will use taxpayers' money to propagandize for a proposition it cannot prove, in an attempt to injure or destroy a great industry.

Maybe, though, the tobacco people should be grateful for this planned attack on them. In the last 3 years, with fanatics screaming on all sides that cigarettes will murder you, cigarette sales have been going up, up, and up.

[From the New York Journal-American of July 8, 1958]

UNITED STATES AID FIGHTS CIGARETTE SCARE

(By Don Oberdorfer)

WASHINGTON, July 8.—While the Surgeon General was announcing a Government campaign against heavy smoking yesterday, another Government official was urging citizens to "sit back, relax, and smoke a cigarette."

He is Joe R. Williams, Chief of the Tobacco Division of the Agriculture Department's marketing services. He helps tobacco farmers sell their leaf.

Williams said a study of 300 years of antismoking crusades shows the attacks on tobacco usually end up by stimulating consumption.

The current antismoking campaign, touched off by a new Government medical report on high death rates among heavy smokers, will add another few pounds to tobacco consumption, Williams predicted.

AFFECTED HIS WIFE

"My wife is so disturbed over the current health scare that she is now smoking twice as many cigarettes as she did a year ago," Williams said.

He traced the first attacks on tobacco to King James I of England, who wrote a book titled "A Counter-Blaste to Tobacco" after the weed was popularized by Sir Walter Raleigh in 1604.

The King wrote that since Indians used tobacco smoke to cure venereal disease, no English gentleman would risk the implication by indulging in the same remedy.

In 1830, Williams recalls, educators, physicians, clergymen—and P. T. Barnum—launched a campaign on tobacco which lasted 30 years.

Horace Mann, Henry Ward Beecher, and Horace Greeley crusaded against smoking.

Tobacco was held responsible for many diseases—including cancer and insanity.

The advent of the cigarette in the 1890's brought a new antismoking crusade. Between 1895 and 1921 a total of 14 States banned the sale of cigarettes. By 1927, all of these laws were repealed.

The Agriculture Department official calls the tobacco health crusade a big smokescreen.

[From the Springfield (Ohio) Sun of June 25, 1958]

A PROPHET IN THE SMOKE

For about 5 years now the American Cancer Society has been at the forefront of the anticigarette chorus, howling away mightily. All that time cigarette manufacture has been growing steadily—from 369 billion units a year to 410 billion, and an estimated 425 billion for 1958.

One can appreciate, therefore, a certain sense of frustration in the cancer society. It isn't altogether a matter of a prophet's being without honor in his own country; it's also a matter of prophecies being sharply disputed by other prophets, equally respectable. The statistical relationship between lung cancer and cigarette smoking is provocative, but it is a statistical relationship only and there are many statisticians as well as medical authorities who question the deduction of a pathological relationship therefrom. The cancer society's own researchers and pathologists seem as far today as ever from establishing even experimental proof that cigarettes cause cancer.

That may explain the more-than-slight trace of asperity that creeps into the public utterances of some cancer society spokesmen. The other day, for instance, the society's Dallas outpost was listening to a talk by a Dr. Robert J. Samp of the cancer research staff at the University of Wisconsin center. As the speaker addressed his audience he became more and more peeved at the clouds of tobacco smoke drifting up from the auditorium. Finally, unable (like Jeremiah) to contain himself, he burst out:

"Nothing makes me angrier than to watch a person take a puff, and smile and say, 'Well, if I'm gonna go, it's a wonderful way to go.' He will go all right, and there's an excellent possibility the way will not be wonderful."

If an annoyed prophet, Dr. Samp was at least too much the scientist to make his prophecy any more explicit. As it stands none can disagree, for we all have to go sooner or later and the way is not usually wonderful no matter what ailment carries us off. But we were reminded once again of the strong Puritan influence in so much of the anticigarette preachments. Dr. Samp, for example, leaves himself wide open to the suspicion that what he resented as much as anything was the spectacle of so many of his listeners enjoying themselves with the weed he pronounces to be noxious.

Who can blame him? Prophets are human, too. But this incident in its turn reminded us of the stand taken by 17th-century Puritans against the cruel sport of bear-beating. The Puritans opposed it (they opposed everything, of course, but notably this) not because it caused distress to animals but because it gave pleasure to human beings.

It would be nice to think that Dr. Samp, relenting of his severity, has gone back to his laboratory to devise some means of eliminating the carcinogenic (cancermaking) ingredient in tobacco. But that could hardly be, for nobody has as yet conclusively demonstrated the existence of such an ingredient in tobacco. As that old English recipe for rabbit pie has it: "First, catch a rabbit."

[From the New York Journal-American of July 7, 1958]

NEED MORE PROOF OF CIGARETTE CANCER

LONDON, July 7.—The United States Government needs more evidence on the relationship between smoking and lung cancer before deciding whether to warn against cigarettes as the British Government has done, world cancer experts were told today.

Dr. John R. Heller, director of the National Cancer Institute, Bethesda, made the point in an address prepared for delivery before the Seventh International Cancer Congress here.

Heller said investigations now under way are expected to provide the additional facts.

"In fact, a review of new epidemiological data will be presented to Congress on Wednesday by Dr. Harold F. Dorn of the National Institute of Health," he said.

RESEARCH NEEDED

Heller said the Surgeon General of the United States Public Health Service and the American Cancer Society have taken the position that "excessive cigarette smoking is one of the factors in lung cancer causation." He continued:

"We believe that more research is needed to identify, isolate and eliminate the various factors in excessive cigarette smoking that can cause cancer, as well as on the role of air pollution and other factors that may cause cancer of the lung in man."

Heller said a "decisive blow" will be dealt cancer in the United States if exfoliative cytology—which has been used successfully in the detection of uterine cancer—can be applied to the early diagnosis of cancer in other sites.

The cytology technique involves taking a sample of material from the suspected cancer site and then studying it for the presence of cancer cells.

[From the New York World-Telegram and Sun of July 8, 1958]

UNITED STATES BACKS DOWN ON CANCER CAUSE

WASHINGTON, July 8.—The United States Public Health Service says it is obvious heavy smoking is not the sole cause of lung cancer, but it said last night a new study adds further to the growing weight of evidence that there is a high degree of statistical association between lung cancer and heavy and prolonged cigarette smoking.

The Service issued the statement in connection with a report made public over the weekend that a study of the deaths of 7,382 veterans found a much higher death rate among cigarette smokers than among nonsmokers.

The report, compiled by Dr. Harold F. Dorn, chief statistician of the National Institutes of Health, also said the lung-cancer death rate among regular cigarette smokers was about 10 times that of nonsmokers.

This was challenged by Timothy V. Hartnett, chairman of the Tobacco Industry Research Committee. He said Mr. Dorn's study ignored all factors except tobacco smoking and admittedly included no clinical or laboratory research.

Without directly referring to Mr. Hartnett's statement, the Health Service acknowledged in last night's statement that lung cancer, of course, also occurs among those who do not smoke.

And it added that the factors in heavy and prolonged cigarette smoking which may cause lung cancer have not been demonstrated by clinical or laboratory research.

Long Way To Go

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1958

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following editorial from the Washington Evening Star of Monday, July 28, 1958:

LONG WAY TO GO

It is good news that the Army's Jupiter-C missile has put another earth satellite into orbit—the fourth and heaviest (38.43 pounds) to be launched successfully by our country thus far. Named Explorer IV, it is equipped to send back information about a mysterious band of intense radiation in space, and that is what it is doing now as it travels around with 3 of its predecessors still up there—Explorer I (30.8 pounds), Vanguard I (3.25 pounds), and Russia's Sputnik III (2,925 pounds).

These comparative weight figures are worth keeping in mind. They mean, of course, that the United States, even while it takes proper satisfaction in the progress represented by its latest manmade moon, has no reason whatever to feel complacent. On the contrary, the difference between Explorer IV's 38.43 pounds and Sputnik III's 2,925 pounds is so great as to leave no room for doubt that we still lag far behind the Soviet Union in spatial rocket power and technology. In fact, as experts like the Army's Dr. Wernher von Braun have warned, we will need to carry on at least another year or year and a half of developmental effort before we can hope to match what the Russians have already achieved in this field. Meanwhile, they can be counted upon to do their best to keep ahead of us.

All this speaks pretty much for itself. Since it bears directly upon our country's position vis-a-vis Russia, militarily as well as scientifically, it plainly indicates that we should do everything possible, as fast as possible, to catch up. As far as space is concerned, the new legislation enacted by Congress promises to be a big help to that end. But perhaps what is needed in addition, as Senator LYNDON JOHNSON has declared, is a greater sense of urgency among Americans everywhere, in and out of Government.

Conservation Leaders Oppose Change in Apportionment of Revenues From Tax on Sporting Goods

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 30, 1958

Mr. PROXMIRE. Mr. President, officials of the State of Wisconsin Conservation Department, as well as of many other States, are seriously concerned about a change in the method of apportioning revenues derived from the excise taxes levied on hunting and fishing equipment which are proposed by the Bureau of Sport Fisheries and Wildlife of the United States Department of the Interior.

For 20 years a method of apportionment has been used which gave recognition to the special problems and needs of States which contain big game hunting areas. My own State of Wisconsin is one of these; our deer hunting is among the best offered in all the States in the Union. Management of big game is a special and separate problem from that of managing small game. It increases the costs of managing a given area above what the cost would be to maintain small game alone on the same area.

At a meeting earlier this month of the Midwest Association of Fish and Game Commissioners, held in Bismarck, N. Dak., the problems arising from the proposed change were discussed thoroughly. Continuation of the present method for the time being was recommended, to permit time for working out a more satisfactory improvement which would be equitable to all the States, yet give due recognition to the needs of States which must deal with the special problems arising from big game management.

I feel strongly, Mr. President, that the proposed change should be postponed to allow time for the adjustments requested by the Midwestern Association.

I hope that Congress will give close attention to this problem, and that in doing so the recommendations of the commissioners—who are particularly well qualified to evaluate the questions which it poses—will be considered thoroughly.

I ask unanimous consent, Mr. President, to have the resolution adopted by the Midwest commissioners printed at this point in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION ADOPTED BY MIDWEST ASSOCIATION OF FISH AND GAME COMMISSIONERS, MEETING AT BISMARCK, N. DAK.

Whereas Public Law 415, better known as the Pittman-Robertson Act, was passed in 1937 and provided that the excise tax on sporting arms and ammunition be distributed to the various States by the Department of the Interior on the basis of a formula which included equal weight to land area of each State and to the number of paid hunting license holders as certified to the Secretary of the Interior by the State Fish and Game Departments; and

Whereas for the past 20 years "the number of paid license holders" has been interpreted to mean "the number of hunting licenses sold" and apportionment of Pittman-Robertson funds has been based on this assumption with the full knowledge and approval of the Department of the Interior; and

Whereas many people purchase both big game and small game, resident, and nonresident hunting licenses, and it is a well-recognized fact that a certain number of people in every State in the Union possess more than one hunting license—such duplication can be determined only by a most comprehensive and costly statistical survey; and

Whereas it is now determined by the Department of Interior that the method of certification of hunters by the various State fish and game departments is no longer considered valid and, therefore, large sums of State fish and game management funds must be expended for statistical surveys to determine the actual number of hunters in each State, such survey may cost up to $35,000 annually per State, which money will be forever lost to game management: Now, therefore, be it

Resolved, That the Association of Midwest Fish, Game and Conservation Commissioners meeting in Bismarck, N. Dak., on July 11, 1958, respectfully request the Bureau of Sport Fisheries and Wildlife to continue for the time being the method which has been in effect for 20 years for computing the Pittman-Robertson apportionment; be it further

Resolved, That the Bureau of Sport Fisheries and Wildlife be requested to study the feasibility of amending the Pittman-Robertson Act to use as a basis for the license computation for any State, a maximum of one big game license and one small game license for any one individual. After such study the Bureau shall submit the results along with their recommendation to the respective States for their review and if approved by a majority of the states the Bureau recommend suitable legislation to amend the act; be it further

Resolved, That copies of this resolution be forwarded to the Bureau of Sport Fisheries and Wildlife and Members of Congress of the member States of this association.

Mr. PROXMIRE. Mr. President, a similar resolution was adopted by the Western Association of State Fish and Game Commissioners, representing 11 Western States, at their meeting June 25, 1958, at Sun Valley, Idaho. I ask unanimous consent that this resolution also be printed at this point in the Appendix.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OPPOSING CHANGES IN FEDERAL AID ACTS

Whereas the Federal Aid in Wildlife Restoration Act, more commonly known as the Pittman-Robertson Act, has since its enactment in 1939 been a tremendous asset to the wildlife conservation programs of the States; and

Whereas the formula for the apportionment of these Federal aid funds to the States had the unqualified endorsement of all 48 States; and

Whereas this basis for apportionment has been successfully accomplished these past 19 years: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners goes on record as being unalterably opposed to any change in the present apportionment formula; and be it further

Resolved, That the Western Association goes on record as being opposed to spending any of the sportsmen's funds for determining the number of duplicate licenses sold and being in favor of continuing the present method of certifying license sales.

Adopted by the Western Association of State Game and Fish Commissioners, 29th annual conference, Sun Valley, Idaho, June 25, 1958.

Huron, S. Dak., Editor Objects to Bipartisanship in Foreign Policy

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. McGOVERN. Mr. Speaker, for several years the editor of the Daily Plainsman of Huron, S. Dak., has offered cogent objections to the notion that American foreign policy should always be considered a bipartisan matter. Mr. Robert Lusk, the Huron editor, is himself an independent-minded, vigorous critic of conformity and soft thinking. He has consistently tried to stimulate public debate and discussion of conflicting viewpoints relating to both foreign and domestic issues.

I personally believe that Mr. Lusk's position is well taken. It is true that the national interest should always take priority over partisan expediency. But the notion that there is no room for vigorous political differences in the formulation of American foreign policy is a dangerous one. As a matter of fact the chief difference between policy in a democracy and a dictatorship is that the former stems from open and honest discussion of differing points of view, while the latter is an official line not subject to criticism.

In an editorial of July 13, 1958, in the Daily Plainsman, Huron, S. Dak., which includes a reprint from the British magazine, Punch, Mr. Lusk underscores the weaknesses in carrying bipartisanship to extremes. I believe that the Members of Congress will find the following editorial comment of interest:

THE PUBLISHER'S NOTEBOOK

(By Bob Lusk)

SHOWING

For years the Daily Plainsman has fought an almost lone war against bipartisanship in America's foreign policy, as well as bipartisanship in numerous domestic fields.

Whether bipartisanship is the cause or the effect of the decrease to virtual nothingness of legitimate and effective debate on public policy in this country, at any rate, in the opinion of this newspaper, unless the trend is reversed, and soon, democracy will shortly be hanging on the ropes in these United States.

There have been small encouraging signs that some others than this newspaper are awakening to the danger. To date, however, they are still afraid to risk doing anything so controversial as to oppose bipartisanship openly.

However, Americans, so sensitive to foreign opinion, might be pushed to running the risk of being branded as opponents to togetherness were they to realize the fact that abroad people are beginning to lump the United States in a class with Russia as far as the effectiveness of their democratic processes are concerned.

PUNCH

At any rate, in the latest issue of Punch magazine of London to arrive on these shores, the United States and Russia are listed side by side in the matter of conformism.

What Punch is worried about is that England may be following suit.

Punch's interesting discussion of the whole question of public togetherness appears in the form of a book review. Because of its timeliness, it is being reprinted herewith in its entirety:

"I doubt whether today there are three papers that would pay good money for articles cutting Mr. Macmillan or Mr. Gaitskell into little bits. It would be even harder to sell a slashing attack on the poet laureate or the Pope or the president of the Royal Society or the various patriarchs. I am not talking about personal abuse; there has been no hope of getting away with that since the press began insuring against libel. I am talking about criticism of opinions pressed home ruthlessly, with every evasion and hesitancy and logical flaw exposed with relish.

"If we follow America and Russia into conformism we are going to sacrifice our inventiveness, our only national asset with rarity value. Apparently in America, the man who wins approval and promotion is the man who gently contributes to steering a committee in the direction the majority of its members want. To the middle-aged Briton Truth emerges from argument; but increasingly the young seem to be feeling that truth will emerge from guessing the way the decision is likely to go. In the past, vigor in controversy and vigor in action have generally gone together; but now compare the genteel disputation of the distinguished men and women on the brains trust with the gusto of the debates that Mr. Vincent Brome describes in his recent book "Six Studies in Quarreling" (Cresset, 21/–). Shaw and Wells and Belloc and Chesterton argued in print and on the platform, and while they argued they entertained, and while they entertained they taught. They may have written too much, but they provided a large public with a far more closely reasoned controversial prose than you find in any present-day newspaper. And things happened as a result of the influence of their arguments on public opinion.

"DULL

"Today, apart from the very rare television program like Free Speech, there is hardly any war of ideas. Politicians' speeches are so dull and apologetic that very few papers bother to report them at all. Parliamentary debates have ceased to have any relevance to the content of legislation. (The only public argument for years that has come anywhere near the classic argument on free trade and protection in the days of Chamberlain and Asquith was about capital punishment, perhaps because the suppression of healthy vituperation has encouraged the growth of fantasies of murder). The theater is slightly livelier than politics; but the plays that have stirred up audiences have generally been expressions of moods rather than beliefs. Look Back in Anger spoke for a generation but it did not really stimulate anything but assertion and counterassertion: 'Jimmy Porter is a special case. He is suffering from a psychological illness' against 'Jimmy Porter is representative of youth today. He expresses its bitter frustration.' Ask, as once a pamphlet asked, What then shall we do? and neither side gives much of an answer. They merely sit back and wait, and you cannot make a political policy or a literature out of waiting.

"Mr. Brome's examples include Coulton versus Belloc on the Medieval Church, Wells versus James on the Nature of the Novel, Belloc versus Wells on Natural Selection, and Shaw versus Chesterton on Socialism and Distributism, and his interest in the controversialist as a human type leads him to include Henry Arthur Jones in his entertaining miscellany. The chief impression from his quotations is that nobody talked down and nobody pulled a punch out of politeness. There are literary controversies today, but they are carried on almost entirely in magazines with very small and specialized sales. Only the New Statesman's John Berger on painting and the Observer's Kenneth Tynan on plays treat particular criticisms as battles in a war. Whether you accept or reject their point of view at least they have one and are always prepared to fight for it. Religious controversy is dead, except, presumably, in theological journals. Nobody criticizes bishops or judges in the press, a new and dangerous silence.

"DETAILS

"The controversies in newspaper correspondence columns are about little factual details. How long is it since capitalism and socialism or Catholicism and Protestantism or, if you like, optimism and pessimism argued it out day after day in print? Now it is old fashioned to suggest that politics ought to be about policy. The public-relations boys in the backroom fit the policy to the possible vote. It may well be that at this very moment Mr. Strachey and Mr. Crosland and Mr. Crossman are molding the next Labor Government's queen speech. What widely read Conservative is publicly cross-examining them, making them reveal their differences in approach to questions of equality or nationalization? What Conservative is in Shaw's position of being able to demand an answer? One of the weaknesses of 'Butskellism,' much as the electorate seem to like it, is that it devitalizes public life. Sir Winston Churchill and Mr. Bevan have raised far more people's blood pressure than Mr. Butler and Mr. Gaitskell, but they have made politics dramatic and electors active. If the ordinary political parties are not colorful a bored public will turn to parties that are. The unexpected revival of fascism may be partly due to the fact that it is no longer done to give Mr. Macmillan and Mr. Gaitskell hell.

"R. G. G. PRICE."

Federal Controls of Education—Words of the Past and Present

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. GWINN. Mr. Speaker, I have had the honor to serve in the Congress for 14 years. During much of that time, I have watched with growing apprehension an increasing tendency by many of our people to unload on the Federal doorstep what should be the responsibilities of the family, the local, or the State government.

One of those responsibilities is education.

For the past several years, the halls of Congress have swarmed with advocates of Federal appropriations for school construction, teachers' salaries, vocational education, guidance, scholarships, and fellowships, and student loans.

Each idea for Federal direction of education is couched in terms of an emergency. Each one is inevitably adorned in the trappings of a special situation. The pattern is consistent. We are almost literally asked to believe that the United States will decay in the likeness of ancient Rome unless a Washington bureaucracy assumes command of education.

Up to date, the Congress has resisted these flamboyant appeals in the critical field of education. It has managed to keep its head above water in a veritable flood of unthinking, unreasoning emotion.

But now, during the 2d session of the 85th Congress, there is talk and proposed legislation—H. R. 13247, National Defense Education Act of 1958—for a new Federal venture in education. Obviously a new scarecrow, another tune on that old saw, national defense.

We are deafened by variations of stale and musty arguments in behalf of this outrageous scheme.

Last year, we were asked to intrude the Federal Government into education on the grounds that there was a crisis in school construction. That was a dud. There never was such a boom in schoolroom construction. This year, we are besieged by a clamor for Federal direction of education on the grounds it is vital to national defense.

What about next year? What will be the emergency in the 86th Congress? We may be sure that the 25-year-old lobby for Federal aid will drum one up.

I shall not be with you. My stay in this Chamber nears its end. I shall watch the next Congress from the viewpoint of an average citizen and taxpayer. But I can foresee, at this moment, that the struggle to keep education free is far from ended, and now is the time to prepare for the assault against freedom that is bound to come in 1959.

The possibility of Federal control of education cannot escape us when we see how many Federal programs incubate and seldom die. It is not enough to insert a line or paragraph in any bill which states that the Federal Government shall not control education, regardless of the Federal funds allotted to the purpose. No such inclusion is a guaranty. We must bear in mind the blunt fact that wherever there is Federal appropriation, there must be Federal control.

Do we want a central education agency? May God forbid. It is the future and not alone the present we must think about. What assurance can we have against the possibility of some future administration that would seek to conform our youth to its particular way of thinking? There is an old saying that powers lodged in some hands will be respected, but if the same powers are inherited by other hands, they can be destructive.

I have brought together for your files and for your possible guidance in the years ahead a number of quotations on the subject of Federal intervention in education. Some of the statements were made several years ago—and the authors today are in sharp variance with their expressed viewpoints of the past. Other statements are as new as last week.

These quotations may be ammunition for my colleagues on both sides of the aisle who are determined that education shall not suffer from bondage to the Federal Government. The classroom must remain a lasting evidence of our devotion to the principle of liberty.

Mr. Speaker, the following quotations require no further explanation. They tell their own story.

QUOTES OF THE PAST AND PRESENT ON FEDERAL AID

Dwight D. Eisenhower, 1949: "I would flatly oppose any grant by the Federal Government to all States in the union for educational purposes. Such a policy would create an ambition—almost a requirement—to spend money freely under the impulse of competition with other localities in the country. It would completely destroy and defeat the watchful economy that comes about through local supervision over local expenditures of local revenues." (Quoted by Ross Roy in Vital Speeches).

President Eisenhower, 1956: "Geographical balance of power is essential to our form of free society. If you take the centralizing shortcut every time something is to be done, you will perhaps sometimes get quick action. But there is no perhaps about the price you will pay for your impatience; the growth of a swollen bureaucratic monster government in Washington, in whose shadow our State and local governments will ultimately wither and die."

President's [Eisenhower] Committee on Education Beyond the High School, second report, 1958: "The Committee recommends that private, local, and State sources increase their support of scholarship funds to several times the present amount and number of scholarships. The Committee believes that, insofar as assistance by the Federal Government is concerned, it should not at the present time, in the light of the considerations presented earlier in this chapter, undertake to provide new scholarships (other than work-study) for undergraduate students."

John Foster Dulles, December 28, 1949: "The Federal Government is no independent source of funds. It has to get what it gives. Whatever money it spends for education must be taken away from local communities—from individuals. Why not leave the responsibility with them, where the money is and where the responsibility is normally the deepest and most conscientious?

"We can be confident that educational responsibilities will generally be discharged at the local level if Federal taxes permit and if we get over the illusion that Federal aid is a financially painless operation. Then our children will get education that is guided by parental and religious care rather than by remote control. And they will be kept beyond the grasp of any who, in the future, might win national power and feel that education ought to conform our youth to their particular way of thinking."

Marion B. Folsom, Secretary, Health, Education, and Welfare, December 1957: "The training of young minds is one of the most powerful forces known to civilization. In the wrong hands—in the hands of ruthless men bent on world domination—education can become a dangerous thing."

Treasury Secretary Humphrey, June 1957: "More elementary and secondary school bonds were sold than in any 9-month period in our history. * * * In the past 4 years $8.8 billion has been spent for school construction—more than had been spent in the preceding 20 years."

Senator LYNDON JOHNSON, Democrat, of Texas, majority leader, United States Senate, 1958: "The primary direction of education should be in the hands of local government.

"On anything as highly personal as education, our people are entitled to determine the future of their children.

"This means that the school system should be handled by that branch of government which is closest to our people."

The Supreme Court of the United States, 1942, *Wickard* v. *Filburn* (317 U. S. 111–113). "It is hardly lack of due process (of law) for the Government to regulate that which it subsidizes."

Senator HARRY C. BYRD, Democrat, of Virginia, United States Senate, 1957: "We must realize that creeping paternalism of the Federal Government is just as bad as creeping socialism. The end result is the same—the destruction of the principles of free government."

John M. Stalnaker, president, March 20, 1958, National Merit Scholarship Corp.: "A large Federal program of say 40,000 scholarships would probably have as its major effect discouraging existing private and State efforts and would not significantly help able students not already being helped."

Commission on Financing Higher Education Association of American Universities, 1952: "The strength of higher education is founded upon its freedom and upon the country's freedom, for without that freedom, its attraction to intelligence, its capacity to stimulate investigation and originality, its power to produce freemen who will guide our country wisely, and serve it well, will wither. It is this freedom that must be protected if it becomes dependent upon any dominant support, no matter how beneficent or how enlightened that support may presently appear to be. Such independence will be threatened if higher education is subjected to further influence from the Federal Government * * *. In these fields (social sciences and humanities) public opinion is notoriously given to snap judgment and in them centralized control could be used to do great damage * * *. Direct Federal control would in the end produce uniformity, mediocrity, and compliance."

Enoch R. Needles, president, the Engineers Joint Council, January 1958: "To ascribe the Russian rocket and satellite lead to weakness in American technology is misleading and erroneous."

Dr. V. Raymond Edman, president, Wheaton College, 1958: "We believe that Federal scholarships, good as they may seem on the outside, can be a real handicap to the highest interests of the American people."

Henry M. Wriston, president, American Assembly and a State Department consultant, March 1958:

"The bill will smother science and education by making private support unnecessary.

"Whatever you do, my brethren, don't get a built-in dependence of science on war. When fear ends, support will evaporate."

The American Legion, policy approved in national convention, September 16–19, 1957: "The National Government should avoid interference, control or direction in educational processes of programs of the respective States, either directly or indirectly or by grants-in-aid, school construction, appropriation, curriculum or program control, or by action of any agency, branch or department of the United States Government."

Governor Daniel, of Texas, 1957: "I think this is a responsibility the States and local governments can and should bear."

Governor Daniel, of Texas, 50th annual governors' conference, May 1958: "We should preserve as much of our Government as possible as close as possible to the people * * * no nation worth its salt, was ever built from the top down * * * we need more effective work done at the State level, with enough nerve to levy the taxes to get needed work done."

Governor Clyde, of Utah, 50th annual governors' conference, May 1958: "Only in those cases where State lines interfere with effective accomplishment should we look to the the Great White Father in Washington for assistance."

Governor Simpson, of Wyoming, 1957: "Once you establish this principle, you will have sounded the death knell of independent State and local systems."

Governor Simpson, of Wyoming, 50th annual governors' conference, May 1958: "Here's my definition of Federal aid: It means we raise our taxes to send some money to Washington, then we raise more money in order to provide the matching funds. Then we raise more again to pay the brokerage tax, in order to get a fraction of the money back."

Governor Foss, of South Dakota, 50th annual governors' conference, May 1958: "No government at any level has anything to offer free."

Gov. William P. Stratton, of Illinois, 1957: "Many people feel—as I do—that there is great danger, no matter how high sounding the program may be made to appeal to the public, that our system would be damaged, perhaps beyond recovery, by having the Federal Government move into the field of education.

"We do not need Federal aid for schools in Illinois."

Governor Stratton, of Illinois, 50th annual governors' conference, May 1958: "The unity that is our Federal system relies on the strength of our States * * * in some areas of functions and services, the States can perform more effectively and better and must accept that responsibility."

Governor O'Neill, of Ohio, 50th Annual Governors' Conference, May 1958: "There is no

magic source from which the Federal Government gets the money. It must come from the taxpayers * * * now is the time to take action to resolve the unemployment problems in our own State. * * * I am opposed to borrowing from the Federal Government because it will lead to Federal interference, furthermore, our States can do the job more economically and much better * * * in the highway program we can cut Federal red-tape to permit the program to move faster."

Lt. Gov. Carroll Gartin, of Mississippi, 1957: "All districts can meet needs with State aid * * * Federal aid not needed."

Governor Chandler, of Kentucky, 50th Annual Governors' Conference, May 1958: "There are many sins being committed in the name of education. * * * I recommend a complete overhaul of the tax structure of the Federal Government, with a view of returning some of the sources to the States."

George Bell Timmerman, Jr., Governor of South Carolina, 1957: "No one on the national level is endowed with sufficient knowledge to predetermine accurately the future needs of the whole country. The problem of public school construction is too intricate to be handled by long distance. Too many variable factors are involved in intelligent planning. These factors multiply as we move from the district level to the community level and then to the local school level. It is farcical to think that a program can be developed in Washington to meet the needs of the Nation."

Gov. Harold Handley, of Indiana, 1957: "We are providing these new classrooms twice as fast as the advocates of federalized education say we should be building them."

Governor Handley, of Indiana, July 22, 1958:

"Once started, a system of federalized scholarships would never be terminated. The cost would run into the billions, and institutions now independent or State-supported would become completely subservient to the new bureaucracy in Washington which would quickly establish its self-perpetuating existence.

"Indiana wants no part of such so-called Federal aid, and it needs none. The self-sufficiency, initiative, and enterprise of the American people are national characteristics. Education problems can continue to be handled locally and individually."

Governor Handley wrote me last week that a statewide survey showed that all the high standing students needing financial help had been provided for.

Gov. James E. Folsom, of Alabama, 1957: "Federal school aid would mean they'd try to control our schools."

Gov. Thomas B. Stanley, of Virginia, 1957: "I am vigorously opposed to any Federal aid program in this field under whatever guise it may be offered. The States and localities are capable of meeting their needs at much greater economy to the taxpayer without Federal aid or intervention in building and operating their public schools."

Resolved by the Senate of the General Assembly of the State of Indiana, the House of Representatives concurring, 1957: "The Congress of the United States be and it is hereby memorialized to reject any and all efforts to obtain the passage of legislation by the terms of which money would be appropriated and made available to the States, through grants-in-aid or otherwise for school building or other purposes, which either indirectly or directly would infringe upon the rights, duties, and obligations of local and State governments or authorities to provide, supervise, and cotnrol the education of the children of this country or the accompanying educational processes."

South Carolina Legislature, 1957: "The people of South Carolina are now, always have been and shall always be unequivocally, incontrovertibly, and unalterably opposed to and Federal invasion, encroachment, or infringement of the fundamental right, obligation, and duty of the people and their local governmental authority to provide, supervise, and control the education of the children of this State or the educational processes concomitant thereon which would directly or indirectly infringe upon the rights, duties, and obligations of local or State governments."

John C. Lynn, legislative director, the American Farm Bureau Federation, March 13, 1958: Counties and communities throughout the Nation are spending unprecedented sums for new schoolroom construction, and efforts are being made to increase teachers' salaries and to improve the overall conditions of our schools. Local people understand this challenge and will meet it through local taxation without Federal assistance and without Federal controls."

Mrs. William S. Shary, president, New York Federation of Women's Clubs, April 5, 1958: "The New York State Federation of Women's Clubs * * * affirms its belief in our traditional American principles and policies of State and local support and control of, and responsibility for, education, and urges the Congress to reject provisions for Federal Aid to Education."

Mrs. Frederic A. Groves, president general, Daughters of the American Revolution, 1956: "Federal aid means Federal control. You cannot get away from the fact that he who pays the piper calls the tune."

Daughters of the American Revolution, 1957: "The National Society, Daughters of the American Revolution has continuously opposed Federal aid to education, believing such aid could lead to Government control of all public schools, thereby removing State and local control."

Dr. Cyrus W. Anderson, president, Association of American Physicians and Surgeons, Inc., April 2, 1958: "Make no mistake about it, 'one shot' Federal aid is as fantastically unrealistic as only one shot for the dope addict. And there is a mountain of evidence to prove it."

Gordon L. Calvert, July 1958, Investment Bankers Association of America: "The great success with which the needed classrooms rapidly are being provided without Federal aid, the decreasing rate of growth in public school enrollment, the large classroom construction programs presently under way and financed for the next several years (demonstrated by record sales of school bonds and approval of a high percentage of school bonds at recent bond elections) lead us to conclude that State and local educational agencies can and will provide the needed classrooms without Federal aid."

Southern States Industrial Council: "The council opposes Federal aid to education, including Federal aid to school construction."

National Association of Manufacturers: "The heart of the matter is whether the financing, direction and control of the public school system shall remain in State and local hands, close to the people and responsive to their wishes and needs, or shall eventually be transferred to a central government authority."

Dr. Brantley Watson, March 1958 Education Committee, Chamber of Commerce of the United States:

"When our entrance into the space age was dramatized last fall, State and local reaction was immediate and is still mounting. State and local boards of education are reviewing the curriculums, the methods, and the standards of their schools. In community after community, we are finding an aroused leadership insisting on higher standards both for general achievement and for graduation. Local and State legislative leaders, who are constitutionally responsible for public education, are likewise being pressed to provide ways and means to maintain effective schools.

"On the other hand, there are no studies showing that local and State leaders believe that any space age emergency in education exists, which requires Federal intervention in science education, or in guidance, or in scholarships."

The Lemley Order

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. ROOSEVELT. Mr. Speaker, among the recent commentary on Judge Lemley's Little Rock order is that of the American Veterans Committee which appeared in the July-August issue of the AVC Bulletin.

Consistent with its position that its concern is for the citizen first, the veteran second, the AVC has traditionally been in the forefront of progressive action to protect civil rights.

The following editorial, which I include in the RECORD under leave to extend my remarks, is a succinct appraisal of the issues involved in the Little Rock court order:

Judge Lemley sought to justify his order for restoration of segregation at Little Rock by pointing to the overt acts of vandalism and the deep-seated popular opposition in Little Rock to the principle of integration, which, as is known, runs counter to the pattern of southern life which has existed for over 300 years.

His reasoning is, of course, flatly contrary to the Supreme Court's explicit ruling in 1955 that "the vitality of these constitutional principles cannot be allowed to yield simply because of disagreement with them."

But his order is especially notable for two reasons: (1) It subordinates law to anarchy and mob rule; (2) it furnishes a new shibboleth to the segregationists for subverting the Constitution into a program of neverism.

Although Judge Lemley candidly admitted that the rioting, vandalism, anonymous phone calls, and other disorderly conduct were perpetrated by segregationists, not by the Negroes, yet his order punishes the wrong persons. It bows to the larrikinalian scoffaws and the instigators of violence, and denies the constitutional rights of the Negro children who have done no wrong.

Judge Lemley's ruling sanctions commotion and violence as the means whereby segregation may be maintained and the Constitution evaded. Even if his order for resegregation could lessen the number of racial incidents in Little Rock, its inevitable effect would be to encourage them at dozens of other places. Nor will Little Rock itself be aided by this judicial kneeling to hoodlumism, for neither that community, nor any community, can long evade the ultimate choice between mob rule and compliance with law. The mob knows no limits or barriers. And no matter how bad a mob may be, it is infinitely worse when a court recognizes it as a legal basis for subverting the law.

Equally shocking is the new technique which the Lemley ruling propagates for destroying the constitutional guaranty of equal protection of the laws. Just as the 1896 Plessy decision gave lip service to the constitutional command of equality, but destroyed it under the guise of "but separate,"

so the Lemley order acknowledges the Supreme Court's desegregation decision but subverts it by asserting that "the time for the enjoyment of that right has not yet come."

Judge Lemley's order is clearly cut from the same cloak that the Southern diehards have woven to smother the Constitution in the fog of dawdling, delay, and defiance. The true purpose of Southern gradualism is revealed in the comment of the Jackson (Miss.) Daily News that integration at Little Rock should be set aside "for, oh say, 66½ generations." by basing his order on "300 years" of "southern life," and tailoring it to fit the 2½ years that Governor Faubus is expected to hold his office, Judge Lemley was reflecting the same sort of attitude.

The 14th amendment to the Constitution was adopted in 1868. It was supposed to have settled the question of first-class citizenship for all. In the 90 years that have gone by, only 1 Negro boy has graduated from Little Rock's Central High School. How much longer must it be before the promise of "equal protection of the laws" becomes something more than a promise to the ear that is broken to the hope?

In this great struggle between constitutional morality and law, on the one hand, and blind prejudice and civil disorder on the other, AVC must not falter from its historic and traditional insistence that the Constitution means what it says and means it now. We reject the slogan of gradualism. We are not against orderly progress, but we shall not condone or acquiesce in the distortion of "deliberate speed" into a program of neverism. AVC will continue in the vanguard of those who work for full enjoyment of constitutional rights for all, now and in the future.

Impressions of Brussels Fair

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from a friend who visited the Brussels Fair and whom I asked for some comments on the fair:

HEIDELBERG, *July 14, 1958.*

Immediately after returning from the Brussels Fair on June 14, I set down some notes intending to record my immediate impressions, but it's now a month since I was there so my feelings are no longer quite so vivid.

Generally, I feel it is a beautiful show. The landscaping is most effective, particularly in the use of water and trees. I have no impression of the high price of food since my appetite is small and I'm better off stopping for frequent snacks. For 20 cents you can get a nice crisp roll filled with ham or some other meat or cheese. Bars for fruit and milk drinks are strategically placed too and the drinks don't cost much. Most people buy these picnic things and find a nice cool place to sit. Coca-cola is probably the most popular drink at the fair. In our pavilion the best seller is soft ice cream in cones for 20 cents. On the 2 days I went to the fair, I saw people waiting in lines to buy the ice cream. I felt the ice cream counter could be played up a bit more and quicker and more efficient service could be given. The cream is to be had in a soda fountain setup in the gallery of the United States pavilion.

It is obvious that the Belgians around Brussels will make a big profit on the fair. Hundreds of temporary jobs have been provided and many families with guest rooms have a bonanza. I believe the family in whose house I stayed in a brand new section not yet complete called Avenue des Constellations, will make a modest fortune this summer. They are sleeping in the living room in order to rent their two bedrooms. Nearly all the homes in this area have garages and the car I saw most frequently parked in them was the Mercedes. Incidentally, although there was a bath in the house, no hot water was provided for washing. I got a very poor impression of the Brussels streetcar conductors who are brusque and ill-informed about directions. They are a poor advertisement for Belgium.

The much discussed fashion show in our pavilion left me quite cold. To begin with there are 22 mannequins of whom I understand only 2 are Americans. The clothes I saw were mostly bathing suits and ugly sack dresses with even uglier hats.

From the outside, the United States pavilion is the most beautiful at the fair, especially at night. I heard people stopping and saying, "c'est magnifique." Inside, one has the impression of airy spaciousness. The round floor plans from the point of view of propaganda is poor. True, nobody feels trapped, but the casual observer may not see much of significance. I found the early Americana very good and am one of those who does not like the contemporary United States art on display. I observed that the European hoi poloi was like me in either not taking it seriously or being frankly amused. The Russian pavilion is also light and airy but not beautiful. They built it so they can take it apart and lug it back to Holy Mother Russia. Their center display is most effective and always swarming with people. Sputnik makes our bathing beauty centerpiece seem pretty frivolous. The Russians also have booths selling all sorts of souvenirs you cannot buy in Russia. I have two accounts on my desk of Easter trips to Russia by United States teachers here, and they both mention the lack of souvenirs. Russian officials questioned them closely on what they would like as souvenirs. Russia has a wonderful opportunity at the fair. Their book display and sales booth is outstanding. Good books printed in all important languages by the Soviet Press. I bought five books, 2 paperbacks and 3 hard covers for $2. Perhaps this book business is to try to convince us of their superior culture. All these books are in excellent English. There is the Three Bears by Tolstoi, The Fisherman and the Goldfish by Pushkin, Gogol's Evenings Near the Village of Dikanka, Vera Chaplina's charming Zoo Babies, and an effort to make the Russian schoolboy a good little Russian citizen by one N. Nosov. I could find not one speck of Communist propaganda in any of these, but, one of our teachers who knows Russian, in translating the publisher's notes at the back of the Three Bears discovered that what had cost me about 15 cents at the fair could be bought in Russia for about 75 cents. The best-selling souvenir at the fair, if I did not make a mistake, is a wooden Russian doll which comes in two sizes. These dolls fit one inside the other like Chinese lacquer boxes. There are 12 dolls in one for $2.40 and 5 in a smaller one for $1.50. In an exhibit of antique toys in a special case this doll is represented and it seems like genuine folk craft.

Our souvenir is a map for ten cents showing racial origins in the United States. I believe a genuine effort should have been made to have a good United States souvenir for maybe a dollar. On thinking it over, though, we'd probably end up with 49 and why not? An effort might have been made to have each State produce a souvenir for the fair. People at this sort of show have a yen for cheap souvenirs.

Our pavilion is notable for the soft sell that everyone talks about nowadays. I'm not sure Europeans of limited education understand the point we're trying to make. I can listen in three languages and eavesdropped on some bewilderment, especially in the modern art. The Vatican has the best example of western propaganda. The exhibit goes from room to room in an orderly fashion. The same can be said of the British cultural room which features the Queen as a symbol. The room is hot and stuffy, though. The achievements of Britons are well done. Canada's pavilion is also very nice and modern and not pretentious.

The Czechs are the masters of display at the fair. Their show is hands down the most artistic one at the fair. It's a stunning display and the fact that it isn't representative of communism doesn't bother them one bit. One whole room is devoted to Comenius and religion!

The American industrial exhibits complement our national exhibit. IBM, General Motors, Bell Telephone, and others have very effective displays too technical for me to understand. The Russians have nothing to compare with these, except sputnik. American autos are not on display but they don't have to be as so many Americans are running about Europe in them. The Russ have put a couple of their autos on display but they wouldn't impress anyone but an ignoramus. Around their pavilion they have all sorts of farm machinery which gets quite a lot of attention from people who look like farmers. We have a balcony outside with free chairs. Very welcome for tired bones. Also our free washrooms like those in our large movies at home are a star attraction as everyone expects to pay washroom fees in Europe. I understand our free movie is also excellent but couldn't spare the time and effort to wait in the crowd to see it. The Russ display enormous quantities of bottled and canned goods, breads and baked products, frumpy clothing, lovely fur, some rather attractive painted peasant furniture, photomontages of classical Russian authors, the Bolshoi Theater, the Russian ballet, Russian explorers, and Russian musicians in the midst of whom and in a place of honor is Van Cliburn from America's second largest State.

The French exhibit is a jumble—just like French politics before De Gaulle. Farm machines are next to clothing displays. What a sad commentary. I especially enjoyed the Belgian tile and glass displays and in the luxury pavilion the beautiful show of Val St. Lambert glass and the fabulous jewels.

I cannot go along with people who say we should not be bothered trying to sell our point of view. Propaganda is something all too few Americans understand. I guess it's because we're advertised to death over TV and radio that we don't like the idea of propaganda. What we have to show coupled with the Vatican's methods of display would make an interesting combination. Incidentally, the Vatican is right next door to the United States.

The Belgian Congo exhibit is unusual and impressive and the Israeli one very well done. The Protestant pavilion is small and unassuming. Monaco has a tiny pavilion with a painting of Ranier over a fireplace facing a very romantic portrait of Princess Grace. Spain was showing flamenco dancers as their central attraction the day I was there. They were really packing them in too. The Scandinavian exhibits are architecturally what we've come to expect from that part of the world. Since I'm rather familiar with a good deal of Scandinavia, I walked through rather quickly and got a generally good impression although the buildings were hot and

rather airless. There were so many places I didn't get to but you'd have to have at least 5 days to get everywhere.

To truly appreciate the beauty of the fair one must spend a couple of hours after dark looking at the illuminations. Tree, shrub, and fountain arrangements are so beautifully lighted as to be breathtaking. The star which with the sparkling Atomium is the symbol of the fair shines, along an elevated avenue running along one side of our show, which lighted with a golden light and reflected in its own pool is the most beautiful single thing at this World's Fair to me.

Sioux Falls Publisher John A. Kennedy Sees Changes in Soviet Education

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. McGOVERN. Mr. Speaker, one of the Nation's best informed men on developments in Soviet education is Mr. John A. Kennedy, publisher and editor of the Sioux Falls (S. Dak.) Argus-Leader. Two years ago Mr. Kennedy and his wife and daughter, Pat, made an exhaustive firsthand report on Russian education. At the present time Mr. Kennedy and his son, Davis, are making a study tour of the Soviet Union. They have interviewed Deputy Minister of Education Zimin and numerous other Russian officials, educators, and private citizens on recent developments in the Russian schools.

Last year during the hearings before the House Education Subcommittee, Mr. Kennedy submitted extremely valuable testimony relating to advances in Russian education.

I am certain that Mr. Kennedy's observations on this vital subject will be of interest to the Congress, and I therefore include his article as printed in the Argus-Leader for July 27, 1958:

KENNEDY SEES CHANGES IN SOVIET EDUCATION—JOB PERIOD INSERTED

(By John A. Kennedy)

A somewhat severe reorganization of education in the Soviet Union is now in progress.

Beginning in September 1958 when universities, colleges, and institutes reconvene in all of the 15 Russian republics, only 20 percent of the entering freshman class students will come directly from the secondary schools.

This means that less than 10 percent of those students who passed every subject in the Russian 10-year school will be able to go to college immediately.

From now on, in order to qualify for matriculation in an institution of higher learning, 80 percent of the successful secondary-school graduates must work on farms, in factories, in industry, or government for at least 2 years.

This is somewhat similar to the type of training first inaugurated by fabulous inventor, Charles Franklin Kettering, at the University of Cincinnati in 1906 and which Antioch College in Ohio has been using for some time by combining college classroom theories with on-the-job training in industry. Using this method, students go to school for 6 months then work in factories, offices, or plants for 6 months.

This somewhat drastic change has been caused in part by the growing awareness of the Kremlin that in their previous educational program they were creating a middle class of educated individuals who seek to shun all type of work except that which we would consider white-collar jobs.

Deputy Minister of Education Zimin gave us the story and some of the reasons why this and other changes are being put into effect.

We were given additional causes for the change in a 3-hour meeting of a specially called conference with the executive committee of the Siberian Affiliate of the Moscow Academy of Sciences in Irkutsk in eastern Siberia.

After being told the story, I commented to Zimin that I didn't think such a system would work in the United States if less than 10 percent of our high-school graduates could immediately enter college.

Many other changes are being made.

A new 11th grade has been experimentally added for the coming September to the 10-year schools where they will decrease slightly the number of lessons in science, mathematics and the humanities.

During the last 3 years in this "11-year" school, students will spend 3 days in school and 3 days in agricultural and industrial work.

The purpose of this change is to produce more skilled workers to take over the shortages in industry, Zimin explained.

A few months ago Khrushchev complained that the tendency on the part of the youth who attend colleges and universities is an unwillingness to work on farms or in factories.

The Soviets already have undertaken another radical step in their drive to master foreign languages.

They have set up special foreign language 10-year schools, attended by selected students where, in addition to the study of languages, other subjects, such as geography, history and foreign literature will be taught in English, French or German.

And not only will the teaching be done in the specified language of the school, but examinations, quizzes and tests will be made in the foreign language also.

Homework, likewise will be completed in the foreign language.

Davis and I visited one of the schools in Moscow where literature and other subjects are being taught in English.

As explained by Vlantina Shipova, the school's director, they hoped to thus train students to have a free command of English when they graduate which would eliminate the necessity of attending foreign language institutes.

Of course, the regular 10-year school will continue to require at least one foreign language—French, English or German.

FORTY-FIVE PERCENT STUDY ENGLISH

When we made our study of Soviet education in 1956, about 35 percent of the students studied English, 35 percent studied German and 30 percent studied French.

The emphasis now is on English and the average for all of Russia for the 1957–58 school year was 45 percent studied English, 35 percent German and 20 percent French.

The Moscow English School graduated 50 pupils in June when we were there on the last day of school and there were 760 students in the 10 grades. Generally there are 30 in each classroom.

The geography and history courses have the same syllabus as the other schools except the books are translated into English.

In the case of English and American literature, they have special books issued from the school library.

Among they American authors they read are: Cooper, Irving, Steinbeck, Longfellow, Jack London, Whitman and Cronin.

Books like Longfellow's Hiawatha, Crolin's The Citadel, and Coopers The Last of the Mohicans are read and studied.

Another departure in the drive for better foreign language education has been the establishment in Tashkent, capital of Uzbekistan, close to the border of India, China and Afghanistan, or thirty 10-year schools where a third language beginning in the fifth grade (our seventh) is taught. The youngsters study Hindi, Chinese, or Arabic, but they still have to fulfill the requirements of English, French, or German, and, of course, the mother Russian language.

"Many students will go to institutes and universities after they work for 2 years," Mr. Zimin said, "but they will also continue in night and correspondence work which will be broadened in curriculum while they are working."

Last year 27 percent of students entering higher educational institutions had worked 2 years before starting their college work.

Zimin said in the future at least 80 percent of those who have worked 2 years or who are veterans will be given first opportunity to enter college but of course they will have to pass the rigorous examinations.

There are approximately 2 million students in Soviet higher educational institutions now, Zimin explained, and Russia does not plan to expand that number. Entrance examinations are becoming more difficult.

When we visited the 34 Russian secondary schools in 1956 and 1957, the gold and silver medal winners who earned top grades were automatically admitted to the college or university of their choice. That now has been abandoned.

Now all students must pass the entrance examinations before they get to college.

Another new departure in education in Russia has taken place during the past year. It is the addition of boarding schools which have the same curriculum as the regular 10-year schools for youths between 7 and 17 years.

There are 14 of these institutions in Moscow and approximately 68,000 pupils attend this type of school in the Russian Republic alone. He did not have the figures for the other 14 Republics.

Zimin explained that the boarding schools were established to help families in which both parents are working, to take care of the children of divorced parents, orphans, and also children of parents whose scientific work takes them to far-off places.

We asked whether there was still complaint about too much homework being given the children in the regular 10-year schools. When we visited the schools in 1956 we found that as much as 6 hours of homework a day w as given the students and the school week was 6 days.

"Now we recommend a maximum of 3 hours a day," Zimin said, "but it still depends on the teacher, student and parents."

Television, about which teachers and some parents complain in America, England and other places, is making its inroads in Russia too.

Of course the Russians do not have the continuous programs we have. Their television is only on from 5 to 6 hours a day except on Sunday when the children's programs are on in the afternoon.

There are only 2,000,000 television sets in Russia according to the reports given us by the head of the television committee.

Zimin explained that it is a very difficult situation because with families of 3 and 4 people crowded into 1 room or at most into 2 rooms in the newer apartments, it is very hard to keep the youngsters interested in schoolwork when a television set is in operation in the same room or the next room.

He said they are relying on the strict discipline of parents to eliminate the troubles connected with children spending too much time viewing television programs.

In Russia television is not used for teaching. Zimin was amazed at some of the successful educational programs that have been produced in the United States, such as those used in Hagerstown, Md., where the school system is enjoying much success using television as a medium for classroom instruction to help combat the teacher shortage.

Zimin pointed out that the Russians do not have a teacher shortage because, of course, their teachers are paid salaries comparable to or higher than those paid doctors, lawyers and scientists and in addition, their teachers enjoy the highest of social prestige in their so-called classless society.

TEXTBOOKS REFLECT RED LINE

As a sample of the propaganda in Soviet education, Publisher John A. Kennedy of the Argus-Leader has taken these excerpts from the textbooks in the 10-year English school in Moscow. In this particular school, as in many others in the Soviet Union, they teach various subjects in English, French, and German.

"We are happy children,
Strong and full of fun,
Look at our banner
In the bright, bright sun.
We are Soviet children,
High our flags we raise
Thank you, Soviet country,
For our happy days."

Story about the Red tie of the pioneers—like our Boy and Girl Scouts:

Mike's father is a Communist. Mike's mother is a Communist too. Mikes goes to school. He is a pioneer. He is a good pupil. He keeps all his things clean and tidy.

Story of two young pioneers, Victor Pavlenko and Nick Chernenko who live in a village near the border.

They are young pioneers who walk along the railway line to get to school. They see someone who does not work on the railroad walking along the road. When he sees the boys he runs away. Victor sends Nick to the railroad man and he, Victor, takes his Red pioneer tie and tries to stop the train. He does. Everybody thanks Victor.

But Victor says, "Don't thank me. I'm a Soviet boy and a pioneer. It's my duty to help the Soviet people. I'm happy when I can do it."

A pioneer's letter:

"I want to write a letter
To tell each Soviet boy
That I am very grateful
For our life of joy.
I go to school, and daily
Put on my pioneer tie.
I want to be a soldier,
Or a flier in the sky,
Or learn to be a captain
And sail across the sea,
But I shall serve my country,
Whatever I may be."

V. I. Lenin:

"There is a well-known portrait
Upon the classroom wall;
We see the face of Lenin,
So dearly loved by all.
His eyes are kind and smiling,
With wisdom deep they burn,
They seem to tell us children
The way to live and learn.
And all the Soviet children,
While studying day by day,
Must always try to follow
Great Lenin's noble way."

The Refugee Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 30, 1958

Mr. PROXMIRE. Mr. President, one of the crying problems of the world today is the problem of refugees. In Europe alone there are tens and tens of thousands of unsettled refugees—families away from their homes, without a place to live, without a place to work, and with only half a chance to live a dignified life.

These people risked their lives to flee from the Communist terror in their homelands. They left their homes, many even left their families, in search of freedom. Men and women of such dedication and courage deserve a fair break, they deserve a place to live, they deserve whatever assistance we can give.

The problem of resettling these refugees is a great and difficult one. The people of Europe have done what they could, and are continuing to resettle the refugees as rapidly as possible. We here in the United States have been able to settle hundreds of thousands of refugees. The American people have always responded warmly to situations such as this when the facts were fully apparent. But the problem still remains. The refugee camps of Europe are still swelling.

The Zellerbach Commission on the European Refugee Situation has done a fine job of presenting the problem to the people of the world. Their thorough, comprehensive booklet, Refugees in Europe, 1957–58, is a fine work which should be read by every person interested in the question of the resettling of refugees.

Mr. President, because I feel that it is of greatest importance that the American people know the facts of the refugee problem, I ask unanimous consent that the study prepared by the Zellerbach Commission entitled "The Refugee Situation in Europe, Basic Statistics and Estimates," be printed in the Appendix of the RECORD.

There being no objection, the study was ordered printed in the Appendix of the RECORD, as follows:

The refugee situation in Europe, basic statistics and estimates, July 1958

I. Stateless [1] refugees in Europe:	
1. Number of nonsettled refugees in countries covered by UNHCR survey (Germany, Austria, Italy, France, Greece, Turkey)	[2] 140,000
2. Number of nonsettled refugees in West European countries outside UNHCR survey (United Kingdom, Switzerland, Belgium, Holland, Norway, Denmark, Sweden, Luxembourg)	[3] 20,000
Total nonsettled refugees in Europe	160,000

The refugee situation in Europe, basic statistics and estimates, July 1958—Con.

I. Stateless [1] refugees in Europe—Continued	
The total of 160,000 includes:	
A. Refugees in camps	48,000
B. Handicapped or difficult to resettle	47,000
II. Continuing influx from Communist countries:	
1. Influx to Western Europe, 1957 (non-Hungarian)	[4] 30,000
2. Influx to Western Europe, January–June 1958	[4] 10,000
III. Ethnic refugees and expellees:	
German expellees	9,004,000
East German refugees	3,030,000
Ethnic Italian refugees	400,000
Ethnic Greek refugees	4,000
IV. Resettlement:	
1. Absorbed by Western Europe since end of war:	
A. UNHCR survey countries	[5] 438,000
B. Nonsurvey countries	[6] 343,000
Total	881,000
Total refugee intake, USA	[7] 437,000
Total refugee intake, other overseas countries (excluding Israel)	[8] 557,000

[1] Not all refugees under the IRO and UNHCR mandates can be considered stateless in a strictly legal sense—that is, their countries of origin have not specifically deprived them of nationality. But they are all stateless de facto in the sense that they cannot or are unwilling to avail themselves of the protection of the government in power in their country and they have not yet received alternate nationality. In this respect they differ from the German ethnic refugees, for example, who are automatically considered German nationals.

[2] This estimate reflects the situation as of mid-1958. UNHCR survey figure for mid-1957 was 178,000.

[3] In the absence of any statistical sampling, this is necessarily a very rough estimate. In the case of the survey countries, the ratio of non-settled to settled refugees is approximately 1 to 3 (see sec. IV above). In the case of the non-survey countries, there would be a much lower proportion of non-settled refugees. The figure of 20,000 is, if anything, an underestimate, since it would imply a ratio of 1 non-settled refugee to 17 settled.

[4] These rough estimates do not include East German refugees (see sec. III above).

[5] Source, UNHCR survey.

[6] This estimate is arrived at as follows: As of January 1, 1957, the total number of refugees in the European countries not covered by the UNHCR survey was 316,500 (UNCHR Statistical Bulletin No. 8). Since January 1, 1957, the non-survey countries admitted a total of 45,000 Hungarian refugees (ICEM figures, November 12, 1957). This would make a total of 363,000. Deducting 20,000 estimated non-settled from this figure (see Section I), we arrive at the estimate of 343,000 settled refugees in the non-survey countries.

[7] These figures are arrived at by adding the IRO figures for refugees resettled from 1947 to 1951, the ICEM figures for refugees resettled 1952 to 1956, and the figures for Hungarians resettled 1956 to 1957—e. g., the United States received 328,851 in refugees, 70,503 UNHCR refugees moved by ICEM, and 37,944 Hungarians. Refugee statistics, however, are sometimes very perplexing because they vary according to origin and definition. Using ICEM figures for refugees in the broad sense—i. e., including ethnic refugees, etc.

the total would be approximately 50,000 greater for the United States and also 50,000 greater in the case of the other countries of overseas reception. (This largely accounts for the discrepancy between the figures in the table above and those in annex XI of the report.) To make our table consistent, we have confined our figures to IRO—UNHCR refugees. The total number of admissions under the President's directive, the Displaced Persons Act, and the Refugee Relief Act was 634,000. If we add to this approximately 32,000 Hungarians who were admitted as parollees, this would make a total of 666,000. However, this total includes German expellees, Italian ethnic refugees, native Greeks and ethnic Greek refugees, orphans, a limited number of Dutch immigrants, and several other minor categories. The figures in table IV above relate only to refugees under the UNHCR—IRO mandate. For this reason, total figures for the United States and other areas are lower in the above table than they would be if all refugees, expellees, and special immigrants had been counted.

Israel has taken almost 160,000 refugees from Europe since 1947. Israel has, however, not been included in the composite figure above, on the one hand because there are next to no Jewish refugees left in Europe, on the other hand, because it cannot be considered a general refugee haven.

The salient fact that emerges from the statistics given above is that of a total of 1,875,000 nonethnic refugees resettled since the end of the war, Europe has taken 881,000, or approximately 48 percent (this in addition to massive numbers of ethnic refugees and expellees); the United States has taken 437,000, or just under 23 percent; and the other countries of overseas reception have between them taken 557,000, or approximately 29 percent. This pattern of the postwar period, in the opinion of the Commission, would be a logical guide for the allocation of future responsibilities—needless to say, on a voluntary and flexible basis.

Death of Dr. R. T. Wells

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. EVERETT. Mr. Speaker, on June 15, Murray State College, the State of Kentucky, and the Nation lost a great citizen when Dr. Rainey Thornton Wells passed away. I had the good fortune to attend Murray State College while Dr. Wells was president, during the years of the great depression. I know that today there are many alumni of Murray, such as myself, who would never have remained in college during those trying times had it not been for the leadership, enthusiasm, spirit, courage, and inspiration of Dr. Wells. As an outstanding politician of the Blue Grass State, Dr. Wells was responsible for the location of the college at Murray; as an outstanding citizen he headed a drive to raise $100,000 to meet the city's end of the bargain and as an outstanding educator he was second president of the college from 1926 to 1933. Under leave to extend my remarks, Mr. Speaker, I request that my remarks of deep feeling of gratitude and friendship for Dr. Wells be made a part of the RECORD.

Man's Best Friend

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1958

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial on man's best friend written by Harry M. Schlacht for the East Side News:

FAITHFUL FRIEND FOREVER

(By Harry H. Schlacht)

This is a tribute to man's best friend—his dog. The dog is the only thing on earth that loves man more than he loves himself. The dog is the only thing on earth that believes in man more than he believes in himself.

The dog is a symbol of faith, hope and love. He is our first friend. He is our truest friend. He is our faithful friend. He is our friend forever.

With eye upraised, his master's look to scan. The joy, the solace, and the aid of man. Down through the ages the dog has proved to be one of man's greatest conquests in the march of civilization.

He serves as a guide for the blind. He serves as a protector for children and the aged. He serves as a guardian of the home. He serves as a scout for the lost and injured.

He is loyal and intelligent. He is a staunch and grateful companion. He is a comforter in time of distress.

He has been cited for valor on flaming, fighting fronts. He has been cited in warfare since Cambyses, King of Persia, used him in his campaign in Egypt in 525 B. C.

None is more faithful found. None yields more pastime in house, plain, or woods. Nor keeps his master's person and his goods with greater care than doth the dog or hound.

His cheerful greeting in the morning starts your day aright. His wagging tail is his way of wishing you good night. He is the first to welcome you. He is the first to defend you.

The dog labors, loves, fights, and breathes for his master alone. In summer's heat he follows you. In winter's cold he never leaves you. When you laugh or when you cry, he is your pal.

Whatever the world may think of you—to your faithful friend—your dog—you are the wisest and most splendid of things. To him you are as wise as Socrates and as mighty as Napoleon. To him you are to be worshipped as the best of men.

He knows no deceit or pretense. With what reverence he crouches at your feet. With what dependence he looks up to you. With what cheerful joy he obeys you.

He has a share of man's intelligence, but he has no share of man's falsehood. There is a general comfort in his companionship. There is an ever ready touching humility.

He loves your friends. He watches you faithfully by night that you in peace may sleep. When your best friend leaves you, when your closest friend betrays you, your dog is ever at your side.

In health and in sickness, he will stand by you. He will sleep on the ground when the winds of winter blow, if only he could remain with his master. He will accept the food that is offered, be it much or little, and be ever so grateful. He will lick the hand that has no food to offer.

He is the one dependable friend in all the world. He is not a fair-weather friend. And when the master is laid to rest in the cold ground his dog will be found at the grave, with his head between his paws, his eyes sad but open in alert watchfulness.

The Wild Greenback Yonder

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. WHITTEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial appearing in the Memphis (Tenn.) Press-Scimitar and other Scripps-Howard newspapers, and also a letter received in connection with land acquisition for the United States Air Force Academy:

[From the Memphis (Tenn.) Press-Scimitar of July 24, 1958]

THE WILD GREENBACK YONDER

Military successes of the ancient Spartans were largely credited to the way they trained their soldiers. Emphasis was on discipline, obedience, endurance.

This became a guiding principle of all great armies. "Spartan" has come to mean "Hardy, undaunted, severe and frugal." Frugal, according to Webster, means "economical in the use or expenditure of resources." O. K.

Now let us consider the United States Air Force and its fancy new Academy at Colorado Springs, Colo. Our Scripps-Howard reporter, Jack Steele and our columnist, Fred Othman, have explored such items as medicine cabinets at $75 each, $6,199 for coffee tables and $300,000 for gardens and reflecting pools. These are details which characterize this whole project. For instance:

The Academy was supposed to cost $125 million but will now cost more than $300 million.

It started as a 10,000-acre project and grew to 17,000—a tract half the size of the District of Columbia.

A sum of $132,184 was spent merely to cook up a cadet uniform. Cecil B. DeMille sketched this uniform free, but the money went anyhow, to a costume outfit in Hollywood for "design and development."

The administration building alone will cost $3 million, more than double the original estimate.

The dining hall will cost $4.1 million, almost $1.5 million more than expected. Part of this goes for a fancy ceiling, designed to absorb the noise of 3,000 cadets eating.

The superintendent's house was to cost $75,000 but it hasn't been built. The superintendent said it wasn't good enough.

Taxpayers are indebted to Representative HARRY R. SHEPPARD, (Democrat, of California), and his subcommittee on Defense Department appropriations, for bringing to light this scendalous spendoggle.

A Mr. Pietro Beluschi, described as an eminent architect, testified.

Question. "But you had no limitation moneywise, insofar as the questions submitted to you, insofar as any finding you made?"

Mr. BELUSCHI. "No, sir."

Question. "So far as you know, the whole Treasury was available to those people?"

Mr. BELUSCHI. "So far as we knew. We were employed as architects and engineering consultants."

In summing up, Representative JAMIE L. WHITTEN, Democrat, of Mississippi, termed the Academy "a shrine to a shoddy way of handling Government money." He added, "I have never seen a public agency or department run as laxly or as wastefully, in all my

years in Congress, as the Department of the Air Force."

That says it.

DENVER, COLO., *July 27, 1958.*

The Honorable JAMIE WHITTEN,
House Office Building,
Washington, D. C.

DEAR SIR: Your statements relative to land-cost at the Air Force Academy were carried in today's Denver Post, as sent them by Associated Press.

There have been rumors in the Colorado Springs and the Denver areas relative to the cost of the land selected by the Academy. It should be borne in mind that the land is not farmland and is not grazing land, being covered mostly by rock, scrub oak, and pine. The same sort of land is leased by the Forest Service to ranchers for grazing purposes at approximately 50 cents per animal per year.

It is possible that the Air Force had decided on the site before the Site Selection Committee had investigated alternate sites in Texas, Wisconsin, etc. It would be interesting to know who owned the land selected 5 years ago, and who had acquired it immediately prior to its sale to the Government.

The Colorado State Highway Department carried out the transactions for land acquisition, and they may have interesting facts in their files.

Sincerely,

Our Subcommittee on Appropriations for Military Construction, created only this year, has done a good job in bringing these facts to light. They present a sad state of affairs. We have taken such remedial action as was in our power.

I have urged the appropriate legislative committees to follow up this matter with a full and public investigation, for the good of the country, and am asking the same action by the Department of Justice.

Election Returns From Arkansas

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. ABBITT. Mr. Speaker, millions of Americans rejoiced at the election returns from Arkansas. These returns were a resounding victory for those of us who believe in constitutional government. It demonstrates once again that all Americans believe in and are willing to stand up for the rights and privileges of our people and the sovereignty of our States. It further demonstrates that the American people, when they realize what is at stake, resent the encroachment on their rights by any arm of the Federal Government. It is also a clear substantiation that in Arkansas the people realize what is about to happen to them unless they take the necessary action to prevent their being gobbled up by an all-powerful Federal Government.

I am convinced that the people of Virginia would react the same way under the same circumstances. I believe the election results in Arkansas are a fair indication of the feeling of the vast majority of the people of the Nation. Certainly all of those who believe in constitutional government. It is a repudiation of the Little Rock episode when the Chief Executive usurped and abrogated unto himself the power and authority that never was delegated to him under the Constitution or by the Congress.

American Advantages in Middle East

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial the Cheraw Chronicle, Cheraw, S. C., of July 24, 1958:

AMERICAN ADVANTAGES IN MIDDLE EAST

Last week we said that America and the West suffered two handicaps in its relations with Middle East nations that Russia didn't have: recognition and support of Israel and a history of colonialism and exploitation in the area.

The West, however, enjoys two great advantages which Russia does not. In the first place, Western Europe offers natural markets for Middle East oil. Russia doesn't need the oil and will not buy it. If the Arab lands want to sell oil and our allies want to buy it, then surely its to their mutual advantage to get along.

Second, Russian imperialism and communism are inherently aggressive and expansionist. A bloc of Arab nations, 70 million strong, would tend to block her imperialistic ambitions.

Arab nationalism and Russian communism should mix little better than oil and water. Russia believes in bending other peoples to her own will. A united Arab State would stand in the path of Russian drives toward the Mediterranean Sea and Indian Ocean. Arab nationalism is not likely to prove very popular with Russian communism which believes all the tunes must be called from Moscow and that all nationalism is antagonistic to true Marxist doctrine.

If we pursue a realistic, open minded, yet firm and consistent policy in the Middle East, we ought to be able to shape Arab nationalism into a western asset rather than a liability. The Arab-Israeli dispute is open to negotiation and settlement around the conference table. Arab leaders, whether rebel generals or kings, want to keep on receiving oil royalties from the West. Western oil companies, with their technicians, experience, and capital, are essential to help develop oil resources.

In view of these facts, it would appear that the western democracies have just as good a chance as Russia to work with the Middle East. During this period of upheaval and intrigue, however, we must anchor much of our policy on armed strength. Until it is clear that reliable, level-headed patriots are in charge of the nationalist movement, American and allied force must remain near the major oil-producing centers to make certain that this vital resource remains available to the West.

In the meantime the United States should make it clear that we have no sympathy for colonialism and that all vestiges of imperialism have disappeared. We should help the people realize the wholesome aspirations of Arab nationalism, national unity, independence, neutrality, economic development, and social reform. We must not, furthermore, confuse legitimate Arab neutrality with Soviet domination.

Depreciation of Production Machinery

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. DENNISON. Mr. Speaker, I have just introduced a bill, H. R. 13592, providing that production machinery acquired during 1958 and 1959 and used in a trade or business may be depreciated over a 5-year period. The bill itself does not need a great deal of explanation. It is an attempt to encourage increased use and investment in new production machinery at a time when there has been a decline in spending for capital goods. Greater than this, it attempts to meet the key problem of obsolescence in our rapidly changing technological era. Today many production machines depreciate through obsolescence created by new technological developments at a much greater rate than the regulations of the Internal Revenue Department permit and in many cases arbitrary and unrealistic depreciation schedules prevent the legitimate growth of business and the resulting expansion of job opportunities for many people.

This bill gives the option to the owner of machinery purchased in 1958 and 1959 to decide the rate of depreciation to be applied to such machinery. If shops are given the privilege of using a realistic depreciation schedule they can plan their replacement needs. The result will be to encourage the purchase of new equipment as soon as the old becomes obsolete.

Similar provisions as those contained in my bill were adopted in 1940 and 1950 for the express purpose of encouraging production. The results are well known. Production was encouraged, income increased and job opportunities became more available.

The ever present threat of inflation is very likely to be with us in the years to come. In any successful business, the cost of old machinery must be recovered before the replacement price becomes prohibitive. If this cannot be done, no business can reasonably be expected to hold its own, to say nothing of progressing. This bill attempts to meet the threat of inflation without depriving the Government of needed revenues. The taxpayer is always permitted to deduct the cost of capital equipment. The only problem is over what period of time. This period should by all means be a realistic one.

I strongly urge that the Ways and Means Committee, to which this bill has been referred, give this measure immediate consideration.

Mending Our Fences

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. MULTER. Mr. Speaker, the following article by Walter Lippmann, which appeared in the New York Herald Tribune of July 29, 1958, is worthy of the attention of our colleagues:

MENDING OUR FENCES
(By Walter Lippmann)

Just what went wrong as between London, Paris, and Washington is not quite clear. But something did go wrong, in that we find ourselves committed to a spectacular summit meeting in New York, which we do not want, and unable to support Gen. de Gaulle's proposal for a quiet meeting in Europe later on, which is what we ought to want. If a New York meeting is unavoidable, the question is how to manage the encounter between Eisenhower and Khrushchev with the least damage.

A way must be found to avoid a public debate. For the President has neither the training and knowledge nor the vitality for such an ordeal. Beyond that, it is highly desirable, indeed necessary, to mend our fences in the Middle East so that when the meeting takes place we shall not be the defendants in a public trial.

This can be done if two things, now in the works, can be achieved before the summit meeting. One would be an agreement in Lebanon which leads us to withdraw the Marines or at least to fix a definite date for their withdrawal. The other would be to extend diplomatic recognition to the new Iraqi Government, as Dr. Adenauer and others are advising us to do. These two actions together would refute completely the charge that we are engaged in a military adventure in the Middle East and we would no longer be on the defensive.

There is no use pretending, however, that there will be any glory or profit in this. It will be recognized by all the world as a forced retreat from an untenable position in Lebanon and in Iraq. The question then will be whether the three Western governments can produce proposals which open up the prospects of better days in the Middle East. It has been proved first at Suez and now again in Lebanon and Jordan that the Western governments have not the power, even if they had the resolution, to restore the supremacy which Britain possessed before the Second World War. What has still to be proved is whether the Western governments have the imagination and the brains to play a leading part in the liquidation of the old privileges and in the construction of a new order.

When we say that the New York summit meeting is to be held without adequate preparation, we generally mean that there has been no adequate diplomatic negotiation with the Russians. This is true. But there is a much more critical sense in which the meeting is unprepared. It is that we ourselves are unprepared. We do not have as yet more than the dim intimations of what might be the shape of a new Middle Eastern order. If we had it, we could face Khrushchev with buoyant confidence.

In my view, the paramount issue in the Middle East is not oil, which the Arabs must sell to the West. It is not Israel, which is on the sidelines in the present crisis. It is not the revolutionary force of Nasserism. The paramount issue is Russia's determination not to have United States military power stationed on her southern flank.

We can never, I think, understand the inwardness of the Middle Eastern crisis unless we recognize that what we consider the military containment of the Soviet Union, Moscow is bound to regard as a military menace to the Soviet Union. Our forces are in Turkey, of which the equivalent would be that the Red forces were in Mexico. We have the NATO alliance and the Baghdad pact, of which the equivalent would be an anti-American Soviet military alliance consisting of Mexico, Cuba, and Central America.

What we are seeing is a campaign by the Soviet Union to disrupt the containing alliance on her frontiers, and with the explosion in Iraq, this campaign has had a great success. It has not only knocked out the only Arab State in the alliance, but it has isolated Turkey. The Russian support of Nasserism has been the main strategical device in this campaign. The immediate objective of a campaign is to deny to the West, and particularly to the United States, the strategic control of the Middle East.

It is important to understand your adversary, and if this analysis is the primary truth about Soviet policy, there are important conclusions to be drawn from it. The first is that a settlement cannot be achieved with Nasser alone. An accommodation with him is most desirable. But appeasement of Nasser is quite unnecessary. The basic settlement must be reached with Moscow, and the subject of the settlement must be the strategic control of the Middle East.

There are three conceivable possibilities. One would be to restore the Middle East as a sphere of influence for Britain, France, and the United States of America, with Russia excluded. This cannot be done. It is too late. We are not strong enough to do it. A second would be to let the Middle East become a Russian sphere of influence. This would be an unnecessarily abject surrender. We are not so weak that we must accept it.

The third possibility would be to neutralize the Middle East as between the two great military alliances, and to build upon this overall neutralization, specific agreements about the oil business, about the security of Iran, Lebanon, and Israel. This will not be easy, and it requires a higher order of statesmanship than we are now accustomed to. But it is not impossible. For it does not run contrary to the vital interests of any of the nations concerned.

Are You Better Than a Politician?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charlotte Observer, Charlotte, N. C., of July 28, 1958:

ARE YOU BETTER THAN A POLITICIAN?
(By Sidney J. Harris)

A friend of mine, who retired from politics a few years ago because he needed more money to put his three children through college, thinks the public is all wrong in its attitude toward politicians.

"The public," he is fond of saying, "bemoans the fact that we have so few decent political figures; I, on the other hand, am constantly surprised that we have as many decent ones as we do."

"Why do you say that?" I asked.

"Well, just consider what we require for a politician in this country," he began to enumerate on his fingers.

"First, he must have the stamina of a bull to endure the rigors of campaigning. If he doesn't have the physique for it, he'll collapse.

"Second, he must have the temperament—friendly and outgoing, willing to listen to people, and thick-skinned enough not to be hurt by false criticism.

"Third, he has to be, if not intelligent himself, at least bright enough to pick intelligent men as advisers and supporters. This is not as common a talent as we think it is.

"Fourth, he has to be able to live on his salary, unless he has inherited or married money, or made his pile before entering politics. These economic pressures cut drastically into the people we can recruit for political office.

"Fifth, he has to live a private life that's above reproach—or, at any rate, he has to be discreet and can't afford to indulge in any of the excesses we condone in others.

"Sixth, he can't be too obviously intelligent or too highly educated, or he runs the risk of alienating a lot of voters who are suspicious of thinkers—and this includes precinct workers, who want a reliable candidate, which means one who is responsive to party needs and doesn't try to put principles above partisanship.

"Seventh, he must be willing to sacrifice his family life and leisure pursuits in order to attend a lot of silly functions he doesn't give a hoot about, and mingle with a lot of people he may have nothing in common with.

"I've still got three more fingers," he concluded, "and could use them up." But perhaps by now you understand why I say that, demanding as much as we do, I'm surprised that even 1 politician out of 10 comes up to our minimum requirements. Could you fit them yourself?"

Toward Farm Freedom

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mrs. BOLTON. Mr. Speaker, the farm bill recently passed in the Senate—S. 4071—now in the Committee on Agriculture of the House, has so much good in it that one cannot but hope that the committee will send it to the floor in time for passage before adjournment.

A brief but illuminating editorial in the Cleveland Press of July 28, 1958, points out that this is the first major change in basic farm-price-support methods in 25 years and represents the first real effort to free agriculture to produce for the market rather than for the Govenment storage bins.

Mr. Speaker, under leave to extend my remarks, I include the editorial above mentioned.

TOWARD FARM FREEDOM

The significance of the farm bill just passed by the Senate is that it marks a retreat from managed economy in agriculture. It provides the first major change in basic farm price support methods in the 25 years since this destructive plan was adopted.

The bill retains the wasteful parity system, but gives the administration authority to lower price supports and loosen planting

controls. It ends all effort to control planting and marketing of corn and other feed grains.

The changes are not large. It may be said they are less than Agriculture Secretary Benson hoped for but more than he actually expected. When he says that the bill is a "long step in the direction of greater freedom for farmers," he thus voices the enthusiasm of a man who feared a stone but at least got a crust. He's right when he says it "represents a victory for sound principles."

Actually the Senate's measure is but a start in the timid process of weaning the country from one of the more extravagant economic whims of the New Deal. Even the severest critics would not want the system abandoned abruptly, fearing violent economic dislocations. Further gradual steps will be necessary to restore the freedom of agriculture to produce for the market, rather than for the Government's storage bins.

But the bill is a start and should be passed by the House. Happily large sections of the farm community now are supporting it, encouraging hope that the House will act in these closing days of the congressional session.

Recovery and Inflation

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S. C., of July 23, 1958:

RECOVERY AND INFLATION

The people whose business it is to survey the American economy and to forecast its future course now find that the plus signs, so to speak, outnumber and outweigh the minus. With virtual unanimity, they say the bottom of the recession has been reached and recovery has now begun. About the only differences of opinion have to do with how far and how fast the upswing will go.

Fortune magazine, for example, forecasts that new records in total output and industrial production will be established inside a year's time. It anticipates a rise of $20 billion in the gross national product in the next 6 months, followed by a further $30 billion rise in 1959. If that happens, we will be producing goods and services at an annual rate of $470 billion by the end of next year. Specific factors mentioned by Fortune include increased defense and public works spending; an improvement in new and used-car sales; a rise in employment during May, and the fact that twice as many industries increased production in May as reduced it.

J. A. Livingston, the syndicated business analyst recently asked 60 leading economists—representing banking, industry, labor, investment, Government and educational institutions—what they see ahead. The consensus adds up to steady, though not spectacular, improvement in business activity generally. According to them, reports Mr. Livingston, "a year from now, business indexes will be straining to break through the old highs."

So much for specific forecasts. But, in the minds of many people, there is another element in the economic picture that is far from bright. Jack Mabley, of the Chicago Daily News, sees matters grimly: "It is generally agreed that the recession has run its course and we are in an upturn. What is coming may be worse than the recession."

That view is based on a fear that can be explained in a very few words, more and greater inflation.) Today's dollar is worth a trifle less than half of its value of 20 years ago. If the decline continues at the same rate, to say nothing of the possibility of an accelerating rate, the dollar will be worth only a quarter in terms of buying power 10 years from now. "After that comes chaos," Mr. Mabley writes. "Life insurance, social security and savings may become almost worthless." And he thinks, "that will happen unless we, through our Government, take drastic action to stop it."

The Government is certainly not doing that now, as Mr. Mabley goes on to show. A huge deficit is looming. The debt limit is likely to be raised to something like $300 billion. And it is an historical fact that circumstances such as these have brought disaster after disaster to once great nations. The classic example of modern times is the German inflation that followed World War I. Utimately, a loaf of bread cost millions upon millions of marks.

What is the primary cause of inflation and what is the cure? Mr. Mabley answers these questions tersely: "Inflation comes from oversized Government. The way to stop inflation is to reduce the size of the Government." But: "We are not reducing. We are increasing."

And it is clear, though he does not say it in so many words, that he is convinced Government won't act until public opinion and demand force it to.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1958

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of July 26, 1958:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, Fifth District, Texas)
JULY 26, 1958.

Public Law 480, the Agricultural Trade Development and Assistance Act, is labeled "An act to increase the consumption of United States agricultural commodities in foreign countries, to improve the foreign relations of the United States, and for other purposes." Under the program, since 1954 we have disposed of $3.9 billion surplus farm products abroad. Under this extension, an additional $1.5 billion in farm products may be sold for foreign currency; $800 million in food to be donated to friendly nations as emergency assistance; and we'll expand our donation of agricultural products abroad through nonprofit agencies and intergovernmental organizations, and here in the United States to schools, charitable institutions, and such. Here is how it works: 35 nations have received wheat, flour, feed grains, rice, cotton, tobacco, dairy products, fats, and oils. The local currencies paid us are banked on the spot abroad, in our name. We give these funds back to be used only within the country, on local projects, for purchase of military equipment from the United States, and in other incidental programs. So it is that India has received loans amounting to $545 million; Poland, $202 million; and Yugoslavia, $432 million. Yugoslavia, for example, used most of this to buy military equipment.

Criticisms aimed at the bill included (1) great extension of the purposes for which these funds may be spent abroad—as, for example, aid to educational institutions, which we'll not permit in our own country; (2) the primary purpose, that of aiding our foreign policy, is now shifted with accent on disposal of surpluses. Unwise disposal (dumping) may disrupt, not strengthen, our foreign relations; (3) the Secretary of Agriculture should be permitted to barter for strategic materials with our agricultural surpluses but not directed to do so as he is in this bill; (4) the subsidy of religious schools violates our traditional separation of church and state. To which I added: (1) Hasty consideration—Members were called upon to vote before copies of the bill and committee reports were even available; (2) this program should properly be included, and correlated with our foreign-aid program, for that is what it really is; (3) in Yugoslavia and elsewhere, we may well be feeding and arming sworn enemies.

The Small Business Tax Relief Act of 1958 brought protests from some Members too. Aimed at helping small business by more liberal tax treatment of losses, inheritance-tax payments, and other items, the bill is open to legitimate criticism on several counts: (1) It deals altogether with corporate business when 85 percent of all small businesses are not incorporated; (2) the emphasis is on manufacturing when 80 percent of small businesses are in the service and distribution fields. It seems to me that tax revision is needed so that barriers to economic growth are removed, resulting in greater, rather than lower tax revenues. There is no such aim here. No tax cuts should be made while our Federal Government is operating at a deficit. If we're to have tax relief, it should be equitably distributed among all our citizens. This bill involves a $260-million loss in revenue. In this case, too, only 40 minutes consideration was allowed and no amendments permitted.

The Small Business Investment Act of 1958 provided the final blow in a disappointing legislative week. Should this measure become law, the Federal Government will be in the business of providing capital for businessmen. Twenty-year risk capital loans made by privately owned State chartered investment companies would be Government insured through the Small Business Administration. Even SBA head, Wendell Barnes, protested such action, stating: "This is a function for which Government is ill-conceived." My own objections include (1) insuring business loans is not the function of Federal Government; (2) Government is assuming an unbusinesslike risk, since the SBA will help only if a bank won't (thus subsidizing poor business operation); (3) who gets loans, who doesn't, and who makes the decisions. Unless everyone can get one, your competitor may be Government subsidized with your tax money. It seems to me that what businessmen, large and small, really need is a tax cut—this first requires less Government aid and spending, not more.

Correction of last week's newsletter (re H. R. 3): On the rule, of the 114 who voted against, 93 were Democrats and 21 Republicans (rather than 105 and 9, as reported). On final passage, 109 Democrats were opposed, as against 46 Republicans (not 132 and 23). Haste in counting caused this error, and I apologize. However, the argument pointed up remains unchanged.

An omnibus judgeship bill, which I supported in testimony before a judiciary subcommittee, was reported out favorably on the same day I appeared. This bill would

provide three additional Federal judges in Texas, one of them in our northern district. This week, too, the independent offices appropriation passed (including funds for Dallas' Federal building site). The military construction bill included funds for the White Rock National Guard Armory, and for construction at the naval air station, and at Hensley Field.

Senate Heaps Praise on Senator Martin

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1958

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD the column of John M. Cummings, which appeared in the Philadelphia Inquirer on July 29, 1958. Senator MARTIN is most deserving of the praise and admiration evidenced by his colleagues in the United States Senate.

SENATE HEAPS PRAISE ON SENATOR MARTIN
(By John M. Cummings)

It is easy enough to understand why Pennsylvania's 48th United States Senator and its 97th Governor ducked a session of the world's most exclusive club in Washington the other day. There is one thing Senator ED MARTIN hesitates to face—praise of his record and his career.

Nevertheless, the praise poured forth until it covered nearly six pages of the CONGRESSIONAL RECORD. It came from the Republican and the Democratic sides of the aisle, proving once again that in a worthy enterprise our Senators are capable of rising above narrow political considerations.

From precinct worker to the United States Senate, from private to major general, ED MARTIN, over a long career, has unflinchingly faced the fire of the opposition, and there were times when he would have been justified in crying out, "Lord, save me from my friends."

The bipartisan praise heaped on Senator MARTIN was neither extravagant nor fulsome. It came from the hearts of those who uttered it and it was meant, every word of it.

Tall, spare and ramrod straight from his years of military service, Senator MARTIN is a quiet-spoken, even tempered guy until—and when that "until" takes place you had better head for the hills. He is the kind of bloke who would have twisted and squirmed had he been in the Senate the day his colleagues broke through the political barrier and traced his career from Washington County to the Philippines, to Harrisburg, to the battlefields of Europe; his return to the State capitol and on to Washington, where his second term in the Senate is drawing to a close.

It was this that brought on the testimonial session. Senator MARTIN having served his State and his country honorably and well, and approaching 80 is about to retire from public life. Indeed he let it be known shortly after his second election to the Senate he would not seek a third term. His successor is to be chosen this coming November. Voters will decide between the Republican nominee, Representative HUGH SCOTT, and Gov. George Leader on the Democratic side.

Senator CASE, a North Dakota Republican, led off in the Senate's laudation of the Pennsylvania soldier-Statesman. CHAVEZ, New Mexico Democrat; KERR, of Oklahoma, in 1950 a candidate for the Democratic Presidential nomination; CARLSON, Kansas Republican; KNOWLAND, of California, Senate minority leader; SMITH, New Jersey Republican; WILEY, Wisconsin Republican; THURMOND, South Carolina Democrat; CURTIS, Nebraska Republican; and BRIDGES, New Hampshire Republican, each in turn paid personal respects to Senator MARTIN and his remarkable political and military career.

Nor was his business life neglected. The Pennsylvania Senator has been over the years active in banking, in manufacturing, mining, and other enterprises.

It was in the nature of the Senate's farewell to the Senator from Pennsylvania who soon will hang up his toga and reach for—well, it is difficult to conceive of ED MARTIN reaching for his bedroom slippers. Certainly he has not lost his zest for public service. As an old comrade in the wars we join his colleagues in wishing him well.

"America, We're on Your Side"

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. DINGELL. Mr. Speaker, one of the distinguished leaders of the free world, an outstanding statesman, humanitarian, and a devoted servant of the people of the Philippine Republic is the Honorable Carlos P. Garcia, President of the Republic of the Philippines.

He is also a fearless friend of the United States, completely without hesitancy in speaking boldly on behalf of America and on behalf of the common ideals which his fine nation and ours share together. He takes the side of the United States at a time when we were never more sorely in need of friends in Asia.

Some remarks by that splendid President of a freedom loving people appeared in Parade magazine as an open letter to Americans under the heading "America We're on Your Side."

Pursuant to permission granted I insert those remarks into the CONGRESSIONAL RECORD with the feeling of contentment that the Philippine Republic should have such a splendid leader and that we Americans should have such a stanch friend and ally.

"AMERICA, WE'RE ON YOUR SIDE"—ON THE EVE OF A VISIT HERE, AN ASIAN LEADER TELLS WHY HIS PEOPLE SPEAK UP FOR DEMOCRACY
(By Carlos P. Garcia, President of the Philippines)

Several thousand miles and the blue waters of the Pacific separate the people of the Philippines and the people of the United States. We are of the East, you are the West. But for once the twain have met.

One reason why friendships sometimes erode and even founder is that partners take each other for granted. Many are the nations which have reason to be grateful to the United States. In all history it would be difficult to find a people who have displayed more generosity than Americans. That such generosity has not received full recognition is a matter for the conscience of the recipients. I intend that my conscience—and the conscience of my countrymen—shall be clear.

I think it is important to reaffirm our common interests, our common ideals, our common destiny. We, the people of the Philippines, want you to know here and now that you, the people of the United States, have a great credit balance in your favor.

We want you to know that should an occasion arise when your friends have to stand and declare themselves, you will not find the Filipinos on the sidelines.

As I have said, we Filipinos are of Asia. There are some 22 million of us, living on 7,000 islands that form a bridge and a bulwark across the South China Sea. Although we are Asians, we are nevertheless the third largest English-speaking nation in the world.

Our neighbors in Asia are sensitive about colonialism. We understand their feelings, for we have been a colonial people ourselves. But we have been able to discard old resentments, to fix our eyes upon the future.

You were our rulers for 50 years. But you were wise rulers. You made it known, from the start, that you did not intend to stay forever, and that your purpose was to prepare us for self-government.

You gave us education, modern medicine, new skills. You coached us in your own form of democracy. Our government and constitution now are replicas of yours, controlled by free elections, spurred by a free press, and dedicated to liberty.

But even such tutoring might have failed to win our full respect if you had not backed your ideas and your ideals with your blood, sweat, and tears in a savage war.

We learned that when your statesmen said "the Philippines for the Filipinos," they were speaking nothing less than the truth. We learned that you had no desire to exploit us, as other Asian nations had been exploited. Among ourselves we had always known the meaning of fair play. Now we discovered that the same principle could operate between nations.

Then we were plunged into the crucible of conflict. After Pearl Harbor we realized that it was no small decision for the United States to fight on for the Philippines to the last. Many excellent reasons could have been found for you not to have done so. But fight on you did with us, and how we honor you.

Friendship is sharing.

East and West joined hands for freedom at Corregidor and Bataan.

We were among the first to help you stem the Red tide in Korea.

We have stood with you in the debates in the United Nations.

We are partners with you in SEATO, the shield of free Asia.

We are fully aware of our common enemy, communism.

Almost alone in Asia, we have no fear of the West, no chips on our shoulders, no sense of inferiority.

Our land and our people are dedicated to freedom and our soil will always be available to the free world's forces.

If we have differences, you may be sure that they will not be differences in principle. And they will be resolved in the give-and-take of honest debate.

You have put us on our feet and we want to stand on them. We ask no charity. We have much to do to develop our economy, retarded and ravaged by war. But we seek to achieve our progress, not from handouts but through the normal channels of trade and industry.

We are a sovereign nation now. But we still seek your help, your guidance, your skills, your know-how. We can prove to the millions of our fellow Asians that they, too, can achieve a good life, as freemen, marching with dignity and justice.

To the American people I would says this. You have exported many things. You have poured out your wealth and inventiveness. But your greatest export of all has been

one word and all it embraces—democracy, the divine thought that "men are created equal."

Effective Date of Compensation Increases to Wage Board Employees

SPEECH
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

(Mr. REES of Kansas asked and obtained leave to extend his remarks at this point in the RECORD.)

Mr. REES of Kansas. Mr. Speaker, the bill S. 25, as reported to the House, is the result of over 4 months of hearings, consultations, and deliberations on the part of the committee. Immediately following the 2 days of open hearing on the bill, the executive branch of the Government interested itself in administratively improving policies and procedures which had been fundamentally responsible for the 6 to 7 months' delay in the granting of increases to the wage board employees of the Federal Government.

After numerous conferences with the departments and agencies, the employee groups, and other interested individuals, tentative procedures and policies were agreed to which would reduce the 7 months' lag to approximately 12 weeks. This period of 12 weeks or 60 working days was still considered by the committee to be excessive. The Senate, in acting on this bill, established a period of 30 days. The bill, as reported today, establishes a period of 45 days in which the departments and agencies are to conduct their surveys, analyze their data, and issue the new wage scales. I believe that this 45-day period is within reason and that if all parties concerned make every effort to improve on the relationships and activities involved, no retroactive pay will result.

In considering the provisions of the bill as it passed the Senate, it was found that the two types of wage-board activities were not recognized. These two types involve different time periods and different procedures and methods. One type is where the agency conducts its own wage survey for the establishment of the salaries of its employees. The second type is where a department or agency uses the results of a survey conducted by another department or agency. So as to recognize and provide for these two systems, it was necessary that the Senate language be struck from the bill and new language substituted.

With the exception of the 45 days provided in the House bill and the 30 days provided in the Senate bill, there is very little difference in the overall provisions of the two bills. The House bill does establish an effective date on which the provisions of this act shall be applicable. The committee, in its consideration of the administrative problems involved, determined that the 45-day limitation should not apply to wage-board surveys which had begun prior to September 1 of this year. This action was to eliminate any undue and unjustifiable administrative difficulties involved.

I sincerely believe that the 7 to 8 months' lag in receiving pay increases experienced by our some 650,000 wage-board employees is unjustifiable, unnecessary, and a distinct hardship on the employee. I feel that the provisions of this bill are workable and that they will bring the salaries of our wage-board employees more quickly into alinement with the salaries being paid in private industry. The sole principle on which the wage-board system is based is that the Federal salaries shall be equivalent to salaries being paid to private employees in the local area. I feel that for the first time this principle will be met with the enactment of this bill.

The Central Problem in Lebanon

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 25, 1958

Mrs. BOLTON. Mr. Speaker, William S. White in his column of July 25, which appeared in the Cleveland Press and other leading newspapers across the country, reminds us that salvation of the entire Middle East lay behind our action in Lebanon. As this veteran reporter so properly indicates, the central problem is whether the free world will be intimidated by the violent overthrow of established governments under the guise of Nasser "nationalism."

Believing that Mr. White's article commends itself to wide reading, under unanimous consent I insert it in the Appendix of the RECORD:

DON'T FORGET THE BODIES IN IRAQ'S PALACE
(By William S. White)

WASHINGTON.—The courage and decency—and harsh necessity—of the allied intervention in Lebanon and Jordan is being submerged in a sea of collateral arguments and valid complaints that the future is far from bright.

It is plain that legitimate questions—but secondary questions all the same—are causing many to lose sight of the central problem. This problem was, and is, simply the salvation of the Middle East from an ugly chaos that would lead in time to the enfeeblement, if not the destruction, of the free world.

The problem is not whether intervention will settle everything; nobody ever supposed it would. It is, regrettably, not even whether the uninvolved world likes what we have done. And it is not of controlling significance whether the chaos was being prepared on direct Moscow orders or by what is called by the curiously soft term of Nasser nationalism.

Whoever was preparing it, it was demonstrably just what President Eisenhower said the other day it was—"violence, murder, and terrorism as instruments of international policy."

This may be the new nationalism—that movement so attractive to so many in their recoil from colonialism. But in a less sophisticated time it would have been called in plain truth by another name. That name is gangsterism.

Even those who have most ably opposed the landings in Lebanon and Jordan have not offered much alternative apart from one form or another of diplomatic negotiation.

The dead bodies in the little palace of Iraq might well have been followed by dead bodies elsewhere if President Eisenhower and Prime Minister Macmillan had not sent troops rather than notes.

But the heavy pressures on Macmillan by the British Labor Party and the undoubtedly strong and high-minded public pressures on Eisenhower here are clearly weakening western will. Many—including this correspondent in a small way—had long criticized Eisenhower for not acting in the world drift.

Most of these critics now upbraid him for the action he has taken. This does not prove that they are wrong now. But it puts a burden upon them to face up to the real, the central, issue, and not to speak as though there had been all the time in the world to make a tidy response in the Middle East.

Quick Adjournment Could Save Billions

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. VURSELL. Mr. Speaker, it would appear to me that the greatest service the Democrat leadership of the House and Senate could render to our people would be to adjourn the House and Senate as quickly as possible.

By a quick adjournment we could save the taxpayers, who are the Government, probably $6½ billion in bills now pending, none of which are necessary and much of it will be wasted, and, a constant burden on the taxpayers.

The Democrat leaders have it within their power to bring about an early adjournment and to prevent passing this spendthrift proposed legislation because they have a majority in both the House and the Senate.

On July 11, the Senate passed a second housing bill authorizing the additional expenditure of $2.4 billion of Federal funds.

Taking these two housing bills together, $1.8 billion in the earlier bill and $2.4 billion in this bill, the Senate has authorized $4.2 billion for housing this year, or almost $3 billion more than requested by the President.

In addition, the House has now pending another bill known as the Community Facilities Act, which would provide that we appropriate $2 billion to be loaned up to 50 years at 2⅝-percent interest, for the building of sewers, disposal plants, recreational facilities, parking lots—bowling alleys, and so forth—to any community or municipality in the United States. This at a time when every municipality is more able to finance their own improvements than is the Federal Government which would have to borrow this money by selling bonds to the taxpayers. There is an abundance of funds throughout the Nation that could be borrowed from private lending market at around 4 percent. This proposed legislation would

entice the borrowers to come to the Government because of the low interest rate, and refuse to borrow from private sources.

In addition, Democrat leaders in the Senate are insisting upon increasing the Defense appropriation by $1.6 billion more than the President and the Secretary of Defense, and the Joint Chiefs of Staff feel is necessary, which would increase the Defense budget to over $40 billion.

It would seem that with the great increase in the maximum defense budget that the President and his expert leaders in the military ought to be better judges of the amount of funds needed than the Democrat armchair strategists in the Senate.

There are 2 or 3 other bills proposed for political purposes for this election year that would also increase the budget expenditures by at least a billion and a half dollars this year, and some of this legislation, none of it needed, would fasten the Government with a program or socialistic spending that would run into billions of dollars in the years ahead.

This adds up to a neat sum of $6 billion extra burden of expense annually throughout the years ahead to the taxpayers of the Nation, and much of it will be passed if Congress remains in session.

Housing Administrator Albert M. Cole has blasted as spendthrift the housing bill to which I refer, and indicated that President Eisenhower would veto this bill if it is finally enacted. He ought to know whether such legislation is necessary. Mr. Cole said, "No more housing legislation is needed this year."

Cole called the housing bill a Christmas tree loaded for the benefit of everyone in sight except the taxpayer. The same liberal spenders behind this waste in billions of funds are the ones who have backed socialistic Federal housing throughout the years until our loss today on public housing alone will run over $5 billion, with a committed loss on the part of the Government of nearly $2 billion for urban renewal.

All of the farmers, the laborers, the little businessmen and all taxpayers in the Nation, nine-tenths of whom never receive any benefits, are taxed each year to pay the above-named losses.

I think it is unfair to the people in my district and likewise to the people in other districts who sustain their own homes and pay their own rent and high taxes to have to help pay a part of the rentals of tose who occupy modern public housing in the big cities.

And it is unfair to the same taxpayers to have to help facelift and rebuild and improve the big cities hundreds of miles away with billions of dollars that should be improved by taxes from the citizens where they are located.

It is to be hoped that a quick adjournment might save a part of this proposed useless waste.

Death of Dr. R. T. Wells

EXTENSION OF REMARKS
OF

HON. NOBLE J. GREGORY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. GREGORY. Mr. Speaker, recently the city of Murray, Ky., located in my district, lost a great citizen, politician, and educator. He was Dr. Rainey Thornton Wells, who passed away June 15. Dr. Wells was a close and personal friend of mine. He was responsible for the location of Murray State College at Murray, Ky.; was the leader in raising funds to build the college and served as the second president of that institution from 1926 until 1933. One of the best loved figures in the State of Kentucky, Dr. Wells was celebrated as a political, civic, educational, and religious leader. Since his death, many tributes to him have been printed, among them articles in the College News, student publication at Murray, the Paducah Sun-Democrat, the Murray Democrat, and the Louisville Courier-Journal. Under unanimous consent to extend my remarks, I offer these articles for publication to the RECORD:

DR. R. T. WELLS, 82, MURRAY STATE COLLEGE FOUNDER, DIES—LEADER OF DRIVE TO BRING COLLEGE TO MURRAY, WAS SECOND PRESIDENT

Dr. Rainey T. Wells, founder and former president of Murray State College, died Sunday, June 15, at his home in Murray.

Funeral services were held Tuesday, June 17, at the First Methodist Church. Dr. Wells was 82 years old.

As a politician, Dr. Wells was responsible for locating Murray State College in Murray; as a civic leader, he headed the drive to raise $100,000 to meet the city's end of the bargain; and as an educator, he was the second president of the college, serving from 1926 to 1932.

Wells taught in the public schools of Jackson's Purchase for 6 years. He was a trustee of Murray city schools for 10 years and a member of the board of trustees of the University of Kentucky for 12 years.

SET MURRAY STATE PATTERN

He was city attorney of Murray, a member of the house of representatives three terms, and chairman of the State tax commission. He achieved a national reputation in the field of fraternal insurance as general counsel for Woodmen of the World, Omaha, Nebr. He served in this capacity from 1932 to 1949. He retired in 1949 and returned to Murray to live the remainder of his life.

Under the guidance of Dr. Wells, Murray State College assumed its present pattern. During his presidency it became a 4-year college and was admitted to the Southern Association of Colleges and Secondary Schools. The enrollment grew from 400 to 1,000 and the plant expanded from 1 to 8 buildings.

ENTHUSIASM CONTAGIOUS

Wells named the football team the Thoroughbreds. Under him Murray was admitted to the Southern Intercollegiate Athletic Association. Wells Hall, a dormitory on campus, was named for him.

But above all, Wells was an energetic bundle of contagious action. His personality dominated, whether the scene was a camp of hunters or fishermen, a meeting of the Rotary club, prayer meeting at the Methodist church, a political convention, or chapel exercises at the college.

On the campus, Wells had the knack of leading songs at chapel, making freshmen forget their homesickness, shouting an athletic team to victory, and inspiring his student body to frenzied heights of school spirit.

BORN ON CHRISTMAS DAY

His was always the heartiest laughter, the sharpest conversation, the most contagious enthusiasm. This was so even when he and Mrs. Wells returned to their beautiful colonial home south of Murray in 1949.

Rainey Thornton Wells was born Christmas Day 1875, at Murray. He received his bachelor of science, bachelor of arts, and master of arts degrees at Southern Normal University, Bowling Green. He obtained his doctor of laws from the University of Kentucky in 1927.

He is survived by his wife, the former Tennie Daniel of Murray, whom he married in 1896; 2 daughters, Mrs. Joe T. Lovett, Washington, and Mrs. Gordon Banks, Fort Wayne, Ind., and a son, O. S. Wells, Omaha. He is also survievd by 6 grandchildren and 7 great-grandchildren.

DR. RAINEY WELLS, MURRAY STATE FOUNDER, DIES AT 82

MURRAY, KY., June 16.—Dr. Rainey T. Wells, founder of Murray State College, died Sunday at Edgewood, his estate near here. He was 82 years old and had been ill the past 2 years.

One of the best-loved figures in the State, it was Dr. Wells who almost single-handedly established the college in his home town. He served as the second president of the college from 1926 to 1933.

He also is credited with locating the State capitol and governor's mansion at their present sites in Frankfort.

Dr. Wells' long career embraced the professions of educator, politician, civic and religious leader.

Without Dr. Wells, Murray State College never would have existed.

LED VIGOROUS BATTLE

When people began talking about establishing a college in the Purchase area, Dr. Wells acted. He led the fight that created the college and located it in Murray. His townspeople, at his urging, contributed $100,000 to put the college where it is today.

The 2-year Murray Normal School opened its doors on September 24, 1923.

When the Normal needed money, Dr. Wells got it, not only for Murray's school but for all schools in Kentucky. He wrote the bills and fought the foes who wanted to replace the college with a hospital or even destroy it altogether.

While in the legislature, where he served three terms, he helped pass a bill clarifying the State allocation of funds to colleges. The bill since has been replaced by one similar in nature.

Before Dr. Wells' time, State colleges had to go to the legislature and lobby for funds. He set the appropriations at a uniform level.

From 1906 to 1920 he was a member of the Kentucky Tax Commission.

SELECTED FACULTY

Dr. Wells even planned the campus and the buildings, giving the college the basic features it displays today as one of the most beautiful campuses in the South. He personally selected the faculty and directed the policy.

From a 2-year normal school it became a teachers' college and finally a full-fledged college.

It was typical of Dr. Wells to act while others talked.

When he was a member of the general assembly in 1904, discussion began about allocation of funds for building the capitol.

In a special session called early in 1905 Dr. Wells announced to the assembly that he had bought options on and for both the capitol and the executive mansion and had drawn up a bill allocating funds for their construction.

The legislature passed the bill, and the governor signed it into law.

Dr. Wells was born on Christmas Day in 1875. He attended Huntington Normal College and the University of Kentucky. He was admitted to the Kentucky bar on August 8, 1901. He retired from the profession in 1947. He was admitted to practice before the United States Supreme Court in 1933.

For 8 years he was a trustee of the University of Kentucky and served for a time as trustee of Nebraska Wesleyan College and a girls' school in Omaha.

It was Dr. Wells who gave the Murray athletic teams their distinctive nickname, "Thoroughbreds."

When he resigned the presidency of Murray on January 1, 1933, he did so to become general counsel of the Woodmen of the World, moving to Omaha to fill that position. He won cases of national significance while employed by that fraternal group.

Even while in Omaha he helped his friends back in Kentucky. His counsel was helpful to members of the Lower Tennessee Valley Association in their long fight for Kentucky Dam.

Besides his legal and educational activities, Dr. Wells was an active leader in his church. He was a Methodist.

Dr. Wells is survived by his widow, the former Miss Tennie Daniel of Calloway County; a son, O. Stum Wells of Murray; 2 daughters, Mrs. Joe T. Lovett of Washington and Mrs. Gordon Banks of Ft. Wayne, Ind.; and 5 sisters, Mrs. Anna Lassiter, Mrs. Betty Lassiter, Mrs. Helen Lassiter, Mrs. Frankie Meadow and Mrs. Houston Strader, all of Murray.

The body was taken to the home at 9 p. m. Monday, where it will remain until 1 p. m. Tuesday. It will then be taken to the college auditorium and lie there until 2:15 p. m.

It will be taken then to the First Methodist Church, where funeral services will begin at 3 p. m. Burial will be in Murray city cemetery.

MURRAY FOUNDER, DR. WELLS, DIES—WAS LAWYER, PUBLIC OFFICIAL, AND EDUCATOR

MURRAY, KY., June 15.—Rainey T. Wells, founder of Murray State College, died Sunday at his home here. He was 82.

Perhaps no man of his times made a greater impact than Wells upon the cultural, political, and civic affairs of this part of Kentucky west of the Tennessee River known as Jackson's Purchase.

As a democratic politician, he maneuvered the location of the State college at Murray in 1922–23. As a civic leader, he headed the local drive for $100,000 to meet Murray's end of the bargain. As an educator, he was second president of the school, serving from 1926 to 1932.

A LAWYER OF DISTINCTION

He was a lawyer of distinction. As general counsel for Woodmen of the World, Omaha, Nebr., from 1932 to 1949, he achieved a national reputation in the field of fraternal insurance.

He was a candidate for governor at the 1931 nominating convention of the Democratic Party at Lexington. He was city attorney of Murray as a young man, a member of the House of Representatives three terms, beginning in 1902, and chairman of the State Tax Commission during the Fields administration, 1923–27.

As a youth, Wells taught in the public schools of Jackson's Purchase for 6 years. He was a trustee of Murray city schools for 10 years, a member of the board of trustees of the University of Kentucky for 12 years.

Wells not only witnessed, but was a participant, in the radio demonstrations of Nathan B. Stubblefield in the early 1890's at about where the Murray State College campus now is located.

Later, as an attorney, he represented Stubblefield in his legal fight for recognition as the Nation's first inventor of workable radio. A monument to Stubblefield now stands on the Murray campus.

But, above all, Wells was an energetic bundle of contagious action. His personality dominated, whether the scene was a camp of hunters or fishermen, a meeting of the Rotary Club, prayer meeting at the Methodist church, a political convention, or chapel exercises at his college.

On the campus, Wells had the knack of leading songs at chapel, making freshmen forget their homesickness, shouting an athletic team to victory, and inspiring his student body to frenzied heights of school spirit.

His was always the heartiest laughter, the sharpest conversation, the most contagious enthusiasm. This was so even after his retirement in 1946, when he and Mrs. Wells returned to their beautiful colonial home south of Murray.

It was during the presidency of Wells that Murray State College assumed its present pattern. At first, it was only a 2-year normal school. Under him, it went to a 4-year college and was admitted to the Southern Association of Colleges and Secondary Schools. The student body grew from 400 to 1,100, and the plant was expanded from 1 to 8 buildings.

GAVE TEAM ITS NAME

The general design of the campus is his. He laid the foundations of the strong music department now featured, and imparted especially strong zeal to athletics. Murray was admitted to the Southern Intercollegiate Athletic Association under him. He dubbed the football team the Thoroughbreds. A women's dormitory, Rainey T. Wells Hall, was named for him.

Rainey Thornton Wells was born Christmas Day, 1875, at Murray, the son of J. K. P. Wells and the former Fannie A. Thornton. He was educated at old Southern Normal University, Bowling Green, acquiring there the B. S., A. B., and M. A. degrees. His LL. D. was obtained at the University of Kentucky in 1927.

Wells continued his interest in education during his long residence at Omaha. There, he was a trustee of Wesleyan University, Lincoln, Nebr., and of Brownell Hall, Omaha, as well as a member of the leading civic organizations of Omaha.

He is survived by his wife, the former Tennie Daniel, of Murray, whom he married in 1896; two daughters, Mrs. Joe T. Lovett, Washington, and Mrs. Gordon Banks, Fort Wayne, Ind., and a son, O. S. Wells, Omaha. He is also survived by 6 grandchildren and 7 great-grandchildren.

DR. R. T. WELLS, MURRAY STATE FOUNDER DIES

Dr. Rainey T. Wells, founder of Murray State College, died at his home, south of Murray, Sunday afternoon at 1 o'clock, following an illness of over 2½ years. He was 82 years of age.

His death marked the end of the most notable character in the community and one who contributed more to the well-being of Murray than any single individual.

Not only was Dr. Wells interested in the location of Murray State College at its present location, he was also a guiding influence in the permanency and national influence of the Woodmen of the World as a mutual insurance organization.

Dr. Wells was selected as president of Murray State College from the years 1926 to 1933. During his tenure as director of Murray State Normal School, he developed the institution from a mediocre State-supported school of higher learning to one of the most influential colleges of the State. He not only is personally credited with the establishment of the school that has contributed so much to the well-being of the city, but he gave to it the drive and forcefulness that marks it today as a first-class college in the Commonwealth.

The Murray State Normal School was originally designed as a 2-year institution in 1923. Never once did Mr. Wells lose sight of the importance and the potential of the college as a community asset and his untiring efforts resulted in the institution of high respect that it is today.

As a member of the Kentucky Tax Commission he conceived of the possibility of locating a school at Murray and exercised his influence as a member of the commission to effect its location in this community.

Dr. Wells served as a member of the Kentucky Legislature for 3 terms and during this time he laid the strategic groundwork that culminated in the selection of his home community as a place for a State institution of higher learning. Not only his influence as a State legislator in the location of a State college at Murray manifested itself, for he had a tremendous influence in the location of the present State capitol and the mansion. He is credited with authoring measures that made possible the two structures.

Dr. Wells attended Huntington Normal College, Tenn., and the University of Kentucky in attaining his teaching and legal training. He was admitted to the bar to practice law in 1901 and formally retired from practice in 1947.

Dr. Wells has been the inspiration of many news articles authored by Prof. Joe Hortin of Ohio State University and formerly of Murray State College. He has contributed most toward publicizing the fact of Dr. Wells' contribution to the educational world. Each year Professor Hortin offers articles for publication on his birth date, Christmas, 1875.

For 8 years Dr. Wells was trustee of the University of Kentucky and in that capacity he served with distinction in the development of Kentucky's central educational unit. In addition he also served as trustee for Nebraska Wesleyan College and a college for girls in Omaha, Nebr. Until the very end Dr. Wells was personally interested in the educational advancement of American youth.

Despite the handicap of ill health, Murray State College each year paid him noble tribute as a special honored guest at homecoming games; and, upon every occasion that he was able to attend, Dr. Wells was a center of admiration. Dr. Wells gave to the athletic teams the nomenclature of Murray State "Thoroughbreds."

Dr. Wells has always been interested in the well-being of the Murray Methodist Church where he held membership for many years. He served in the capacity of Sunday school superintendent and youth leader for many years as a young citizen of the community. He personally led the drive to build the annex on the old church building many years ago.

Surviving members of the family include his wife Mrs. Tennie Wells; a son Stum Wells of Omaha, Nebr.; two daughters, Mrs. Gordon Banks of Fort Wayne, Ind., and Mrs. Joe Lovett of Washington, D. C.

Funeral services were held this afternoon at 3 o'clock at the First Methodist Church with the Rev. Paul Lyles in charge. Burial was in the City Cemetery.

The city of Murray, through the mayor, Holmes Ellis, has proclaimed an hour of mourning from 3 to 4 p. m. in honor and respect to the departed leader.

REPORT TO THE PEOPLE

Sleepy little towns in the Southland are pleasant places in which to live and die, rear children and be modestly happy. Murray was such a typical community for some 50 years with the population fluctuating between 2,000 and 3,000 persons. For the first 20 years of this century, our little town hovered over the 2,900 mark with the deaths and the births reasonably well in balance.

Just such a sample town could have been ours for the next 100 years had it not been for the good fortune of having been born in the county one son of Mr. and Mrs. J. K. P. Wells. No single person has contributed more toward the development and full bloom of our community than has been accomplished by our late and most honored Rainey T. Wells. It would be difficult for any one to create another even in our imagination who would be competent to meet his accomplishments.

Thus in our Calloway County Hall of Fame a new figure takes his place alongside any others who have made vast contributions to the betterment of our way of life. To category Dr. Wells and to classify him one and apart from the several distinguished citizens would be difficult for many people, but not to the thousands of young men and women who have been influenced by his acquaintanceship.

To classify our illustrious leader as a statesman scarcely fills the description most acceptable. An educator, yes; on the other hand his diverse life many times took him far afield of the realm of education. A lawyer? Of course, but it was only a means to an end and a partial source of livelihood. His knowledge and his vibrancy took him far afield in a successful career as an executive of the Woodmen of the World. His accomplishments as a politician were remarkable and he ranks high with our most courageous and most dependable, however the title is not acceptable to those who have known him through the many years. A church layman? Certainly, but that is not all.

How can a compensating title be lifted from this multitude of accomplishments without grasping a single denominator that sparked each manifestation of Mr. Rainey's life. Without hesitation, we give title to our departed neighbor as "Mr. Organizer." Also without hesitation we are of the opinion that he fired more young boys' hearts to loftier ambitions than any single man living in this county.

Possibly his greatest contribution to Calloway County in this opinion is one that has not been entertained by many people, however we do believe that the lovely little companion, "Miss Tennie," will agree with us it was one of his first, one of his noblest, of human manifestations. He organized a common goal of human interest among a population torn asunder with politics, civil war, religion, and factions. He found an acceptable course of community development with his, and his alone, Murray State Normal School. All differences melted away in the new adventure spearheaded by a human dynamo of enthusiasm. Not a man, woman, or child hesitated to accept his leadership and for the first time since the founding of Calloway County, the shelter of human understanding roofed our coexistence.

Where is that leadership today that could weld together our diverse views toward a common objective and mutual understanding that by the hour worsens with each precinct recount? Where is that guiding hand that would be as welcome in one Democratic faction as in another? Scant hope can ever be held out for the phenominal growth, prosperity, and happiness of our county until once again we rediscover another Rainy T. Wells in whom we can maintain comparable faith through the years.

The reminder is made of the Woodmen of the World encampment out at the old fairgrounds. Drill teams across the Nation competed with axes used as sidearms. The guiding hand behind the scene that brought the big event was you know who, but he did not have the slightest idea that at some day he would be one of its guiding hands. The event was spectacular and became legendary in the memory of Calloway County folks.

The big stroke of Mr. Rainey's life occurred while he was a member of the Kentucky Tax Commission. As a member he was in a vulnerable position to exact his toll for the common welfare of the city of Murray, and he placed Murray in a competing position for the location of a State college in this section of the State. He executed the coup with finesse of the master.

To place Murray in a favorable position he prompted the college stipend of a hundred thousand dollars well in advance before Mayfield or Paducah could get in the running. The investment was well calculated and paid off according to advanced odds. He was named the second president for the school and his invaluable service spelled the difference between success and failure. He gave Murray State the needed punch to make it a fighting and growing institution of learning.

After a tenureship as director of Murray State Doctor Wells turned to the advancement and welfare of the Woodmen of the World. He resigned his position at Murray State and became chief counsel of the Woodmen of the World. His directorship of the latter was of national significance and his organization he directed prospered.

Upon attaining retirement he returned to his native home and once again became one of our respected and beloved citizens. Although handicapped by age and declining health, he was once more a prime target of advice for the most talented politician. To the last he was vitally interested in the well-being of his community. Only 2 nights ago he asked for the latest occurrences of the political front and was transmitted the information and offered his suggestions.

Thus ends a life worth his weight in gold to Murray and we will always be grateful to the mayor of the city who has proclaimed the hours of 3 to 4 p. m. Tuesday as an hour of mourning to the man who has given more and taken less in return than any human being ever to live in our community. To Mrs. Wells, Laurine, Geneive, and Stum we share the vacuum that is yours when you turn for the sympathetic understanding of your one and only dad. From experience we can say in advance there will be no one who can match his wisdom and understanding.

What Sort of Praise?

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S. C., of July 21, 1958.

WHAT SORT OF PRAISE?

The Arkansas Gazette, the newspaper that won applause in the North for its editorial policy of approving bayonet rule in Little Rock, has published a handsome self-congratulatory brochure.

The foreword to the brochure states that the Arkansas Gazette takes pride in recording its Pulitzer Prize citations "together with a handful of the hundreds of gratifying editorials these awards occasioned in the United States press."

It is a very interesting collection of editorials. These are editorials of praise from the leading pro-integration newspapers, including the Washington Post, the New York Times, the St. Louis Post-Dispatch, the Philadelphia Inquirer, and the Chicago Daily News.

Strangely absent are editorials from the South, the region affected by the race-mixing policies of the integrationists. To be sure, there is an editorial of praise from the Tampa Morning Tribune. The editorials of praise from the Atlanta Constitution, and the Charlotte Observer shouldn't be considered as reflecting the southern views. Both newspapers are controlled by financial interests outside the South.

It is nice for a newspaper to be admired by journals published in faraway places. Frankly, we think it is nicer to be respected by the people in one's home community and region. They are likely to be better judges of the facts on which editorial comment is made.

The self-congratulatory brochure fails to mention the fact that the Arkansas Gazette has lost circulation in its territory and that the overwhelming majority of southern newspapers spoke out against the bayonet rule in Little Rock that the Gazette endorsed. (News and Courier.)

Self-Employment Security

SPEECH

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1958

Mr. PHILBIN. Mr. Speaker, I commend our able distinguished friend and colleague, Mr. KEOGH, and his capable associates for the long-sustained, successful work, which has resulted in the pending measure, H. R. 10, to encourage the establishment of voluntary pension plans for self-employed individuals.

The merits of this measure have long been obvious to me and I have been privileged to join in efforts being made to bring it to the floor of the House for passage.

It is felicitous that this question has been considered on its merits and it is untouched by even a suggestion of critical partisanism. In complimenting those who worked so hard and ably on the measure, I realize that it would not be appropriate for me at this time to enter into any lengthy analysis or exposition of the bill. Its purpose and its intent is manifest. It seeks to remove certain discriminations against self-employed persons by entitling them to qualify like other employees for certain contributory pensions.

In its operation, it would remove the present tax disadvantage for self-employed proprietors and partners and to that extent provides a measure of relief

for the small-business man that will be very welcome in these days when small business as a whole is not receiving its due share of the national product.

The bill applies to persons, who are subject to the tax on self-employment income, as well as doctors and ministers. It allows these individuals to deduct up to 10 percent of their earnings from self-employment, but not over $2,500 a year, for amounts paid into restricted retirement insurance policies or restricted retirement trust funds. It will be applicable to persons over 50 years of age on January 1, 1959, who would, under its terms, be permitted higher annual deductions.

It contains a lifetime ceiling of total deductions of $50,000 per taxpayer reducible in the case of individuals, who have previously withdrawn employer contributions under a qualified pension plan or have received nonforfeitable rights to employer contributions. There are several technical provisions in the bill, which imposes various limitations on its retirement program provisions.

Before the bill takes effect, insurance companies must make available insurance policies that meet the specific requirements of the bill and banks will be in a position to establish trust funds meeting its requirements. These steps cannot be taken until the Treasury issues detailed regulations, outlining the rights and responsibilities of the banks and the insurance companies.

I realize the administration has raised certain objections to the bill, which the committee has endeavored to meet, but on the whole I think that the bill is a step in the right direction and believe it will be of considerable help to self-employed persons without costing the Treasury much money.

Every time the Congress moves to reduce taxes objections are raised that the reduction will cost the Treasury too much money. It is my opinion, however, that these objections are not valid in every instance and neither are they true in some instances. I have felt right along that a general tax reduction bill, instead of costing the Treasury money, in the long run would bring in new revenue. I think that there are many authoritative economists who take the same view, and while I highly approve of this bill, I regret that the Congress did not move during this session to put into effect some long overdue tax reductions. I think that such reductions would do more to eliminate present depressed economic conditions in some parts of the country more effectively than any other method that has been tried to date.

Grassroots Politics

EXTENSION OF REMARKS

OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 15, 1958

Mr. BEAMER. Mr. Speaker, I was pleased that Indiana and especially the Fifth Congressional District was chosen as typically American by the Wall Street Journal. There are 10 counties in this district that I am privileged to represent and all of us who live in that area feel that we are a wholesome cross section of agriculture, industry, and culture and good, honest living.

One of these counties was visited by Mr. John F. Bridge recently and he has given a thoughtful analysis of his observations. Under unanimous consent, I include this article from the July 28 issue of the Wall Street Journal in the Appendix of the RECORD.

GRASSROOTS POLITICS—THE WORLD CHURNS BUT A LOCAL LEADER MUST TEND OWN BACKYARD

(By John F. Bridge)

HUNTINGTON, IND.—As President Eisenhower maneuvers his precarious Middle Eastern course, Thomas M. Watts is holding his breath more than most Americans.

A student of history and a thoughtful young man, he is of course concerned for his country. But also he has a certain position in the American political structure which makes him peculiarly sensitive to what will happen in the Middle East. Mr. Watts is a county chairman, specifically of the Republican Party in Huntington County, Ind. And he wonders: Just what are the voters here really thinking about that Lebanese intervention? And more importantly, what will they be thinking by the time of this fall's elections?

It is Mr. Watts' job to get out the vote in his county, and to see that it is a Republican vote. As part of that job he organizes the local campaign that is supposed to accomplish those objectives. And as part of that, in turn, he also dispenses patronage to good and deserving Republican Party workers—some 50 to 60 jobs under his direct control, as well as some right of review on all State and Federal appointments to Republicans in his county.

DRAWS NO PAY

For this he draws no pay; in fact he perhaps loses because of time taken off from the concrete block business he operates with his father. But there are other compensations and, in the case of Mr. Watts, a possibility that his political activities may in time yield him financial benefit—wholly legal and acceptable under the United States political system as practiced on the county level. But that is contingent on a number of things including continued success as a politico, and in part that hangs on such things out of his control—like what Khrushchev or Nasser or another Middle Eastern street mob may suddenly do.

Right now, in his area, he finds his own party members divided on the Middle Eastern intervention. One group believes that the United States had the commitment and so it was right to honor it. Another group believes there should have been no involvement in the first place, but isn't sure what to do now. He believes most Democrats in his area favor the move.

As to the effect on his party's prospects, he says, "that still depends on what happens, how bad things get." He adds: "If the situation there worsens—well, that would not have a good effect. If the situation resolves itself relatively peacefully within a week or two, it probably will have no appreciable impact." And he adds: "Of course, the alternative to Republicans is Democrats—and they aren't noted for staying out of trouble abroad."

Meanwhile, in Huntington, as most places, there are many issues that are bigger than the intervention of the United States in Lebanon, short of war. There is the business recession, which seems to be lessening—and in this town of 15,000 there is less grumbling than might be expected. There are crop prospects which are good, and farm prices which are higher than they have been. These are the issues of daily life here and Mr. Watts counts voter sentiment toward them as on his side.

Then there are national issues which strike closer to home, or are more understandable. Sherman Adams, for example. The President may not have made up his mind, but Mr. Watts has. "Most people around here think he's just about got to go. If he's still in office in the fall, that will do quite a bit of harm to the Republicans here. If he goes pretty soon, we'll hear a lot about it in the fall campaign, but I think we'll do all right."

NEGLIGIBLE IMPACT

The sputnik and education crises didn't hit Huntington overly hard. There has long been a feeling that education was becoming too frilly, but the political impact has been negligible. People were irritated at the failure of the Vanguards, but, in Mr. Watts' opinion, not overly upset because the Russians had gotten off first in the race into space. There is still a feeling that United States technology generally is ahead, and that this will prove more important in the end.

The youthful politico is of course not out to knock his party. But there are areas where he does not hesitate to note voter unhappiness. His State has a reputation for conservatism; Republicans hold both Senate seats, 9 of the 11 congressional districts, the governorship and both houses of the legislature. By and large there are conservative Republicans; and the Democratic party has its most success with nonliberal candidates.

So Chairman Watts is hardly a maverick when he ticks off Federal spending, high Federal taxes, Federal intervention in State and local affairs, Federal interference with farm and business, and foreign aid as things that excite ire among Republicans in his county.

On foreign aid the feeling is that it is not doing much good, if any good; any aid ought to be military aid to some allies who might be of use. The voters often write to him as well as their Congressmen along this line. As to the big Federal budgets, Mr. Watts feels the voter ire "particularly when we go after campaign contributions. People writing out a check sometimes stop for a minute—and we get it," he says wryly.

About half of Huntington County's 30,000 people are farmers and the vote from those areas is more strongly Republican than in the town of Huntington. "There is a definite feeling among these farmers"—and Mr. Watts carefully separates his farmers from those elsewhere in the Nation—"that there has to be a withdrawal of Federal interference. The farmers are confused by the controls; it is hard to get Republican farmers very enthused over new ones. The various stabilization programs find mostly Democrats on the boards."

Getting Federal Government out of local and State affairs strikes Mr. Watts as the great basic national issue of the times. He thinks most Republicans in his county agree with that idea. And he says that basic belief "and the desire to try to put it into action where I could" is a main reason he went into politics.

To the visitor, who grew up in a time when politically minded bright young men were rushing off to Washington to help put more Federal Government into local affairs, this seems something of an indicator of the times. Certainly young Mr. Watts, if starry-eyed, is getting his stars from a different quadrant.

But one can doubt that this particular young man has much of the starry-eyed in him. He is quiet-spoken but large—about 6 feet tall. One senses that there is quite a bit of toughness beneath the exterior of

this pleasant and rather handsome young fellow who might just as well be an up-and-coming junior executive for some giant corporation—indeed, for the first 2 years after he graduated from Albion College in Michigan he was with General Electric as a trainee.

KNEW HE WAS BOSS

"Some of the old courthouse hands thought they would push Tom around a bit, when he first took over," a long-time Huntington Republican recalls. "But before they were through, Tom had the resignation of one and the rest knew he was boss in fact."

Mr. Watts came to Huntington 6 years ago to join his father in operation of Huntington Concrete Products.

He had never taken part in politics, even in high school near Detroit or at Albion. But in 1954 a precinct committeeship fell open in the precinct in which he lived. He was interested, partly as a hobby but also because it does not do anybody any good just to sit on the outside and complain. He ran for the post and won. A year later he moved to another precinct and became a committeeman there, too. The following year he became city Republican chairman in a hot mayoralty campaign, elected his man, and in 1956 became the youngest county chairman in the State.

In Indiana a precinct committeeman is a very key figure, in either party. He (or she) usually serves without pay, but is required to make an annual poll—personally contacting every voter in the precinct and reporting to the county chairman. The poll's purpose, of course, is to keep the voters in the party camp and win new voters for the party. In the course of the visits the committeeman is bound to hear what voters don't like about their party, and bound to tell the county chairman. In Huntington County there is one precinct in the town that has 1,000 voters. One in the county has only 200, but it is no simple matter for the rural committeeman to poll even that number.

There are in Huntington County some 600 to 900 active party workers. And, says Mr. Watts, there are always plenty of applicants for the jobs and generally speaking it is no problem to find among them someone who is both competent and politically acceptable.

Mr. Watts believes this system is altogether right and so do most of the people in the county. "To the victor belongs the spoils" bears no overtones of the opprobrium one finds in political-science textbooks. It is a simple statement of fact to Mr. Watts, and a viable part of the American political system. "Administration of policy set by elected officials ought to be by people loyal to the policy—else it won't get across," he declares.

Some examples of local patronage? A former Republican county chairman of Huntington County had also been county sheriff; now he is the State inspector of jails. A former Huntington chief of police is now employed as an arson inspector. Mr. Watts has supplied State drivers license examiners for three counties from his loyal Republicans. One of these was a precinct committeeman who had served many years, but who at 50 was unemployed when a local factory closed. "It was an opportunity to supply a good man who was a loyal party worker," Mr. Watts states.

THE FARMERS WATCH

He also supplies maintenance personnel for the State highways in the county—the only patronage available for many rural areas. These workers get about $1.45 an hour driving trucks, painting the white lines on the highways and the like. These appointments are among the more difficult ones. "Roads are very important in rural areas, and it requires much care in selecting these personnel. The rural folks are very quick to criticize a shabby job done by these appointees."

The vice chairman of the GOP in the county is a woman, and she operates the county office for automobile registrations. What will Mrs. Watts' reward be for this unpaid service? That remains to be seen, but already his father has a good State job as a claims adjuster and some have been quick to note that perhaps Tom Watts' share of the profits of the concrete block business they operate together is now larger. Mr. Watts says no not yet, most of the profits are being plowed back into the business—but eventually he certainly hopes to benefit from the plowback.

Does he want to advance further in the party? "Right now I don't think so—but then it never would have occurred to me to want the county chairmanship until suddenly one day I did."

The Watts tenure has not been an easy one. While his party holds the county courthouse beside the Erie Railroad tracks, and the mayorship of Huntington, the Huntington City Council is Democratic. And the mayorship was decided not only in an election but finally by the State supreme court. The Republican and Democratic candidates alternated in office for over a year as there were a series of recounts, court actions, and appeals.

But the Watts regime has been noted for better organization and more GOP social functions—chili and pancake suppers which draw as many as 800 people when Mr. Watts is able to get a top speaker like Republican Senator WILLIAM JENNER. All this takes some 8 to 10 hours of Mr. Watts' time every week, not counting appearances at the junior chamber of commerce, the Kiwanis Club, and the Toastmasters Club plus service on the local industrial development board and on the Governor's traffic committee.

Helping him with his voluminous correspondence is his pretty young wife, Polly, also an Albion graduate and now an instructor in English and art at Huntington College. Much of this work is done in the big old house, built around 1860, on Jefferson Street where the Watts live.

THINKING AND PLANNING

It is in these surroundings that Mr. Watts does most of his thinking and planning, though there is downtown an office with desks, filing cabinets, and an adjoining room for meetings. Here are the voter lists, and the committeeman reports, all of it geared to election day, when volunteers will roll around town and country in their cars, getting the Republicans to the polls. When the voters get there they are met by a checker, who keeps tabs on who has voted and keeps in touch with a telephone committee which needles the desultory. In the last county-wide and presidential election these tactics brought out 95 percent of the established Republican voters.

And that, in Mr. Watts' view, is what a county chairman is for. What goes on in the Middle East will have its impact on what goes on in the Middle West. But that is something Mr. Watts can't do much about. He can get out his party's voters, and that is what he intends to go right on doing.

They Teach Citizenship to People Who Prize It

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert the following interesting article from the Orange Transcript of July 17 concerning a most worthwhile project carried on by the Americanization Council of the Oranges and Maplewood sponsored by the Orange Central YMCA. My good friend, Mr. Frank Jay Morris, the director of the council, is widely known and admired for his selfless devotion to the public welfare and his tireless efforts to promote democracy and brotherhood among his fellow men. He has devoted his energies, time, and efforts unstintingly for the good of the community and the country, and the help and hospitality he and his fellow volunteers on the council have extended to the foreign-born residents deserve the highest praise.

Mr. Frank Koch, who is director of the citizenship class, rendered distinguished service in World War II and was severely injured. His deep patriotism is surely an inspiration to the newcomers to our great country. The article follows:

THEY TEACH CITIZENSHIP TO PEOPLE WHO PRIZE IT

(By Richard Fadem)

Retired reporters are apt to be found anywhere. Thank Jay Morris—once a correspondent for the Newark Morning Ledger, the Star Eagle, the New York World, and the Herald Tribune—is now and has been for the past 5 years the director of the Americanization Council of the Oranges and Maplewood, a project sponsored by the Orange Central YMCA.

Morris, who chews on a stogie and talks the way a good news story should be written, takes a very personal interest in his voluntary job and a great deal of pride in the service his small group of volunteers is doing.

The Americanization Council began receiving immigrants some 39 years ago, the object of the project being to help the newcomers, through special classes, to pass their citizenship exams and become citizens of this country. In more precise terms its purposes is, "to act as a clearing house for the dissemination of information regarding legislation and activities on Americanization, to teach correct conversational English and to aid in the assimilation of newly naturalized citizens in the Oranges and Maplewood by endeavoring to inculcate in them the true spirit of America."

Since the program's establishment in 1919 it has helped over 12,000 persons of foreign birth to become citizens of this country. The program of the Council represents "the only evening adult school activity in suburban Essex County offering this particular type of study for foreign born residents who desire to become American citizens." In addition to its "special, beginner, intermediate and advanced classes" which primarily teach English and citizenship, the program offers individual assistance in handling problems of immigration, legal entry, naturalization and preparation of required applications and affidavits.

Morris began sitting (last week) in a corner office of the Orange Y receiving applicants and will continue to do so every Tuesday night from 8 to 9:30 until September 23. Last year 185 students enrolled in the project, coming from over 2 dozen different countries, including Italy, Germany, Hungary, Czechoslovakia, France and China. (There were two that claimed no nationality.) Morris expects as many or more this year, and makes a plea to all prospective applicants that they apply as soon as possible so that they may be assured of acceptance. Facilities and teachers cannot permit more than this number.

DANCING, TOO

The registration fee of $10 includes books, 4 annual parties which take place during the 32-week course, and sundry special activities. According to Morris, one of the favorite pastimes of the newcomers is dancing. There are about 10 teachers, all voluntary. They are required to have a college degree and 1 year of professional teaching.

One of these teachers is Frank G. Koch, of 101 Gates Avenue, Montclair, a graduate of Princeton and now a lawyer for the Prudential Life Insurance Co. He is director of the citizenship class. Recently they had a French woman who made such progress as a pupil that she later became a volunteer teacher.

ORAL REPORT

The classes, which number 8 or 9, begin September 23. They meet once a week from 8 until 10 every Tuesday night. Grades are given and homework, too. The citizenship class begins with a pledge of allegiance to the flag. Any students who have taken the Board of Immigration exams gives an oral report to the class, and then the teacher takes over, stressing American history and the responsibilities and privileges of American citizenship. The English classes emphasize conversation. They also begin with a pledge of allegiance and then turn to the more practical, studying reading, writing, spelling, and letter writing.

According to Morris, the students, who range in age from 16 to 88, are talented, gay-hearted, and appreciative folk. The average age is between 45 and 50, so you see you don't have to be young to go to school. Morris tells the story of a woman named Mary who studied at the project 4 years ago. After 23 years in this country she succeeded in getting her papers.

"There was no more happy person in the world," Morris said. In gratitude for what the school had done for her, she gave a contribution. Shortly after she contracted pneumonia. A side effect of the sickness caused her to lose her sight. She was so proud of her rights as an American citizen, though, that she insisted she still be allowed to vote. After her lawyer told her she wouldn't be able to, she went to Morris one night, finding the "Y" by herself, and explained her situation. Now, although blind, she goes to the polls for every election.

These people are faced with difficult immigration exams. Questions like, "Who was the 16th President of the United States? How many branches are there in the Federal Government and what do they do? Who is your mayor and governor? What is the name of your State capital? How many stripes are there in the flag, and what do they stand for?" These questions may seem easy, but if you were to go to a foreign country with no knowledge of the language, it would be a difficult task for you to answer.

In the 5 years, however, that Morris has been director, not one of his pupils has failed the exam.

Miss Carolyn Melton, Cheraw Beauty, Named Miss Queen of the Sea Islands III at Beaufort

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cheraw Chronicle, Cheraw, S. C., of July 24, 1958. This salutes another South Carolina beauty of whom I am justly proud as she is from my district. This young lady has exhibited the finest character and leadership, and her life, even at this early age, has been an inspiration to many, many people.

MISS CAROLYN MELTON, CHERAW BEAUTY, NAMED MISS QUEEN OF THE SEA ISLANDS III AT BEAUFORT

Miss Carolyn Melton, daughter of Mr. and Mrs. Carroll Melton, Jr., was crowned Miss Queen of the Sea Islands III, Saturday, at the water festival ball. The silver crown was placed on her head by the reigning queen, Barbara Mishoe, of Conway.

Miss Melton won the coveted title over 19 other lovely misses, all from South Carolina towns. She was a runner-up in bathing-suit competition Friday night. Judy Austin of Sumter, who won the swimsuit contest, was runner-up for queen, and Patricia Ann Furr of Hartsville was second runner-up.

Miss Melton received a large Sheffield silver engraved bowl, a bracelet and her silver crown. She was sponsored by the Cheraw Jaycees.

She left Wednesday for Greenville to represent this county in the Miss South Carolina contest, the winner to compete in the Miss America pageant in Atlantic City in September.

Among other beauty honors bestowed upon Miss Melton during the past 2 years were: Cheraw High homecoming queen, 1956; 1956 Christmas festival queen; 1957 queen of hearts, and one of finalists in the 1958 Pageland watermelon carnival. She is studying dramatics at RPI, William & Mary College, Richmond, Va.

America's Cultural Strength a Great Asset in Dealing With Africans and Asians

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. REUSS. Mr. Speaker, I am sure that the Members of Congress will be interested in a most thoughtful lecture on American policies in Asia and Africa given at the School of Advanced International Studies of the Johns Hopkins University to an institute of workers in the United States point 4 program.

The lecturer is Philleo Nash, Wisconsin political leader, anthropologist, student of government, teacher, and former White House staff assistant who participated in the development of the point 4 concept under President Harry S. Truman.

The summary text of Mr. Nash's remarks follows:

REMARKS BY PHILLEO NASH OF WISCONSIN ON INTERNATIONAL COOPERATION ADMINISTRATION DEVELOPMENT PROGRAMING, WASHINGTON, D. C.

Mr. Chairman and members of the institute, the future of our children's children rests with the peoples of Africa and Asia. They are farmers, herdsmen and merchants who are on the fringe of the expanding wave that began with the industrial revolution. During most of their history they have been dependent peoples under colonial rule. Their leaders attended the Asian-African conference at Bandung. There it was made clear to the world that these countries regard their own future status as independent nations as considerably more important than who wins the cold war.

The values that we take for granted—political representation and the equal rights of women—seem remote to them. And when we project America we must project Little Rock as well as Ralph Bunche; and this is not remote to them.

Technical know-how, better methods of agriculture, medicine, education and engineering are not the exclusive property of the Western World. Anyone who still thinks so has not looked up into the sky lately.

If these peoples want the benefits of industrialization they can get their technology as well from the Russians as from ourselves. And if they do, they will get with it the inhuman values of communism, the philosophy of supremacy of the state over the individual.

But if they get their technology from us, it is possible to share it with them in a way that will advance the philosophy of democracy—belief in the equal worth and dignity of every human being.

Point 4—the program of technical cooperation initiated by President Truman in 1948—was and is America's answer to colonialism. We must make certain that it remains what it was originally intended to be—a program of shared knowledge. Let it become a series of trade missions, or an adjunct of our military stockpiling program, and we will have lost our chief, perhaps our only advantage, in this phase of the cold war.

We must make the most of our strength in dealing with Africans and Asians—not our overpowering military strength or our wealth, for we are dealing with nations that, comparatively speaking, are weak and poor.

I am referring to our cultural strength, which is a great asset.

First: Our history. Countries that are small, weak, and were formerly colonies and today have a burning desire for national recognition, have a natural identification with us, for we too brought forth a nation under these conditions.

Second: Our idealism. We are known the world over for our buoyant optimism and our cheerful confidence in progress. This is a commodity that is always in demand by struggling humanity and we have unlimited quantities of it.

Third. Our desire to do good. There is scarcely a country in the world that has not received help from our bounty at one time or another. American business, American labor organizations, American foundations have cured disease, built schools, and staved off famine all over the world. We cannot expect to buy friends with money, but we can expect to win and hold friends by the exercise of our normal generous impulses toward people.

Fourth. Our record. We have not been a harsh or oppressive landlord. The Philippines are an independent nation today because we worked jointly with their people for independence. The Commonwealth of Puerto Rico is a model of cooperative searching for economic and political solutions. Alaska is a State, and Hawaii will soon be one. Guam and American Samoa will compare favorably with nearby islands. The Trust Territory of the Pacific was voluntarily placed by us under United Nations trusteeship.

Fifth. Our own struggle. America is struggling painfully to solve a most difficult problem of race relations. If we could approach our friends throughout the world in a spirit of humble learning in racial matters, we might obtain a sympathetic hearing. But if we are boastful, defiant, defensive, silent, or apologetic, we have little reason to expect friendship. We have far to go and much to

learn in matters of race. Let us learn from others; if we do, they may become our friends.

Finally, let us never forget that the Arab soldier with his rifle trained on an American boy is the same fellow who was known throughout World War II as a "gook." This is a lesson we have never learned, and it is a weakness we cannot afford. We must conduct ourselves in Africa and Asia like the minority we really are. Most of the peoples of the world are not either very black or very white, but in between. In such a world white supremacy is a losing proposition. It is not too late to abandon it, but it is a stumbling block on which costly programs have failed and will fail again if we do not abandon it.

Point IV workers are in a delicate and difficult position. We cannot and must not abandon our allies who are holding the line against Soviet expansion in Western Europe. But these same nations are the former colonial masters of the very peoples we are trying to help. We cannot reasonably expect to have the firm friendship of both simultaneously. But short-run failures will be forgotten and the long-run gains are the greatest in the world—eventual realization of the ancient dream of equal justice under law for all mankind.

Wildlife Associations Request Bureau of Sport Fisheries and Wildlife To Retain Present System of Allocating Funds

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter and resolutions which I have received from L. P. Voigt, conservation director, State of Wisconsin Conservation Department, regarding a proposed change in procedure of the Bureau of Sport Fisheries and Wildlife in allocating funds to the various States under the Pittman-Robertson Act. The resolutions urge the Bureau to continue the system of apportionments under the same procedure which has been in effect for the past 20 years. The letter and resolutions follow:

STATE OF WISCONSIN,
CONSERVATION DEPARTMENT,
Madison, July 23, 1958.

Hon. MELVIN R. LAIRD,
House Office Building,
Washington, D. C.

DEAR MR. LAIRD: Thank you for your letter of June 16, 1958, regarding Pittman-Robertson apportionments.

I would like to bring to your attention the most recent action on the matter of changing the method of calculating the Pittman-Robertson apportionments to the States for wildlife-conservation programs.

As you may recall, the Bureau of Sport Fisheries and Wildlife plans to institute a method of sampling license holders to determine the number of individuals, in place of using license-sales data which the States have in the past certified to the Secretary of the Interior. At the recent meeting of the Midwest Association of Fish and Game Commissioners, held in Bismarck, N. Dak., representatives of the Bureau of Sport Fisheries and Wildlife indicated that the new sampling system would probably be put into effect this coming fall. We are, therefore, at this time very much concerned on the effect such action will have on our program.

At the Bismarck meeting a resolution regarding this problem was passed by the commissioners from the 14-State association. A copy of this resolution is attached. You will note that it specifically requests the Bureau to continue the system which has been in effect for the past 20 years. It, furthermore, endorses a method of apportionment which would use as its basis one big-game and one small-game license for any one individual in any one State. In the event the proposal as outlined by this resolution is put into effect, it will definitely be in the best interest of Wisconsin's program. I am also attaching a resolution passed by the 11 States comprising the Western Association of Fish and Game Commissioners which endorses the established method of computing the apportionment.

Your assistance in seeing that these resolutions reach the Bureau of Sport Fisheries and Wildlife and other interested Congressmen will be sincerely appreciated. Similar letters are also being sent to the other Members of the Wisconsin delegation. In the meantime, I will appreciate being advised of any new developments on this matter in Washington.

Very truly yours,

L. P. VOIGT,
Conservation Director.

RESOLUTION 14, OPPOSING CHANGES IN FEDERAL AID ACTS

Whereas the Federal Aid in Wildlife Restoration Act, more commonly known as the Pittman-Robertson Act, has since its enactment in 1939 been a tremendous asset to the wildlife conservation programs of the States; and

Whereas the formula for the apportionment of these Federal aid funds to the States had the unqualified endorsement of all 48 States; and

Whereas this basis for apportionment has been successfully accomplished these past 19 years: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners goes on record as being unalterably opposed to any change in the present apportionment formula; and be it further

Resolved, That the Western Association goes on record as being opposed to spending any of the sportsmen's funds for determining the number of duplicate licenses sold and being in favor of continuing the present method of certifying license sales.

Adopted by the Western Association of State Game and Fish Commissioners, 38th annual conference, Sun Valley, Idaho, June 25, 1958.

RESOLUTION

Whereas, Public Law 415, better known as the Pittman-Robertson Act, was passed in 1937 and provided that the excise tax on sporting arms and ammunition be distributed to the various States by the Department of the Interior on the basis of a formula which included equal weight to land area of each State and to the number of paid hunting license holders as certified to the Secretary of the Interior by the State fish and game departments; and

Whereas for the past 20 years the number of paid license holders has been interpreted to mean the number of hunting licenses sold and apportionment of Pittman-Robertson funds has been based on this assumption with the full knowledge and approval of the Department of the Interior; and

Whereas many people purchase both big game and small game, resident and nonresident hunting licenses, and it is a well-recognized fact that a certain number of people in every State in the Union possess more than one hunting license—such duplication can be determined only by a most comprehensive and costly statistical survey; and

Whereas it is now determined by the Department of Interior that the method of certification of hunters by the various State fish and game departments is no longer considered valid and, therefore, large sums of State fish and game management funds must be expended for statistical surveys to determine the actual number of hunters in each State, such survey may cost up to $35,000 annually per State, which money will be forever lost in game management: Now, therefore, be it

Resolved, That the Association of Midwest Fish, Game and Conservation Commissioners meeting in Bismarck, N. Dak., on July 11, 1958, respectfully request the Bureau of Sports Fisheries and Wildlife to continue for the time being the method which has been in effect for 20 years for computing the Pittman-Robertson apportionment; be it further

Resolved, That the Bureau of Sports Fisheries and Wildlife be requested to study the feasibility of amending the Pittman-Robertson Act to use as a basis for the license computation for any State, a maximum of 1 big game license and 1 small game license for any one individual. After such study the Bureau shall submit the results along with their recommendation to the respective States for their review and if approved by a majority of the States the Bureau recommend suitable legislation amending the act; be it further

Resolved, That copies of this resolution be forwarded to the Bureau of Sports Fisheries and Wildlife and Members of Congress of the member States of this association.

A Grim Warning to the American People

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. ANFUSO. Mr. Speaker, the New York Daily News of July 29, 1958, in its column entitled "Capital Circus," by Jerry Greene, refers to a report compiled some 3 years ago which contains a grim warning to the American people—but nothing has ever been done in the matter. It is a report of the Civil Defense Foods Advisory Committee of the National Academy of Sciences and the National Research Council in which our people are warned against the possibility of the poisoning of our food supplies by saboteurs.

Just about a year ago, on July 17, 1957, the subcommittee of which I have the honor to be the chairman—Consumers Study Subcommittee of the House Committee on Agriculture—issued a brief report on studies conducted by our subcommittee in which similar warnings are contained. This is a very serious matter and it is time we deal with it in a very serious manner. Our negligence now may mean tremendous loss of life and property in the future.

In the hope of reviving interest in this matter, I am inserting Mr. Greene's article into the RECORD, as well as the report of my subcommittee entitled "Food for

Civilian Survival in the Event of War," and I commend them to the attention of my colleagues:

[From the New York Daily News of July 29, 1958]

CAPITAL CIRCUS

(By Jerry Greene)

WASHINGTON, JULY 28.—For 3 years now the Government has kept from the American people through negligence a vital report which says that one saboteur could kill off 500,000 of us in 1 day's work.

Maj. Gen. William M. Creasy, Army chief chemical officer, has been warning the taxpayers of such perils for some time, but nobody seems to listen, outside of a handful of technical experts.

The report was compiled by the Civil Defense Foods Advisory Committee of the National Academy of Sciences-National Research Council and was issued in November 1955.

This committee was headed by Roy C. Newton of Swift & Co. and included a list of top-flight executives and scientists. They worked long and hard and they turned out a handsomely bound 167-page volume. It spells out how most of the United States population could be killed by homemade poison in the hands of about 100 spies.

Unlike the suppressed Gaither Report about Russian and United States armaments—which scared a lot of people by indirection—there was nothing at all classified about the Newton committee findings.

The simple truth is that nobody paid any attention. The Government was not even sufficiently impressed to announce publication of the document, despite its frightful warnings. Nor was there a single press agent handout describing these matters.

The report contained some very pointed conclusions and recommendations. They were directed to the Food and Drug Administration of the Department of Health, Education, and Welfare.

We called the FDA today, after a careful study of this document, and asked what had been done about it in these 3 years, in view of the importance of the matter and the prominence of the people involved.

"Nothing," the spokesman said. "We just haven't had any money."

Here's one sample of how the businessmen and scientists tried 3 years ago to warn of what might be expected:

"During the past 15 years many new toxic chemical substances have been discovered. Some display such extreme toxic potency as to render them likely agents for sabotage usage.

SABOTEUR COULD MAKE THE STUFF AT HOME

"It must be considered possible for a saboteur to make enough of such poison in his home to do great damage in a food in which it is compatible.

"If he had access to a food plant with wide distribution, he could easily conceal a sufficient quantity of the toxic material on his person and poison enough food in one day's activity to provide a lethal dose to 500,000 people."

The report indicated the Committee felt greatest fears over the handling of dairy products, processed meats, such as hot dogs, and beverages, including beer:

The highly unpublicized report offered this grim warning to the American public:

"As few as 100 saboteurs established previously in food plants and acting in unison could so seriously demoralize the American population that confidence in our foods would be lost. Unless some proper organization is set up in advance to handle this type of emergency, the effect on morale could be devastating."

These are very grim words, and there are worse in the report.

REMEMBER HOOVER'S WARNING

Take a deep breath and remember the J. Edgar Hoover statement that there are 25,000 hard-core commies abroad in the United States. Match that up with the statement of this wholly nonpolitical committee that the Reds need only 100 selected agents to put us all out of action for keeps, with no need of nuclear weapons.

The Committee disclosed top-secret intelligence without meaning to do so when it announced that the basement operator is now able to come up with the equivalent of the dread nerve gases by spending a few hours around his kitchen sink.

There was a warning against attack "with toxic chemicals which can be manufactured readily in 1-to-10 pound batches with a minimum of laboratory equipment and with easily obtainable starting materials."

Study the report and it adds up to this: Pour a few drops of bug juice into the salami and hotdog mixing vats and, brother, have the proletarians had it.

Everybody in the food and drug business has been thinking about the problem, the report says, but "very little work has been done nationally to set up a defense against the threat of CBR (chemical-bacteriological-radiological) attack and we find that adequate plans for such a defense are lacking."

SEE OVEREMPHASIS ON H-BOMB THREAT

There has been, the Committee said, an overemphasis on the part of the Government on the "horrors of the H-bomb, leading to a feeling of hopelessness in developing an adequate defense."

There, in black and white, in an official report, is the answer. Pompous Harold Stassen, even today closeted with a busy President, didn't get anybody to agree to disarm. But in all of his disarmament talks, long and loud and costly to taxpayers, we heard no mention of germs and gas.

And if, as this worthy commission notes officially, one rat coming out of a basement can kill off 500,000 people in a day's work, such matters should be worthy of consideration. Even at the summit.

FOOD FOR CIVILIAN SURVIVAL IN EVENT OF WAR

(Interim report of the Consumers Study Subcommittee of the Committee on Agriculture, House of Representatives, 85th Congress, 1st session, July 17, 1957)

In the event of nuclear war the United States is utterly without a plan to immediately feed its civilian population, including its Territories and possessions. Moreover, there is no design in being for immediate availability of food for our allies.

This constitutes perhaps the weakest link in the chain of defense planning, within America's boundaries, and in concert with other nations of the free world.

The subcommittee is aware of the many important civil-defense studies and programs which are in process or have been completed. It recognizes that at the Federal level very good work has been done in developing civilian-defense programs, and these have been carried out in cooperation with the State and Federal agencies. These programs have included emergency feeding of people evacuated from military installations and urban communities. Valuable experiences also were gained in the national alerts in 1956 and in 1957. Yet the subcommittee is forced to conclude that if war should strike tomorrow the United States would find itself without an adequate emergency food-reserve program.

The Federal Civil Defense Act, known as Public Law 920, was enacted by the Congress in 1950. It was designed to protect "life and property in the United States from attack." It was foreseen that the attack could be "in any manner by sabotage or by the use of bombs, shellfire or atomic, radiological, chemical, bacteriological, or biological means, or other weapons or processes" (sec. 3). The act is to be administered by an administrator known as the Federal Civil Defense Administrator with power to delegate responsibility for preparing "national plans and programs" and to delegate any of these responsibilities "to the several departments and agencies of the Federal Government." There is nothing in Public Law 920 designed to sustain or protect the civilian population in any foreign country where the United States now has, or in the future will be required to have, military forces.

The Consumers Study Subcommittee was created on March 14, 1957, by Representative HAROLD D. COOLEY, chairman of the House Committee on Agriculture. One of its functions is to study and investigate the stockpiling of food for national emergencies.

REPORTS AND VIEWS ON STOCKPILING PRESENTED

On June 12 and 13, 1957, the subcommittee held hearings on food stockpiling. Witnesses appeared from the Department of Defense, Department of State, Department of the Interior, Department of Agriculture, the Office of Defense Mobilization, the National Grange, and the National Farmers Union. A representative of the Office of Civil Defense also attended these hearings.

The subcommittee finds that 7 years after the enactment of Public Law 920 there is not in being a comprehensive or otherwise adequate overall food program aimed at maintaining sufficient emergency food supplies for the civilian population in the United States, its Territories and possessions. Of deep concern to the subcommittee also is the fact that there is no plan in being to protect civilian populations in foreign territories which are part of the defense orbit of allied military operations.

The Department of Defense reported to the subcommittee that it maintains only minimum stocks of foods for the Armed Forces. Large additional quantities of food would be required for the military in the event of an attack. The Department of Defense depends upon the Department of Agriculture for assurance that the needed food supplies will be available when and where needed. Yet no plan for strategically located civilian food stocks has been developed.

The Department of Interior reported that United States Territories and possessions import from 20 to 90 percent of their food supplies from the mainland. Interruptions in ocean shipping would cut off normal food imports. For example, two of our most strategic areas, Guam and Alaska, import 90 and 80 percent, respectively, of their food supplies. Another and perhaps even more serious example is Hawaii, where the people are dependent on food imports from the United States mainland. In the event of war enemy submarines or other type of warships could isolate the islands and force the people thereon to capitulate for lack of food. Yet no plans have been developed for emergency feeding in our Territories and possessions.

The Department of State reported that our foreign policy embraces assistance to friendly countries who wish to build up reserves or strategic stockpiles of food. In some cases a part of the purchases of surplus foods under title I of Public Law 480 have been used to build more adequate food reserves, notably in India and Poland. Yet no plans have been formulated for United States cooperation with other countries in building strategic food reserves to buttress our NATO and other military alliances.

The Department of Agriculture presented to the subcommittee a detailed statement embracing explanations of what it has done in the way of formulating an overall program of food preparedness. The Department concluded its statement as follows:

"The need for stockpiling must be critically examined, and it must be clear that there is a justifiable need, and that there is no satisfactory and less costly alternative for the safety of our people, before undertaking this difficult and expensive task."

FARMERS WANT CITY POPULATIONS PROTECTED

The subcommittee was impressed by the position of the National Grange, a major farm organization, on the stockpiling of food near major centers of population. The Grange presented a statement saying in part:

"The National Grange is particularly pleased that this subcommittee is holding hearings on food stockpiling for defense. It is a subject of tremendous importance. The welfare of millions of Americans is involved and perhaps even the survival of our country in time of war.

"The National Grange favors the establishment of food reserves at strategic locations throughout the country. We consider such reserves as a matter of fundamental prudence and a basic part of national preparedness.

"As well as we have been able to learn, there is no emergency food plan in existence today. If there is one, it's a well-kept secret. * * *

"If Baltimore (as an example) were hit by an enemy missile or bomb today, several hundred thousand people from Washington—along with survivors of the Baltimore attack—would be roaming the hills and valleys of Virginia west of here by tonight or tomorrow. The Virginia counties west of here are not prepared to feed and take care of several hundred thousand refugees from Washington and Baltimore. The food isn't there. Without food and without a plan, there would be extreme disorder, to say the least."

(Conditions would even be more chaotic in cities like New York, Boston, Pittsburgh, Los Angeles, San Francisco, and the rural areas surrounding them.)

"There could be wheat in Minnesota, corn in Illinois, and beef in Nebraska, but it might as well be a million miles away unless there is an orderly and practical plan for getting it to the hills of Virginia in time to be used. * * *

"If there ever is an attack—or even the imminent possibility of an attack—it will be the farm countryside that will bear the burden of feeding and caring for the millions of our fellow Americans who come out from the cities to stay with us during the emergency. The farmlands would become the support areas—the place where a great many Americans would catch their breath and organize for the next step in fighting back. We hope against hope that all this may never happen, but if it ever does, we think food stockpiles will be vital—and cheap at any price."

FINDINGS

The survival and safety of the civilian population are the basic responsibility of Government in times of enemy attack. This is not to say the States, private organizations, and individuals can abdicate their responsibilities.

In this respect it must be noted that in any major war the first enemy blow may be expected to fall upon concentrated civilian populations, to cripple industrial potential and in the expectation of destroying a people's will to resist.

Food is the one indispensable element in survival and morale. Its presence would be likely to lessen fear and prevent panic and terror in an evacuating population of a city.

The subcommittee finds (1) that such plans as have been devised under the Federal Civil Defense Act of 1950 are by no means sufficient in the event of an attack to take care of our American civilian population within the continental limits of the United States, its Territories and possessions; (2) that there is absolutely no plan in being to sustain or protect civilian populations of foreign countries having allied military operations or bases; and (3) that there is too much delegation of responsibility under Public Law 920.

Insufficient urgency has been attached to the planning of emergency food supplies.

We recommend that the Government move swiftly to formulate plans and gather facts to assure that emergency stocks of food commodities will be available at accessible locations as reserves against possible disaster.

We have heard testimony regarding the vital importance of adequate food supplies in strategic locations in case of military operations. We consider an adequate emergency food program both within the United States and in friendly countries a vital part of our program of national and international defense. We consider the cost of such a program as much a part of the general cost of defense as the payments made for aircraft, bombs, missiles, ships, and tanks.

This subcommittee recognizes that an emergency food program involves a number of problems, such as rotation of stocks, not encountered in other defense supply programs. None of the peculiar problems are insurmountable, however, if the technical staffs of the executive agencies are given instructions to develop remedies.

We believe there should be a relocation of food storage facilities throughout the country so that each major city will have strategic reserves in the accessible rural areas. We believe that these facilities can be planned, constructed, and operated in such a way that the food stocks can be rotated into normal trade channels and that the facilities can contribute to our ever-growing civilian needs for additional food storage.

We recommend that consideration be given to the utilization of existing underground facilities in the large metropolitan areas and the development of such new facilities which, while serving a peacetime purpose, can be used to stockpile essential food, water, and other necessities as a part of our national-defense program.

We are convinced that the departments of Government mentioned in this report recognize the necessity for an overall food program attuned to possibilities of war or other national emergency and that each department wishes to cooperate in the solution of this problem. However, we believe that this matter of strategic food stockpiling is too important and too complex to be handled entirely by any single department of Government, and that the authority created under Public Law 920 is insufficient to provide for all of the emergencies contemplated by this report.

CONCLUSION

The subcommittee finally recommends in the light of the above findings that the President give this important problem his immediate attention, that he create a new coordinating board or council from personnel of existing agencies of Government, and that he delegate to it the specific authority and responsibility of devising plans for national and international food programs deisgned (1) to protect the civilian populations in the event of attack, and (2) that this subcommittee be kept informed of the planning of said board or council in order to propose such legislation as may be necessary to make the work of said board or council more effective.

Our Universe as a Propagating Flame in the Cosmos

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following hypothesis by a constituent of mine, William Stanton Foulks, Jr., of East Liverpool, Ohio:

THE COSMOS AS AN EXPLOSIVE MIXTURE OF INFINITE EXTENT—OUR UNIVERSE AS A PROPAGATING FLAME IN THE COSMOS

(By William Stanton Foulks, Jr.)

This hypothesis gives an answer to the question of why the galaxies in our universe are receding from each other at velocities which are directly proportional to the distances of separation. The word "cosmos" is used to mean the sum total of everything of a physical nature. The word "universe" is used to mean everything of a physical nature from which we could ever hope to receive radiation—even under the most idealized circumstances.

Several points that must be stated: (a) Antimatter—consisting at least of antiprotons and positrons—appears to exist; (b) collisions of antimatter with normal matter result in instantaneous annihilation of both types of atoms with the release of energy; and (c) no evidence has been found to demonstrate that antimatter would repel normal matter.

The writer's hypothesis:

1. The cosmos is infinite. It is composed of gas at absolute zero. There is no kinetic energy, and there is no radiant energy. (Our universe is an exception—a small disturbance.)

2. The gas atoms are distributed with exact uniformity throughout the cosmos. The number of atoms per unit volume of cosmos is exactly the same at any place in the cosmos. All atoms are separated from their nearest neighbors by precisely the same interatomic distance. With an infinite gas and this degree of order, the suggestion is that there is no net force existing in the cosmos even on an interatomic scale. Nothing is ionized, and there is electrical neutrality. There is no movement, and there is no radiation.

3. Of these absolutely motionless gas atoms, some percentage is antimatter relative to the others. Perhaps the lightest isotopes of hydrogen and antihydrogen would serve. Other elements and combinations of elements in the anti and normal forms might be suitable, but they must be entirely stable. Some nuclear particle and its antithesis might serve, if stable.

4. Such is the initial state which may have existed always. With no beginning, the initial state found it proper and easy to exist with this symmetry and precision of atomic spacing.

5. The introduction of radiation, mechanical energy, or some "disturbance" at any part of the cosmos will produce a collision of a normal atom with an antiatom. One hopes that one quantum of radiation would suffice. After such a collision, the radiation released by the annihilation of the atom and antiatom will go out in all directions

at the speed of light—causing more annihilation collisions. This effect is self-propagating at the speed of light through the infinite cosmos. Our universe is such a propagating flame—expanding at the speed of light through the limitless explosive mixture.

6. The annihilation reaction is a very rapid reaction. After the annihilation flame front moves beyond a point, one species of atom—either matter or antimatter—has been almost eliminated at that point. Which survives depends on which was the major constituent at that point. The surviving atoms now have kinetic and radiant energies. Local forces can begin to operate—so the condensation into clouds, galaxies, and stars is initiated.

7. The radiation pressure from the highly intense and very rapid annihilation reaction forces the surviving matter to fly outward radially in this propagating spherical explosion. (The early stages are surely spherical.) With a uniform cosmos, the latent annihilation energy per unit volume of unexploded cosmos is the same at all points. Thus, the total annihilation energy release increases directly with the cube of the radius (as does the volume) while the area of the spherical surface increases directly with only the square of the radius. Per unit area on the surface of the sphere, the total amount of annihilation radiation passing radially outward is thus directly proportional to the radius of the sphere. So the radial velocity of matter surviving the annihilation reaction is also directly proportional to the radius. Hence, we have the galaxies in our universe receding from each other at velocities which are directly proportional to the distances of separation.

8. It is possible that there are many expanding flame universes such as ours. Some could be vastly more ancient than our universe. We and they are expanding toward each other very rapidly through the infinite, primordial explosive mixture. Since there is no radiation in the primordial explosive mixture, it would seem impossible to know directly of it or of other flame universes by radiation-receiving techniques. (Perhaps the contacting of two flame universes could produce the intense compression needed in Gamow's cosmology.) Also, the annihilation flame front and the brink's galaxies are expanding away from our galaxy at the speed of light at least. Thus, our galaxy is not receiving intense annihilation radiation. Annihilation radiation from the explosion's earlier stages has passed away from our galaxy long ago in the elapsed billions of years. The writer offers no reason for the original disturbing of the explosive mixture.

Is Nasser Another Mao Tze-Tung?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Constantine Brown:

[From the Washington Evening Star of July 24, 1958]

NASSER ANOTHER MAO TSE-TUNG—WEST CRITICIZED FOR NOT RECOGNIZING EGYPT'S DICTATOR AS FOIL FOR MOSCOW

(By Constantine Brown)

Is Prime Minister Nasser of the UAR just a liberal-nationalist, just as Mao Tse-tung was a mere agrarian reformer in the eyes of many western diplomats?

The answer is yes—exactly the same.

The Soviet Union helped the Chinese Communist leader with arms, ammunition, military technicians and cash to take over China. We let down the Nationalist regime headed by Generalissimo Chiang Kai-shek, our ally then as now, because so many of our pious leaders discovered suddenly that the Kuomintang was corrupt and inefficient. By western standards this may have been so, but not by oriental standards. Anyhow, we lost the Chinese mainland to the Soviet Union. One of its many consequences was the war in Korea which cost America 147,000 battle casualties, upwards of $22 billion and a continued explosive situation in the Far East which may blow up in our face any day Moscow and Peiping decide to pull the trigger.

Even when it became more than obvious that the Chinese Communists had lined themselves up irretrievably with the men in the Kremlin, public figures in this country who are still practicing political Coueism believed that every day, in every way, things would be getting better. At the height of the crisis in the Middle East last week, Peiping announced not only that it was ready to send volunteers to the Middle East, but also intimated that it intended to take Hong Kong. Britain's only remaining prize colony in the Far East.

Wishful thinking continues to be the basis of our policies. You can hear on and off the floor of the Senate, among business leaders and more rarely in the State Department, the opinion that Nasser ought to be cultivated. If we don't oppose him, and if we show a conciliatory attitude backed by substantial economic and financial aid, he will desert Moscow and become truly neutral.

The same thing is now said about the junta in Baghdad. Has it not announced that it intends to maintain its obligations toward the West? The fact that the Iraqi Minister of Education who participated in the Tuesday demonstration in Cairo, where Colonel Nasser threatened to throw our forces into the sea, stated that his government was ready to follow the Egyptian caravan to the bitter end, and obey the wagonmaster does not appear to have shown the Iraqi trend to our perennial Coueists.

The blunt fact is that Russia, after more than two centuries of diplomatic and military endeavors to reach the Mediterranean, has finally succeeded in doing so. Where the czars and even Stalin failed, Khrushchev has succeeded. We had a chance last week to put a stop to Soviet domination of that vital area by supporting the Turks and the Jordanians to restore the Iraqi-Jordanian confederation. We did not do it, not because of lack of ability, but because we (or some of the American and British leaders) seemed to believe that Colonel Nasser could eventually be appeased.

Let's make no mistake. He is as much—and possibly more so because he is fundamentally weak—in the pocket of the Kremlin as are Mao Tse-tung and Chou En-lai. Unless something totally unexpected occurs, he likely will control before the year is out not only the pipelines of Iraq, Syria, and Lebanon, but also the oil resources of Iraq, Saudi Arabia, and Kuwait.

Colonel Nasser will nationalize the oil industries, with the usual compensations to the stockholders, just as he did with the Suez Canal. The financial aspect of oil—the loss of profits by the American, British, French, and Dutch companies—is unimportant and immaterial. What is important, from the economic and strategic point of view, is that the Soviet Union, through its Egyptian proxy, will control the production and syphoning of oil.

Europe is dependent on Middle East oil for its industrial and military needs. Russia, once it has completed its plan to control the wells, the refineries, and the pipelines through Colonel Nasser, will be in a position to impose on Europe its own political forms. The penalty for a refusal will be oil starvation. It will be able in this manner to force the dissolution of the NATO, which is more a symbol of Western unity than an effective weapon against a Soviet aggression. These are the real implications of Colonel Nasser's unopposed drive in the Middle East.

New Reason for U. N. Force

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I commend to my colleagues' attention the following thoughtful editorial appearing in the Maplewood-South Orange News Record of July 24. The editorial points out the need for a standing U. N. force with which to exert pressure for peace. I introduced a resolution on February 6, 1957, requesting the President to take such steps, through the United States delegation to the United Nations, as may be necessary to establish such a military force within the framework of the United Nations. As the editorial states, the Middle East situation underscores the need for a U. N. peace force. The editorial reads as follows:

NEW REASON FOR U. N. FORCE

I can't help but be greatly disturbed by the events in the Middle East. The world is sitting on a powder keg, that's for sure, and one misplaced spark could blow the world to bits. No country, no leader of any country, wants that to happen but it could happen without premeditation.

It seems to me that the situation in Lebanon and Jordan and Iraq points up once again the basic weakness—and the great need—of the United Nations. I mean the U. N.'s lack of power to step in and prevent conflict and, on the other hand, its need for a standing force with which to exert pressure for peace.

I've talked about this many times before. It just so happens I read a piece a couple of nights ago in the AAUN (American Association for the United Nations) News by Clark M. Eichelberger, the AAUN executive director. Listen:

"The need of a permanent United Nations force is once again dramatized, this time by the situation in Lebanon. And that such a force can be highly successful is demonstrated by the results of the present UNEF in the Gaza Strip and Sharm el Sheikh.

"No one is advocating today a large United Nations force capable of waging war against an aggressor. A permanent United Nations army can scarcely be realized until there is drastic disarmament.

"What is contemplated is really what Ambassador Warren Austin called a peace force—which dispatched to the scene of difficulty in time might prevent the difficulty from becoming serious.

"If such a force were in being and if it were understood that the Secretary-General (of the U. N.) had the authority to dispatch this force into any troubled area at the request of the party or parties concerned, the

force might arrive in time to prevent difficulties from developing into full-scale conflict.

"Now the situation in Lebanon is very difficult. Undoubtedly a civil war exists, with overtones of religious differences. The United Nations cannot concern itself in a purely internal revolutionary situation.

"However, it is the concern of the United Nations that a member state not be destroyed because of a supply of arms and men coming across an unprotected border. Such a destruction is Nasser's aim.

"It would seem that to support the establishment of such a force would be one of the first acts of our Government in strengthening the United Nations."

Yes; and I feel we should urge our Government to do so.

Prime Minister Fanfani's Address at National Press Club

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. ANFUSO. Mr. Speaker, I was privileged to attend the luncheon today at the National Press Club and to hear a most interesting and forceful address by the Prime Minister of Italy, His Excellency Amintore Fanfani. In it he discussed the current international crisis in the Middle East and United States-Italian relations.

Under leave to extend my remarks, I insert in the RECORD the full text of the Prime Minister's address:

ADDRESS DELIVERED BY PRIME MINISTER AND MINISTER OF FOREIGN AFFAIRS AMINTORE FANFANI AT THE NATIONAL PRESS CLUB, JULY 30, 1958

Ladies and gentlemen, before all, let me tell you how happy and how flattered I am to have been invited to your Press Club, whose resonance is worldwide. Talking in general, I love to meet journalists. I have faith in them, and I must say that this faith has been very rarely contradicted by facts. Naturally, I talk mainly of the Italian journalists, but I have the impression that journalists are very much alike in all parts of the world. Sometimes, after a rather long series of questions, and a lot of picture taking, you feel you have given reporters all that you had to give, and wait for them to retire; but much more often, when they are not there you miss them badly. Such are the contradictions in human nature and in political life.

I know that many prominent people have had the pleasure of receptions such as this and have talked into this microphone, and they were always received with respect and understanding. I am, therefore, really happy to join them in your highly honorable company.

Naturally, the first question which you might like to ask could be: What was your purpose in coming to Washington? If I told you that I came here to talk, I fear your curiosity would go so far as to ask to what purpose and on what subjects I came to talk.

I shall tell you frankly that a first theme of our conversations has been that of the mutual friendship and the constant collaboration between the United States and Italy, then that of the solidarity among the people of the Atlantic Alliance, and, finally, the Middle East. And I would qualify the Middle East according to a traditional definition which includes neither Africa nor central Asia, but only the countries of the Asiatic eastern shores of the Mediterranean. Our ancient Italians named those lands the Levant.

Of course Italy is deeply interested in anything that happens in that area. We have there countrymen, trade relations, investments and good friends. This does not necessarily mean that I came to Washington to outline any special program by my country regarding that region. Indeed we tend to bring a contribution of ideas, and the intention to participate in a possible work of assistance, rather than to make any plans.

Since the Suez crisis, the Italian point of view on Middle Eastern questions has been at once peaceful and realistic. We have always followed with serene understanding the changes and developments of the Arabian peoples. We have always held that the explosions of nationalism in that area were not exclusively a consequence of well known foreign influences. At the same time we have always believed that such unwarranted interventions could not be ocunterbalanced by opposite maneuvers unwelcome to the people concerned. Now, the events of the last months and especially those of Iraq however tragic and deplorable they may be considered in terms of bloodshed and the sacrifice of human lives have confirmed some of our points of view. There are historical movements which must be promptly evaluated without letting them be mortgaged by Communist propaganda and action. Some situations should not be allowed toward chaos; we should rather guarantee the orderly evolution toward a stabler equilibrium. Therefore we could not fail to appreciate in its right value the acceptance, on the part of our allies, of invitations to assistance coming from Lebanon and Jordan; the more so since President Eisenhower and Premier Macmillan promptly and decidedly declared their will to subordinate the presence of their contingents to the decisions of the United Nations.

There has been on this occasion an exchange of messages between President Eisenhower, the Secretary of State, and your present guest. These documents are not public and I am very sorry not to be in a position to offer you today a firsthand bit of news, something I know all journalists appreciate whether they are ladies or gentlemen. But I can assure you the spirit of those messages is one of mutual trust and cooperation for the purposes of peace.

We can say that the danger of a conflict is passed, at least for the moment. We are now confronted with problems of a wider order, starting with the complications of international procedure, and proceeding toward the settlement of political and economic difficulties of a wide range. We can only greet with satisfaction this transition from the days of tension to the days of negotiations. We approve of efforts directed toward maintaining the conversations within the framework of United Nations rules; these offer the most solid ground for orderly procedure. On the other hand we do not reject either adjustments or a certain measure of flexibility; nor do we hold that the border line between a meeting of the Security Council and a less formal encounter at high level is necessarily sharply defined as to make the one incompatible with the other. Italy is prepared to take part in these efforts toward a settlement, thinking that her part in such efforts is not so much her right as it is her duty; it is in the order of nature and of history. A glance at the map of the Mediterranean is sufficient to show that among great nations of Europe, Italy is the closest to the routes and the centers of the Near East. But, I repeat, we do not request any special form of participation which may make the problems of procedure more difficult: We are convinced that our opinion in this field can be useful and that consulting us will be both a duty and a pleasure for our allies. For that matter this is clearly shown by the present visit in Washington and by the invitation for next Friday to London and Saturday to Bonn.

We know, ladies and gentlemen, that the situation in the Near East cannot be solved only by insuring the independence of Lebanon and Jordan. A score of other political questions in that territory are still pending; the question of Israel evidently exists, as well as the great problem of Arab refugees. And then, apart from all political questions, there are in the Near East economic and social necessities which should not be underestimated. The ancient social structures are being questioned under the pressure of new needs and new aspirations. From this point of view, the question of Near East is one of economic development, and of a better use and a more equitable distribution of existing resources. Whatever the political developments, the problem of economic and social progress in that area should be faced, and, also in this case, as soon as possible.

In this connection I have been much flattered by the remarks in the American press, which has kindly related my visit to a supposed Italian initiative for a new and comprehensive plan for the Near East. This can only be very flattering and very risky at the same time. In all candor, I believe it is very difficult to devise anything like a decisive plan for the Near East, or for any other region, on the part of a country which cannot then sustain it as the principal agent. The Italian nation and Government are ready to contribute to the study and implementation of any development plan for the Middle East. We are well aware of the importance of the progress of the Arab people, to the ultimate end of progress and peace in the world.

As you see, ladies and gentlemen, much can be said in the Near East, and much can be done in a spirit of mutual cooperation.

But, of course, there are other subjects of great importance. The developments of European integration and of Atlantic solidarities must be examined in the light of the most recent events and experiences. Our ties with Germany, France, and Benelux must continue to be inspired by the final objectives of European unity. At the same time we must make more effective the common action of the peoples of the Atlantic Alliance, to increase the security of the free world. With President Eisenhower and with the Secretary of State we have exchanged and will continue to exchange information and impressions also concerning the political and economic situations of our respective countries. These exchanges of ideas are useful because they are made in a spirit of mutual respect and understanding. But I wish to say a few words about this to you too.

The Italian Government which I have the honor to direct and represent, is not only a new government, it is also a new type of government. During the 13 years between 1945 and 1958 Italy has been governed by three different forms of government: the first were general coalition governments, including also parties of the extreme left. Then from 1947 there were center coalition government, including, besides the Christian Democrats, also parties of the democratic left and of the liberal right. They alternated for short periods of time with some so-called one-color governments, that is to say minority governments fromed by the Christian Democratic Party alone.

Now, for the first time, we have put together a new formula, called the center left: it marks the Government alliance of the Christian Democrats and the Democratic Socialist Party. It has affirmed itself against the votes of the Communist-Socialists, and

UNIVERSITY OF MICHIGAN LIBRARIES

of the rightists, with the abstention of the Republican Party. This new experience of the Italian democracy made in a spirit of wide social policy but of firm democratic defense. Progress without adventures has been the slogan of the Christian Democratic Party in its electoral campaign and may well remain the slogan of the new Government in its practical activity. We are convinced that the influence of totalitarian parties can be counterbalanced not only by insuring the firm respect of order and democratic legality, but also and mainly by raising the working classes to a better life and to a higher awareness of their civic duties in a free society. To achieve these aims we have long-range plans in view, in the fields of education and professional instruction, of agriculture, and of public housing. At the same time we intend to maintain a high production rhythm and to increase productivity, following the aspirations of our friend, the late Minister Vanoni.

We think and we hope that the new Government, recently approved by Parliament, will be able to insure Italy's further progress, real economic stability, and full guaranty of freedom. Every man entertains particular hopes for his creatures. The head of the recently constituted Cabinet is confident that the Government now approved by Parliament will work effectively carrying out its program. I have been speaking to you of this anticipation. I thank you now for your kind attention, wishing for myself that Italian and international press may from time to time record that speaking as I did, I have not deceived myself.

A Call to Self-Discipline

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 24, 1958

Mr. REES of Kansas. Mr. Speaker, under unanimous approval granted by the House, I am including herewith a sermon delivered to the graduating class of the George Washington University on June 1, 1958, by the Reverend Dr. Joseph R. Sizoo. Dr. Sizoo is a nationally known scholar, preacher, and teacher. Members, I am sure, will be interested in the views expressed in this sermon:

A CALL TO SELF-DISCIPLINE

Mr. President, members of the graduating class, a person's value to society is determined not by the things he begins but by the things he ends, not by the forces he sets in motion but by the forces he brings to a successful conclusion. Anybody can begin a thing but to bring it to a successful end reveals the earmarks of a worthwhile life in the eyes of God and history. What a satisfaction therefore these days must bring to you. What you have begun you have ended, and the forces you have set in motion you have brought to a successful conclusion. I join your friends therefore in extending you greetings and congratulations.

We live today in a period of history marked by distinctive and disturbing characteristics. No one can call himself a discerning student of contemporary life unless he lives with an awareness of them. We speak of this as the unpredictable age: anything can happen, nothing is impossible, nothing stays put. We refer to it as the atomic age. Words like satellite, intercontinental missile, electric charges, space ships, and atomic fission are breathing down our necks. Forces never before known have become commonplace; techniques and disciplines never available to any man have suddenly become available to all men. Some refer to this as the age of the ulcer: a devasting neurosis is biting into the life of modern man. But perhaps the most sobering characteristic of our time and surely its greatest peril is the lost sense of discipline. A blatant unrestraint has taken hold of people.

This is an era when people are swerving from high purpose, accommodating themselves to what is expedient and convenient. They follow the line of least resistance. They never take sides, they never put a trumpet to their lips, they never unfurl a flag, they never commit themselves to anything, they never respond to a call. They have a way of pigeonholing an inconvenient conscience. They gyrate from one side of the street to the other, depending upon where the sun is shining. They send up a trial balloon to find out which way the wind is blowing before they give an expression to an opinion. They are afraid of the black mark of public disapproval. * * * They are terrorized by a shower of postcards and a wheelbarrow of telegrams.

This is the most devastating threat to modern society. Thoreau once wrote: "Youth gets together his material to build a bridge to the moon or, perchance, a temple and palace on the earth. And middle-aged man concludes to build a woodshed with them." That middle-age mind and spread has taken hold of many today. They want what they want as they want it and when they want it. They throw all discretion to the wind and are utterly unconcerned about the consequences of their deeds upon others. Step by step, gradually and perhaps unwittingly, they accept and acquiesce in elements which involve compromise. All around us one sees cynical indifference, tolerance of lies, decay of honesty coupled with whining self-pity.

If imagination, daring, and courage are necessary for the building of a new world, surely these cannot be developed in men who are soft, indulgent, flabby, and pampered by circumstances. We shall never build a better tomorrow until we have a baptism of self-discipline.

Let me point to some areas in modern life in which all this is relevant:

I

You must help your age recover the sense of self-discipline on the national level. The desire for freedom goes deep with us. We take rather seriously the Declaration of Independence "that all men are created free and equal." We have a passion for freedom in this country. But the blunt fact is that freedom is having a hard time to survive. It seems like a lonely island in a sea of hate and suspicion. We are no longer first in scientific genius, and no longer first in the hearts of men. The high regard which people of the world have always had for us is rapidly fading into the mists of suspicion and misgivings. How can you account for that and what explains it? Can it be that the principles which have always undergirded and sustained freedom: service, responsibility, mutual respect, religious tolerance, racial good will, and economic justice, have been brushed aside and pushed against the wall while we have substituted for them other principles: demanding rights, self-interest, pressure grups, political doubletalk, Little Rock, indifference to education. And can it be that when once again we have disciplined our freedom-restoring economic, social, religious, and racial tolerance and good will that freedom's holy light will once again shine across the earth?

Freedom is like a coin. It has the word "privilege" on one side and "responsibility" on the other. It does not have "privilege" on both sides. There are too many today who want everything involved in privilege but refuse to accept anything that approaches the sense of responsibility.. A modern novelist in one of the recent books has a character called Edith. The novelist describes Edith in this fashion: "Edith is a little country bounded on the north and on the south, on the east and the west by Edith." The signs multiply that we are becoming crass and banal and undisciplined, coupled with an epidemic of unreason. Walls always buckle when foundations crumble. It is still true that eternal vigilance is the price of freedom. If freedom is to survive in the world of tomorrow, we shall need to cleanse and purify it. Perhaps that is your first assignment with destiny.

II

You must help your age recover the sense of self-discipline on the intellectual level. In the area of learning there is so much contentment today with mediocrity and the superficial. Our generation has no desire to go deep in knowledge. Scholarship, which requires hard study and long hours, is frowned upon by those who want to stand well with the group. Bookishness is twisted to mean freakishness and to make a fast buck is more important than learning history.

You stand at opposite poles from all that. Your university has fixed standards which never compromise with mediocrity. Your very presence here bears witness to your intellectual competence. You may go out in the world unashamed and unafraid. But there is so little of that in modern life.

Because many refuse to live with the discipline of the mind they have developed all manner of short cuts in learning. We have dehydrated Shakespeare; we have Karl Marx for children; we have history in pictures; we have the Bible in comic strips. Learn a foreign language in six lessons or your money back. It is the age of the short poem, the one-act play, and digest form of novels. Our thinking has bogged down since Fulton, Edison, Brassiere, and Steinmetz led the Nation to inventive genius. It is said that more than one-fourth of the high schools in the United States do not have courses in science. When you try to find out why that is, the answer is always, "It is too hard."

We have developed a hit-and-run concept of education. The school has become a sort of intellectual hotdog stand where no one tarries very long, except to get a quick bite, gulped down with breeze courses and academic hoopla as they rush off to the next attraction. This is the age of butterfly learning; we flutter everywhere, sipping a little here and sipping a little there, but settling nowhere. We string poles and wires from coast to coast; we have vastly improved the techniques and mechanics of communication, but we have so little to communicate. Believe me, there is no short cut to learning for everything has its price. If we are to give leadership and direction to the world of tomorrow we must restore the discipline of learning. This, too, is your assignment with destiny.

III

There is a third area in which all this is relevant. You must restore self-discipline in the moral order. This whole business of evading unpleasant assignments, sidestepping responsibilities, and dodging issues bears witness to the blatant unrestraint of modern man. There is so much accommodation to what is comfortable, convenient, and expedient. When issues arise, they hold aloof and like the Pharisees of old pass by on the other side. When some cause solicits their interest, they wrap themselves up in dry ice. When some crusade is launched, they let the armies march by. On the stage

of the world they refuse to be actors; they are content to sit in the balcony eating peanuts, shrugging their shoulders with, "What is the use; if I don't do it somebody else will; we are a long time dead, and a hundred years from now nobody will know the difference."

I asked a group not long ago involved in a dreadful delinquency, "Why did you do this?" Their answer was, "Frankly we do not care for things like that; we have no heart for them." I asked them, "Why then did you do it?" They answered, "We do not want to stand out like a sore thumb." When the philosophy, "They all do it," takes root and man resigns his moral control to the crowd, the inevitable next step is anarchy.

Here is a teacher who frankly permits cheating to go unchallenged. He suggests that if he taught honesty it would not prepare the student for life. Indeed, "to teach honestly would give him a false orientation. Honesty is not realistic." Here is a popular tragic personality involved in a tragic death, under even more tragic circumstances, assured that all this is no cause for either regret or embarrassment; it will increase the box-office returns.

The want of moral fiber is leaving its marks on life today. The signs multiply of a soggy moral standard. It is popular to disclaim all moral responsibility for everything. We blame criminal behavior on heredity, neighborhood conditions, family maladjustments, sex, libido, or some other hokus pokus; everywhere, except where it belongs, personal moral responsibility. James Barrie in his Dear Brutus portrays a group of uphappy disillusioned people in an English home. If only the setting of their lives had been different, if only they had had other talents and other work to do, then indeed they would have known serenity and happiness. The butler was sure he would be happy if he had been a financier; the sculptor is positive he would have had great joy in life if only he had been a painter. So the hostess arranges for them to change to the status in which they believed they would find happiness. The sculptor becomes a painter, and the butler becomes a financier, and so on. The fact, however, is that the sculptor on becoming a painter lost all sense of genius and inspiration. The butler had become rich, but his great riches had made him coarse and crude. In the end they all revert to the same status of unhappiness and disillusionment with which they had come to the English home. So James Barrie, with an innate genius, concludes the play with, "The fault, dear Brutus, is not in our stars, but in ourselves."

It is significant that an era which refuses to accept the disciplines of life is in such desperate search for serenity and strength. An age which seeks to find serenity by tranquilizing pills, sleeping on foam mattresses, counting sheep, and buying peace of mind books written by this or that swami with or without turbans, has yet to learn that the sooner we stop fooling with the Ten Commandments and the arithmetic table will we experience those inner resources of peace which come alone through obedience to the will and the law of God. The greatest single need of our time is to reassert and reaffirm those basic realities which have disciplined men in the past. A distinguished American has indeed spoken wisely, "We have grasped the mystery of the atom, but we have rejected the Sermon on the Mount. We have achieved brilliance without wisdom, and power without conscience. Ours is a world of nuclear giants and ethical infants." We have become spiritual albinos whose mortal clay has been bleached but in which there has not yet been breathed the breath of life. We need people in education, in legislation, in business who believe in a moral order that is centered in God. The moment a civilization loses touch with God life becomes so complex and complicated men do not know how to handle it or what to make of it.

If ever we fall apart and lose our freedom and leadership, it will not be because we lack political technique, social patterns, and economic regulations, but because we refused to discipline ourselves. When the roots wither, the tree perishes. You cannot build a new world by stringing together a great number of bad people.

If the need of our time does not turn on programs but on people with self-respect enough to be servants of eternal purpose rather than straws in the wind of circumstance, if our difficulties are not so much political and economic as moral and spiritual, then only by a fresh awareness of God can we stop this modern social and political decay and place life on the basis of soundness and decency.

We have changed from sailing ships to jet airliners, from hieroglyphics to electric typewriters, from clay tablets to Oxford editions, from mud huts to penthouses, but to what end? What is the good of a civilization whose art ends in comic strips, whose music ends in rock and roll, whose learning ends in red-back-magazine stories of smutted lives and soiled tempers coated over with psychoanalysis and tossed off as literature; whose science ends in the capacity of self-destruction. Education may rationalize life, government may nationalize life, business may mechanize life, but only religion can spiritualize life. Vachael Lindsey wrote it for us in these words:

"Not that they starve, but starve so drearily,
Not that they sow, but that they never reap,
Not that they serve, but have no Gods to serve,
Not that they die, but that they die like sheep."

Across the lonely centuries there comes once again the voice of the Son of Man, "Seek ye first the kingdom of God and its righteousness and all these things shall be added unto you."

This is your world; it is the only world you will ever know. If you ever expect to do anything for it, it will have to be in that kind of a setting. You did not make that world, but you have the chance to do something about it. Whether this fills you with fear or with adventure, whether that makes your blood run cold or your nerves tingle, depends entirely on the stuff of which you are made.

In a few days you will leave this intellectual home in which you have lived these happy years. It is quite possible that you will feel like the little bear who ran away from his mother determined to live his own life at his own convenience. When he got to the top of a nearby hill and saw peak after peak and valley after valley stretch on and on and on to the far off horizons, he rushed back to his mother and said, "The world is so large; take me back, I am afraid."

Surely you will not run back. As a matter of fact, they won't take you back. You are starting the journey, and you will go on and on. It is an entrancing and difficult journey. It is entrancing because it will bring you glorious opportunities, high romance, great adventure, independence, and joy unspeakable. It will also be difficult because the grandeur will often be corroded by cruelty and stupidity and evil. The world will try to take away your happiness, rob you or your integrity, break your heart, and hang a cross on your back. Richard Watson Gilder in his Ode to Grover Cleveland wrote a solemn warning, "Lonely is the life that listens to no voice save that of duty." You can either stand up to that world and pay the price or you can yield to that world and let it bend you. If you do the latter, you will never again be able to look yourself in your university in the face. But that is your choice. Some of you will fail, some of you will triumph, but all of you must struggle in this battle where character is made.

The eyes of those who hope for a better world are turned to people like you. God forbid you should trail in the dust their golden hopes.

Members of the graduating class of 1958 I salute you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Church, Yarborough, Clark, Jordan, Carlson, Jenner, Langer, Martin of Iowa, Morton and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Church, Jordan, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4972 Hutchins Place.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3007 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.

OFFICERS OF THE SUPREME COURT

Clerk—John T. Fey, 2931 Cathedral Ave.
Deputy Clerk—Edmund P. Cullinan, 4621 Reservoir Road.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Drive, Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Burton. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Address Delivered by Hon. Edward Martin, of Pennsylvania, Before the American Legion, Department of Pennsylvania

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address I delivered at the annual convention of the American Legion, Department of Pennsylvania, in Philadelphia, on July 26, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. EDWARD MARTIN, OF PENNSYLVANIA, AT THE ANNUAL CONVENTION OF THE AMERICAN LEGION, DEPARTMENT OF PENNSYLVANIA, PHILADELPHIA, PA., SATURDAY, JULY 26, 1958

As an old soldier who looks back with pride and pleasure to a half century of military work, I am happy to salute my comrades of the American Legion.

One of the greatest honors that have come to me during the years has been your invitation to speak at the annual convention of the department of Pennsylvania.

I have stated many times that the various veterans' organizations and the other patriotic societies deserve the gratitude of the American people.

First, because they are strong and steadfast in support of the ideals of Americanism, and second, because they always have the courage to point out and to fight any danger confronting us as a Nation.

Here in our blessed land of freedom, we have more precious rights and privileges than any other people of the earth. Paramount among our blessings is freedom of the individual which we cherish as the gift of God to mankind. The American form of government was established to protect and sustain our scarced right to "life, liberty and the pursuit of happiness." However, we must keep in mind always that in payment for these rights we must be prepared and willing to bear an equal share of responsibility.

Individual responsibility as the strongest support of the American system of government. Therefore, the dangers that confront us should be of deep concern to everyone with love in his heart for American freedom and the American way of life.

If the Founding Fathers who created this Government here in Philadelphia could come back to this city they would be proud of our magnificent achievements. We have expanded from the Atlantic to the Pacific. We have grown in material and spiritual strength until we are the most powerful Nation on earth.

We have developed such political stability that the depressed areas of the world look to us for leadership and help.

The Founding Fathers, however, might well be worried over some of the things that government now does. In the Declaration of Independence they did not mention the things they wanted from government, but they did list the burdens that government had laid upon them.

The Founding Fathers probably would be worried because of the widespread lack of interest in our Government. They would wonder why so many of our people do not even take the trouble to vote.

I am sure they would be disturbed over the vast increase in the size of our Government and the many functions which have been added beyond the powers and duties clearly set forth in the Constitution.

Big government is best illustrated by the tremendous payroll expansion. Many do not realize that 1 American out of 8 works for government, with a total payroll, local, State, and Federal, of more than $30 billion a year.

The Founding Fathers would surely find cause for alarm in the debt of the three branches of Government which has now reached the staggering total of more than $354 billion.

A great American President, Col. Theodore Roosevelt, warned against the dangers that could destroy America in terms that apply with equal force today.

"The things that will destroy America," he said, and I quote, "are prosperity-at-any price; peace-at-any price; safety-first instead of duty first; the love of soft living and the get-rich-quick theory of life."

The dangers to which Colonel Roosevelt pointed so clearly are still with us today.

How can we overcome these threats to the future of our country?

We will continue to be the greatest Nation of all history if we carry out with loyalty, determination and courage the principles supporting the American system of government.

These United States will remain great if we have proper education of our people, if we have a strong national defense supported by all our citizens, if we maintain a strong, stable, dynamic economy, if we are clean and constructive in our politics, if we are honorable in our international relations, and if we are faithful to the principles of our religious belief.

Let us discuss briefly these vital elements of our national strength.

Education, after the family and the church, is the bulwark of our country's greatness. Our free educational system must be directed and controlled by local authorities. The higher echelons of Government must never be permitted to influence it.

When the Soviet's launched a satellite, many of our people urged that science become the number one thing in our colleges and universities. It would be unfortunate if emphasis on science would lead us away from the American tradition that the moral teachings of the humanities are basic in our country. If science is placed above all else, there is danger that eventually we will all conform to a pattern. That means mechanization and probably the loss of individual effort which is interwoven with individual freedom. We must never forget that real progress is made when we have the quest for freedom.

National defense of the United States may determine the freedom of the world. Our forefathers were self-reliant and fought their own battles. Their weapons were the rifle, the ax, and the Bible, symbolizing the three fronts on which we must prepare today in order to keep our land strong, free, and at peace. The rifle is the symbol of military defense; the ax, of work, sweat, and industry; the Bible, of spiritual strength and unity, without which no nation can permanently endure. In planning our defense we must never forget the part of industry, agriculture, and our skilled workmen. As far as practical, we must keep critical defense items within our own borders.

Only by the strictest Government economy can we provide the necessary funds to insure ourselves against tyranny and aggression. The Communists would like to see us in financial collapse, debt-ridden, and bankrupt. That is the soil in which the seed of communism thrives. Those who advocate unlimited Government spending are unwittingly giving aid and comfort to the forces that would destroy our freedom.

A sound and progressive economy in America is supported by the legs of a tripod consisting of agriculture, labor, and industry. If one leg of the tripod is damaged, the whole may collapse. Let us keep our finances in good shape, not only as individuals but as a government. Let us never fail to appreciate that deficit financing is dangerous, as it is the greatest reason for creeping inflation. Free enterprise, without too much governmental interference, will keep us strong. God gave us pure air, clean water, good soil, and an abundance of natural resources, and it is our duty to preserve them.

Politics, after the home, the church, and the school, should be the first consideration of every American. Since the first administration of President Washington, the two-party system has had much to do with the strength of our Government. Fortunately, there have been few times in our history when there were more than two strong political parties. Minority parties have soon gone out of existence. Tenure in office has helped strengthen the two-party system. For that reason I have always opposed the referendum and recall.

Political parties are strengthened when they stand for ideals, decency, and good government. Our political system, regardless of many shortcomings, approves the right of a man to say what he likes, to think what he likes and, under the law, to do what he likes. This means that the state is the servant and not the master of the people. It means that public officials have power only as trustees for the people. We must keep it that way.

In these days of unrest and confusion in world affairs, we are all deeply concerned with international relations and the supreme desire of all God-fearing people for freedom from the threat of war.

In the pages of history we find that dictators, kings, armies and navies, statesmen, diplomats, and educators all have failed to establish true and lasting peace. Our remaining hope—the hope that springs eternal in the human breast—is hope inspired by faith in the omnipotent power and goodness of God.

In a world divided by conflicting ideologies, each striving to influence the hearts and minds of men, the United States has been called to leadership for peace, freedom,

UNIVERSITY OF MICHIGAN LIBRARIES

and justice. If we are to measure up to that tremendous responsibility, we must turn with deeper devotion to the eternal and unchanging truths that govern the destiny of men and nations.

We must set forth to the world an example of honor, justice and loyalty in public affairs and in our private lives. We must live in obedience to the ideals of peace and good will ordained by the Prince of Peace 2,000 years ago.

In our dealings with other nations, we must be sincere and humble, placing emphasis upon our moral and spiritual strength rather than the power of our material resources. To the people of lands less fortunate than ourselves, we must hold out the hand of fellowship and helpfulness.

As individuals and as a nation, we must seek the path that leads to better international understanding, mutual respect and greater cooperation for a better world of peace and justice for all mankind.

In meetings such as this it is appropriate to recall that our Republic was established on the sacred principles of religious faith.

The courageous men and women who built the foundation of American freedom believed that each human being was created in the image and likeness of God. America has attained its high place among the family of nations because of our deep religious convictions.

Supporting our background of devotion to the teachings of the Holy Bible, we have the great legal pronouncement of the Supreme Court of the United States in which it was stated: "This is a religious Nation."

That opinion, delivered by Mr. Justice Brewer, marks a great milestone in the judicial and religious history of the United States. More than anything else it points out one of the great elements of American strength—the spirit of tolerance and good will under which many faiths and creeds live together in peace and harmony, rspecting the right of every individual to worship God according to the dictates of his own conscience.

In accordance with the plan of the Almighty, some men gain leadership in industry, science, education, government or religion. Others became outstanding in the development of our natural resources. Others have superion skills as craftsmen in the production of articles of beauty and utility.

We have been industrious, tolerant, thrifty, considerate of the less fortunate and God-fearing. In the some, schools and the church, we have taught self-reliance.

While we have invented many labor-saving devices used in peace and war, we have never forgotten that we must have skilled men to operate them.

In armed conflict, for example, we will never have a "pushbutton" war. It will always be necessary to have brave men to fly combat planes, man fighting ships, carry the bayonet, fight the guerrilla warfare, and go under fire to carry food and munitions to the frontlines.

Let us remember that as long as we support the power of the church, truth and moral values will prevail.

Let us all fight for these great ideals. They represent our highest hope for the stability of our Nation and peace in the world.

A Declaration of Foreign Policy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in my home city newspaper, the July 29, 1958, edition of the Concord Daily Monitor of Concord, N. H.

It has reference to my speech on the Senate floor on July 23, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIDGES' SPEECH

Senator BRIDGES is convinced the only way to deal with the Russians is to end uncertainty over where this country stands in international relations.

The Senator voiced his views in a speech in the Senate in which he urged the United States to "smoke the Soviet Union out of its entrenched position in which it avoids risk to itself while it instigates indirect aggression."

This can be done, the Senator says, by a "forceful, dramatic declaration of policy directed straight at the Soviet Union." Such a declaration is needed, he points out, to tell the Kremlin that it cannot continue to try to force its political system on independent nations.

Senator BRIDGES has pulled no punches in an analysis of America's foreign relations policy. He is convinced this is the time to put the chips down for a showing of the cards. He is opposed to weakness, fuzzy declarations, and platitudes.

He wants a cold, realistic clarification of where we stand, what we propose to do, and what we can expect the Soviet Union to do. The Senator's speech was concerned primarily with the Middle East, but what he says applies equally to other parts of the globe. He warns the United States cannot stand idly by while the Soviet Union chips away at countries which are still not under the domination of the Kremlin.

It has taken a high degree of courage for BRIDGES to call for decisive action at a time when the administration is under strong pressure from allies of this country to move cautiously, to avoid any move that might annoy the Russians. And this pressure is constantly reinforced by warnings of the perils in a global war.

What Senator BRIDGES is calling attention to is the need for a reassessment of the western policy toward Russia. For a variety of reasons, there has been an unwillingness for commitment to a single line against Soviet nibbling. There is an equal unwillingness to treat Russia as an irreconcilable enemy.

As a result there has been employment of a series of half measures in dealing with a crisis. At a time when the need for firmness is obvious, there is an attempt to justify a mild and ineffective policy on the ground that Washintgon must leave no avenue to peace unexplored.

But as Senator BRIDGES has pointed out in his speech, a clearly defined and firm international relations policy could be the best assurance of peace.

The Late Dr. Umphrey Lee, Former President of Southern Methodist University

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. YARBOROUGH. Mr. President, recently a very distinguished educator in Texas passed away—Dr. Umphrey Lee, of Dallas, Tex., the beloved and esteemed former president of Southern Methodist University.

The Dallas Times-Herald, in an editorial of July 12, 1958, has made a fitting suggestion to memorialize the name of this great humanitarian. The editorial recommends that an elementary school be named after Dr. Lee.

It has long been an American tradition to name institutions of learning after our outstanding leaders, and I join wholeheartedly in supporting this suggestion. With the need for better education so plainly evident, we can take example from some of our outstanding educators in the knowledge that their achievement may serve as an inspiration for our own actions.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FITTING MEMORIAL TO DR. LEE

Members of the Dallas Board of Education are to be commended for moving promptly to name a school after Dr. Umphrey Lee, beloved and esteemed former president of Southern Methodist University who died recently. The structure to memorialize this great educator and humanitarian is scheduled to be built in Southwest Oak Cliff.

The list of Dallas public school names is a partial honor roll of Americans who have made outstanding contributions to their nation. It includes many tall Dallasites of the past. The addition of Dr. Umphrey Lee's name is a most worthy one, for by ably guiding Southern Methodist University during its critical years as a young university, Dr. Lee bequeathed much to posterity.

It may not be too much to hope that many of the students of Dr. Umphrey Lee Elementary School will take the trouble to find out who he was and what he stood for. Those who do so will find inspiration. They will come to know more about reverence for God, stanch patriotism, respect for their fellow beings, intellectual diligence, kindness, community responsibility and many other virtues that combined to make Dr. Lee an outstanding leader of his era.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Return to a Sound Principle," which appeared in the Roanoke Times of July 29, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RETURN TO A SOUND PRINCIPLE

The new farm bill passed by the Senate retains the parity principle but at the same time it is a step toward lower price supports and less Government control of the farmer's business. In the form in which it went to the House, the measure is acceptable to President Eisenhower, who earlier this year vetoed a bill which would have maintained

price supports on all farm commodities at not less than 1967 levels.

The Senate bill provides a new formula for cotton, corn, and rice supports based on the open market price. Farmers would be guaranteed 90 percent of the average market price for a preceding 3-year period. An amendment preserved in part the old formula by providing a floor at 60 percent of parity for price supports. A third provision fixes specific price minimums—$1.30 for corn, 30 cents for cotton, and $4 for rice. Thus a choice of three different support floors is provided, the bill requiring that the farmer receive support prices at whichever level is highest.

In most cases the formula of 90 percent of market price would be applicable. For 25 years the Government has attempted to maintain farm prices by a complicated system of parity which ignored all the laws of economics. A vestige of the system remains in the 60-percent-of-parity floor, but the topheavy Senate vote for the bill, 62 to 11, is a welcome indication that even the farm politicians in Congress realize that a program of high guaranteed Government prices and controls will not work.

The bill represents an important step toward helping farmers adjust their production to market demands instead of depending upon Government subsidies. In the House there will probably be loud demand by many Members for retention of the old parity formula. The Senate bill is sensible legislation and the heavy majority in favor of it indicates that an alternative program could not be passed this late in the session. Whether there is farm legislation this year is up to the House.

Ethics in Government

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. NEUBERGER. Mr. President, there continue to be widespread expressions of interest in the press in some of the issues raised by the current public review of the role of favors and influence in the Government and its administrative and regulatory agencies.

In the current issue of the Sign, a national Catholic monthly, for August 1958, the editorial page is devoted to the subject of Congressmen and Conflict of Interest. Under this heading the editor, the Rev. Ralph Gorman, discusses some of the proposals which I made in the Senate on June 11, for the establishment of uniform rules with respect to conflict of interest applying both to executive officials and to Members of Congress. I ask unanimous consent that Rev. Gorman's informative and thoughtful editorial be printed in the Appendix of the RECORD, followed by an earlier excellent editorial on the same subject which appeared in the Honolulu (Hawaii) Sunday Advertiser for June 15, 1958, and which, I am also glad to say, commented favorably on my proposals in the field of conflicts of inteerst, and called for extending them to local government.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Sign of August 1958]

CONGRESSMEN AND CONFLICT OF INTEREST

(By Father Ralph Gorman, C. P.)

Senator RICHARD L. NEUBERGER, of Oregon, proposes that his fellow Congressmen try their own medicine. He has introduced a bill in the Senate which would extend to the Members of that august body the conflict-of-interest laws which apply to the executive branch.

The idea sounds good to us.

Here are some of Senator NEUBERGER's questions on the matter:

"If Federal commissioners are to be pilloried for accepting hacienda suites at Palm Springs or airplane tickets to Palm Beach, how can Senators and Representatives continue profitable associations with law firms retained by banks, railroads, labor unions, and utility companies?

"Is Sherman Adams any more indebted to Mr. Goldfine for gifts than a man who sits in the Senate or in a governor's chair is indebted to those who collected $100,000 from big-business men or from trade-union political-education funds for his campaign expenses?

"Is Sherman Adams, with his $2,400 rug and $700 vicuna-cloth coat, more obligated to render unethical favors than is a Member of Congress who is dependent every few years on 20 times that amount from bankers, natural gas and private utility owners, and distillery executives to finance his billboards and radio and TV shows?

"Is it morality for a Senator to collect $500 or $1,000 speaking fees from many labor unions or liberal groups and then to oppose a Federal right-to-work law, but immorality for Harry Vaughn at the White House to be given a deep freeze or Mr. Adams a coat?"

There are plenty of cases where there can be a conflict of interest for Congressmen. Here are a few:

A Congressman's wife or other member of the family can be engaged in a business for which he legislates. A Congressman can own radio or TV stock and vote legislation affecting these industries. Congressmen may be authors and publishers and legislate second-class mailing privileges and mail rates for books. Congressmen may be farmers and vote farm subsidies, own stock in oil companies and help determine special tax provisions for the oil industry. A Congressman may accept generous legal fees from a railroad and legislate for railroads.

Senator NEUBERGER's idea is that what's sauce for the goose is sauce for the gander. Congress has been zealous in legislating propriety and honesty for the executive branch and in investigating lapses. It doesn't show any willingness so far to take a dose of its own medicine.

Senator NEUBERGER's bill would require Congressmen to file with the Comptroller General a report (available to the public) including the following:

1. The amount and source of each item of income, each item of reimbursement for any expenditure, and each gift (other than gifts received from members of his immediate family) received by him during the preceding calendar year which exceeds $100 in amount or value; including any fee or other honorarium received by any individual for or in connection with the preparation or delivery of any speech or address, attendance at any convention or other assembly of individuals, or the preparation of any article or other composition for publication, and the monetary value of subsistence, travel, and other facilities received by any individual in kind;

2. The value of each asset held by him, or by him and his spouse jointly, and the amount of each liability owed by him, or by him and his spouse jointly, as of the close of the preceding year; and

3. All dealings in securities or commodities by him, or by any person acting on his behalf or pursuant to his direction, during the calendar year.

Other Congressmen are proposing similar legislation, but those in the know don't think any will be passed. If it isn't it will be obvious that congressional zeal for honesty and virtue applies only to the executive branch and not to Senators and Representatives.

[From the Honolulu (Hawaii) Sunday Advertiser of June 15, 1958]

CONFLICT OF INTEREST

Senator RICHARD L. NEUBERGER, Oregon Democrat, wants the Congress to pass laws prohibiting conflict of interest among Senators and Representatives. His views are outlined in a column on this page today by Roscoe Drummond, the Washington commentator for the New York Herald Tribune.

The result of his move will be watched with interest all over America, for the situation in the Congress is repeated in every State and Territorial legislature, in boards of supervisors and commissions everywhere. The cold fact is that men and women, elected and appointed, hold positions in which their daily official actions can affect their own businesses for better or worse. Who will say they will vote for the worse?

Lawyers and liquor distributors, real estate men and manufacturers, ranchers and restaurant owners; these are among those called upon to judge legislation affecting their own livelihood. The nature of our society may make it impossible to avoid such incongruities entirely, but the adoption of codes of ethics by lawmaking and regulatory bodies would be a show of faith. In the case of appointive bodies, such as our own city planning commission, the appointing authority can fulfill his responsibility to the public by putting justice and the commonweal ahead of political considerations and plain expediency.

Senator NEUBERGER has placed a finger squarely upon one of the most sensitive spots in American Government. If the Congress heeds his counsel it will have set an example that cannot be ignored by State and municipal governments.

This does not excuse local governments, however, for failing to establish standards of civic virtue on their own.

Profiles in Love—The Famous Five Senators

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. BEALL. Mr. President, Columnist Holmes Alexander, who lives in Baltimore and is a constituent of mine, is author of a new book, The Famous Five. This book is about the five outstanding Senators of all time who were picked by a subcommittee, the chairman of which is the Senator from Massachusetts [Mr. KENNEDY], and having as its other members the Senator from Montana [Mr. MANSFIELD], the Senator from New Hampshire [Mr. BRIDGES], and the Senator from Ohio [Mr. BRICKER]. The famous five Senators are Clay, Webster, Calhoun, LaFollette, and our late distinguished Republican leader, Robert A. Taft of Ohio.

Mr. Alexander's book has received some very fine reviews and promises to

UNIVERSITY OF MICHIGAN LIBRARIES

become a best seller. In a column titled "Profiles in Love," Holmes Alexander, whose column is syndicated in upward of 100 American dailies, has some kindly and interesting things to say about the critics of his book and about the famous five Senators themselves.

Mr. President, I ask unanimous consent that the column Profiles in Love, by Holmes Alexander be included in the RECORD as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFILES IN LOVE

(By Holmes Alexander)

WASHINGTON, D. C., July 31, 1958.—"Statesmanship is not a cliché," Senator JOHN F. KENNEDY was good enough to write in his foreword to my book The Famous Five, "but a quality within the reach of politicians with the vision and courage of the five Senators included in this fine volume."

"Vision and courage," KENNEDY went on to say, "are qualities which Senators Clay, Webster, Calhoun, La Follette and Taft had in common." Reviewers of my book have added some other qualities shared by these greatest of Senators—courtesy, intelligence, pride in the Senate, integrity of purpose.

Some reviewers have chided the author for raising the question: "What makes greatness in these famous five?" without supplying the answer, if there is one. "If we Americans are living," as Adlai Stevenson has said, "in a time for greatness," maybe it is a question which needs answering.

Funny thing—there is an answer, and a useful one, in the lives of these five men. It seemed so obvious to me when I wrote the book that I left it for the individual reader to find for himself. What did each of the famous five have in abundance? Each had love. As simple as that—love.

Henry Clay, heaven knows, was not great because he legislated for a protective tariff, a national bank, and the War of 1812. But whole acres of people would come to hear him speak. More people, as a friend said, would run after him and fewer would vote for him in presidential races than any man in history. The voting is not the thing. It's the old story of why the lamb followed Mary to school. Mary loved the lamb, and the lamb loved Mary. Clay, who suffered more than his share of family tragedies in death and insanity, was drawn to humanity for this very reason—the brotherhood of sorrow. His surviving son at Clay's deathbed wrote the Senator's best epitaph: "Was there ever a man had such friends?"

Daniel Webster, as a number of critics have noted in the light of the Sherman Adams story, was always getting his purse refilled by businessmen whom he assisted. But this habit did not prevent 150 professors of history and all living Senators from selecting Webster for membership in the famous five. What was the overriding virtue in Webster? I think it was his enormous gift of affection. He bestowed it upon his father, his brother, his wife, his chosen friends. Today, love is a sex-oriented word. But several years ago, novelist Somerset Maugham in his philosophic autobiography, the Summing Up, used the one-word expression "lovingkindness" to name the greatest of all human qualities. Webster had it in abundance. No wonder men called him great.

We all know who was the femme fatale in the life of John C. Calhoun. He died crying out her name: "The South. The poor South. God knows what will become of her." We are taught to be suspicious nowadays of nationalism, and to regard internationalism as better because it's bigger. But there was a time in American history when men's hearts throbbed for their Nation and their State, else we would never have become a country at all. No group of all-star selectors could pass over a man who loved the principle of State sovereignty as passionately as Calhoun.

That leaves us La Follette and Taft. Well, the greatest lovers in song and story are the men who fell in love and stayed that way throughout their lifetimes. The romantic legend that 1 man can love 1 woman exclusively and forever is written in the marriages of Bob La Follette and Bob Taft. I have never read anything in biography more touching than Fola La Follette's description of the parting in death of her father and mother. I doubt if any two human beings ever lived a finer love story than Bob and Martha Taft. Nothing in books or on the stage can touch that parting in New York hospital of the doomed Senator and his stroke-crippled lady.

So, if we want greatness in our time, we had better stop and remember what makes it. To be great a man must first be capable of great feeling for persons and causes outside himself. He must be capable of loving and of being loved. Anything else he has is so much garnish to this central trait.

In the Nation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial by the distinguished writer, Mr. Arthur Krock.

Mr. Krock makes a keen analysis of the possible effects which Gov. Orville Faubus' overwhelming reelection victory will have on attempts by the Federal Government to force racial integration in our State public schools. The editorial is entitled "In the Nation," and it appeared in the July 31, 1958, issue of the New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN THE NATION—THE PREFACE TO THE GRAVE ISSUE OF SEPTEMBER

(By Arthur Krock)

WASHINGTON, July 30.—The protest, implicit in the large majority vote cast for the renomination of Governor Faubus in the Arkansas Democratic primary, against federally decreed and enforced racial integration in the public schools of States with segregation laws was anticipated by the executive department. But the consequences of something which is likely to happen have an unrealistic quality, and it requires the event before the consequences are weighed on the scales of reality.

This has been the effect here of Governor Faubus' overwhelming nomination for the third term he seeks against the hard political tradition of Arkansas. If the issue on which the voting turned had not so distinctly been Federal enforcement by military means of the pro-integration decrees of the Federal judiciary, the President's use of this method would not stand directly repudiated in the one State where it was employed. If the race between Faubus and his two opponents had been close, its challenge to the Federal Government would not have been so serious. And if there were a longer period between the Arkansas primary and the opening of the school terms in centers of southern resistance to integration, the Exectuive would not have been obliged to decide its September policy in the atmosphere of an immediate crisis.

But the issue, the size of Faubus' vote in the Arkansas primary, and the imminence of September, compel an emergency approach to the enforcement problem by the President. His choices, which are hard and few, have been rendered harder and fewer by the prospect that the event in Arkansas will stiffen southern resistance to racial integration in the public schools. This prospect is evaluated as a certainty by southerners, with differing views on resistance, who agree that not a lustrum but generations will be required if this radical social evolution is to come.

Without the factor of the heavy protest in Arkansas, the problem of enforcement in the South would soon have reached a new critical peak anyhow. In six States—Alabama, Georgia, Louisiana, Mississippi, South Carolina and Virginia—there has been no racial school integration at all. And all the powers of these States, supported overwhelmingly by public opinion, are in readiness to maintain public school segregation in September and indefinitely thereafter. The situation in Virginia, the historic leader of southern thought and action, sufficiently illustrates the problem of Federal enforcement.

In Prince Edward County the litigation began that led to the Supreme Court's 1954 holding that statutory racial segregation in the public schools is unconstitutional, to its 1955 decree which directed the inferior Federal courts to eliminate it "with all deliberate speed," to the President's dispatch of the Federal paratroopers to Little Rock and to the Arkansas primary. In this county a private school system for whites already has been financed against the day when all judicial process to avert racial integration has been exhausted. Then the Negro schools will be closed with the white; other communities are prepared to follow Prince Edward County's example; and the Governor of Virginia is required by State law to close any integrated school, regardless of whether there is local financing of substitute facilities for primary and secondary school education.

This means that, unless some Federal judicial process in the interim postpones or removes the occasion for the showdown, a climax of the President's enforcement problem will come in the cultural and traditional center of the South. No leadership could be more encouraging to southern resistance than that of Virginia, which would have been true despite the event in Arkansas. Small wonder that the President is reported as deeply troubled by the forthcoming concentration in Virginia of the six-State southern challenge to his concept that it is his constitutional duty to enforce Federal inferior judicial rulings equally with Federal statutes (in this case there is none) as the law of the land.

The Supreme Court's 1955 decree puts it within the power of the Federal judiciary at least to postpone indefinitely this ominous showdown. The courts, confronted with political and social situations which made it imperative as a matter of public policy, in the past have adjusted or reversed their interpretations—as in 1934 with principles of New Deal laws previously held invalid. This goes historically by the name of judicial statesmanship, and it has averted national crises before.

Congressman Baker, Republican of Tennessee, Tells Why TVA Should Have a Self-Financing Program

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. EVINS. Mr. Speaker, the Senate has already passed a bill to provide a program for TVA's future financing. The House Committee on Public Works has also reported a bill for this purpose which is pending before the Rules Committee. In this connection, our colleague, Congressman HOWARD H. BAKER, has written informatively on the need for prompt passage of this legislation. Under unanimous consent I include Congressman BAKER's article entitled "Why I Think TVA Should Have a Self-Financing Program" in the Appendix of the RECORD.

The article follows:

WHY I THINK TVA SHOULD HAVE A SELF-FINANCING PROGRAM

(By Representative HOWARD H. BAKER, Tennessee Member of Congress)

On January 7 when the 2d session of the 85th Congress convenes in Washington, every Member will be intensely aware of challenging new problems which press for attention. Grave national issues have developed during the recess; new perils to our security have been revealed. In such an atmosphere, it may be difficult for us to remember that half-finished tasks cannot be abandoned just because new problems have appeared and to realize that nothing has happened during the recess to diminish the importance of the backlog of unfinished business we left when the 1st session adjourned on August 30.

I hope you will be ceaseless in your efforts until the House acts favorably on one item of unfinished business of great concern to every rural electric cooperative—the TVA financing bill which was pending when we adjourned. Its enactment is vital not only to the area served by TVA, but to the future of rural electrification over the whole Nation.

TVA must have a way to finance the capacity its growing loads require or this great partnership between the Federal Government and the people will be ended. That would be a disaster. This amazingly successful demonstration of the results achieved when power is made abundantly available to consumers at the lowest possible cost must be continued.

Here TVA, an agency of the Federal Government, owns the facilities for generation and transmission, the wholesale part of the regional power system. It is the sole supplier of a great area of 80,000 square miles and a population of over 5 million. The people themselves through 151 municipal and rural cooperative distribution systems own the retail end of the business, purchasing at wholesale from TVA the power they deliver to over 1,400,000 consumers. In their contracts with TVA these distributors agree to carry out the policies laid down by the Congress in the act of creating TVA. They accept the responsibility of pioneering in the regionwide demonstration. Their experience is a contribution to power systems and power consumers everywhere, and particularly to the rural electric cooperatives of the Nation, no matter where they are located.

TVA FATE NATIONAL CONCERN

I am astonished by the propaganda which is intended to convince those who live outside the area that what happens to the TVA power system is a matter of purely local concern, that you can be indifferent to the fate of TVA. That is not true. What happens to TVA is of grave concern to you. What happens to TVA is important to the entire country.

When I say that the continuance of this regional power system is vital to the Nation I am not thinking solely of TVA's enormous contribution to defense, and the fact that the Federal Government experiences considerable savings because more than half of TVA's energy output is delivered to Federal facilities located in the area. I am reflecting also on the value of this power system as a pace setter in the nationwide movement to make electricity available to the farms of America and at the "lowest possible" cost. I sometimes wonder if the contributions of TVA and its distributors to that program are forgotten.

I wonder how many farmers recall that the great network of rural electric cooperatives had its beginning in this region. That did not happen because rural electrification was already far advanced in this area when REA began and a wealth of experienced managerial talent readily available. On the contrary, rural electrification was almost nonexistent here, with less than 3 percent of the farms in the region now served by TVA having electric service. The impetus to a national program was not generated here because a rich and prosperous agricultural community demanded electricity no matter what the cost. The area supplied with power by TVA was not and is not an area of high agricultural income. The countrywide program of rural electrification got its start here and has prospered for a very good reason—TVA. TVA had been created and was given a mandate by the Congress to supply the electricity to cooperatives so that the farmers of the area could be served at rates established at a level which would increase use.

COVERAGE REFLECTS PROGRESS

The fact that more than 95 percent of the farms in the area have electric service today reflects the progress of the region, but the story of increased use and the financial results of that use is the record which qualifies the 51 cooperatives which buy power from TVA to be called pace setters. They represent only 5 percent of all the cooperatives in the United States, but they sell to their consumers nearly 20 percent of all the power sold by the cooperatives in the Nation.

NATIONAL AVERAGE EXCEEDED

Today the average residential use of power on the farms in the TVA area is 4,670 kilowatt-hours per year. This compares with a national average residential use for all utility systems, including urban centers, of only 3,003 kilowatt-hours a year. Starting from scratch, these cooperatives have made that phenomenal record because under the terms of their contracts with TVA they have set themselves these definite goals: Extending their lines, keeping rates low, helping their members to make increasingly effective use of electricity, relying upon the expanding volume of their sales for the revenues to keep them in the black. During the past year alone, 11 of the 51 cooperative distributors reduced their charges to their consumers. Those consumers will realize more than $1 million in annual savings as a result. The importance of such rate reductions to our national experience in rural electrification is tremendous.

What will be the result to the cooperatives themselves? You can find the answer in detailed reports made by TVA. The record so far gives a hint of the results to be expected, for in spite of increasing costs of labor and material the sale of power by cooperatives in the TVA area has increased so rapidly that the costs per unit of power sold have been and still are on a downward trend. I am told that in fiscal 1957 the operating costs per kilowatt-hour of power sold by TVA cooperatives were about 25 percent less than the kilowatt-hour costs of the same cooperatives 5 years earlier, and as their sales have increased the investment per kilowatt-hour sold has been reduced from 9.4 cents to 6.4 cents during the same period.

What has been done here can be done elsewhere. TVA and its cooperative distributors are taking the risk out of the widespread adoption of low rate-high use policies by rural systems. Their record ought to encourage the timid, prod the slothful. For these results have not been achieved in a test tube or pilot plant. This is the actual operating experience of 51 cooperatives, with a total investment in plant of approximately $212 million. The areas they serve vary in income levels as they vary in other regions of the country. The skills and experience of their managements are not identical. Only one characteristic is common to them all. They are all in partnership with TVA. They are all committed to a common purpose—to make power abundantly available to consumers and at the lowest possible cost, to demonstrate that such a policy is good business. This demonstration will continue if the TVA self-financing bill is passed. TVA must have capital to meet the load growth such a dynamic program requires. The measure can be passed, and promptly. The basic issues are not complicated. This is the situation.

Except for a small amount of bonds—about $65 million—all now retired, the investment in TVA power facilities has been made either by the owner, the Government, through appropriations by the Congress, or by the reinvestment of earnings. Currently TVA has no authority to borrow money, but the management of TVA has assured the Congress that if such authority is given, future capacity to meet its normal load growth can be financed by the issuance of revenue bonds. The bonds will not be tax exempt; they will not be guaranteed by the Government. They will compete in the money market with securities offered by private utility systems. They will be backed by TVA's reputation for good management. The competence and reliability of TVA's distributors will stand behind them, and the electricity consumers, through their power bills, will provide the revenues to carry and retire the bonds. They will finance the additional capacity. The Federal Government will still own the TVA facilities, and each year the Federal Government, as owner, will receive from power earnings a cash return which must, at a minimum, cover the cost to the Treasury of the money invested in power facilities through appropriations. It is a fair proposal from every point of view.

At this critical point of its life TVA itself cannot command millions of dollars to use in a campaign of public education, nor can the distributors, the municipalities and cooperatives who deliver the power to the ultimate consumer, finance such an effort. Nationwide propaganda campaigns cannot be charged to their consumers, no matter how desirable such campaigns might be. TVA and its distributors must rely upon the people who know the facts to spread the truth. Members of Congress who believe in TVA will do their part. The people who care about TVA must do theirs.

Perhaps the meetings of your cooperatives can be considered a modern form of those cracker-barrel discussions to which the President recently paid tribute as a traditional device for public education. Use them to tell the story of TVA, to make certain that Congress does not forget the importance of this bit of unfinished business

UNIVERSITY OF MICHIGAN LIBRARIES

in the crowded weeks and months ahead. If this great partnership can continue to promote policies in the public interest, electric cooperatives everywhere will continue to find the TVA power system a bulwark of strength to rely on, a reservoir of experience to draw on, a guaranty of future growth.

Rehabilitation of the Injured

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. REED. Mr. Speaker, in the month of December 1917, during World War I, I was in Paris. Seated at the table with me was a distinguished, elderly French professor, Dr. Doleans. He was a member of the faculty at Grignon University, an ancient agricultural college. The professor asked me to visit the university. What I saw there was a revelation in the field of humanitarian work. Instead of the usual student body, the college was engaged in the rehabilitation of her crippled soldiers. There were men with loss of arms, hands, legs, and the blind. I saw the blind being led to the chapel to hear inspiring music, by elderly men who had been blind all their life, who were telling the blind boys the compensations of the spirit in being blind.

These injured boys, all with heroic war records, were being trained in some vocation to enable them to return to their respective communities and be able to be gainfully employed, not a public charge.

In 1918, I was elected to the United States House of Representatives and thereafter appointed a member of the Committee on Education. It was there that I presented my experience in the French rehabilitation service. From this small beginning our Federal rehabilitation legislation was established. Hon. William Bankhead, of Alabama, and I labored throughout the years in urging the expansion of this humanitarian service.

It is a pleasure for me to insert as a part of my remarks what has been accomplished over the years in restoring our unfortunate citizens to useful, productive, gainful occupation:

Number of persons rehabilitated during each fiscal year and number of persons in process of rehabilitation at end of each fiscal year, 1921–27

Fiscal year ended June 30	Number rehabilitated	Number in process at end of year
1921	523	3,062
1922	1,898	9,966
1923	4,530	15,515
1924	5,654	13,044
1925	5,825	12,727
1926	5,604	13,606
1927	5,092	16,148
1928	5,012	16,393
1929	4,645	16,823
1930	4,605	20,561
1931	5,184	23,937
1932	5,592	27,666
1933	5,618	30,619
1934	5,062	37,661
1935	9,422	40,941
1936	10,338	41,726

Number of persons rehabilitated during each fiscal year and number of persons in process of rehabilitation at end of each fiscal year, 1921–27—Continued

Fiscal year ended June 30	Number rehabilitated	Number in process at end of year
1937	11,091	42,055
1938	9,844	47,843
1939	10,747	46,750
1940	11,890	47,174
1941	14,579	50,513
1942	21,757	55,149
1943	42,618	64,823
1944	43,997	74,224
1945	41,925	89,416
1946	36,106	101,451
1947	43,880	102,706
1948	53,131	117,795
1949	58,020	133,715
1950	59,597	140,941
1951	66,193	139,568
1952	63,632	137,452
1953	61,308	133,174
1954	55,825	126,770
1955	57,981	127,573
1956	65,640	134,457
1957	70,940	144,589

Source: Annual Statistical Reports. Prepared by Division of Program Statistics and Special Studies Office of Vocational Rehabilitation.

It is a source of great satisfaction to know that our leading industrialists are cooperating magnificently in this great work. They find that the rehabilitated persons have fewer sick leaves, less absenteeism than the physically sound employees.

The retrained persons are performing the most technical tasks with all the skill and precision of the physically and mentally sound.

Tax Relief for Small Business

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. SPRINGER. Mr. Speaker, the benefits of the small-business tax bill passed last week are gradually becoming known to the public. Fortunately it is receiving some publicity in the press and the provisions are being explained in newspaper language which the ordinary small-business man can understand.

One of these editorials is from the Decatur Herald of Decatur, Ill., of July 29.

It is good to know that this bill is receiving publicity and that the small-business man is being told of what he can expect under the tax provisions of this act.

Mr. Speaker, the editorial from the Decatur Herald is appended herewith in full:

TAX RELIEF FOR SMALL BUSINESS

In Congress everybody talks about helping small business, but very little has been done about it.

However, the House of Representatives last week passed a bill providing an estimated $250 million in tax relief for small firms. The main provision of the bill allows a proprietor to reduce taxable income by deducting up to 20 percent of the cost of machinery and equipment for depreciation in the first year after purchase. On the remaining 80 percent, he can also take the regular first-year depreciation allowance. The effect of this provision is to free the funds tied up in expansion at an earlier date.

The allowance applies only to the first $10,000 of investment, or $20,000 in the case of joint returns—the idea being to make the bill of greater value to small companies.

There was hardly any opposition to the measure, and what there was came mainly from Congressmen who felt that it did not go far enough. One of the chief criticisms of the bill was that its benefits would go largely to small manufacturers rather than to proprietors of retail and service establishments who do not as frequently invest in income-producing equipment.

The measure also liberalizes tax-deduction provisions for investment losses and expands to 3 years the period in which retroactive tax refunds may be claimed as a result of net operating losses.

While the House bill does not mean that the millennium has arrived for small business, at least it provides a better answer than such devices as dangling the will-o'-the-wisp of additional Government contracts in front of businessmen. The Senate should act promptly on this legislation.

Europe and Atoms for Power

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Max Kohnstamm to the 12th American Assembly, Arden House Conference on United States Policy in Atomic Energy Development, entitled "Europe and Atoms for Power."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EUROPE AND ATOMS FOR POWER

(An address to the 12th American Assembly[1] by MAX KOHNSTAMM)

Speaking of Europe and atoms for power, two questions, it seems to me, must be put and, if possible, answered. In the first place, Why is Europe creating Euratom? In the second place, What does it expect from it?

In trying to answer these questions I shall have to talk about things which may seem to you scarcely relevant to atoms for power. But I think that if we want to understand the situation we must look at it in the framework of economic and political events in Europe since the war.

One more general remark: I am talking tonight about the six nations which, since 1952, have together formed the European Coal and Steel Community and which are now setting up Euroatom (the European Atomic Energy Community), and the General Common Market (the European Economic Community). If, when talking about these six nations, I call them Europe, it is partly because nobody would continue to listen to me if I had to say all the time: Belgium, France, the German Federal Republic, Italy, Luxembourg, and the Nether-

[1] Arden House Conference on United States Policy in Atomic Energy Development, October 17–20, 1957.

lands. But it is also because these six nations are convinced that, in building the "Europe of the six," they are at the same time laying the foundations of the larger Europe of their dreams.

Now to my first question: Why Euroatom?

War, an uneasy peace, the crisis of the thirties, the advent of hitlerism, the Second World War, if possible even more horrible than the first one—all these events separate our six nations from each other and form, at the same time, our common heritage. The agonies of hatred and defeat, which we all have known, made many of us realize that we had come to the end of the road. Nationalism, the nation state, no longer seemed to provide the answers to our problems. Even international cooperation and the pursuit of goodwill and friendliness among separate nations seemed completely insufficient. A fundamental change of structure seemed necessary.

Certainly, in 1945 reconstruction began within the old forms. With the exception of Germany, where the task of reconstruction was taken in hand by the victors themselves, national governments were the only available instruments. A Byzantine system of barter trade and money exchange between our nations sprang up, proving once more, and now in peacetime, that for Europe's nations new forms of living together were indispensable; 1947 made it evident that even the task of reconstruction could only be fulfilled with foreign aid and if undertaken in common. The Marshall plan not only prevented disaster but was the first peacetime realization of a solidarity, which, until then, had manifested itself only in coalitions of war. It trespassed upon the boundaries between friends and foes, introducing Germany, be it in the disguise of the uniforms of Allied military government, into the circle of European nations. The Marshall plan immediately captured Europe's imagination as a symbol of hope and change. But the OEEC, to which it gave rise, brought, together with great realizations, nevertheless disillusions. Undoubtedly trade was liberalized to the enormous benefit of all. But there as no beginning of the necessary change of structure. National sovereignty, the basis of the structure of a disastrous past, continued to be the supreme rule.

The Schuman plan meant a resolute turning away from the past, toward the future. It refused to accept the frontiers and divisions of Europe as immovable and looked upon our nations' resources, as well as on our nations' problems, as common resources and common problems to be dealt with according to common rules applied to all by common institutions. During its past 5 years of existences, the Coal and Steel Community has proved: First, that Europeans are capable of working federal institutions; and second, that industry, in none of our six countries needs tariffs, quotas, subsidies for itself and discrimination against its competitors, to keep alive. None of the calamities predicted with touching unanimity in most of our nations actually came about. While France increased its exports of steel to Germany, and Germany its exports of coal to France, Italy, thought to be the weakest of the six, quietly doubled its steel production. The incredible not only became true, but more than that, became believed and accepted; namely, that increased competition was in the interest of all, that the withering away of national sovereignty by common institutions of federal character did not mean disaster, but, on the contrary, served the interest of everyone.

The European Army plan was launched in August 1952, even before the Coal and Steel Community began to function. It was hoped that it would be an important second step on the road toward European union. But this plan raised too many passions of the past to give victory to the future. Its final defeat in 1954 was more spectacular than the quiet and gradual progress of the forces unleashed by Europe's first experiment in federal union: the Coal and Steel Community. Many observers outside, and even inside, the six nations did not notice the ground swell of public opinion, which made it possible for the governments, within a year after the defeat of the European Army to convene a conference of experts under the presidency of M. Spaak, charged to study the setting up of an Atomic Energy Community and a General Common Market. A few months later, Jean Monnet formed the Action Committee for a United States of Europe, of which all the major political parties and non-Communist trade unions of the six nations became members. The defeat of the European Army proved to be only an incident, while the current of opinion in favor of structural change gradually gathered strength. Out of M. Spaak's study group grew the intergovernmental conference at Brussels. In M. Monnet's Action Committee, Europe's political and trade union leaders found unity of purpose. The Brussels treaties, providing for an Atomic Energy Community and a European Economic Community on the lines of the European Coal and Steel Community, were signed in Rome last spring. Public and parliamentary opinion were well prepared. Within 4 months after the signature the Parliaments of Germany, France, and Italy pronounced themselves with huge majorities in favor of these treaties. The Benelux countries, where public opinion had often been in advance, preferred this time to wait for France's and Germany's decision. In the Netherlands, the Second Chamber has already accepted the treaties; Belgium and Luxembourg will do so immediately after the end of their parliamentary holidays, early in November. A few months from now both treaties will have begun to function.

The setting up of these two communities is in itself an even of major importance. But what has happend is more than the acceptance of two rather complicated treaties. It is the discovery and the acceptance at the same time, by all the major political groups with the exception of the Communists, of a new method of solving the economic and political problem of our nations. It is a method which implies changing the structure of Europe, basing it on the federal principle instead of on the principle of national sovereignty.

It does not mean giving up national characteristics, differences, and peculiarities—not to speak of our four languages. It does not try to substitute 1 monolithic superstate for 6 national states. It is simply a method of looking at our problems and resources as being common to all, of defining what actions should be taken in common and what rules are necessary to govern our behavior as citizens of a European community. It sets up the necessary institutions:

An executive in order to do what should be done in common and in order to apply the community rules;

A Council of Ministers to harmonize community action with state action;

A Court of Justice to ensure the respect of the law by the community's executive, national governments, and citizens alike;

A Parliament to provide democratic control.

Euratom now is simply the application of this method to the problems and the promises with which the advent of atomic energy confronts our six nations. In this challenge each of our nations disposes of limited, but important, resources.

In the first place: Scientific ability. Our scientists made fundamental contributions to the discoveries on which nuclear power prospects are based. If they have taken little part in the industrial application of these discoveries, we believe that this is not because the creative spirit is lacking in Europe, but because none of our nations separately is capable of offering our scientists the facilities they need.

In the second place: Industrial capacity. True enough, none of our countries disposes of a nuclear industry which can be compared with the nuclear industry now existing in the United States and the United Kingdom. Nevertheless all our nations are advanced industrial nations, with excellent mechanical and engineering industries. Euratom provides for the pooling of our scientific abilities and industrial resources. It provides, also, for the exchange, unhampered by tariffs or quotas, of all goods and materials necessary to build reactors.

But pooling our resources is not enough. Common actions are necessary. Under the treaty certain research projects will be undertaken in common. Certain enterprises, for example, for the fabrication of fuel elements, chemical separation and isotopic separation, may be built in common. In order to make the necessary coordination of investments possible, nuclear investments will be communicated to Euratom's executive. Supply of nuclear fuel will be a common undertaking; and, in the relation with other nations, Euratom will represent the six as a single unit. Common resources and common actions make a certain number of rules necessary, accepted by all, and applied by common institutions. The Euratom treaty provides for rules to govern the exchange of information and the opening, within only 1 year, of a complete common market for nuclear industry.

Rules for health and insurance will be established on a communitywide basis. Of great importance is the safety and control system set up under the treaty. Euratom will institute, among our six nations, a supra-national control not only over uranium and special fissile materials delivered to them by third countries, but also—and this is an extremely important departure from existing practice—over nuclear fuels produced within the community itself. In order to make the system watertight, it is decided that special fissile materials shall remain the property of Euratom, just as they remain the property of the Atomic Energy Commission in the United States. Furthermore, the Council of Ministers can unanimously adapt the community's control mechanism on the executive Commission's proposal.

To execute the actions, supervise and elaborate the rules, a Euratom Executive Commission, composed of five members, is formed. It acts in close contact with the Council of Ministers, which provides also the necessary coordination between state and community action. The same Parliament, which controls the executives of the coal and steel community and the common market, will control the action of the Euratom Commission. A supreme court, also common to the coal and steel community and the common market, will form the judiciary branch of Euratom. I have tried to explain why Europe has chosen Euratom as its instrument and how it is constituted.

We now come to our second question: What does Europe expect from Euratom?

As you know, even before the Euratom treaty was signed, the governments of the six asked the three wise men—Monsieur Louis Armand, Herr Franz Etzel, and Signor Francisco Giordani—to report on what should be Euratom's target. In their report, which gives a clear insight into what Europe expects from atoms for power, two major preoccupations appear.

The first is that Europe's industries should not miss the atomic bus as they would without the common effort, made possible through Euratom. In the words of this report:

"A critical movement has been reached: atomic power is coming of age. Nuclear power has moved out of the scientist's laboratory

UNIVERSITY OF MICHIGAN LIBRARIES

onto the engineer's drawing board; it will now come quickly into commercial phase. This provides a great opportunity for our countries if we seize it and a grave danger if we do not. Scientific and technical knowledge can be borrowed; but industrial capacity one must create oneself. If our industries do not go ahead on a big scale now, at a time when others are poised to do so, they will soon be unable to face competition from the full-grown industries which have seen and seized their chances in time. Later developments would only be possible behind protective walls with all the drawbacks they involve. In view of the growing importance of atomic techniques for industry, Europe, as the world's greatest exporter of engineering goods, cannot afford to miss the chance to move off to a rapid start."

Their second preoccupation is Europe's increasingly serious energy situation. The figures are by now well known. The six nations, which were still nearly self-supporting in energy just before the last World War, are this year importing the equivalent of 110 million tons of coal. Assuming a moderate but steady rate of economic expansion, the import requirements will reach 200 million tons (35 percent of total requirements) 10 years later. These imports will create difficult balance-of-payments problems. Since they will for the most part take the form of Middle East oil, they will, at the same time, create a much more serious political problem.

In order to understand how Europe's growing dependence on Middle East oil has sprung on us so unexpectedly, we must look at three developments which took place during almost the same years, all three with revolutionary speed. These developments are first, Europe's rapid economic growth since 1950; second, coal's loss of its virtual monopoly as the source of energy; and third, the rapid rise of the Middle East as a major oil-producing region.

The first revolution took place in Europe's economic development. Between 1900 and 1913 industrial production increased rapidly not only in America but also in Europe. But in the 37 years between 1913 and 1950, which included two world wars and a world crisis, Europe experienced 2 full decades in which industrial expansion hardly kept pace with the destruction brought about by war, and another decade of crisis and near-stagnation. The same wars sped up American industrial expansion; only the crisis hit the American production very badly, too. The result was that the industrial production between 1913 and 1950 went up from 100 to 150 in Europe, and from 100 to 350 in the United States. Owing to more efficient use of energy during this period, energy requirements did not have to keep pace with industrial expansion. In the United States, where expansion was not held up as in Europe, energy requirements more than doubled during this period, but in Europe they could be allowed to remain stagnant. But then, in 1950, for the first time since 1913—with the exception of a few uneasy years in the late twenties—real expansion set in in Europe. Between 1950 and 1955 industrial output in the 6 nations rose by 34 percent more rapidly than in the United States. In the same years energy consumption shot up by 36 percent, slightly more rapidly than industrial production.

A second development, which had already been well on its way some years before in the United States, now took place in Europe within a few years: Coal lost its virtual monopoly as a source of energy.

And here Europe found itself confronted by a third development, also revolutionary in importance and rapidity. Until 1945 production of oil was, if we leave the U. S. S. R. aside, for all practical purposes, confined to the Western Hemisphere (1945: 85 percent Western Hemisphere, 6.5 Middle East). Ten years later the Middle East produced 25 percent of the free world's oil. Its share is expected to rise to one-third of free world production by 1965 and one-half of free world production by 1975. In the meantime, the Western Hemisphere, once a great oil exporter, will probably become a net importer. Known reserves in the Western Hemisphere represent only 13 times 1 year's production, against a hundred times in the Middle East. Nevertheless, the Chase Manhattan Bank oil report says: "From the standpoint of both exploration and development, the surface (in the Middle East) has barely been scratched." Between 1946 and 1955 the investments necessary to produce 1 additional ton of oil were 7 times as high in the United States as in the Middle East. Oil, as far as Europe is concerned, is rapidly coming to mean Middle Eastern oil.

It is for these reasons that the three wise men stated Europe's need to atomic power as follows:

"Thus without nuclear power, Europe's dependence on the Middle East is bound to increase. The Suez crisis has given us a warning of what this could mean. As the quantity of oil imported from the Middle East increases, there will be a corresponding increase in the political temptation to interfere with the flow of oil from that region. A future stoppage could be an economic calamity for Europe. Excessive dependence of our highly industrialized countries on an unstable region might even lead to serious political trouble throughout the world. It is essential that oil should be a commodity and not a political weapon.

"The European economy must be protected against an interruption of oil supplies, by finding alternative sources of energy to limit the further rise in oil imports. Only nuclear power, providing Europe with a new source of energy, can achieve this."

The wise men's target of 15 million kilowatts of installed nuclear capacity by 1967 represents an answer to a politically and economically threatening situation. One may deny the possibility of achieving this target, but one cannot deny, it seems to me, the necessity to leave no stone unturned in trying to achieve it.

The Euratom countries are deeply aware of the fact that the power program they need can only be realized in the closest cooperation with the United States and the United Kingdom.

The wise men, seeing in this cooperation the first condition of achievement, visited the United States, the United Kingdom, and Canada. In this country their discussions with the Secretary of State, the Chairman and members of the Atomic Energy Commission, convinced them as they stated in their report that "on the healthy basis of a two-way traffic, a close partnership as equals can be built up between the United States and Euratom and their respective industries." Being neither capable nor authorized to do so, it would be foolish for me to make precise suggestions concerning this cooperation. Undoubtedly the form and content of it will be discussed immediately after Euratom is set up, that is, within a few months.

But I would be grateful if you would permit me to end with 1 or 2 general remarks on this subject.

I have described to you the new method of dealing with Europe's problems, which is the basis of the coal and steel community and the common market, as well as of Euratom. For 7 years my work has been to apply this method, first to coal and steel and afterward to new fields. Looking at this different object—our future cooperation—I find myself taking a busman's holiday. In Henry Kissinger's excellent Nuclear Weapons and Foreign Policy I was struck by this thought:

A power favored by geography or by a great material superiority, as we have been through most of our history, can afford to let a threat take unambiguous shape before it engages in war. It can do so as long as the outcome of a war cannot be decided against it by a single battle, or by the loss of an objective located outside its territory, which could cause national catastrophe, such as the loss of Middle Eastern oil would be for Western Europe.

But does such a thing as a purely European catastrophe exist? Does not European catastrophe spell western catastrophe? And is not catastrophe a thing dangerously near to war and, worse, defeat? And is it not the great maxim of trategy in our nuclear age to be as flexible as possible, which means to try as hard as possible to provent the development of a situation in which force would seem to be our last and only resort? Is it just my occupational disease which makes me look at Europe's energy problem as a problem common to Europe and the United States which may be solved by our common efforts?

A friend of mine said the other day: "America has the greatest knowledge of atomic power and no need for it; we have no knowledge of it and the greatest need for it."

Does not this situation in our mutual self-interest call for an intimate association between the United States and Euratom? The United States would bring into this association nuclear fuels and above all what the wise men called the most complete nuclear foundation in the world. Our need, that is, our difficult energy situation, has a very positive side to it. The average cost of electricity being much higher in Europe than in America, atomic power will be competitive in Europe long before it can be so in the United States. Europe, therefore, willing to pay 12 to 15 mils per kilowatt-hour, can become the testing ground for commercial nuclear powerplants. As the power program develops, experience gained thereby would become available to all. We would also contribute our rich inheritance of inventive science and industrial capacity.

But I must now mention what I consider our greatest asset—one which nobody has thought of looking for in Europe for a long time. But believe me or not, from now on people are going to find it there nevertheless: It is a growing sense of confidence. This may be not so strange after all in a European community which for the first time for nearly 40 years is at last enjoying economic expansion; a community which, after 40 years of crisis, war, and hatred, is at last turning toward the future. The rich past of our nations has kept us spellbound for many decades. But we are now experimenting with a method which, without destroying our nations, their past, their heritage, enables us to look toward a common destiny.

One of my friends, with whom I have been engaged in this European venture from the very beginning, happens to be one of the most French of all Frenchmen. He cannot live anywhere but in Paris. The only time I succeeded in bringing him to the Netherlands he fell ill immediately. There being no better proof of how far our silent revolution has gone already, I would like to read you a few lines, which he wrote the other day:

"For the rest, I care very little about being a good European. If anyone could tell me some more effective way of freeing Frenchmen from their staleness, from their fears, from their complexes; if anyone could promise to me a revolution which would change the structure more effectively while destroying less; if anyone could show me that progress lies elsewhere—then I should abandon the idea of Europe for this other quest, just as I abandoned the nationalist past in favor of Europe. I am not ashamed to admit this inconstancy, which is the logical outcome of a higher allegiance—the allegiance which I swore when I sided with

progress, and was torn away, as I have described, from the fatal charms of the past and its vanished glories." (Francois Fontaine, Preuves, October 1957.)

Provision in S. 3051 Dealing With Sustained Yield of Timber Supported by American Forests Magazine

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. NEUBERGER. Mr. President, as we near a Senate-House conference on the Klamath Reservation purchase bill, S. 3051, I ask unanimous consent to include in the Appendix of the RECORD a pertinent and thoughtful editorial from the August 1958 issue of American Forests magazine entitled Sustained Yield Versus Continuous Growth.

This outstanding magazine in the field of forest management, which has given us fine support on this issue, pleads for the Senate version of language in the bill dealing with the proper methods for operating the vast Indian pine-timber forest growing on the lands of the terminated Klamath Reservation, in southeastern Oregon.

This editorial should be of paramount interest to Senators and Representatives concerned with this question.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUSTAINED YIELD VERSUS CONTINUOUS GROWTH

Sustained yield is described by the Society of American Foresters as a policy, method, or plan of forest management, implying continuous production with the aim of achieving, at the earliest practicable time, an approximate balance between net growth and harvest, either by annual or somewhat longer periods.

This is the accepted definition by the professional foresters of America. We believe it was what AFA's board had in mind when it resolved on September 29, 1957, that "disposal of timberlands in the Klamath Indian Reservation should be made under such conditions as will assure sustained forest production and maximum permanent contribution to the economy of the area including the economy of the Indians themselves." If there were any questions on this score, (since the word "sustained yield" were not actually used) they were certainly dispelled by the board's subsequent action on February 24, 1958, when it enthusiastically embraced proposals by Interior Secretary Seaton as incorporated into S. 3051 to amend Public Law 587. The Seaton-Neuberger bill, as enacted by the Senate, is a clearcut sustained yield bill. On that score, there are no doubts whatsoever.

Consequently, deletion of all references to sustained yield in amendments to the Seaton bill as proposed by the House Subcommittee on Indian Affairs is now a source of concern. In lieu of the words (sustained yield) the House version now refers to "a continuous supply of timber." In another change, the committee has whacked out the phrase "specifications and minimum requirements for sustained yield management," and refers only to "minimum requirements."

Thus the question now arises, minimum requirements to what? Sustained yield minimum requirements are one thing. Minimum requirements to Oregon's seed tree law that requires that a few seed trees be left on every acre otherwise clear-cut, is something else again: That something else is not necessarily sustained yield. Concern regarding the deletions is further heightened by the fact that NLMA, in a letter to the committee published below, states in one part that "the term 'continuous supply' may be construed as less impelling than the words 'sustained yield.'" There doesn't seem to be much question about that.

What has happened here is this. Someone has carefully pointed out to the committee that the words "sustained yield" are not present in the organic act of 1897 covering the national forests, which is true. However, the term is used in the Secretary's regulations and one would hope that any subsequent ruling would be made on the regulations, rather than the act itself. Also to be borne in mind is the fact that no ruling exists on just what a "continuous supply of timber" may or may not be. Any resort to the courts to obtain such a ruling, say my private purchasers of the Klamath property, would have ramifications of considerable import to forestry.

What this all boils down to is an attempt to weaken the sustained yield intent of the Seaton bill which AFA is supporting, at a time when we should be attempting to raise forestry standards, not lower them. So we say let's put the sustained yield language back in the bill to avoid any misunderstandings what might arise. The intent of the Senate version of the bill is clear. The intent of the proposed House version is not clear. While the urge is great, we aren't permitted to buttonhole legislators on this. That's lobbying. But readers aren't subject to any such restrictions. And if you still feel the same way about this Seaton bill after 32 articles, letters and editorials on this subject in the last few months, we suggest you now use your influence where it will do the most good and do so without delay.

Charles County, Md., Celebrates Its 300th Anniversary This Year

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. John C. Sciranka, an editor from Passaic, N. J., which appeared in the Easton (Pa.) Herald:

I had an unexpected pleasure to visit Waldorf, Md., during the weekend of October 25, and I learned a great deal about the rich history of Charles County, which will celebrate its 300th anniversary in 1958. Waldorf is situated only 20 miles south of Washington, D. C. I learned about the glory of Port Tobacco. No area in the Nation is richer historically or more interesting and picturesque than this, one of the oldest permanent settlements in North America as an English-speaking town.

Its history dates from a few years after the founding of Maryland in 1634. More and more of the English settlers came to the Port Tobacco region, and they soon founded a town. At first they called it Candlerstown, after the first settler Job Chandler. Later its name was changed to Port Tobacco on account, as some think, of tobacco being its chief product and an important commodity since Charles County was established in 1658. In spite of the fact that tobacco is linked with the history of the county, the historians claim that Port Tobacco does not owe its name to the magic weed. Their claim is that the name is anglicized version of the Indian word Pertafacco, Potopaco or Potobac, commonly descriptive of the town's location "between the hills." Historians claim that Port Tobacco's history goes back even more than 300 years. The Indian village of Potobac occupied the site in 1608 when Captain John Smith visited there. Others claim that the Spanish explorers, a century before, probably sailed their ships up Port Tobacco River because they were known to be in that vicinity then.

CONVERSION OF INDIAN QUEEN BY FATHER WHITE

There is so much interesting history here that one would have to write a series of articles. For instance Maryland's first historian, Father Andrew White, S. J., made his home among the Potopac Indians for several years. In 1639 he converted the Indian queen and 130 of her subjects to Christianity. It was here that Father White compiled the first catechism, dictionary and grammar in the Indian language. Incidentally, next year will also mark the 350th anniversary of the arrival of 4 Polish and 2 Slovak craftsmen on the Goodspeed, September 25, 1608, to help Capt. John Smith establish the first permanent English settlement in Jamestown, Va.

Maryland also has a Bohemian Manor, founded by Augustine Herman, first Czech in America, who arrived here in 1630 and was a close friend of famous Peter Stuyvesant. Herman was delegated to make a map of Maryland and Virginia, which he successfully compiled and as a reward received 20,000 acres of land, on which he established the Bohemian Manor. He was honored last year when a portion of Maryland highway in Cecil County was named in his honor.

Some 50 years ago an American Slovak journalist established a farming colony in St. Marys County, Maryland, for colonizing namely the members of the National Slovak Society. Many Slovak families still reside there and the famous American Jesuit, Father John LaFarge, S. J., noted lecturer and author, served these Slovaks for several years on account of his knowledge of Slavic languages. Father LaFarge describes the early years of this Maryland Slovak settlement in his autobiography published 2 years ago.

St Marys County is known as Mother County of Maryland. I shall describe it at some later date.

FIRST CONVENT IN 13 ORIGINAL UNITED STATES

Now let us concentrate on the 300th anniversary of Charles County. Its rich history thrilled me. However, I shall describe presently the place known as Mount Carmel, a religious shrine, where on October 15, 1790, the first convent in the Thirteen Original United States was founded. Its founders were 4 Carmelite nuns, 3 of them members of the well-known Matthews family of this historic Charles County.

Mount Carmel was known to the people of Charles County as the Monastery for almost 170 years. It is situated on a rolling hillside near Port Tobacco on Maryland Route 327. It has become the scene of pilgrimages from southern Maryland, Washington, Baltimore, and other American cities.

The Carmelite community which eventually grew to 40 nuns, occupied the place until 1831. They sold the property and moved to Baltimore for they were unable to operate the convent farm, which was their principal means of support. Mount Carmel, as the

UNIVERSITY OF MICHIGAN LIBRARIES

historians put it, slowly slipped into oblivion for a century. However, in 1933 the late Mrs. Benjamin E. Talbott and her daughter, Mrs. John J. Haggerty, created a movement to restore the historical site, which also contains an old Catholic cemetery with graves of many well-known residents of the Port Tobacco area. In 1935 the Society for the Restoration of Mount Carmel was formed. The society restored the main buildings and the chapel. This historical landmark, no doubt, through the generosity of its members, will be permanently maintained as a priceless relic of colonial religious life.

The original convent buildings and 14 outdoor stations of the cross and the large crucifix have been erected on the historic site.

TWO OLDEST CHURCHES

The histories of two of the oldest churches, one Catholic and the other Protestant Episcopal, are closely linked with the past of Port Tobacco, Md. Saint Ignatius Catholic Parish at Chapel Point, where Port Tobacco River empties into the Potomac, has had a resident pastor since 1662, which is believed to be a record in the United States.

Christ Church, located now at La Plata, Md., was created in 1692 as Port Tobacco Parish. Until 1904 the Protestant Episcopal Church was situated in Port Tobacco for 212 years.

The above-mentioned Father Andrew White, S. J., who accompanied the first settlers to Maryland in 1634 built a small chapel at Chapel Point in 1642 while he was a missionary to the Indians in that area. This was the first house of worship in Charles County, but has long since disappeared.

A Strong Transportation System Insures a Strong Nation

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. MOORE. Mr. Speaker, I am very happy that the House has approved the conference report on S. 3778, the Transportation Act of 1958. This legislation is of vital necessity if we are to maintain a strong transportation system in this country as a major bulwark in our economy and to bolster the defenses of our Nation.

I think it is significant that while this legislation has commonly been referred to as the railroad bill, S. 3778 is really designed to benefit all types of common carriers, and will also greatly aid shippers, consumers, and the general public. This is wise legislation which has been adopted by the Congress only after lengthy hearings, careful deliberation, and thoughtful study. The measure is designed to protect the public good and promote the general welfare of our Nation in every sense of the word. It is a forward step in insuring the continuation of our unequaled system of transportation which has been one of the primary reasons for the great economic and productive growth of our Nation. The transcontinental railroad systems which stretch from the Atlantic to the Pacific, and the cross-service trunk lines which link the United States with our neighbors, Canada, and Mexico, are the backbone of our Nation. This superb system of transportation, has contributed in large measure to our high standard of living and has helped to elevate the United States to its present position as the leading power in the world.

The Government of the United States recognized at an early date, the importance of building, and maintaining a system of transcontinental railroads to link the industrial East with the prairies of the West. The driving of a golden spike" at Rosbys Rock, W. Va., 7 miles from my hometown of Moundsville and in the heart of my congressional district, signaled the completion of the first railroad west of the Alleghanies which then terminated at Wheeling, W. Va. This event helped to fulfill a long existing need for a "ribbon of steel" to bind together the various States into a Federal Union where commerce could readily flow from coast to coast. The faith which was placed in the railroads has certainly proved one of the best investments ever made by our Government because it has paid dividends a hundredfold in prospering the economic welfare of our Nation.

Our Government has in recent years, through neglect, overly zealous regulation, and confiscatory taxation, allowed the Nation's transportation system to seriously decline, impairing the efficiency and service formerly enjoyed by the public. This legislation which the House has approved will help immeasurably in providing the assistance needed to assure the future growth and stabilization of the Nation's transportation system. The provisions of S. 3778, coupled with the recent action of Congress in repealing the burdensome tax on transportation of consumer goods, will go a long way in helping to solve the economic ills of the railroads and our other modes of transportation. I am only sorry that we were not successful in also repealing the transportation tax on personal travel, because it was a wartime measure which can no longer be justified.

The State of West Virginia with its mountainous terrain, its great mineral resources, and its strategic location, depends in large measure for its economic prosperity upon the continuation of a prosperous, efficient and adequate system of rail transportation to serve the needs of our many communities and industries. Especially is this true of the First Congressional District of West Virginia, which I have the honor to represent. The seven counties in my district are largely industrial and produce a great amount of coal, steel, chemicals and other manufactured goods which find their way into the commerce of our Nation. Without the services of the railroads, the wheels of industry would grind to a halt in short order, because the flow of raw materials, and finished products would no longer be possible.

Consequently, I am certain the industrial workers, the manufacturers, and the general public will join in the joy shared by the transportation industry in the passage of this legislation by the House. I am happy to have supported this legislation and to have voted for its passage.

School Bells

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. BAILEY. Mr. Speaker, it is gratifying to those of us on the Committee of Education and Labor, who have observed the diligent and patient efforts of our esteemed colleague, CARL ELLIOTT, hammering out legislation designed to meet the educational aspects of the challenge presented by sputnik, to welcome the forthright support of the retiring Health, Education, and Welfare Secretary, the Honorable Marion B. Folsom.

The importance of the Elliott bill and the need for more vigorous support for it from the White House is effectively pointed up in an editorial from the Washington Post and Times Herald of July 31. I recommend it to my colleagues.

The editorial follows:

SCHOOL BELLS

"In education," said retiring Health, Education and Welfare Secretary Marion B. Folsom in a final appeal for Federal school aid, "the hour is late. We must begin to act before it is too late." He could have chosen no more significant a note on which to leave an office which he filled with real distinction. We share his conviction that the American people will be deeply disappointed if Congress neglects the national interest in education at this critical point. We share equally the feeling expressed in a speech last week by Senator CLIFFORD CASE that "if we adjourn this session without substantial education legislation, we will have failed in a national emergency."

The particular Federal-aid proposal to which Secretary Folsom sought to rally bipartisan support is the Elliott bill approved by a 23 to 2 vote of the House Education and Labor Committee early this month and by the Senate Subcommittee on Education this week. It is a bill which follows the line—although not so meagerly and ungenerously—laid down in President Eisenhower's education message to Congress last January. In brief, it would provide Federal scholarships and also student loan funds to enable financially disadvantaged youths to go to college; its emphasis would be on the teaching and study of science, mathematics, and foreign languages; it would improve testing and counseling in elementary and secondary schools; and it would help train more college teachers.

This newspaper for more than a decade has been urging Federal financial aid for school construction to repair the desperate shortage of classrooms throughout the Nation. That shortage has not diminished during the intervening years of neglect; it has grown and will continue to grow. We remain convinced that the need for new school buildings is now far beyond the capacity of the States and can be met only through a large-scale emergency program of Federal grants to the States.

Perhaps, however, Secretary Folsom is correct in saying that the Elliott bill "represents the best hope, almost the only hope, for effective new action at this session of Congress to advance American education." Certainly he is sound in saying that "enactment of this bill would demonstrate an awakening national recognition of the critical importance of education to the future

of the country." What a pity it is that he has been unable to persuade the President to give the Elliott bill more than the patronizing pat on the back and the quibbling over detail which he tendered to it in a letter to Representative WAINWRIGHT on July 7. Lack of leadership from the White House was largely responsible for the failure of the administration's own aid-to-education bill last year. If the President really believes, as he said in his letter, that "the passage of a sound education bill is a top-priority objective for this session of Congress," then vigorous support of the Elliott bill is an obligation of his office. The school bells are ringing, and time is running out.

Czechoslovakia Society of America Offers Sound Proposal for Dealing With Communists of the Czech Government

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. COLLIER. Mr. Speaker, perhaps no nation in modern times has held such high hopes for the future, only to have them so disastrously dashed, as the Republic of Czechoslovakia. Forty years ago this year the republic was born, only to hear the tocsin sounded a scant 20 years later. However, between Versaille and Munich the Czech people demonstrated their love of freedom and the fine responsibility of a free people toward their government and themselves. It is perhaps the most indelible blot on the statesmanship that followed World War II that Czechoslovakia was allowed to slip so quietly and quickly into the stranglehold of Russian communism. It was a tragic loss to the world.

Fortunately for us in America many hundreds of persons of Czech ancestry, still holding fast to the ideals of their forefathers, have become a part of our national life. It is to be expected that these people should feel distressed at the fate which has befallen Czechoslovakia. The desperate condition former friends and relatives now must endure are enough to torment any group.

The wonder, to many, is that the Czechs living in this country have been so moderate in their approach. Their demands have not been unreasonable. One reason for this calm, sound approach to the problems created by Communist rule of Czechoslovakia is the outstanding competence of those who from time to time act as spokesmen for those of Czech ancestry living in America. One of the most important organizations through which their aims are channeled has been the Czechoslovak National Council of America. This group recently issued a memorandum concerning the policy our Government should follow in dealing with Czech Communists. I think these proposals merit the close study of the Government, and am therefore presenting them for consideration by Members of the House. In essence, here are the proposals made by the Czechoslovak National Council of America:

I. PARITY IN ALL THINGS

Americans should be able to send free gift packages to friends if limited to the personal use of a family. As the United States Government permits its citizens to spend in Czechoslovakia or to send any amount of dollars to Czechoslovakia, the Prague regime should at least permit its citizens to receive small gift packages of American goods.

II. PARITY IN VISITORS

As practically all Americans wishing to visit Czechoslovakia are given an American passport and thousands of them have gone there last year and this year, Czechoslovak relatives should be allowed by their regime to visit American families as guests. Under present conditions, only those Czechoslovaks, handpicked by the Prague regime for special reasons, come to the United States.

III. PARITY AGAIN

For every Czechoslovak film shown here, we ask that an American film appear on the screen in Czechoslovakia, a film showing life in the United States as it really is.

We suggest that a closer check be kept on films brought here by private individuals, intended for public showing, and that the Censors Board include on its staff an adviser with a thorough knowledge of the wiles of communism. Communist propaganda is far too subtle, and it is not enough to know a foreign language. The Czechoslovak National Council of America offers its services gratis in Chicago, New York, Detroit, Cleveland, Washington, D. C., Cedar Rapids, etc.

IV. PARITY IN NEWS INFORMATION

Inasmuch as this country permits Communist and proregime newspapers to be published in Czech and Slovak and to be sent to Czechoslovakia as representing American public opinion, and inasmuch as this country also permits newspapers, magazines, and books from behind the Iron Curtain to be delivered and sold here through various agencies and bookstores, we ask for the same privilege.

The Czechoslovak National Council of America, with the help of other organizations of Americans of Czechoslovak descent would launch a magazine drive and send to Czechoslovakia thousands of issues of magazines—other than political, about everyday life in America. The Czechoslovak public is eager for the magazines, and we would supply them gratis.

Arthur Andrew Corcoran: A Great Loss

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include several newspaper articles written by famous Boston writers, Bill McSweeny, Arthur Siegel, and Huck Finnegan, concerning the recent passing of my dear and valued friend, Mr. Arthur Andrew "Bunny" Corcoran, of Boston.

"Bunny" Corcoran was one of the great athletes of his generation. As a player and a coach, he greatly distinguished himself on the gridiron. He was also an outstanding baseball player, even though football was his great love, next only to his profound interest in training young people in character, citizenship, and athletic careers.

In his youth, attractive business opportunities beckoned "Bunny" Corcoran. But he rejected all of them in favor of the brilliant athletic career, in which he achieved such marked success. The immortal Jim Thorpe, regarded by many as the outstanding football player of all time, said of "Bunny" Corcoran that he was the greatest end that ever lived, and this opinion was shared by many in informed football circles.

Whether in victory or defeat, and "Bunny" had his share of both, he seldom lost, even for a moment, his quiet, earnest, unperturable mien. While he was a man of action, he was also a man of gentle nature and deep spiritual character. He was devoted to his religious faith, and he was a generous and loyal friend. Possessed of the courage of a lion, he was soft spoken and gentle and generous in his judgments of others.

He spent the last years of his life in the field he loved—working with young people in the athletic program of the Boston Park Department. He was especially proud of his work in connection with the Hearst sandlot baseball program and in that capacity developed many splendid athletes. He devoutly believed in athletic training for youth and told me not long ago that his program was keeping teen-age boys off the city streets, interested in wholesome activities and doing much to eliminate juvenile delinquency. He had a superlative faith in young men. He said:

Give them a chance to do something really worth while on the athletic field or classroom and they will usually respond 100 percent."

While he was genuinely disturbed by some of the current conditions affecting youth, he saw in expanded athletic and career guidance programs a large measure of the solution to the serious problem of juvenile delinquency.

For years he worked hand in hand on youth programs with his boyhood friend of many years, the incomparable Swede Nelson, to whom he looked for guidance and help. Needless to say, he always received the most generous measure of support and cooperation from his distinguished friend and he shared Nelson's oft-expressed injunction to the parents of America, "Be sure to know where your son or daughter is tonight."

"Bunny" Corcoran was modest and self-effacing. He carried his honors lightly. He sought no adulation. He did his job quietly and with heartfelt interest in young people, in whom he saw the Nation's future. Many young people, whom he coached in college and trained and counseled on the athletic fields of Boston, are deeply indebted to him. The community of Boston is the richer for his heartfelt contributions to its youth. The many loving friends, who mourn his loss, are the nobler and the more inspired for having intimately known this courageous, loyal, stout-hearted American. He was a great man and a great friend to the end, and in his untimely passing the community, the

UNIVERSITY OF MICHIGAN LIBRARIES

State, and the Nation, have suffered the irreparable loss of a loyal public servant and a noble citizen.

The eloquent and touching services conducted at his grave by one of the Nation's greatest spiritual leaders, Rt. Rev. Msgr. Francis L. Phelan, pastor of St. Cecelia's Church in Boston, deeply moved those who had gathered to bid their tearful farewells to a loyal friend, loved, respected, and admired by all who knew him.

May "Bunny" Corcoran, who so well and so modestly exemplified the strength that America needs today more than ever before, find eternal peace and rest in his heavenly home.

[From the Boston (Mass.) Daily Record of July 29, 1958]

LEGEND OF CORCORAN TO LIVE FOREVER

(By Bill McSweeny)

"The greatest end in the history of football" crossed his last goal line Sunday. "Bunny" Corcoran died of heart trouble at the age of 64. Heart trouble? It hardly seems possible. No one ever had more ticker than this gray-haired lion of a man.

His full name was Arthur Andrew Corcoran. Biographers had to dig to find it out. It is doubtful that anyone has called him Arthur since he first played football at St. John's Prep. Some forgotten Boswell on that campus named him "Bunny." Because he had the swift moves of a rabbit. But the courage of a tiger.

Those who knew and really liked him are in the hundreds. Yet, there are many more who probably never heard of him. "Bunny" was exceptional in the world of sports. Both in ability and in the fact that he never capitalized the game and his fame into something tangible—like money.

He always had a good suit, a clean gray hat and a silk rep tie. He had a deep full laugh and he couldn't walk anywhere that people, old and young, didn't come up and say, "Hi, 'Bunny'." He never spoke a bad word of anyone. His hardest knock would be: "He's not right, that guy. He's offside." These were his riches.

GREATEST OF ALL PRO GRID TEAMS

A man sliced him with cleats once. The scar was a livid line down the left side of his face. Life was not always kind to "Bunny," but this was the only scar on mind or body.

Outside the realm of his family he loved, more than any other, three people: his commissioner, Frank Kelly, of the park department. His sidekick of half a century, "Swede" Nelson. His teammate of the great glorious days, Jim Thorpe.

He played end on the Canton Bulldogs, which athletic historians contend was the greatest professional football team. He had two jobs: catch Thorpe's passes and catch the wild Carlisle Indian when he "went off the reservation." Several years ago Thorpe passed through Boston on the final Sportsmen's Show swing before his death. Remembering back over seasons of laughter and of tears he told a press conference: "Here you have the greatest end in the history of football, 'Bunny' Corcoran. Believe it. Old Jim tells you so."

"Bunny" was good, apparently, at everything. He came out of Georgetown to play third base with Connie Mack's Athletics, staying with them until he joined the French Ambulance Corps in World War I. After that he had a chance with the Tigers. But Thorpe lured him back to his first love, football.

Then followed a succession of jobs, winding up as head coach at Holy Cross and, for the last 14 years, director of the Hearst sandlot system. A hard job. Searching, always searching for the kid who might make the big league. Trying to let kids who didn't have it down easy. Taking the rap from irate parents who didn't know he was saving their sons from wasted years as allmosts, but not quites. Standing at the pitchers mound for hours on end watching candidates work out.

PLAYED THE GAME BY THE RULES

Was he successful? For a starter a fistful of names: Monbouquette, Agganis, Gastall, Leja; his latest kid, a Framingham boy named Ryder, who'll be up there soon. And about 100 names which appear in the minor league box scores, working their way toward the top. And maybe a thousand names long since forgotten to whom he taught something about being a man, as well as a player.

He played the game by his rules and he never wavered. Last winter he had pneumonia and doctors rightly gave him up for gone. "I'll beat it," he said. And came home. Three months ago the heart grew weaker and weaker. "Bunny" grew shakier. Just last week he could hardly walk. He was wasted away to a shell of a man. The fire was there but the juice and the muscle was gone.

But he turned out at Fens Stadium for the first sandlot workout. And he picked 13 boys out of 188 in a six-hour workout. Then he went home to rest up for Thursday. He was en route to the next workout when time began to run out on him.

He was all ticker and all man, this grey-haired lion. He ran the full 64-year course like a thoroughbred. The kids he taught are running for him now. Perhaps 1 of the final 13 he selected will 1 day make it to the majors. Perhaps somewhere in his last pick "Bunny" Corcoran found his greatest player.

They're burying the body of Arthur Corcoran at St. Joseph's Cemetery in West Roxbury Tuesday morning.

But the legend has just begun to live.

[From the Boston (Mass.) Traveler of July 28, 1958]

* * * * *

The death of Arthur "Bunny" Corcoran marks the passing of another great athlete, especially in football, of this section. The soft-spoken "Bunny" was one of those football ironmen of the more vigorous days when only the less hardy wore helmets. He was of the era of Bull Lowe and Tom Whelan and Lou Little, when a collegian would pick up some spending money by playing a pro game on Sundays. And, upon graduation, played pro football when $50 a game was good money although an All-America would get more. There were the Frankfort Yellow Jackets and the Canton Bulldogs and the Ironton Steelers. "Bunny" and Jim Thorpe not only were teammates, but close friends. When Thorpe was here a few years ago, "Bunny" was a close companion. But "Bunny" also was a great teacher. He was an end coach at Holy Cross under the colorful John McEwan. And finished the season as head coach when McEwan quit after arguments with authorities. But "Bunny" didn't like the job of head coach. He would rather be an assistant, dealing personally with boys and never losing the gentle patience that was one of his greatest virtues.

[From the Boston (Mass.) Evening American of July 28, 1958]

"BUNNY" PAL OF THORPE

(By Huck Finnegan)

"Bunny" Corcoran is gone but fellow members of the Gridiron Club of Boston, true-blue friends like Dan O'Connor and "Swede" Nelson, will not let him be forgotten, just as they never let "Bulger" Lowe be forgotten.

"Bunny" was a product of the golden age of sports, when sports dominated the headlines. He was a pioneer in pro football right after World War I with O'Connor and Lowe and many others from New England. They helped lay the cornerstone of the National Football League. That league has produced some famous successes and some abject failures. But all its alumni seemed to have one trait in common: they never let down a friend.

THREE INDIANS IN BACKFIELD

"Bunny's" father was a successful businessman, and "Bunny" was known as the best-dressed kid at Princeton Prep and Georgetown. But business never interested him. Baseball and football were his life from cradle to grave. Only last Tuesday he was sitting in the grandstand at Fens Stadium directing the Hearst sandlot program as he had done for 14 years. He was with Joe Dugan, Bill Joyce, and Larry Woodall of the Red Sox and with Bill McSweeny, of the Record. All could see he wasn't the old "Bunny" but none could foresee such a quick fadeout.

"Bunny" was a great athlete in his day. Jim Thorpe called him the best end he ever saw, and Jim was looking for no favors because "Bunny" had none to grant. He spent his closing years with Boston's park department but the Hearst sandlot program was his pet project. He liked to help youngsters like Holyoke's Frank Leja, Medford's Bill Monbouquette, and Framingham's Steve Ryder to major league contracts.

He had signed one himself way back when. That was in 1915 after Connie Mack had broken up his $100,000 infield. "Bunny" was supposed to take Frank Baker's job at third but he wasn't ready. When he was ready after the war, when Ty Cobb made a bid for him, the owner of his club put such a prohibitive price tag on him that the Tigers lost interest. He managed a baseball team at Akron, Ohio, in his football playing days and later on ran the New York Athletic Club at Travers Island.

He made his reputation mainly in football. He attended Georgetown with O'Connor, Jackie Maloney and Ralph Gilroy but didn't stay long. He spent a year at Fordham with Frankie Frisch and Bulger Lowe, then enlisted with Lowe in the French Ambulance Corps (before the United States entry). The war over, he went to Canton to play with and against the men who actually made football. He played against Knute Rockne, Gus Dorais, Bert Bell (now National Football League prexy), Lou Little, Tiny Thornhill, Jock Sutherland, Elmer Oliphant & Co.

The Canton team had Bunny and Tom Whelan of Lynn at ends, Dan O'Connor (Dorchester) and Fats Henry of W-J at the tackles, Greasy Neale and Fat Spears at the guards, Al Feeny of Notre Dame, center, Carlisle Indians Pete Calac, Joe Guyon, and Jim Thorpe in the backfield, with Tony Griggs at quarter.

Others well known in New England who played in that league under their real or assumed names were Austen Lake, Mark Devlin, Al Pierotti, Spike Johnson, Milton Ghee, Guy Cogswell, Cuddy Murphy, and Bucky Sweetland.

HUNTED WITH THORPE

"We were at Canton from 1919 through 1924," said O'Connor. "I roomed with 'Bunny' but he spent most of his time with Thorpe. Old Jim was an avid raccoon hunter, and he and 'Bunny' used to prowl the woods at night. I preferred sleep. One night I induced 'Bunny' to get to bed early, and Thorpe came in, took 'Bunny,' mattress and all, and threatened to dump the package out the window. There were plenty of laughs and plenty of good times. There was only one hotel in the town, so everybody had to know everybody else."

His playing days ended, "Bunny" coached the ends at University of Virginia under Frank Murray and at Holy Cross under Capt. John J. McEwen. One of his Holy Cross proteges was Pat Lynch, now chairman of the State Democratic committee.

He was the most unpretentious of athletes, a kindly soul with a good word for everybody. It is easy to see why a boyhood chum from Winthrop like Swede Nelson and an old roomie like Dan O'Connor remained so deeply loyal to him to the end.

John F. Stevens: Celebrated American Engineer

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. FLOOD. Mr. Speaker, 53 years ago, on July 25, 1905, a great American, just appointed chief engineer of the Isthmian Canal Commission, landed at the Atlantic end of the Canal Zone to take charge of the historic work of building the Panama Canal. Arriving in the midst of chaos and hysteria incident to a yellow fever epidemic, he rescued the project from possible disaster, prepared the plan for the canal that was adopted by the Congress in 1906, formed the organization for construction, procured the major part of the plant, and brought the undertaking to a point where its success was a certainty, with estimated completion date by January 1, 1915. Resigning on January 30, 1907, he left the isthmus to attain new fame in other endeavors. His name was John F. Stevens.

It was my privilege on May 12, 1956, to have been the principal speaker at the 21st annual meeting of the Panama Canal Society of Washington, D. C., on the occasion of the 50th anniversary of the decision by the Congress for the high-level-lake and lock-type canal at Panama. Thus, it was natural that I should choose as my subject, John F. Stevens: Basic Architect of the Panama Canal, an address published in the CONGRESSIONAL RECORD of May 29, 1956, volume 102, part 7, page 9285.

In my preliminary reading about the life of Stevens, I discovered a remarkable career of a remarkable man, whose achievements constitute important chapters in American history.

One of the greatest construction engineers that our country ever produced, Stevens is renowned, especially, for the following:

First. Discovery of Marias Pass in Montana in 1889 through which the Great Northern Railroad was constructed.

Second. Participation in the planning and building of that and other railroads.

Third. Design and starting of the Panama Canal.

Fourth. Rehabilitation of Russian and Siberian railroads at the end of World War I, 1917–23.

With a record indelibly associated with great projects, both railroad and interoceanic, his name has long since become a symbol of American initiative in the field of transportation.

Thus, it was with the greatest interest that I read in the July 20, 1958, Brooklyn edition of the New York Journal American a news story by Harry W. Frantz, distinguished Latin-American correspondent of the United Press International, reporting that the name of this famed engineer is now being widely advocated, especially in engineering circles, for the official designation of the great bridge that is to be built across the narrows from Brooklyn to Staten Island in New York.

As New York was the great shipping center from which nearly all the personnel and supplies for building the Panama Canal sailed, such naming of this bridge would be historically appropriate to a unique degree.

The indicated news story, together with the original text of the release, follow:

[From the New York Journal-American of July 20, 1958]

FOUR MORE NAMES SUGGESTED FOR PROJECTED NARROWS SPAN

(By Harry W. Frantz)

WASHINGTON, July 19.—A famed Panama Canal engineer and three New York politicians are in the running for the honor of having a great New York bridge named after them.

The engineer is the late John F. Stevens. The politicians are Governor Harriman, Mayor Wagner, and Tammany Leader De Sapio.

The bridge is a huge span that will link Brooklyn and Staten Island. The structure, over the Narrows, one of the world's greatest marine thoroughfares, is not scheduled for completion until 1964, but its name already is being debated.

SUGGESTED NAMES

Among the suggestions have been Harriman Bridge, Robert Wagner Bridge, and De Sapio Bridge.

(Besides these and the proposal to honor Stevens, there has been a spirited campaign for several years to honor Giovanni da Verrazzano, Italian explorer and first white man to sight the shores of New York, by naming the Narrows span "Verrazzano Bridge."

(This campaign has been sponsored by the Italian Historical Society, 26 Court Street, Brooklyn, and Governor Harriman himself publicly announced he personally favored the name "Verrazzano Bridge.")

That it be named in tribute to Stevens, chief engineer of the Panama Canal during its early construction period, is being advocated by engineering circles in New York and Washington.

Stevens' proponents note that the connecting bridge between Staten Island and New Jersey was named for another celebrated Panama Canal engineer, George W. Goethals.

President Theodore Roosevelt appointed Stevens chief engineer of the Panama Canal Commission on June 30, 1905.

(By Harry W. Frantz)

WASHINGTON, July 20.—A great new bridge over the Narrows between Staten Island and Brooklyn might someday be known as Stevens Bridge, to honor one of the most famous engineers of the Panama Canal construction.

That it be named in tribute to Stevens, chief engineer at the canal during the early construction period, is being advocated by engineering circles in New York and Washington, with indications of wide support.

Sponsors of the movement presently reserve their identity, pending correspondence with the New York Triborough Bridge Authority and other responsible State and municipal agencies.

But they report privately that Stevens' name has been advanced and point out that the connecting bridge from Staten Island to New Jersey already has been named for another celebrated Panama Canal engineer, George W. Goethals.

The bridge over the Narrows, one of the world's greatest marine thoroughfares, is not scheduled for completion until 1964, but its name already is being debated. Among the suggestions have been Harriman Bridge, Robert Wagner Bridge, and De Sapio Bridge.

President Theodore Roosevelt appointed Stevens Chief Engineer of the Panama Canal Commission on June 30, 1905, after the early construction plans had revealed formidable difficulties in transportation, workers' welfare, sanitation, canal design, and the menace of yellow fever.

History recounts that barely a week after his arrival at Panama, Stevens decided to double-track the inefficient Panama Railroad, establish commissaries for all employees, build the Tivoli Hotel, speed up housing and sanitary construction, and apply railroad transportation to mass excavation.

His judgment influenced the later decision by Congress in favor of a high-level-lake plan with the Atlantic terminal dams and locks at Gatun and the Pacific dams and locks in one group at Aguadulce, a hill south of Miraflores. The alternative would have been a sea-level canal, involving far greater cost and time for construction.

The Panama Canal Society of Washington, composed of veterans of the Big Ditch construction, held a special meeting at Washington in 1956 to honor Stevens. Representative DANIEL J. FLOOD, Democrat, of Pennsylvania, then described Stevens as the basic architect of the Panama Canal.

"Often speaking to employees," FLOOD said, "Stevens told them that there were only three diseases on the isthmus—yellow fever, malaria, and cold feet—and the greatest of these was cold feet."

There are indications that the naming of the Narrows Bridge for Stevens might attract wide additional support because of his association with many other great construction projects in the United States and foreign countries.

Working for James J. Hill, Northwestern empire builder, Stevens early in his career discovered the Marais Pass in Montana, through which the Great Northern Railway was constructed.

During World War I, he was head of the United States railway mission to Russia and directed improvement of the Russian transportation situation.

From 1919 to 1923 he was president of the Inter-Allied Technical Board, which supervised the Siberian Railway.

After the war he became national president of the American Society of Civil Engineers. He received the John Fritz medal and many other awards for great engineering achievements.

Neah Bay-Lapush Road

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD a resolution presented by the city of Bremerton, Wash., supporting a proposed highway from Neah Bay to Lapush, in my district.

I am happy to know the Bremerton City Council and its mayor, H. O. Dom-

UNIVERSITY OF MICHIGAN LIBRARIES

stad, have gone on record favoring this road, and sincerely hope that this desire is fulfilled.

The resolution follows:

"Resolution 1009

"Whereas from Neah Bay to the Point of Arches and to Cape Alava (the most westerly point of land in the United States) and thence to LaPush, as the panorama unfolds, the huge rocks of the sea emerge from the silence of the centuries to welcome travelers; and

"Whereas the lack of this road, less than 30 miles in length, from Neah Bay to LaPush is denying the people of the State, and the Nation, access to one of the most spectacular areas of this vast continent; and

"Whereas from a financial point of view this road project is sound. With the building of this highway thousands of tourists will stay 1 or 2 days longer in our State, greatly benefiting its economy; and

"Whereas the development of such a proposed highway would make it possible for additional thousands of sports fishermen to become acquainted with the famous king salmon, whose fighting ability is legendary; and

"Whereas this proposed highway would give mobility to the Armed Forces along the Strait of Juan de Fuca, and would likewise strengthen the western rampart of our Nation which lies directly in the path of potential invaders: Now, therefore, be it

"Resolved by the City Council of the city of Bremerton, That we go on record asking the Governor of Washington, the chairman of the legislative interim committee on roads and bridges, and the chairman of the State highway commission, and other interested agencies, that they endorse and help put into action whatever procedure is necessary to start the building of this road in the shortest possible time; and be it further

"Resolved, That letters be sent to members of the Washington State congressional delegation asking them to coordinate their efforts with ours and the elected representatives of this State in the procurement of funds and support from the National Government as needed."

Passed and approved by the City Council of the city of Bremerton, signed by the mayor and attested by the city clerk in authentication of such passage this 9th day of July 1958.

H. O. DOMSTAD,
Mayor.

Attest:

E. H. T. MCGOWAN,
City Clerk.

Colorado Has Lost a Great Citizen

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. CHENOWETH. Mr. Speaker, I am sure the House will be interested in an editorial from the Star-Journal of Pueblo, Colo., on the passing of Hon. E. D. Millikin, former United States Senator from Colorado:

COLORADO HAS LOST A GREAT CITIZEN

The death of former Senator Eugene D. Millikin Saturday brought to a close the life of one of Colorado's greatest citizens.

A brilliant, kind, and thoughtful man—he achieved the highest esteem of his colleagues in the Senate where he served from 1942 to 1956.

As a Coloradoan he always placed the interests of his State second only to the basic interests of the Nation. Partisanship was limited to those things about which political parties disagree as to principle, but when the interests of Colorado and its citizens were involved, he joined forces with other Coloradoans. His close friendship and working understanding with former Senator and Governor, Ed C. Johnson, constituted the outstanding State team in the United States Senate.

As a Republican leader he had no peer. He never dictated—he cooperated and worked for mutual understanding and beneficial solutions to all problems.

He was a close personal friend of the late Robert A. Taft and supported him for the nomination for President on the Republican ticket. But when President Eisenhower was given the party's nomination in 1952, Senator Millikin joined ranks and became one of the President's ardent supporters and workers.

His record of accomplishments is almost endless.

Colorado has lost a great citizen and devout worker. Poor health cut his senatorial service short and the entire Nation missed his leadership and guidance in the 85th Congress.

We know we express the sentiments of thousands of persons when we pay him our highest tribute and extend to his widow our deep sympathy and condolence. Senator Millikin was truly one of Colorado's and the Nation's greatest citizens.

Best Editorial

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. ROGERS of Florida. Mr. Speaker, the following editorial, written by Mr. Jack W. Gore, editor and copublisher of the Fort Lauderdale Daily News, Fort Lauderdale, Fla., has been judged best editorial in 1957 by the better newspaper contest of the National Editorial Association. This new honor just received is in addition to many others received during the past years by this able and outstanding editor. This award-winning editorial "When Father Loses Contact With Son He Should Not Expect Help From Santa" was first printed December 22, 1957. It is a fine example of the kind of newspaper that serves our Sixth District in Florida. The lesson presented here is of importance to all of us; therefore, I am happy to present it here in the RECORD for all the Members to read:

WHEN FATHER LOSES CONTACT WITH SON HE SHOULD NOT EXPECT HELP FROM SANTA

(By Jack W. Gore)

A few days ago an incident happened in one of our department stores here in town which well illustrates how many of us today are looking to someone else to solve our problems.

The incident involved a father, his 6-year-old son, and the store Santa Claus.

The man, well-dressed and apparently of above average means, brought his little boy into the store to talk to Santa Claus. But before the little boy got to Santa the father handed the bewhiskered gentleman a slip of paper on which he had noted all the child's misdeeds and he asked Santa to read the list and then tell his son he shouldn't do those things any more.

Santa looked at the list to see what the man had written. With some astonishment he noted that the father wanted him to tell the little 6-year-old boy to stop biting other children; to stop destroying all the neighbors' plants and flowers; to stop calling his mommy names and telling her to shut up; to quit tearing down his bedroom window curtains and not to dig big holes in the walls of his room; to quit being selfish with his toys and his other possessions; and, finally, to quit telling lies.

This list was quite an indictment against a little 6-year-old boy, and when Santa finished reading it he called the man over to his side.

Gently, but rather firmly, he explained that he couldn't do what the father had requested. His job, Santa said, wasn't to make little boys and girls unhappy or sad. Nor could he do in just a few seconds of conversation what a father had apparently failed to do in 6 years. He would talk to the little tyke, of course, but he would talk to him like he did all the other youngsters so that the child would leave with a bit of happiness in his heart instead of a feeling of guilt.

We don't happen to know the father of this little 6-year-old boy, but he must be a very disturbed individual to think that a store Santa Claus can take the place of a parent in teaching a child the fundamentals of good behavior.

Or, perhaps disturbed isn't exactly the word to use in this case. Perhaps lazy, careless, indifferent, or just plain ignorant would be better words to characterize a father who has apparently lost any ability he might have had to control his own offspring.

Or then again, perhaps it isn't the father's fault at all. Maybe this child is one of those really unfortunate children who actually can't tell the difference between good and bad conduct and who need psychiatric treatment which few parents are qualified to give to straighten them out.

Whatever the reason behind the incident, however, it well illustrates an attitude which is all too prevalent today. Far too many of us are looking to others to do the things for us that we should do for ourselves. The home is a place where a child should learn the rudiments of good behavior and proper morals. But many of us are too busy to teach our children these essentials. So we turn the job over to our schools and churches, our juvenile authorities and police courts, and hope that in some magical fashion they will do what we are too busy to do.

Like a store Santa Claus these agencies cannot be an adequate substitute for a child's own parents. A school can apply discipline to a child but it cannot give him love. A church can preach the necessity for good morals but it cannot take the place of parents in setting good moral examples for a child to follow. And juvenile authorities and police courts can correct and punish but all too often by the time they are called in it is much to late to do any real good.

This Santa Claus incident in one of our department stores a few days ago wasn't a big thing. Quite probably it went almost unnoticed by people standing nearby waiting for their own youngsters to see Santa.

Yet, small as it was, it is still symptomatic of a great ill that is prevalent in our Nation. More and more of us are losing close contact with our children and then looking around for some Santa Claus to get us out of trouble we built up for ourselves.

Naval Tradition

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article, published in the July 1958 issue of Navy, official publication of the Navy League, entitled "Naval Tradition: Bulwark of the Republic," by Anthony Harrigan, of the Charleston News and Courier, Charleston, S. C., the South's oldest and best newspaper:

NAVAL TRADITION: BULWARK OF THE REPUBLIC

(Guest editorial by Anthony Harrigan, published in July 1958 issue of Navy, official publication of the Navy League)

In this second atomic decade the Nation's strongest shield is the character of its citizens. It is not something that can be provided for in a Defense Department budget or listed on a strength report. It is the principal means of defense in the arsenal of the United States. And the strengthening of character is an all-important task facing those who are charged with this Nation's defense planning.

The naval service of the United States has long recognized its responsibilities in strengthening the character of the men who serve in its ships and aircraft and who execute its battle plans. Moreover, the United States Navy is keenly aware of its role in holding up to the Nation a pattern of conduct and character for citizens to emulate. The Navy's heroes and outstanding officers—John Paul Jones, Stephen Decatur, Oliver Hazzard Perry, David Farragut, George Dewey, Ernest King—have represented to the Nation much more than professional excellence in the art of naval warfare. They have exemplified the highest type of American citizen.

This phase of the Navy's role should be stressed again and again these days. For the Navy has a character-training task to accomplish that the Nation cannot afford to have crippled or limited. The reasons for this stress are very clear.

The President of the United States and others in authority have expressed concern at signs of deterioration in some departments of American life. Public discussion in recent years has focused on lowered standards of public and private behavior. Under the pressure of modern living, ethical values have suffered. And there has been a downgrading of the importance of personal responsibility. Some educational theories have emphasized life adjustment and ignored the basic importance of sacrifice and discipline in human affairs.

The naval service has been fortunate in that its rigid standards of behavior have been maintained. Nevertheless, an age which excuses lowered standards and which is contemptuous of strictness and tradition has an effect on persons outside as well as inside civilian circles. Unnecessary emphasis on material rewards and inadequate understanding of the patriotism that causes men to stay in a profession that has limited monetary rewards has an adverse effect on morale. The blurring of responsibility, which is characteristic of much in modern life and which takes the form of saying wrongs are rooted in social conditions rather than individual failure, touches the judgment of citizens, whether in or out of uniform.

The willingness to forget the primary obligation to one's little platoon in life—indeed to one's own nation first and last—has troubled leaders of this Nation. Furthermore, the demands of a technological era could have the effect, if such is not already the case, of causing an officer to undervalue the traditions of his service. There is the real danger of officers forgetting that they are first of all naval officers as they become absorbed in the gadgetry of modern warfare. Such a situation, on a large scale, would be a national tragedy. For an officer of the United States Navy is not basically a button-pusher, reactor control technician, or a slide rule or electronic computer operator. He is an officer and a gentleman, a leader of men and a duty-conscious citizen who is the bearer of a special tradition that strengthens all Americans.

The customs and usages of the naval service, which advocates of a single service fail to appreciate, are the strengthening factors, in terms of human character and spirit, that made possible victories at Midway and a hundred spots on the board Pacific. The distinctive United States Navy traditions and customs build up a pattern of thought and action that carries men through crises that men, without a naval background would fail to overcome. They provide what Admiral Mahan referred to as "a reserve of strength which cannot be obtained by any novel device."

Naval traditions enable men of ordinary talents to work harder, sacrifice more, and act with greater promptness than would the rules and regulations of an artificially created single service. For that reason, the United States Navy, which must be prepared to fight on the vertical frontier and the undersea frontier, must not forget the frontier of character. On the American character, influenced by the traditions of the naval service depends, in large degree, the safety of the republic.

The Tax on Telephone Service Should Be Repealed

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. HEMPHILL. Mr. Speaker, I wish to take this opportunity once again to make a plea for repeal of the 10-percent tax on telephone service.

We all know taxes are a necessary part of life. But why do we overtax a resource that is also an essential part of our life?

There is plenty of evidence that the Federal excise tax on communications is a discriminatory overtax on a service that people cannot do without.

It is a discriminatory tax. Telephone service is the only household utility so taxed—there is no excise tax on gas, water, or electricity. The tax also discriminates against long-distance users, because it is calculated on a percentage basis; people who live in remote sections of the country, away from population centers, are penalized by this tax.

Excise taxes on communications, until now, have been levied only during emergencies—and removed after the emergencies. Today, more than a decade after the end of the World War II emergency, the excise tax on communications is still in effect—adding 10 percent to telephone bills and all telegrams and radiograms.

Communications are a necessary in business, government, and community life. More than 75 percent of the American households have telephone service, and few businesses could operate without telephone and telegraph service. Yet these services are taxed at luxury rates. Only such items as club dues, cabaret bills, liquor, and tobacco are taxed at higher rates.

The question of excise taxes comes up before Congress just about every year. It is hardly necessary to point out here that removal of the tax from communication services has been urged repeatedly by representatives of the regulatory commissions.

The National Association of Railroad and Utilities Commissioners has reaffirmed its stand with a resolution calling for repeal of the tax. The association also has authorized its president to appoint a special committee to work toward this end.

In 1956 the communication excise levies exceeded a total of $574 million or in excess of $9 per telephone per year. This is a big load for telephone customers to carry.

Representatives of the telephone industry, appearing before the House Ways and Means Subcommittee have graphically demonstrated this cost problem: for every dollar of additional net earnings granted a telephone company, the customer must pay $2.29—of which 21 cents is excise tax.

Expressed in another way—

One of these representatives testified—

for every million dollars authorized in increased rates, $520,000 of this amount goes to the Federal Government as income taxes. But another 10 percent, over and above the million dollars, must be paid directly by the customers as an excise tax.

Another point of concern registered by a telephone company spokesman was made in the following words:

We have now come to the point where the wartime pent-up demand for telephone service is lessening and the full impact of the excise tax is being felt increasingly. * * * A public utility like a telephone company has to compete in the money market with oil, manufacturing, and other utility companies and all other business requiring capital. The excise tends to dry up the capital market by subtracting from the customer's spendable dollar, amounts which might otherwise be saved and invested in new capital, and also raises doubts in the minds of some investors as to whether an industry so very heavily taxed is truly a good investment.

Even without the excise tax, communications already bear a heavy tax burden.

An example of just how big a tax load telephone customers carry was spelled out not long ago by one telephone company. It reported a total of $128½ million for Federal, State, and local taxes. About one-third of this—$36,985,000—was Federal excise tax.

UNIVERSITY OF MICHIGAN LIBRARIES

The total tax bill in this case amounted to 2½ times the company's net profits and was 50 percent more than the amount it spent for maintenance costs, including wages and supplies.

Of course, the money to pay these taxes came from the telephone customers. Looking at the tax figures from the customers' viewpoint, the company found its customers paid an average of $60.34 in telephone taxes in a single year. This means, on the average, that 28 cents from every dollar the company collected from customers last year went for taxes.

An example of how the excise taxes on communications add to the family food bill has been given to the House subcommittee.

A spokesman for the fresh fruit and vegetable industry testified before the House Ways and Means Committee that the 10-percent tax on communications alone added about $1,575,000 a year, or roughly $5,250 a day, to the country's food bill for fresh fruits and vegetables.

Fresh fruits and vegetables, which make up about 21 percent of per capita food consumption in this country, are highly perishable. The industry moves an average of 5,000 carload shipments every working day, and fast transportation and use of the telephone and telegraph are indispensable.

At best it is wobbly economics to put a public necessity in the same category with luxuries for excise-tax purposes. And in a period of inflation, such reasoning collapses completely.

Utilities need rate increases as the cost of doing business rises. There is no way around this fact. But why add a tax on top of the utility bill?

This penalizes the customer for using a necessity—something he has to use. The tax is thereby locked into his cost of living. On the other hand, many items which he can choose to buy or not to buy go free of this type of tax.

A constituent recently wrote:

"With all of the talk, writing, and growing concern that there is about the slowdown in business, increasing unemployment, high public debt and today's cost of government, Congress certainly should understand that unjustly penalizing users of telephone service through the continuation of wartime excise taxes is not in the public interest, but is in effect—

A penalty upon very business which depends upon the sale of goods or services for its existence—once upon the use of telephone service by the business and once more upon its suppliers and customers use of telephone service associated with orders, etc., pertaining to the business.

A penalty upon workingmen and workingwomen and their efforts to retain employment or to find reemployment—once upon the use of telephone service by the workingmen and workingwomen and once more upon their employers, or potential employers, use of telephone service in calling them for available work.

A penalty upon every business, upon workingmen and workingwomen, and upon all investors, who use telephone service indirectly as an aid to retaining and improving their status as taxpaying businesses and citizens; a penalty upon the same taxpaying businesses and citizens who finally must carry whatever burdens grow out of the slowdown in business, increasing unemployment, high public debt and today's high cost of government.

The concern over this tax becoming imbedded in the tax structure is not an idle one. Very recently a joint Federal-State committee formed at President Eisenhower's recommendation to determine an orderly line of demarcation between Federal and State responsibilities, agreed tentatively to permit 40 percent of the tax on local telephone service to pass from Federal hands to the States in return for the States assuming certain additional responsibilities. This is a clear indication that some are coming to think of the excise tax as a permanent feature of our tax structure. I need not point out any such action would lessen whatever chance there may be of eliminating this discriminatory levy.

The position of the telephone industry, both Bell System and independent telephone companies, on the telephone taxes has been stated as follows:

The entire communications industry has urged the elimination of these taxes at every opportunity. Representatives of the United States Independent Telephone Association and of the Bell System have testified before congressional committees a number of times, beginning as early as 1947. The current international situation has cast doubt on a lessening of Federal expenditures and an overall reduction of taxes. Nevertheless, the question remains as to whether or not a tax so discriminatory as the telephone excise tax should be continued in lieu of obtaining needed revenue from other tax sources.

A Joint Federal-State Action Committee has been formed to determine an orderly line of demarcation between the spheres of Federal and State responsibilities. This committee has proposed that 40 percent of the local telephone tax be turned over to the States in order to provide funds for certain functions now handled by the Federal Government and to be assumed by the States. The proposal overlooks (1) that the local telephone tax was a wartime emergency tax, (2) that no excise tax was ever imposed upon local telephone service until required by World War II, and (3) that the proposal of the committee would have the effect of making the tax on local telephone services a part, and no doubt a permanent part, of the tax structure of State governments for the first time in the history of telephone service.

The committee's proposal, if adopted, would freeze the excise tax permanently into the tax structure. It would fasten an unequal tax burden on telephone customers and therefore should not be permitted to occur.

The necessity of maintaining Federal tax revenues at the current high level should not preclude the elimination of the unfair and discriminatory excise tax on communication services. The nature of this tax demands its early repeal.

Yes, Mr. Speaker, the excise tax on communications service is an unsound tax that should be repealed now.

James Howard McClellan

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. AYRES. Mr. Speaker, there have been many fine editorials appearing in the newspaper of Capitol Hill—Roll Call.

The one appearing this week on James Howard McClellan is deserving of your attention:

JAMES HOWARD MCCLELLAN

Our heart and hand go out to the grief-stricken father, the young widow, and the stepmother of Jimmy McClellan. Those of us who know the senior Senator from Arkansas are aware of the love, affection, and hopes for the future that he held for his sole surviving son. Time after time, the solemn-faced man had walked slowly to the grass plot on the high ground in the little graveyard at Melvern. There he had bid a last goodby to James' mother, then to his eldest son, and then to his second son. On Thursday, he walked beside Jimmy through the stifling Arkansas heat to the resting place of his loved ones to say goodby again, and a bereaved nation walked with him.

Senator MCCLELLAN'S high hopes for his son were well justified. At 30, Jimmy had established a law practice in Little Rock that was well on the way to becoming the most successful in the State. He had served his country in the Armed Forces and there is little doubt, that had he lived, he would have followed in the footsteps of his illustrious father. The Senator looked forward to the day he could return to Arkansas and join his son in the practice of law, and Jimmy, too, looked forward to that day for they had established an ideal father-son relationship.

It is our fervent hope that this, the latest in a long line of personal tragedies, will not break the spirit of Senator MCCLELLAN. We do not think that it will, for the Senator is a strong man and he knows the Nation needs him.

Dr. Norman Vincent Peale Discusses Pay Television

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 15, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on the subject of pay TV by one of the Nation's best known clergymen and authors, Dr. Norman Vincent Peale:

DR. NORMAN VINCENT PEALE DISCUSSES PAY TELEVISION

(By Ruth Nathan)

"It's simple. Pay TV won't pay. The people can't afford it."

Dr. Norman Vincent Peale, one of the Nation's best known clergymen and authors, who has appeared frequently on the air, made this obseravtion in a recent interview.

"Sure, I've been thinking about pay TV, and so have other church leaders with whom I've had private shop talk; but we've been reluctant to declare ourselves publicly because the situation is fraught with politics. I think it is important to speak up now," he said, "especially since the people are gaining premature comfort from the decision of the Federal Communications Commission to postpone a trial test of pay television. This is the time to build strength."

Dr. Peale, who believes in positive thinking and confident living, as espoused in his best selling books, also believes that positive action should be taken against positive greed.

As pastor of the Marble Collegiate Church in New York City and founder of the Ameri-

can Foundation of Religion and Psychiatry, he drew on his own experience to document his conviction about free TV.

"When I go out on lecture tours to raise money for my foundation and other services, I charge a modest admission fee," he said. "I discovered that the people cannot afford even this small amount. It simply is a fact that most people are living on strict budgets. When our official organ, Guideposts, failed to get some subscribers to renew at the tiny cost of $2 a year, we sent out a questionnaire to learn why. Nearly every withdrawal was based on the budget factor—mind you, $2 was important to most budgets on a yearly basis."

Asked what he thought about the fee to see a religious service on television, Dr. Peale said:

"It's well to remember that in actual church, if the plate is passed, contributions are strictly voluntary. Imagine my saying to my parishioners, 'I don't intend to preach a sermon until you pay me 50 cents.'"

How does Dr. Peale weigh the power of television? "It is formidable, of course," he said. "The greatest showcase for the manufacturer of goods to advertise his wares; the greatest medium whereby a clergyman might persuade the viewer to allow religion to work in his life, to let it give him victory over his problems. * * * TV, in many respects, sets the tone, morals, idealism, and conditioning of the American mind.

"There is no question in my mind but that TV is in the public domain. It belongs to the people, like the beaches, the right-of-way.

"So many people are lonely," he said. "Unfortunately, their inner resources are limited—I mean intellectually. They find themselves with nothing to do, day and night, and no money to go out on the town."

Dr. Peale recalled a sight on one of his numerous train trips through the country. "I remember going through Baltimore," he said. "I saw this forest of TV antennas on a whole score of pathetic-looking, poor-district houses. It was symbolic, as if those antennas were being sent up by all those people into the heavens for something, something nice, to come into their homes.

Let's not forget the aged and the handicapped," Dr. Peale went on. "There are so many. My brother, Dr. Robert Clifford Peale, says that in about 80 percent of the home he visits on his medical rounds there is at least one elderly person on the premises either living on a small fixed pension or supported by his children. Often his eyes are glued to the TV set. I feel that TV is to the aged and disabled what braille is to the blind."

Does Dr. Peale have anything to say against TV programing as it is today?

"Well," Dr. Peale said in his perky drawl, "sometimes one thinks of it as a bad, metallic, inane mechanical screech getting into your nervous system. But as long as it keeps its good taste, it is a great force for education, enlightenment and pleasure."

And the possible elimination of commercials, sometimes labeled objectionable by some club and church groups?

"First of all," Dr. Peale said, "it would be unfair to the advertiser who perhaps wouldn't sell as much of his product as he does now, and then the American people would be footing the bill of higher prices. Secondly, I do not feel that commercials are a corrupting force."

Dr. and Mrs. Peale are the parents of 2 daughters, 15 and 23, and a son, 21. "Our family could afford pay TV," Dr. Peale admitted frankly, "but we're all against it because pay TV presents the great danger of filling the pockets of the few and emptying the pockets of the many. This is a case where the interests of the smallest citizen who is lacking in influence must be protected.

"Let's look at what we've got on present TV," Dr. Peale said. "There are many rich, regular hours of free religious programing and family counseling each week. Pay TV champions have not come up yet with any plans for providing such public service, to say nothing of news, science and other educational shows not classified 'pure entertainment.' On the other hand, heads of the broadcasting networks, such as Dr. Frank Stanton of CBS and Robert Sarnoff of NBC, have shown a sense of responsibility to the public. There is a growing number of food-for-thought programs for which free time, and often technical production are provided."

Dr. Peale's favorite programs are: The Lineup, I Love Lucy, Person to Person, Dean Pike, and This Is You Life. He was paid tribute over the latter about 3 years ago. He also loves westerns, especially Wyatt Earp. Dr. Peale pointed out that other cowboy sagas, such as Gunsmoke and Have Gun, Will Travel, often weave moral messages into their shows.

Revealing that in his talks with other religious leaders he has never found a single clergyman who was in favor of pay television, Dr. Peale announced he would seek an open, interfaith study-group meeting with leaders of all denominations. This he intends to do upon his return from a visit to the Middle East. "I think we must help the people prove that the fallacies of pay television are so great that its proponents would outsmart themselves and lose money.

"Pay television is a form of tax; the scheme won't take hold. But," Dr. Peale concluded, "we must do all we can to prevent it."

Bounty on Dogfish Shark Proposed

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. WESTLAND. Mr. Speaker, depletion of our salmon runs is a serious problem for the commercial fishermen and the sports fishermen of Puget Sound and the Pacific Northwest. This problem can be traced to two major causes, fishing with small-mesh nets by the Japanese, and predators. Negotiations with Japan are being undertaken to bring about a solution to the former, but something positive should be done in an attempt to solve the latter problem.

I have offered a bill that I believe is a practical method of controlling one of the most common predators, the dogfish shark. This salmon-eating fish has increased in numbers during the past few years, both in west-coast waters and in the waters off the Northeast Atlantic coast.

This fish is a serious problem to the salmon industry of my district and fisheries in general. Many tons of valuable commercial and sports fish are lost and thousands of dollars spent because of damage by dogfish to fishing gear. This means great losses to the fishermen of the Second District who rely on salmon runs for their livelihood, and affects the sports fisherman. Sports fishing in my disctrict is part of another industry, tourism. Poor fishing caused by these predators means potential reduction in incomes for resort operators. My bill would provide payment of bounties on dogfish to encourage the destruction of this menace.

I might point out that at one time the dogfish provided income because of its medicinal properties. Today, synthetics have replaced the value of these properties, leaving no incentive to take dogfish shark commercially. This may account for the rapid increase of dogfish in Pacific coast waters during the past few years.

Mr. Speaker, I hope Congress can give prompt attention to this legislation because of the seriousness of the problem. The destruction of this predator must be accomplished so we can protect one of our most vital natural resources.

Pay TV Presents the Great Danger of Filling the Pockets of Few and Emptying the Pockets of Many

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. EVINS. Mr. Speaker, the accompanying article concerning pay TV, by Dr. Norman Vincent Peale, came to my desk—I read it and liked it. I think others would want to read Dr. Peale's discussion concerning a minister's point of view, regarding pay television. The article follows:

DR. NORMAN VINCENT PEALE DISCUSSES PAY TELEVISION

"It's simple. Pay TV won't pay. The people can't afford it."

Dr. Norman Vincent Peale, one of the Nation's best-known clergymen and authors, who has appeared frequently on the air, made this observation in a recent interview.

"Sure, I've been thinking about pay TV, and so have other church leaders with whom I've had private shop talk; but we've been reluctant to declare ourselves publicly because the situation is fraught with politics. I think it is important to speak up now," he said, "especially since the people are gaining premature comfort from the decision of the Federal Communications Commission to postpone a trial test of pay television. This is the time to build strength."

Dr. Peale, who believes in positive thinking and confident living, as espoused in his best-selling books, also believes that positive action should be taken against positive greed.

As pastor of the Marble Collegiate Church in New York City and founder of the American Foundation of Religion and Psychiatry, he drew on his own experience to document his conviction about free TV.

"When I go out on lecture tours to raise money for my foundation and other services, I charge a modest admission fee," he said. "I discovered that the people cannot afford even this small amount. It simply is a fact that most people are living on strict budgets. When our official organ, Guideposts, failed to get some subscribers to renew at the tiny cost of $2 a year, we sent out a questionnaire to learn why. Nearly every withdrawal was based on the budget factor—mind you, $2 was important to most budgets on a yearly basis."

On the other hand, heads of the broadcasting networks, such as Dr. Frank Stanton of CBS and Robert Sarnoff of NBC, have shown a sense of responsibility to the public. There is a growing number of food-for-thought programs for which free time, and often technical production are provided."

Dr. Peale's favorite programs are: The Lineup, I Love Lucy, Person to Person, Dean Pike, and This Is Your Life. He was paid tribute over the latter about 3 years ago. He also loves westerns, especially Wyatt Earp. Dr. Peale pointed out that other cowboy sagas, such as Gunsmoke and Have Gun, Will Travel, often weave moral messages into their shows.

Revealing that in his talks with other religious leaders he has never found a single clergyman who was in favor of pay television, Dr. Peale announced he would seek an open, interfaith study-group meeting with leaders of all denominations. This he intends to do upon his return from a visit to the Middle East. "I think we must help the people prove that the fallacies of pay television are so great that its proponents would outsmart themselves and lose money.

"Pay television is a form of tax; the scheme won't take hold. But," Dr. Peale concluded, "we must do all we can to prevent it."

Stadium Bill Signed, Ending 50-Year Fight

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. HARRIS. Mr. Speaker, I was highly pleased with the final action by President Eisenhower when he signed the bill on Monday to provide a modern stadium for the Nation's Capital. This culminated efforts on behalf of many people over a period of more than 50 years.

Nearly 15 years ago, I proposed legislation with a view of providing such a facility for Washington. Some 10 years ago, I introduced a stadium bill. I have had the feeling that a facility of this kind was imperative for this city, which is not only the Capital of the United States, but looked upon as a center of operation in many, many ways throughout the world.

Many people have cooperated in this effort and even though there has been controversy, it is a tribute to the people of Washington that these differences have been resolved and through their cooperation this program finally is assured.

I would like to pay a special tribute to one who has been methodic and untiring in his efforts toward this action. William N. McLeod, Jr., clerk of the House District Committee, has on more than one occasion been the motivating factor that prevented our efforts in the last few years from subsiding. He has cooperated with the committee and pursued the suggestions that we have made that kept the program alive. A debt of gratitude and special thanks are due him for his cooperation and constant efforts.

An article appeared in the Star, Monday afternoon of this week, with reference to the stadium and something about its history. In order that it too may be made a part of the record, under unanimous consent, I include this article with these remarks in the RECORD:

STADIUM BILL SIGNED, ENDING 50-YEAR FIGHT
(By Grace Bassett)

President Eisenhower today signed a bill to give Washington a 50,000-seat stadium.

His signature made law out of language reflecting half a century of community effort to win a model sports arena for the District of Columbia. The stadium will be located near the armory between Independence and Constitution Avenues.

For the last 2 years, the drive has been led by William N. McLeod, Jr., clerk of the House District Committee. His orders came from a Representative from the Deep South with no constituents to serve nor votes to win by his compaign.

Representative HARRIS, Democrat of Arkansas, began championing a stadium in the Halls of Congress 9 years ago. A chairman of a House District Subcommittee, he steered through legislation in 1944 for a stadium-museum, to be run by a Presidentially appointed Commission.

BALKED BY DISSENSION

The aluminum-topped, marble-faced dream never was built because nobody could figure out how to finance it. The idea was buffeted about in Congress for a decade as civic leaders split on stadium sites.

Through the years, the relatively obscure Arkansas Representative rose to become a powerful, controversial House investigator of influence peddling in Washington. He kept the stadium top-drawer business.

Mr. HARRIS received a telephone call in Arkansas in September of 1956 from Mr. McLeod about reviving legislation.

George Marshall, owner of the Washington Redskins football team, had knocked on House District Committee doors with a new idea;

BILL DRAFT ORDERED

"Authorize an engineering study of financing, design, and location snags that have blocked the stadium for years," he said. Then, on the basis of a sensible plan, Congress would be willing to call for construction, Mr. Marshall reasoned.

When Mr. McLeod put the idea to Representative HARRIS, orders went out. The lawmaker told Mr. McLeod to draft a bill. Mr. HARRIS' prime concern was setting on a location. He was encouraged by Mr. McLeod's report that business leaders had promised to work for a public subscription of bonds to finance the arena.

Federal appropriations for the stadium were blocked repeatedly in past Congresses as "giveaways."

Hundreds of conferences began. They were to occupy many days and nights of Mr. McLeod's time for the next 2 years. George F. Shea, Armory Board chairman and lawyer; Floyd Akers, auto dealer; John A. Reilly, banker; and Robert E. McLaughlin, District Commissioner, cooperated.

They were prodded by Mr. Marshall, who held out the lure of long-term contracts at a new stadium. They were pressed by Calvin Griffith's threats to move the Washington Senators out of town because of lagging receipts at the old Griffith Stadium.

LIMITS SET

Edward R. Carr, the real-estate developer, was instrumental in bringing Mr. Marshall and Mr. Griffith into preliminary stadium discussions.

As drafted, the 1957 Harris bill set a $9 million limit on stadium costs. The Armory Board was to hire consultants to draw up final plans, which in turn would be handed Congress the following year before construction began.

The board hired the New York firm of Praeger-Kavanagh-Waterbury, which recommended:

A stadium to be set on the circular tract of land ringed by Constitution and Independence Avenues east of the Armory.

Financing by bonds issued to the public by the Armory Board and guaranteed by the Federal Government.

Transfer of land from the Interior Department to the Armory Board on a 30-year lease. At the end of 30 years, the stadium would revert to the Federal Government, along with the site.

Back went Mr. McLeod and Mr. Shea to draft amendments to the 1957 law.

DIFFICULTIES DISPELLED

The new bill, just signed by the President, overcame financing and site questions of Congress. Mainly, difficulties faded after the phrase written into the bill by Mr. McLeod that the stadium would be constructed in substantial accordance with the Praeger-Kavanagh-Waterbury report.

This called for lifting the $6 million cost limit from the old law. Substituted was a variable price tag from $7 to $8 million, depending on how bonds sold and which design was adopted.

The United States Treasury backed the bond issue, under terms of the bill. Congressional fears that the stadium eventually would be a drain on the Treasury were allayed by a proviso that District Commissioners would budget money annually to make up the difference between bond payments and stadium receipts, if need be.

LOCAL RESPONSIBILITY

Commissioners were authorized by the bill to borrow from the Treasury if Congress refused the budget items. Loans would have to be repaid, with interest, by District taxpayers. So the bill made the stadium a clear local responsibility.

Representative HARRIS and cosponsor Senator BIBLE, Democrat of Nevada, blue-penciled from the drafted bill a promise that bonds would be tax free. That satisfied the Treasury, which otherwise would have objected to backing the issue even through loans.

To assure the land transfer, Mr. McLeod gained from Interior Secretary Seaton a pledge to lease the site to the Armory Board for a reasonable sum. "What is reasonable?" pressed Mr. McLeod. The Secretary said $100.

The words "substantial accordance" also settled the site dispute, at least to the satisfaction of Congress. Praeger-Kavanagh-Waterbury called the grassy oval of land beside the Anacosta the most desirable site.

So the bill as passed does not bind sponsors to the tract. But the intent of Congress to place the stadium there is clear.

With this language, Representative HARRIS was able to block brickbats thrown at the stadium on the House floor by economy-minded Republican Representatives GROSS of Iowa and SCHENCK of Ohio.

Five typographical errors caught in the Senate sent the bill back to the House for final passage. There, House District Committee Chairman MCMILLAN, Democrat of South Carolina, spent the afternoon on the floor with the bill in his coat pocket.

Thanks to his evening defense against Representative O'KONSKI, Republican of Wisconsin, stadium legislation went to the White House.

Farley Is Back

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. MUMMA. Mr. Speaker, the following clipping appeared in the Lebanon Daily News, a prominent paper in my district. Its insertion was requested by Congressman KEOGH, of New York, in line with congressional courtesy to me. I am sure Mr. Farley is a nationwide character and his whereabouts interesting.

FARLEY IS BACK

At the 1940 Democratic convention Senator Carter Glass, of Virginia, placed in nomination the name of James A. Farley. He had left a sick bed to do so, because he shared Farley's determination to oppose a third term.

Neither Glass nor Farley had any illusions as to the outcome. Mr. Roosevelt received 946 delegate-votes against Farley's 72. But the seed of protest against a third term bore fruit, eventually resulting in a constitutional amendment to forbid what, until then, had been an unwritten law.

That break with F. D. R. marked the end of Big Jim's open participation in politics. He resigned as Postmaster General and became first chairman of the board of the Coca Cola Export Corporation. He now is its president.

Now, presumably after "the pause that refreshes," the 70-year-old Farley (who has not held elective office since the one term he served in New York Assembly in 1923) has suddenly announced his candidacy for New York's United States senatorial nomination.

It was the biggest bit of totally unexpected political news in some time. It seems to have caught that State's Democratic bigwigs completely off guard.

If, after an 18-year absence from active politics, Jim Farley manages to capture the top spot on the State ticket, the comeback will be one for the books.

H. R. 13247, National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. DENTON. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD a letter written by me to the Honorable Wilbur Young, State superintendent of the State of Indiana Department of Public Instruction, under date of July 28, 1958, in regard to H. R. 13247, the National Defense Education Act of 1958:

JULY 28, 1958.

Hon. WILBUR YOUNG,
State Superintendent, Indiana Department of Public Instruction, Indianapolis, Ind.

DEAR SUPERINTENDENT YOUNG: This letter is in response to your communication of July 21, in which you summarize the results of a study of mathematics and science education in Indiana schools in support of your opposition to the enactment of H. R. 13247, the National Defense Education Act of 1958.

As a Member of Congress representing the Eighth District of Indiana, I am deeply interested in the status of education in our State and throughout the Nation. In this time of peril for our Nation, during which it has become increasingly obvious that the quality of American education is a decisive factor in our struggle to preserve our freedom, I also feel that there is an urgent national interest in the kind and amount of education available to our young people. Therefore, I very much appreciate having the information you forwarded and your views regarding H. R. 13247.

It is extremely gratifying to me that Indiana boys and girls are doing so well in mathematics and science and that Indiana schools provide such opportunities for academic achievement. The teachers of Indiana are obviously doing a good job, and we should all be thankful that we have these men and women who have dedicated themselves to the most important work of a democracy—the education of our youth.

I think that we can all agree, however, that we cannot be satisfied with the quality of education—in Indiana or in the Nation—until it is the very best that we can make it. After the most careful consideration of the facts available to me, including those presented in your study, I cannot agree that they prove that H. R. 13247 should not be enacted. On the contrary, I think that the great mass of reliable information on the needs and deficiencies of American education conclusively proves that this legislation is needed and that its enactment is vital to national security. It was on this basis that President Eisenhower requested enactment of legislation along these lines early this year. Recently the President has reemphasized his support of H. R. 13247, which in large measure would carry out his recommendations. Based upon my own review of the available facts, I agree with the President in this matter. I think you are entitled to know my reasons for taking this position.

First, your letter deals largely with scholarships. A Federal scholarship program is merely one feature of this legislation, and perhaps not the most important one. The bill would authorize Federal assistance to help and encourage the States to improve counseling and guidance services in the schools so that more of our able youngsters will be identified and properly encouraged to study the hard subjects in high school and prepare to continue their education in college.

Your own study demonstrates conclusively that, even in Indiana, youngsters are not making the most of their abilities in subjects of critical importance to themselves and to the Nation. On pages 3 and 4 of your study it is shown that, of the ninth grade students taking science and mathematics tests, 58 percent showed a knowledge of mathematics and 36 percent showed a knowledge of physical science above their grade level, and 61.6 percent and 50.7 percent were above the national norms respectively in mathematics and science. (If Indiana is only average, the least we could expect is that 50 percent of Indiana students be above the national average in these subjects—without even inquiring as to whether our national average attainment is high enough.)

Yet, on page 2, the study shows that among graduating seniors, only 11 percent had actually taken 4 years of mathematics, and that nearly 75 percent had not taken more than 2 years of mathematics. Worse, it shows that only 2 percent had actually taken 4 years of science, and that nearly 85 percent had taken no more than 2 years of science. Surely you will agree, as an educator, that these 3d and 4th year high school mathematics and science courses are essential to the well-rounded academic education of children who have ability to take them—and are absolutely necessary for a student who plans to take college courses in mathematics and science. Unfortunately, the situation nationally is about the same as in Indiana. United States Office of Education studies indicate that only 1 high school student out of 8 takes trigonometry or solid geometry. This might be contrasted with the Soviet Union where science and mathematics are required study for all secondary school students for each of the final 4 years of secondary schooling. I feel that

UNIVERSITY OF MICHIGAN LIBRARIES

the assistance provided by the bill to help improve testing, counseling, and guidance services in our schools would help reverse this condition.

The bill would provide assistance to the States to provide the modern laboratory and instructional equipment needed by the schools to properly teach mathematics, science, and foreign languages. Your study did not deal with the needs of Indiana schools for such equipment, but the lack of modern equipment is generally recognized as one of the major problems of giving effective instruction in these vital subjects. For instance, in the field of foreign lanugage instruction, the report of the House Committee on Education and Labor on this legislation (p. 10) reveals that only 60 high schools in this country have electronic laboratory equipment for drill in hearing and speaking the foreign languages offered.

H. R. 13247 would authorize the commissioner of education to contract with colleges and universities for the establishment and operation of foreign language institutes and foreign language and area studies centers in order to provide advanced training for elementary, high school, and college teachers of modern foreign languages and to provide training for individuals in extremely important languages which are not taught in the United States. I think the necessity for improving our understanding and command of languages is perfectly obvious. I agree with the President that this program will make a solid contribution to our national security and will help meet the growing needs for people with a knowledge of languages on the part of the Military Establishment, science, the diplomatic corps, business, and industry, and education. Did you know that over half of our American high schools offer no courses in a foreign language, and that less than 15 percent of our high school students study a foreign language? By contrast, 40 percent of the high school students in the Soviet Union are studying English. It seems to me that this bill will make it possible for a number of Indiana foreign language teachers to further develop their skills and knowledge to their benefit and to the benefit of their students. I would think that you would welcome such an opportunity for them.

The bill provides for Federal participation in the establishment of university loan funds in order that more deserving college students can be assisted in completing their education. These funds, which account for a large item ($220 million over 4 years) of the cost of the whole bill, would be returned, with interest, to the Federal Government. Your study does not cover the need in Indiana colleges and universities for additional loan funds for deserving Indiana students, but the need for such assistance has been amply demonstrated in the reports of colleges and universities to the United States Office of Education in its study of institutional student financial aid.

Nor does your letter or study deal with the needs in Indiana, or nationally, for assistance in expanding graduate education in order to increase the number of qualified college and university teachers who, in turn, educate the scientists, doctors, teachers, economists, linguists, engineers, and other highly educated people required by a strong America. Yet the bill you ask me to oppose would provide such assistance to graduate students and, through them, to the institutions in which they are doing advanced work in their fields. There are only about 9,000 earned doctor of philosophy degrees awarded annually in the United States. Yet, the President's Committee on Education Beyond the High School estimated that only about 5,000 of the recipients of these degrees enter, or are engaged in, college teaching—whereas it is estimated that our colleges and universities will need a minimum of 15,000 new faculty members each year during the next 12 to 15 years. Where are they to come from? One obvious answer is that a good many will not have completed the full education needed for teaching at the highest academic levels—as is often the case right now. In 1953–54, 40 percent of new college teachers had a doctoral degree; the figure today is 28 percent. You must be aware of the serious consequences of this trend for higher education. I feel that our needs in this respect are so serious—and the consequences to education so grave—that Federal assistance is required in the national interest.

The bill would also authorize the Commissioner of Education, through grants or contracts, to initiate the conduct of research and experimentation in more effective utilization of television, radio, motion pictures, and related media for educational purposes. The House committee felt that such a program of research would hold a great promise of improved methods in education which could, in turn, be utilized by schools and colleges in Indiana and elsewhere in the Nation to great advantage.

Finally—and it represents only a part of this proposed legislation—I come back to the single relevant question which your letter and the study raises with respect to H. R. 13247, the need for scholarship assistance.

Nationally, a number of reliable studies have demonstrated that a substantial number of our most able boys and girls—those who have the potential ability to become scientists, or engineers, or teachers, or other badly needed professionals—do not go on to college. Some drop out even before completing high school. Part of the reason for this loss—a loss of abilities we cannot as a Nation afford—undoubtedly lies in inadequate procedures for identifying able youngsters and for properly motivating them by expert counseling and guidance. Another reason is the lack of financial ability to pursue a college education. Through whatever combination of reasons, most estimates are that about one-half of our high-school graduates in the top 30 percent of their class academically do not go on to college.

But I shall confine my observations to the results of the study conducted in our State which you believe demonstrates that Federal scholarships are not needed to enable Indiana boys and girls to go to college, or to stimulate more of them to prepare for college by taking the "hard" courses—such as trigonometry—in high school. Let us look at the facts.

Your first false assumption with respect to this study is that only those intending to study mathematics or science in college should get scholarships. The scholarship aid in H. R. 13247 would not be so restricted. Our national security needs include mathematicians and scientists and linguists but are much broader. We needed educated men and women in all fields. We need gifted economists, political analysts (and political leaders), historians, teachers in all fields, philosophers, and administrators. But your inquiry was directed only to the need for scholarships on the part of those students who wished to study mathematics or science.

Secondly, among those who were capable of pursuing college work successfully, only those scoring in an extremely high percentile were considered eligible.

Thirdly, if financial assistance was needed at all, it is difficult for me to understand how aid ranging as low as $10 could be of much assistance.

The study, however, did not really answer the pertinent question: How many boys and girls in Indiana who graduate from high school with the ability and desire to successfully pursue a course of higher education are unable to do so because of financial inability?

Fortunately, we do have some reliable information on this question. A study of 60,000 high school juniors and seniors (representing a scientifically selected sample group) sponsored by the highly respected National Science Foundation and conducted by the Educational Testing Service of Princeton, N. J., led to the conclusion that higher education is still losing up to one-half of the top 30 percent or so of the Nation's high school seniors and that each year * * * between 60,000 and 100,000 highly able secondary school graduates with aptitude and interest for college fail to continue their education for financial reasons. In 1957, according to a research brief issued by the research division of your department, 38,165 students graduated from the public high schools of Indiana (and we must keep in mind that the scholarships provided by this bill would also be available for qualified private school graduates). One-third of this group—at least—must have had the ability to do college work. That would mean over 12,700 in the top third of the group which graduated in 1957. If Indiana is typical of the Nation, a good working hypothesis is that one-half of those top-third students—or about 6,350 Indiana boys and girls of exceptional ability—did not go on to college for financial reasons.

Now, granted, a great many of the graduates who were not in the top-third group did go to college. But it is the loss of these most able youngsters which must be of great concern to Indiana and to the Nation.

Let's approach this question of need for Federal scholarship help from another angle—which apparently was not considered. How many able Indiana boys and girls drop out of school before the senior year in high school? How many of these, if they knew (perhaps through improved counseling and guidance which this bill you oppose would help provide) that it would be financially possible for them to go on to college, might finish high school? Your study doesn't attempt to answer such questions. However, your own department of public instruction, in a May 1954 research bulletin entitled "Holding Power of the Schools of Indiana," reveals that for every 100 Indiana boys and girls who started first grade in the years between 1937 and 1941 only 55 finished high school. And among the recommendations your department made to improve this situation was provide better counseling services. Don't you think that another aid might be to provide a greater assurance that an able child who worked hard in school would be able to go to college despite his lack of financial ability?

To conclude, I cannot agree that this limited study shows that Federal help is unnecessary. On the contrary, the facts point the other way. I think that the teachers, the students, and the parents of Indiana need all the help they can get to improve the quality of educational opportunity for Indiana young people. I believe that a careful reading of the bill, H. R. 13247, would reveal the genuine help it would give to schools all over the Nation. Therefore, I am enclosing a copy of the bill, a copy of the committee report which explains what the bill would provide and a copy of the President's letter of July 7 to Representative STUYVESANT WAINWRIGHT in support of H. R. 13247. I hope that when you have had a chance to study these public documents you may change your mind and ask me to support this progressive legislation which is needed by Indiana and the Nation.

In these days of guided missiles, satellites and other advanced weapons of war, the defense of our country is so dependent upon scientific research, and the training of our brainpower to carry on this work, that we cannot afford the luxury of arguing whether the local, county, State or National Government should perform this training function. The defense of America is primarily the duty

of the Federal Government, but in this instance, I believe all the agencies of Government should work together to see that the education and training of America leads that of all the world. Certainly there is no strife in Russia among the various agencies of its government as to which one will carry out this function. America cannot afford to fall behind in this field.

Sincerely yours,

WINFIELD K. DENTON,
Member of Congress.

Address by the Korean Ambassador, Dr. You Chan Yang

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 14, 1958

Mr. BRAY. Mr. Speaker, the Korean Ambassador to the United States, my good friend Dr. You Chan Yang, appeared before the assembled representatives to Girls Nation on the campus of the American University on July 30, 1958.

Girls Nation is an annual mock government sponsored by the American Legion Auxiliary, and is the sequel to the Girls State in the various States.

This outstanding group of young women were moved and inspired by the remarks by Dr. Yang, and I want to insert them in the RECORD:

My young American friends, for the second consecutive year, I consider it a real privilege to be invited to address the Girls Nation. This year, as last year, I am grateful for the opportunity to chat with you charming young ladies for two reasons. First, I have long admired the tremendous good work done by both the American Legion and the American Legion Auxiliary in their Boys State and Girls State programs and their climaxes, the annual nations held here in Washington. I have long been of the belief that the Legion, through these programs, is providing the best practical exercise in American citizenship.

I am delighted to be here, secondly, because I can come to you as a father of a young lady of your own age. I know that my own daughter, Sheila, were she here, would thoroughly enjoy this program.

Beneath the veneer of slang and sophistication attributed to the youth of today, I believe that most American young ladies are gravely concerned about their own future and the future of their Nation, in these awesome, atomic times. The mere fact that you young ladies have gathered here in such a serious venture today illustrates that serious thinking is being done on all levels by the youth of the United States.

No one could have expressed more aptly the tenor of our times than did Charles Dickens, about a hundred years ago, in the opening lines of his great novel, A Tale of Two Cities. With the events in the Middle East reaching a crescendo and as we anticipate within the next 2 weeks the summit conference at the United Nations, the words of Dickens are as applicable today as they were a century ago:

"It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of light, it was the season of darkness, it was the spring of hope, it was the winter of despair, we had everything before us, we had nothing before us, we were all going direct to heaven, we were all going direct the other way—in short, the period was so far like the present period, that some of its noisiest authorities insisted on its being received, for good or for evil, in the superlative degree of comparison only."

These are the worst of times, because it should be obvious to all that the Middle East crisis is a new variation of the proxy war tactics of the Soviet Union. Surely, there can be no doubt about who instigated the revolts in Lebanon and Iraq. About 2 months ago, I prepared a speech, which was delivered at Rockford, Ill., on June 13, in which I said in part: "I believe that it is far less than coincidental that riotings and bombings erupted in Lebanon just at a time when Nasser of Egypt was paying a courtesy call in Moscow." To a number of us here in Washington, the bloody sequence of events in the Middle East was not only clearly predictable but expected. The tragic frustrating part of it was that we could not seem to be able to awaken the free world so as to forestall the grim consequences. In a larger sense, the Middle East crisis has thus many of the earmarks of the Korean problem. It is, as President Eisenhower pointed out in his message to the people of the United States, the pretension of "civil" war. It is the pattern of the Communists seeking to subjugate by the indirect aggression of terrorism, assassination and bluff.

These are the worst of times also because many of us are apprehensive that the overall world pattern of Communist intent might not be clearly perceived. Also, we are concerned because we are apprehensive that the Communists may succeed in their strategy of talk and trickery until they are ready for an armed showdown. We are concerned that the free world's position might again be weakened as it was as a result of the Geneva Conference of 1954. Most important of all, we are gravely afraid that the United Nations itself might be further weakened in its effectiveness, should the Communists succeed in preventing valid expressions of opinions and important votings in that organization.

On the other hand, it is the best of all worlds because the American people awakened in time to the grave danger which confronted them. Also, the tremulous cries of those fearful of direct Soviet intervention in World War III have proved hollow. To the contrary, as President Syngman Rhee has often argued and as events in the Far East have proved again and again, when the Soviet Union is confronted with a show of strength, it backs down and seeks to appear to be reasonable. Think back a moment. In your wildest imagination, did you believe that even a month ago you expected Khrushchev to come to the United States? No. And while it is true that negotiations are still underway as to who will represent the Arab states, have you stopped to think that for the first time the Soviet Union is not insisting upon complete representation at a meeting by all of its phony satellite powers? Also, the crisis has had the effect of bringing the United States and Great Britain closer together in their views on the Middle East. Furthermore, the Security Council itself, including several nations not directly allied with the free world, voted 10 to 1 against the Soviet Union. The Soviet veto of the proposals to strengthen the United Nations force in the Middle East clearly revealed the bloodied Communist hand, and exposed the falseness of the Communist cry that they desire peace.

You know and I know that the Soviet Union and its puppets can have peace any time they want it. We should have learned the lesson, too, that the best chances for peace lie in the concerted actions of the free world to maintain pressure constantly against the Communist world.

One of the most important things we must realize is that if the United Nations does not strengthen its authority, it may easily go the way of the old League of Nations. Let us take a specific case—the United Nations observer group in Lebanon. It was the weakness of the UNOGIL which led to the deteriorated situation in Lebanon and encouraged the events in Iraq. Now, I know that you have been given different reports as to the actual events in Lebanon and you have been given criticism of the American action. But from my own files, I want to reveal certain other things to you.

1. The UNOGIL patrols did not go outside the passable roads.

2. The UNOGIL patrols were confined to the daytime; yet the infiltration of men and securing of arms occurred at night.

3. The UNOGIL included only those areas adjacent to opposition-controlled areas, not Rebel-held territory.

4. The headquarters of the UNOGIL operations were located in a hotel in Beirut, from which nothing could be seen; in Zahleh, 40 kilometers from the border; and Saida, which is a coastal city. Needless to say these centers were absolutely useless.

5. The UNOGIL observers could not enter any opposition-controlled areas unless they first secured a pass directly from the Rebel leader himself.

6. When the observers were asked at the press conference about their attitude, if and when they should find many non-Lebanese among the Rebels, they answered: "We shall not try to verify that because we are not investigators."

It should be obvious that any United Nations Observer Group must have access to all danger areas anywhere in Lebanon, in the Middle East and in the world. It should likewise be obvious that if the United Nations cannot beef up those observation teams with an international police force, then the United States and its allies must be given the international authority to maintain world order.

The reason why, as a Korean, I may seem to intrude myself into the Middle East picture is simply because we have seen this very scenario played over and over again. Between 1945 and 1948, repeatedly, United Nations efforts to enter North Korea for the simple purpose of observation were thwarted. Again and again the Communist world has refused permission for the United Nations supervision of elections in North Korea. Originally, this pattern led to the division of my country and ultimately to the Korean war. Since the armistice agreement in 1953 it has prevented a genuine political settlement of the Korean question.

An almost identical pattern occurred in Indochina. The same tragic design exists in Germany. We would be foolish, indeed, if we closed our eyes to the obvious pattern in the Middle East.

I am concerned about these times of crisis; also because I am afraid that our preoccupation with the well-publicized events and our concentration on the summit meeting may prevent us from noting events of equally great significance that are and shall be taking place in the Far East.

For example, in one southeast Asian country a rebellion against Communist infiltration in the central government is being ruthlessly suppressed with the aid of actual military weapons and material provided by the Soviet Union. In the same area, the tiny country of Laos is now in critical danger of being subverted by the Red tide of aggression. In my own country, we have seen a rash of outright acts of piracy in the air. The Communists in North Korea have increased their pressures tenfold during the past year hoping to break the economic and political back of my government. This they have attempted to do by stepping up their slanderous attacks upon my President and our Government and by seeking to isolate us economically through the conclusion of

UNIVERSITY OF MICHIGAN LIBRARIES

trade agreement with our nearest neighbor, Japan.

However, they have been unsuccessful. The recent election in the early part of May indicated that democracy is growing at a greater rate than ever before. We now have a flourishing two-party system. The incumbent Liberal Party won a majority of the votes in an election noted for its peaceful atmosphere and good self-regulation. Communist efforts to disrupt that election were completely thrwarted.

On August 15, our government will be celebrating its 10th anniversary. This celebration will mark the first decade of the existence of the Republic of Korea. This is a good time for a summing up of our accomplishments and a preview of our hopes for the future.

When President Syngman Rhee was installed as the first President of our country on August 15, 1948, in Seoul, he was faced with the enormous task of trying to create a functioning government in a half of a country which had been liberated just 3 short years before from Japanese occupation and which was politically inexperienced and economically deficient.

What has he accomplished?

As I pointed out before, he worked for and is now achieving a genuine two-party democratic political system. I am amused by the Communist charge that our President is a dictator. If he is, he is the only one in the history of the world who has as his vice president the outspoken leader of the opposition party.

We have accomplished a number of notable political reforms, such as direct voting privileges for both men and women, the establishment of provincial councils, the encouragement of political participation by our women, and a gradual expansion of sound foreign relationship with our friends abroad.

In the economic field, although severed in two by artificial division, the Republic of Korea has achieved stability and is reaching more closely toward the goal of complete economic independence. Thanks to the wonderful aid provided principally by the United States and the United Nations, we have rehabilitated our textile industries, restored our rice production to better than prewar levels, and have laid the foundation for a vast industrial complex that shall fulfill our hydroelectric power and fertilizer needs. We have constructed a new flat glass plant at Inchon, rehabilitated the cotton and woolen textile mills in Seoul, Taegu, and Pusan, and have put our coal and tungsten mines on a well-paying, productive basis.

In the field of social welfare, we have constructed dozens of hospitals and clinics, instituted programs for physicians and nurses, and have made my countrymen the most literate nation in Asia.

Several months ago, when I was home for consultation, I had an opportunity to go about the country and see for myself the remarkable signs of progress. Gradually the scars of Communist aggression are being erased. Smoke is coming from factory chimneys. New housing developments are going up. My countrymen appear to be better clothed and better fed than ever before in my memory. During this past quarter, for the first time in a decade, the wholesale price indexes, instead of rising, actually declined. The money rates have remained stable now for the past 6 months, indicating that the dangerous problem of inflation is well on its way toward solution. If we can count upon continued American aid for the next year or two, and if the people in Washington will grant some of our specific requests for moneys for important new productive facilities, I feel sure that the time will come soon when Korea will no longer be a burden upon the American taxpayer. I hope that you will help us plead our case.

It has been said that the first year of marriage is always the hardest and the first 10 years of any new country are also the hardest. We have had more than our share of troubles, but I think the way in which we have solved our problems indicates the inherent stability of my country and the dedication of my people.

It was the great British historian, Toynbee, who has argued that the annuals of history are largely written by a people being challenged; if they do not respond to the challenge they are obliterated, but if they do respond to the challenge they become a great nation. Our past dedication has been one of challenge and response.

Every day we constantly face new challenges. The greatest challenge right now is the possibility that our corner of the world, and particularly our country, will gradually slip back into the dimmer memories of our American friends. I want you to recognize along with us that there is a "clear and present danger" on the Korean peninsula. First, there is a dangerous military imbalance created by the Chinese Communists by bringing in planes, rebuilding airstrips, and replenishing men and supplies. As far as we are concerned, the Communists have so persistently and consistently violated the terms of the truce agreement that it does not in fact any longer exist.

The real danger in Korea is that the great American people, with all of their humaneness and easygoing way of life, may forget the horror that took place in Korea. It is well to remind ourselves from time to time of the bitter flavor of the free world's defensive crusade in Korea.

If you young women of America really want it, this can be the age of wisdom, the epoch of belief, the season of light, and the spring of hope. To paraphrase Dickens, we do, indeed, have everything before us, providing we see the world facts as they really are, remain resolute, and harden ourselves against the Communist barrage of lies.

It would be my hope that when you return to your respective States, you take every opportunity to tell your young associates how critical are these times and how necessary it is for Americans everywhere to be concerned with world affairs. I hope you will tell them something of the Korean cause. I hope you will tell them something of the growing desire of all the free peoples of the world for peace and security, a strengthened United Nations, and a turning back of the Red tide of aggression.

While I am a doctor, I hope your final impression of me is not that of the Witch Doctor. I have tried to be simply a reporter, tell you not A Tale of Two Cities, but a tale of two worlds. Make no mistake about it: Should our world, the free world, be destroyed by the Communist world, there would never again be a Girls Nation; the liberty to enjoy whatever fads and strange music would die; and, indeed, life as we enjoy it now would no longer be possible. I have great faith in the youth of America, because of their energy, their enthusiasm, and their wonderful articulateness. I hope that you will accept the challenge to join in the leadership to preserve the free world.

I thank you.

Conditions in Poland

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, July 31, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of articles which have appeared during the past days in the New York Times.

The events in Poland have caused the greatest concern to all friends of the Polish people and to men of all faiths. The situation in Poland is most precarious, and I insert these articles in the interest of clarifying the picture.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of July 29, 1958]

POLES KEEP CURB ON FARMS' SALES—REGIME DEFERS THE ABOLITION OF COMPULSORY DELIVERIES OF GRAIN AND POTATOES

(By A. M. Rosenthal)

WARSAW, July 28.—Poland's peasants were told by the Government today that they would have to continue compulsory deliveries of grain and potatoes to the state.

The decision to make deliveries compulsory for this year's harvest was taken by the Council of Ministers. It is important politically as well as economically.

After the political upheaval of 1956, when Wladyslaw Gomulka returned to power as first secretary of the Communist Party, the Government took several agricultural measures to win the confidence of the peasants. These included free sale of land, lower taxation, the breaking up of most of the collective farms and reduction of compulsory deliveries of grain at fixed prices.

The peasants also won the promise that compulsory deliveries at state prices—which are sometimes less than half of what the product would bring on the free market—would be terminated. Since 1956, compulsory delivery of milk has been abolished, compulsory deliveries of wheat have been cut by one-third and the state price of wheat has been raised.

REMINDER BY PEASANTS

But peasant leaders have urged the Government not to forget its promise to abolish compulsory deliveries. They said that the confidence of the farmers depended on keeping that promise.

The fact that the peasants have achieved a measure of economic confidence can be seen almost everywhere in the Polish countryside. The peasants are putting more of their money into farms, as new brick buildings, new barns, and new equipment show.

Today's announcement gave new price concessions to the farmers but made it clear that the Government felt it could not now afford to abolish the compulsory deliveries.

The Government explained its decision by pointing to Poland's poor balance sheet for grain. Last year the country had to import about 1,200,000 tons of grains. This year's floods will probably increase the food import bill and make Poland more dependent in shipments from the Soviet Union.

STATE PRICE OF RYE RAISED

The Government decision calls for compulsory delivery of 1,040,000 tons of grain, about the same amount as last year. But the Government has decided to raise the state price of rye by 25 percent, 150 zlotys for 200 pounds, or about $6 at the official exchange rate. This increase is not likely to be welcomed wildly by the peasants, who can get almost twice as much for the rye they are allowed to sell on the free market.

The Government took other steps to sweeten its decision. Local councils in the mountain regions will be allowed to exempt farmers from compulsory deliveries of grain and potatoes to encourage them to step up stock breeding. Peasants hard hit by the floods also will get special relief. All told, these concessions will amount to 60,000 tons.

The price of potatoes was raised, too, and Trybuna Ludu, the Communist Party paper, made it clear that the promise of abolition

of compulsory deliveries had not been permanently shelved. The newspaper said the changes were part of the transition from compulsory deliveries to a system of market purchasing.

CATHOLICS ASSAIL POLISH REGIME FOR POLICE INVASION OF SHRINE

WARSAW, July 28.—Official Roman Catholic sources accused the Polish Government today of having broken the law, violated the rights of citizens, and shocked the religious feelings of the nation.

These charges, which brought church-state relations in Poland to the lowest point in 2 years, grew out of the invasion of the ancient monastery of Jasna Gora on July 21 by the Polish police.

No reports of the search of the offices of a religious organization at the monastery have been carried so far by the Polish press. But the story of the incident at the pilgrimage city of Czestochowa is now known to all residents of that city and is beginning to circulate in Warsaw.

Yesterday, Stefan Cardinal Wyszynski, Primate of Poland, attended a special mass at Czestochowa at which a letter from the bishop of the city protesting the search as an insult to the shrine was read from the pulpit.

LEGAL ANALYSIS PREPARED

Today, church sources close to the cardinal prepared a detailed account of the incident and a legal analysis.

The importance of the controversy goes far beyond any legal issues. Jasna Gora, the Mountain of Light, is the holiest shrine in Poland. It has deep emotional and national connotations to most Poles as well as a religious place in the history of the nation. The decision of the Government to search the offices on the monastery grounds was a grave one and a reflection of the belief of important Communists that the political powers of the church was growing.

GATE FORCED BY MILITIA

According to the version of the story given by church sources here, the first search party ransacked the offices of the religious institute directed by the cardinal, buffeted priests and officeworkers, and cut telephone lines. Pilgrims on the grounds, according to this account, protested the action.

At 9 p. m., 6 hours after the search began, priests locked the gate for the evening. The police searchers then used a shortwave radio to call for help.

About 200 helmeted militiamen, armed with truncheons, arrived in trucks, crashed through the gate, and attacked the crowd, according to this account, "beating up everybody without regard for women, children, or priests."

The sources said the state prosecutors had asserted they were looking for mimeographed material printed without having been passed by the censorship. The legal position taken by the church is that as a social organization it is exempt from censorship in certain cases.

"The prosecution itself, in a drastic way, violated legal order and essential citizens' rights," said the statement by the church sources. "This action must shock the whole nation, which has been hurt in its most delicate religious feelings."

[From the New York Times of July 30, 1958]

RIFT WITH CHURCH WIDENS IN POLAND—GOVERNMENT AND COMMUNIST PARTY ACCUSE CATHOLICS OF ANTISTATE MOVES

(By A. M. Rosenthal)

WARSAW, July 29.—The Polish Government and the Communist Party publicly recognized today the rapidly deepening rift between the state and the Roman Catholic Church. Two major political attacks were directed against church authorities.

The office of the prosecutor general accused church officials of issuing publications with an antistate context directed against the existing regime.

The prosecutor also charged that certain circles, apparently church circles, had put out false information about the police search of the monastery of Jasna Gora July 21 and warned that criminal proceedings would be started.

In the second political move, the official theoretical monthly of the Communist Party printed a long and sharp article accusing the church of carrying on a nationwide political campaign aimed at establishing the influence of the church over the Government in the interests of reactionary social forces.

RELATIONS GROW WORSE

These two moves brought into the open the fact that relations between the church and the state, which both sides insist are vital for the stability of the nation, have taken a sharp, serious turn for the worse.

The publication in Monday's edition of the New York Times of a story of the incident at Jasna Gora, Poland's holiest shrine, prompted today's statement by the prosecutor giving the Government's account of the episode. But the search of the offices of a religious organization on the grounds of the sanctuary was a symptom of the deteriorating church-state relations rather than its direct cause.

This deterioration has been deeply disturbing church and state officials for weeks. At the moment nobody knows how far and deeply it will go. There is no mood of optimism in Warsaw at the moment. But on both sides there are leaders who feel it would be a disaster for the nation if the church-state agreement worked out in 1957 was wrecked.

Both sides have major complaints.

COMPLAINTS OF COMMUNISTS

The Polish Communist Party believes the church thinks the moment has come when its own strength and the trouble within the Communist world makes a church political offensive possible. The party says the church has received rights in Poland not given to it in nations of the West but is abusing them for political aims.

Party leaders say pilgrimages organized by the church are political rallies in disguise, that the church is violating state laws and that it is spreading intolerance of other faiths and encouraging attacks against nonbelievers.

The Roman Catholic Church says the government is interfering with church rights, particularly religious education, the distribution of charitable gifts from abroad and the organizing of pilgrimages and religious rededication.

Jasna Gora and Szestochowa, the city in which it stands, are the symbols of Polish Roman Catholicism and to the church the search on the monastery grounds is proof that the state has decided to use its heavy weapons.

The statement of the prosecutor's office issued today said the search at the religious institute under the direction of Stefan Cardinal Wyszynski on the monastery grounds was conducted because illegal publishing was carried out on the premises. The statement said laws requiring approval by censorship and registration of implements of publication, presumably mimeograph machines, had been violated.

The statement went to say that a previous warning had been ignored and that the search July 21 had uncovered many publications with an antistate context. The prosecutor said the church had used the monastery as a cover for its illegal activities of publication.

According to the government version 10 to 20 policemen were called in to put down resistance in the monastery. Church sources in Czectochowa said there were 40 policemen. Church sources in Warsaw said there were 200 policemen.

The prosecutor took note of comments made here yesterday by church sources. His statement said the information spread by these certain circles were lies and criminal action would be taken.

STATEMENT MAY BE PUBLISHED

The prosecutor's statement is expected to be printed in tomorrow's newspaper. This will be the first word Polish papers will have carried about the Gasna Gora incident.

However, party members have before them now an even sharper criticism, issued by Nowe Drogy, official monthly publication of the Polish United Workers (Communist) Party. The article, written by Josef Siemek, deputy director of the press bureau of the Communist Party, carried an attack against Bishop Zdzislaw Golinski of Czestochowa. It accused him of having made a speech to lawyers on a pilgrimage that could be interpreted only as instruction to treat leniently persons who had committed economic crimes.

"Will it not be justified if state authorities will not see the possibility of keeping in court service members of these pilgrimages and especially organizers to whom such instructions are given?" asked the article.

The article said church policy in Poland had become a political action and that the "Polish way" was being opposed "by the Vatican way, a way dictated by the raison d'etat of the International anti-Communist crusade of balancing on the brink of war."

[From the New York Times of July 31, 1958]

POLES ASK CHURCH TO MEET ON RIFT—HIGH OFFICIALS SET PARLEY TODAY ON THE GROWING CRISIS IN RELATIONS

(By A. M. Rosenthal)

WARSAW, July 30.—The Polish Government has called high authorities of the Roman Catholic Church to a special conference here tomorrow on the critically sharp relations between the church and the Communist regime.

The decision to call the meeting was accepted today by political circles here as a plain indication as to just how seriously the Government and the Communist Party took the disputes between the church and the state.

These disputes, a matter of whispers, a few weeks ago, were dramatized recently by government search of Catholic offices in an ancient monastery. Now the disputes are being related in detail in the party press.

Still not a matter for public discussion is the role of the Soviet Union in the current crisis.

Some Catholic laymen believe the state has adopted a tougher policy in response to Soviet pressures or at least to Soviet displeasure about the freedoms given to the church in Poland.

SOVIET SUSPICION NOTED

There are Communists in Warsaw who also stress the role of the Soviet Union, but from a different viewpoint. They say that Moscow has always looked with suspicion at Warsaw's policy of friendly coexistence with the church. They say church leaders have gone in heavily for politics in the last few months, that this builds up Moscow's case against Poland's church policy and forces the state to counterattack before Soviet pressure gets too heavy.

In any case, the Government indicated today that while it still hoped to narrow the gap between church and state it was prepared to fight against church illegalities and political influence.

The psychological atmosphere for tomorrow's conference—at which two bishops will

UNIVERSITY OF MICHIGAN LIBRARIES

sit down with two high Government officials—was indicated today by Jerzy Sztachelski, a calmly spoken, gray-haired man who is Minister of State for Religious Affairs.

M. Sztachelski, in a talk with foreign correspondents, said the Government's attitude toward church-state relations had not changed. He said that freedom of religion would be enjoyed by all Poles, that there would be no interference in the internal affairs of the church and that the principle of friendly coexistence between church and state would be maintained.

But M. Sztachelski also emphasized the state's sharp charges against the church. He said that ever since Stefan Cardinal Wyszynski, Primate of Poland, returned from a visit to Rome last year he had stopped saying positive things and the church was now emphasizing the differences with the state.

The minister said there was an "aggressive tendency" on the part of the church to impose a religious character on education, intimidate nonbelievers through pressures, and arouse the Polish youth.

Under a church-state agreement of December 1956, the state agreed to set aside schooltime for religious education. The state says the church now is trying to use this right as a method of getting control of the schools. The church says the state refuses to accept certain priests, monks, and nuns as teachers.

MONASTERY RAID RELATED

ROME, July 30.—Concern over renewed church-state tension in Poland was voiced in the Vatican today.

The police raid on the shrine of Jasna Gora at Czetochowa July 21 was termed here the most flagrant but by no means the sole violation of a truce that has existed between the church and the state since 1956.

It is seen as significant that the target of the most serious incident in church-state relations in the last 2 years was the office of the primate, which is the center of propagation of church doctrine. This institution was set up in the Jasna Gora monastery in May 1957, under the auspices of Cardinal Wyszynski.

The purpose of the office was to make public the teaching of the primate and of other members of the hierarchy and to issue instructions of a "strictly catechistic nature," it is said in the Vatican. The contention here is that Polish laws expressly exempted from censorship church publications such as those issued by the office of the primate.

Last May 13 the police attempted to search the office, Vatican sources say. Polish church protests elicited assurances on July 17 that similar incidents would not occur again.

Four days later the monastery was raided again. According to unofficial reports, 200 policemen participated in the raid. They used a truck to force open the gate of the Jasna Gora monastery, which houses Poland's national shrine and the office of the primate. Although without a search warrant, the policemen ransacked offices, seized equipment and documents, and detained several persons, these reports say. It is not known whether churchmen were among the detained.

Brig. Gen. Joseph W. Beacham

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. REED. Mr. Speaker, on yesterday, July 29, 1958, at the age of 84, there passed away at Walter Reed Hospital in Washington, D. C., one of my dearest friends. I refer to Brig. Gen. Joseph W. Beacham, my first football captain. Those of my colleagues who have played the game know how deep the devotion is between those who have battled on the gridiron together for the honor, prestige, and glory of their alma mater. As a mark of my deep affection and esteem for my lifelong friend, I want others to know the record of this great patriot and leader of men. Many are the men whose character has been shaped and enriched, ennobled and inspired by the influence of Joe Beacham. There are generations of Cornell University men who will mourn the passing of a man who throughout his long and useful life has been their ideal athlete, soldier, officer, and friend. As a part of my remarks I insert an article which appeared in the Washington Star of July 30, 1958, the day following the death of my beloved and lifelong friend:

GENERAL BEACHAM, EISENHOWER'S WEST POINT FOOTBALL COACH

Brig. Gen. Joseph W. Beacham, an Army officer for 40 years and President Eisenhower's football coach at West Point, died Monday in Walter Reed Hospital. He was 84.

Recalling the football days of the Cadet Eisenhower, General Beacham once said: "He had a lot of promise. He needed a little seasoning, but he would have been All-American if he hadn't hurt his knee."

The two men met for the first time since West Point days in 1953 when President and Mrs. Eisenhower entertained sick and disabled veterans and service personnel at the White House. The President's most enthusiastic greeting was for the retired general. "Oh, brother, are you as tough as you used to be?" he asked.

WON SCHOLARSHIP

General Beacham was born in Brooklyn, N. Y., and attended public schools there. An energetic student, he won a competitive scholarship to Cornell University in 1893. He majored in law but took more than an average interest in athletics.

He gained a place among Cornell football greats when he was picked second string All-American end in 1895 and 1896. After his graduation he remained at Cornell to coach the team the following season.

He began his military career in 1898 as an Army private and rose to the rank of first sergeant under Gen. Peyton March during the Spanish-American War. During the battle of Manila, he was recommended for commission for gallantry in action.

The general was head coach at the Academy in 1911. He returned to line duty in 1912 and was sent to France at the outbreak of World War I. He was assigned to General Pershing's staff and formed a close friendship with Gen. Douglas MacArthur, with whom he was quartered. During the war he earned the Distinguished Service Medal, the Silver Star, the French Croix de Guerre with Palm, the order L'Etoile Noitre, and the Greek Order of Redeemer.

RETIRED IN 1938

The general retired in 1938 and moved to the Army-Navy Club here in 1948, shortly after the death of his wife, the former Bernadette M. Herman.

His eyesight continued to fail and eventually he was confined to his room at the Army-Navy Club.

Funeral arrangements are being handled by Chambers Funeral Home at 1400 Chapin Street NW. Services will be held at 11 a. m. tomorrow in Fort Myer Chapel with burial in Arlington Cemetery.

The Kennedy-Ives Bill

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. DOOLEY. Mr. Speaker, following is an analysis of the Kennedy-Ives bill by competent legal minds which have been consulted by Mr. Edward J. Hughes, vice president of the Westchester County Publishers, Inc., White Plains, N. Y.

The far-reaching effects of the Kennedy-Ives bill, if it were passed, are almost frightening to contemplate and it is a mystery to the Representative from New York and to many of his constituents how the Senate could have condoned such a measure.

Here is a summary of the objections to particular provisions of the Kennedy-Ives measure as carefully analyzed.

First. By revising the definition of "supervisor" as now spelled out in the Taft-Hartley bill, the new measure will permit unions to grab off many confidential management workers—people like the confidential secretaries of executives, draftsmen engaged in creative work on highly competitive projects, and so forth. This will be done by the seemingly innocent requirement that a supervisor be only a person who actually and directly controls the activities of other persons.

Second. The Kennedy-Ives bill not only fails to prohibit evil organizational or recognition picketing but, by legal implication, gives such picketing a statutory blessing it does not now have under Taft-Hartley. In other words, it would make vicious picketing even more vicious.

Third. The bill would remove from Taft-Hartley the section which prohibits strikers from voting in a representation election. This will throw the doors wide open to strike-happy unions, which will be able to recklessly call men out without risking loss of representation. This long has been one of the most-sought-after union weapons—now seemingly to be handed to the unions on a congressional silver platter.

Fourth. Under the pious guise of outlawing bribery by an employer, weasel language in the bill sets an employer up for criminal prosecution if, for example, he exercises his Taft-Hartley law right to make a speech urging his employees to vote against a union. The Kennedy-Ives bill would cunningly make it a crime for an employer to pay or lend anything of value to his employees to get them to adopt his views, so, unless he docked his workers for the time spent listening to his speech, he could be criminally prosecuted for attempting to bribe them.

Fifth. One of the cutest bear traps in the Kennedy-Ives bill is section 103, which requires, with seeming propriety, that an employer who spends more than $5,000 in a fiscal year for activities intended to influence or affect employees in the exercise of rights must file a detailed report of such expenditures with the Secretary of Labor. If the employer

fails, even innocently, to file such a report, he may be fined $10,000 or be sent to jail for a year. On the other hand, if he does file such a report, and the Labor Department decides some of the things he reported were wrong, he may be criminally prosecuted, with his report standing against him as a confession. Thus he would, as a practical matter, be forced to testify against himself—in violation of one of his fundamental constitutional rights.

Under this same section of the bill, an employer who assigns an executive to time-consuming but legal efforts to convince a group of workers they should not join a particular union could be prosecuted if he failed to report the nature of those efforts and the amount of the executive's salary, and, if he did report, could still be criminally prosecuted if the executive's procedures were regarded as wrong by the Secretary of Labor.

Still under this section 103, the words "influence or affect" may be so broadly interpreted as to compel even an attorney, if engaged as a labor consultant, to report everything he said and did in a labor-relations campaign, disclose all fees received by him and all disbursements made by him, even though such disclosures by attorneys are expressly forbidden by numerous State laws.

Legal experts say there are numerous other camouflaged booby traps in the Kennedy-Ives bill, which is, it would seem obvious, why its proponents rushed it through the Senate and now seek to railroad it through the House.

Thus, apparently, the "boss" is in for a new shellacking at the hands of the labor lobby in Washington. Professional labor leaders are willing to take some regulation of their spending, lending, and other heretofore uncontrolled practices, as a cheap price to pay for a nice, shiny, new set of clubs to be whacked against the skulls of even law-abiding employers.

A National Debt to a Modest Man

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Courier-Journal of July 28, 1958:

A NATIONAL DEBT TO A MODEST MAN

As Robert P. Clark noted in his Washington column in the Courier Journal the other day, Representative RICHARD B. WIGGLESWORTH's decision to retire from Congress is of interest in Louisville on account of ties of family and friendship here. More than this, it is a matter of serious loss to the House of Representatives and thus to the whole Nation.

Already well experienced in important public affairs, Mr. WIGGLESWORTH was elected to the House 30 years ago from a Massachusetts district and has served continuously ever since. During that whole period he has never sought a headline or any kind of personal preferment. Undoubtedly he has performed the parochial duties which constituents expect of a Congressman. Yet also as a member of the House Appropriations Committee he has been for many years an effective participant in the conduct of the entire country's business, both in peace and war.

This has required hard-working diligence, even drudgery. But no mere drudge ever had as much wisdom, spirit and humor as have marked Mr. WIGGLESWORTH's character and career. We are glad that the voters of his Massachusetts district have so long and so consistently recognized his worth and would very likely continue to do so as long as he chose to ask for their suffrage. Yet it is a pity that he is less well known to the country at large than some of the noisy windbags we have to read about in the Washington dispatches every day.

He is a conservative Republican whose politics have seldom agreed with this newspaper's but by their honesty and courage have always compelled our respect.

Washington Post Slurs

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. JOHANSEN. Mr. Speaker, the distinguished and able columnist, Mr. David Lawrence, commenting yesterday on the tactics of Khrushchev and his efforts to divide the allies, had this to say:

"The whole plot is so palpable that one wonders why politicians or left-wing editorial writers lend themselves to anything that strengthens the Khrushchev hand at the expense of their own government."

In that connection, I note that on last Tuesday, the Washington poison pot, the Washington Post, spewed its editorial venom with a fine impartiality as between the quick and the dead.

Because the President of the United States has not enthusiastically welcomed Mr. Khrushchev's acceptance of his self-extended invitation to New York City, the Washington Post insultingly referred to the surly tone of President Eisenhower's last note.

And in its grudging editorial acknowledgment of the valor and military skill of the lamented Lt. Gen. Claire Chennault, the Washington Post could not forebear a slurring reference to what it called Chennault's unrealistic, stormy championship of reconquest of the mainland of China, and to the outmoded clique on Formosa.

Having contributed so much in the past to the public and official acceptance of the false premises which helped lose China to the free world, and now so assiduously supporting the line of coexistence and so-called flexibility in dealings with Moscow, I presume the Washington Post will hereafter judge equally unrealistic any subsequent American efforts to regain past, present, and future losses to international communism.

Erwin C. Uihlein on the Importance of People

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 23, 1958

Mr. REUSS. Mr. Speaker, I am indebted to James W. Martin, of Milwaukee, for calling my attention to the inspiring address by Erwin C. Uihlein, president of the Joseph Schlitz Brewing Co., of Milwaukee, Wis., at the 1958 sales convention of representatives of the Joseph Schlitz Brewing Co. from the 48 States. Mr. Uihlein's remarks illustrate the family spirit which pervades this great organization, now in its 108th year. I commend to the attention of Members on both sides of the aisle the following address by Mr. Uihlein:

It is always a pleasure to see you and to realize what a fine body of people we have representing us in the field. This is very gratifying for no company is better than the men who represent it in the local communities of the Nation. Ours is no exception.

I understand that in the main you have had a good meeting, and I hope that you will all return to your respective areas better informed and oriented as to what we have in mind for 1958.

As our company becomes bigger and bigger, it becomes increasingly more difficult to continue to think of ourselves as just one big family. Unfortunately, that is one of the penalties that leadership has to pay in any industry. Nonetheless, we still manage to maintain that family feeling, and I, for one, hope it is a virtue that our organization will never lose.

While we are proud of our sales record, proud of the progress we have made in Milwaukee, proud of our plants in Brooklyn, Van Nuys, and Kansas City, and the great new Schlitz brewery now under construction in Tampa, Fla., such occasions as the present one should remind us all that in the last analysis it is the people, rather than things, that make an institution great.

We, the people, so to speak, are more important than tools and buildings, for however fine in the beginning, mechanical or material things wear out, and it is always the people—the thinkers and doers, and those who love their work, no matter how humble—who are capable of carrying the torch and passing it on to new generations and new workers who will arrive to take our place.

We, the people, are the spiritual essence of this company, whatever may be its ultimate destiny, or however big it may become.

We have countless treasures in our national history which I could recall to you today, but I should like to quote the remarks of just one man, Abraham Lincoln. He was a giant of a man, physically, spiritually, intellectually. I wonder what might have been the history of our country if providence had not supplied us this leader in its grave hour of decision. He was American to the core, a product of its environments, of its fields, and plains, and forests. He was intensely loyal to our Na-

UNIVERSITY OF MICHIGAN LIBRARIES

tion, yet his philosophy transcends national boundaries and because of this he is today revered in many parts of the world.

Abraham Lincoln said: "You cannot bring prosperity by discouraging thrift. You cannot strengthen the weak by weakening the strong. You cannot help the wage earner by pulling down the wage payer. You cannot further the brotherhood of man by encouraging class hatred. You cannot help the poor by destroying the rich. You cannot establish sound security on borrowed money. You cannot keep out of trouble by spending more than you earn. You cannot build character and courage by taking away man's initiative and independence. You cannot help men permanently by doing for them what they could and should do for themselves."

Here, in nine short sentences, is a whole philosophy to guide a perplexed and confused humanity, as individuals in our daily affairs, in our relations with our fellow employees, with our community and in our national and international life.

This has always been our philosophy—ever since the company was founded in 1849. From the small beginning that year when Schlitz sales were a meager 150 barrels, it has been our aim to make a product that Americans wanted, and to build an institution which would merit the respect of our fellow citizens. This has been our single-minded purpose. Hard work, initiative, imagination, and, above all, the voluntary cooperation of every employee have built a world-famous product and an equally famous and respected institution. Today, 108 years later, I have the pleasure of congratulating you on another year of outstanding achievement.

Not only do you deserve to be congratulated for this accomplishment, but I also want to thank you. This could not have been achieved without the wholehearted support of everyone in this room, our plants in Milwaukee, Brooklyn, Van Nuys, and Kansas City, and our wholesalers and salesmen. You have my assurance that the entire organization will do its utmost to stand by and support you in every phase of our work in 1958 so that together we may carry this great company's sales to still greater heights.

What of 1958 and the years ahead? You know of our plans for the new Florida plant. These are physical plans.

If to these plans we add the counsel of Abraham Lincoln, we can face the future with faith and confidence.

The Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. BROOMFIELD. Mr. Speaker, we in the Middle West near the Great Lakes are all familiar with an object called the sea lamprey. It has depleted our once-abundant fishing grounds. It has thrown many of our fishermen out of work. It has cut sizably into the economy of our State.

The sea lamprey's method of attack is quite simple. It attaches itself to the side of a fish and hooks a free ride. It lives off the blood of the fish until it finally drains it dry, killing the fish.

We are faced with a similar problem in our consideration of S. 1869, which has been reported out of the House Public Works Committee. We are talking about the Tennessee Valley Authority and its relationship to the Federal Government. This bill would give the TVA the power to attach itself firmly to the Federal Treasury, draining it in gigantic gulps. We would give this agency the power to ride and grow alongside the Federal Government, but not as a part of the Federal Government. It would bear no direct responsibility to either Congress or the executive branch, nor would it be an integral part of the Federal structure.

The poor fish, of course, would be the Federal Government and the people who pay the taxes. We would be enlarging to tremendous proportions a parasite with the function of draining off Federal funds and growing in any direction it chooses.

We in the vicinity of the Great Lakes have taken a number of steps—with Federal help, by the way—to kill off these parasites. We have used electric fences and poisons to destroy them in their spawning grounds.

The spawning ground for the Tennessee Valley Authority is right here in Congress. We have the power of life and death over the Authority. Now I am not proposing that we kill the TVA, but I do propose that we shock it a little. Let us not give this parasite agency of the Federal Government the power to grow into something which can be dangerous. Let us keep it firmly in check and make it answer to Congress, its spawning ground, if it oversteps its borders or infringes upon the rights of our American taxpayers.

Let us always remember that the Tennessee Valley Authority is a parasite. It lives off the Federal Government. It feeds on the pocketbooks of our taxpayers, both directly and indirectly.

Let us defeat S. 1869 and keep this Government-created parasite in check.

Retirement of Joseph Warren Severy From Montana State University

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. METCALF. Mr. Speaker, last month a group of his former students gathered at a dinner in Missoula, Mont., to honor Dr. Joseph W. Severy on his retirement from the faculty of Montana State University.

Dr. Severy is a botanist but he ranged far into the related fields of wildlife and resource management to make a solid contribution to conservation throughout the Nation.

He helped organize a statewide conservation committee and develop a course syllabus, now widely used. His pioneer work in developing a wildlife forum course for sportsmen, stockmen, and other lay citizens has resulted in a program now available to widely scattered sportsmen groups in various parts of the State. He assumed an active interest in the organization of the Montana Conservation Council. He served as a member of the Montana Fish and Game Commission for 8 years, 3 of them as chairman. In 1952, he received the award of merit from the National Association of Conservation Education. In 1953, he received the Nash conservation award for meritorous service in the field of conservation education.

It is noteworthy that many of Dr. Severy's former students occupy responsible positions as natural resources administrators with Federal, State, and private agencies and organizations. I am sure these men, and the cause of conservation, will benefit everlastingly from the understanding and appreciation of adequate natural resources management programs given them by Dr. Severy.

Here is a resolution, adopted by the Montana State Board of Education paying tribute to Dr. Severy:

RESOLUTION PASSED BY THE STATE BOARD OF EDUCATION, APRIL 14, 1958, ON RETIREMENT OF JOSEPH WARREN SEVERY FROM MONTANA STATE UNIVERSITY

Resolved, That upon the retirement of Joseph Warren Severy from Montana State University, the State board of education joins the students, faculty and a grateful citizenry, in expressing appreciation of the years of service he has given the State. "An inspiring and convincing teacher and speaker he is equally at home in the academic atmosphere of the campus or in the forest and field amongst foresters, ranchers and sportsmen."

Very early in his career as a teacher and a citizen of Montana, his infectious interest in his chosen field, Botany, and related fields of wildlife and resource management, became felt throughout the State and the Northwest. Among his contributions, in the field of plant ecology and conservation, was his active support in organizing a statewide conservation committee and developing a course syllabus, now widely used. His pioneer work in developing a wildlife forum course for sportsmen, stockmen and other lay citizens has resulted in a program now available to widely scattered sportsmen groups in various parts of the State. He was instrumental in developing the course in Wildlife Technology. He assumed an active interest in the organization of the Montana Conservation Council, and has served as director and council member almost continuously since its inception. His interest in basic scientific research is evidenced by his active leadership and participation in the Northwest Science Association, serving as its president from 1942–45. His ability to translate scientific principles into practice is exemplified by the important position he occupied for 8 years as a member of the Montana Fish and Game Commission, 3 years of which he served as chairman.

His services have been constantly sought by civic, educational, and other lay organizations, and since 1950 he has occupied the chairmanship of the Missoula Labor-Management Board. For several years he has served on the Lolo National Forest Advisory Council. He received the award of merit from the National Association of Conservation Education in 1952. In 1953, he received the Nash conservation award for meritorious service in the field of conservation education. Recently he was elected honorary president of the Montana Wildlife Federation.

That the community and State demands on his time did not diminish his responsibilities to or his activities at the univer-

sity, is demonstrated by more than a quarter of a century service as chairman of the department of botany. He has served as vice president of the university, and has been a member of practically all the important appointed and elected faculty committees. He has been an inspiring teacher, sympathetic counselor, enthusiastic worker for his university, and above all, a citizen dedicated to his community and State. Montana is infinitely richer for having claimed him as one of her own.

Conflicting Comment of Capital Columnists

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. DAGUE. Mr. Speaker, it is generally recognized that American columnists mold public opinion to an extent not warranted by their access to factual data. Each day we are treated to what amounts to one man's opinion, dished up in a style which would seem to compel us to accept it as the last word. However, these men are fallible; and, from all of this welter of words that pour out of editorial offices and the National Press Building, just what is one to accept as authoritative?

For example, in yesterday's Evening Star an editorial entitled "Shaken Alliance" throws some cold water on Secretary Dulles' efforts to strengthen the Baghdad Pact. In the same paper, on the other hand, the brilliant Constantine Brown titles his column "New Life in the Baghdad Pact" and on that subject has this to say:

Mr. Dulles' commitment, with the full approval of President Eisenhower, that we will resist to the limit of our power any "direct or indirect" aggression against our Baghdad Pact allies was manna from heaven to all of them. It indicated that Washington had not really "caved in" before Mr. Khrushchev and his associates and that we intended to support these three free nations with everything we have.

In the same issue of the Evening Star and on the same general subject of our involvement in the Middle East, William S. White appropriately emphasizes a crucial point by labeling his column "Quieting the Destructive Clamor." He then goes on to describe President Eisenhower's prestige as falling at a frightening rate although he completely ignores the latest Gallup poll which reports that 68 percent of our people approve of the President's action. Further along, however, he makes a contribution to congressional solidarity by ascribing to the Democrat leadership this observation:

That many critics of the President's intervention in the Middle East properly stress its awkwardness and danger—but forget that but for this intervention, an admittedly bad situation would be far worse. For one thing Lebanon and Jordan would be gone, too, and with them the last hope of keeping Turkey's 20-odd divisions effectively in the Western alliance.

It is also noted that Mr. White properly comments on Republican criticism of Mr. Truman's "police action" in Korea but ignores the fact that most of that criticism was directed at Dean Acheson's virtual invitation to the Communists to attack, our woeful unpreparedness at the outset of that conflict, and our complete failure to carry the fight to the Chinese beyond the Yalu River.

All of us have our preferences and I have never made a secret of my partiality for the views and opinions of David Lawrence. By long odds he is my favorite columnist and this extract from yesterday's article, Khrushchev Unmasks Himself, in my opinion, sets what I think should be the general tone of all editorial opinion in this uncertain period:

One of the principal weaknesses in the American position is the petty attitude of so many antiadministration newspapers in this locality which, because of their deep-seated political and ideological antagonisms domestically, are pouring out criticisms that are gleefully quoted by the Soviets over the radio to the Mideast and the world generally. Such criticisms taken from American newspapers blame the United States for the Middle East situation and back up accusations of aggression. There seems also to be a delight in minimizing what the Communists have done to cause much of the trouble in that part of the world.

To sum up and to put things in their proper place, it seems to me that the time has arrived when we should ignore this Nation's detractors and return to the philosophy of an American hero of another age, Stephen Decatur, who left his mark in the Middle East and on the pages of history when he said, "My country, may she ever be right; but, right or wrong, my country."

"Big Jim"

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I include the following letter to the editor of the New York Post, entitled "Dear Jim," referring to the Honorable James A. Farley, former Postmaster General of the United States, and published on July 25, 1958:

"BIG JIM"

DEAR EDITOR: An outstanding injustice has been done Hon. James A. Farley in an article by Arthur Massolo in the Sunday, July 20, Post. It is therein stated that the United States Senate candidacy of Mr. Farley is not even genuine; that a a given signal he will step aside in favor of Mayor Wagner "or some Irish Catholic."

No such story should drip off the end of an American pen without supporting evidence.

Of course Messrs. Farley and Wagner do both happen to be Catholics. I happen to be a Jew. I don't know the religious affiliation of the person or persons from whom your scribe obtained his information—and I care less.

However, very many Americans do care enormously about loose accusations being made to the effect that James A. Farley, universally respected as one of our great living Americans, would place religious affiliations above duty to party and to country.

Americans know that no man has demonstrated complete freedom from bigotry more than has "Big Jim." Your own editorials have conceded how well he is able to retain friendships with those with whom he may happen to differ.

Among Americans of good will of all creeds, sniping of the type just attempted will only increase the stature of "Big Jim" that much more, and it will cause thoughtful Americans everywhere to ponder how much men possessed of his genuine qualifications are needed in the United States Senate in these especially trying times.

MANUEL DITTENHEIMER.

Four Truths for Betancourt

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. WITHROW. Mr. Speaker, I read with some amazement, and certainly more interest, the exchanges between the gentleman from Tennessee and the gentleman from Oregon. I am not prepared to say who may be right or wrong, but I can vouch my own experience. When the Alaska statehood bill was before the House I noted that the gentleman from Oregon had arranged for an hour before the House. I promptly telephoned him to inquire whether or not he was going to speak on Latin American affairs and was told by the gentleman that he was not. The following day I read with surprise that his entire time was devoted to Latin America. The House will have to judge in the light of the remarks of the gentleman from Tennessee and my own.

I read with real interest the statement by the gentleman from Oregon to the House upon his return from Venezuela that some of his remarks against communism failed to be printed in the press of that country. I am not at all surprised that they were not printed, if they were said. So far as consultation with the State Department is concerned, the gentleman from Oregon makes much of this. I, too, was called by the State Department and asked into consultation, but I declined the briefing with the pointed remark that I wish they would spend more time giving other people with distorted views the real facts.

I state without fear of challenge that Mr. Betancourt, of Venezuela, has fomented revolution not only there, but everywhere in the Americas. I know what I am talking about, and my only regret is that I am unable to produce the documents for the House. I deplore any attempts to lionize him in the Congress and to speak of his honorable desires for peace and democracy. There are other things the controlled press of Venezuela do not print these days.

UNIVERSITY OF MICHIGAN LIBRARIES

I want to offer at this time a copy of a letter from a responsible person in Venezuela which has not been printed in the Venezuela press. I think this offers some light on the present political party in Venezuela headed by Mr. Betancourt which may illuminate the public discussion:

FOUR TRUTHS FOR BETANCOURT

(This letter from a member of the Democratic Action is being hand circulated because its publication in Venezuela has been prohibited. Here is what the Venezuelan newspapers have not been able to print)

CARACAS, *February 10, 1958.*

Mr. RÓMULO BETANCOURT,
City.

DEAR FRIEND: Upon your return to your country I take pleasure in extending to you my greetings and sincere good wishes because you are at the side of your distinguished wife reveling in the enjoyment of your country and your people. You should be pleased inasmuch as the reception which was accorded to you has been, without any doubt, [a] multitudinous [one], as you used to say in your younger years. Since the overthrow of the government of Gen. Marcos Pérez Jiménez, all of Venezuela has been waiting for your arrival, waiting, especially, to hear the speech that you would be making to the people after long years of expatriation. All of Venezuela has listened attentively to your speech which has been generously broadcast all over the country; a large part of the population heard you with rapture, but the other part interpreted your words with deep concern and attention. In your delivery it was noted that the eloquence as leader of masses which you had displayed in 1928 had undergone a radical change.

Business, the bank, big industry, people with money, high society, producers, cattlemen, farmers, the enormous group of independent politicians and, finally, those who are members of the political parties formerly opposed to the Acción Democrática ["Democratic Action"] government * * * were afraid of your return * * * and of what you would say.

Fortunately for everybody you have changed, "but grown older, your dignity more assured and more deliberate owing to experience and wisdom acquired."

When you spoke to the people you admitted that, "the term of government was characterized by the political immaturity of yourself and of all the parties, and by unnecessary aggression among them"; and therefore you preach and fervently pray for unity.

In these times of democracy there is much talk of unity. Up to now I have not been able to comprehend the real political meaning of that word.

I read that "if your presence would cause a break in unity you would refrain from coming back." You stated that you "have never been against unity and that you are willing to propitiate it to the fullest possible extent."

You ought to know what unity is.

Would you like to tell me, and explain to me in detail, what unity is? What are the principles sustaining it? What is its purpose? What group or party would it really benefit? How long will it last? Against whom is it directed? How would a break occur?

Nobody I know has thoroughly explained the political meaning of that word which has been repeated over and over again in every speech and political sermon of recent date. It has been said that those who are against unity will be considered enemies of the people and, as I don't want to commit a crime due to lack of knowledge or ignorance, I ask you to explain to me: What is unity?

As for your statements, I quite agree with you that the Armed Forces are indispensable. Had the army not intervened in the overthrow of Marcos Perez Jimenez, we would be suffering, instead of breathing the beneficial democratic air, under the most terrible and bloody dictatorship in the history of Venezuela.

You said in your speech: "The overthrow of the dictatorship was the culmination of a process of resistance which began on that same November 25, 1948, when the men in the prisons, in the concentration camps, in exile, and in the underground proved that a passionate desire for freedom was alive, uniting the people from shoeshine-boy to millionaire." On this point, my friend, we are not in agreement; it seems, that is the impression you give, that you want to forget historical facts. The military coup of November 24, 1948, against the government of the well-remembered and venerated maestro, Prof. Romulo Gallegos, was applauded and supported by all of Venezuela, with the exception of the atheist party in power. Romulo Gallegos, President of Venezuela by popular, universal, and secret vote, endorsed by over a million blank ballots, was overthrown by the same punctilious self-righteous young officials who swept you into power; and the maestro, teacher of the young people, the man who wrote by and for his people, did not, upon his overthrow, rely on majority votes to defend his election to the highest office in the land.

All of Venezuela, I repeat, approved and supported that military coup, and banking circles, large industries, big business, capitalists, the entire society, clergy, and all political parties of that day, applauded the military government board, Junta, and lent it their most outright and determined collaboration. Possibly the necessary and active search in which you engaged in those days for a foreign legation which would protect you against the wrath of the people, had not permitted you to see the situation in its real light; but now that you are back again in your country, ask for and read the newspapers of the time after the above overthrow, and try to account for what was thought of your democratic action government.

"Without denying you the positive role which the Democratic Action administration might have had as a government, you must admit that the balance (of its activities) was a frankly negative one; a very logical result derived from the political immaturity" and lack of education of its most outstanding leaders.

All of Venezuela was tired of the atheist sectarianism and arbitrariness; of the abuses of the press, of the famous investigators, the innumerbale spies, the mass incarcerations, the tortures by electric shock waves at the Trocadero defended in the congress by some of the party representatives; of the manifest administrative inability and the stubborness evidence by the atheist officials in coping with the production problems; of the famous imports of Argentine meats and animals from countries where foot-and-mouth disease obtained; of the arrogance of the men of the party, of the open contempt for the ability and honesty of citizens who did not belong to the clan (clique) in power; of the irreverence for the church, of 321, of Inciso Alfáro Ucero, of the negation of the postulates of the party when it came into power, of the sectarianism of the atheist syndicates, of the disgust of those working on important public works with the usual squandering of State funds; of the unjustified attack of all members of political parties whose doctrine was opposed to the atheist political platform; of the threats of strike directed against the country's large industries, with only you, the leader, to lift a finger to hold back the arm of the worker, the powerful muscle, the only force on whom the movement of that gigantic industrial machinery depended; of the attacks on outstanding politicians, etc. That entire Democratic Action government is still fresh in the minds of all the people of Venezuela.

The coup of November 24, 1948, was regretted only by the atheists who did not wish, or did not know how, to defend their government; the rest of the country applauded it, because that date marked the overthrow of the dictatorship of the Democratic Action Party.

You, as a politician, have made big mistakes, but the biggest of all was to have participated with your civic party in the overthrow of the most democratic of governments that Venezuela has ever had: the government of Gen. Isaías Medina Angarita. The date of October 18, 1945, stands out as a black spot on the record of Venezuelan democracy, and that indelible black spot was put there by you, the principal leader of the Democratic Action.

When those punctilious young officials, as you call them, invited you to take charge of the military coup of October 18, 1945, you were presented with the most brilliant opportunity of your political career: You, as a militant member of a civic, democratic party, should have been consistent with the civic principles preached by you in the public places, and should have directed all your energies toward avoiding that violation of the constitution and the law. But, far from acting like a civic-minded, democratic person, you preferred the garrison (military headquarters) riot in which you participated with your entire party. You should have considered that other peaceful and lawful methods could be resorted to in order to make the democratic government of Gen. Medina Angarita change the political course which he wanted to set for his government when elected President. On that date of October 18, 1945, the constitutional fiber of the Republic was lost, and up to now all efforts to retrieve it have been futile.

I am glad to see you embracing Dr. Rafael Caldera, Dr. Jovito Villalba, and Dr. Gustavo Machado; and I am even more pleased to hear you admit the mistakes which you previously made by insulting them in an unjust and bigoted fashion. I am also very happy that you have found a real 100 percent Venezuelan interested in strengthening the Venezuelan democracy, in the person of Gen. Eleazar López Contreras, ex-President of Venezuela. It is a shame that your former political blindness prevented you from realizing that he was the only military man of our day who may have handed over the Presidency of the Republic because of proven democratic affiliation in office.

All of Venezuela was amazed to hear you mention the name of Gen. Isaías Medina Angarita in your welcoming address to the people of Venezuela. There are political mistakes which cannot be made even in improvisations (impromptu addresses?) in public places. To my way of thinking, it was an indiscretion on your part to have mentioned the name of ex-President Medina Angarita, whose premature death was accelerated by the military coup of October 18, 1945, which you yourself had helped to set off.

You should have asked his pardon, on your knees before his tomb, for the evil done unto him and his country.

We heard you say: "Those sincere conversations and action undertaken by the Venezuelans, have revealed to us our past mistakes and have convinced us that there is only one course; namely, that of understanding and coordination of all sectors who wish the return of a legal government,

which can guarantee the life and coexistence of all Venezuelans, without exception." You also said: "We are waging a lawful fight for democracy, without impatience and without an appetite for government; we are, of course, basically interested in a political truce. It does not matter how long we must wait to reopen the debate from which insult and violence must disappear forever. That is the Venezuela which must be incorporated into the democratic revolution, but on a plane of nonviolent harmony, of general truce."

If in the period between 1945 and 1948 you had been thinking and acting, as the Government, along the line of those sound principles, how many sacrifices could have been avoided for the Republic.

Today, you beat your breast in public places and ask for the mantle of forgetfulness for everything [that has happened] in the past but, fortunately, the actions of men in public life are judged by history, and the definitive judgment pronounced for you and your party is positively damning. * * * You were born sectarian, you are, and you will be sectarian, and nobody can believe in your remorse outside of your partisan sects [fellow sectarians of your own party?]; all of Venezuela wants to hear [what] you [have to say] when the political truce ends and the party fisticuffs reopen in the coming election campaign. Every party wants to come to power, but on the path of your political life [career] you will now encounter a crossroads: one of the branches might take you to "Miraflores"; the other would lead you to be consistent with what you said at El Silencio, about [your] "lack of appetite for and disgust with government affairs." Don't make the mistake of ordering your legions to sweep you into power.

If your political maturity is real, if you are going to fight for democracy without violence, without insults, without sectarianism, and without aspirations for government, choose no other course but that of stating publicly and solemnly, with courage, that your Democratic Action has no presidential candidate in the atheist ranks. You must state that the white [or blank] ballot will support a man of another party, and that man must be, unquestionably, Dr. Rafael Caldera, secretary general of the Copey Party. To support an independent, extra-party, man, would be to deny the very essence of the parties and to underestimate the ability of their men [members]. The democratic position of the Democratic Action, of the Democratic Republican Union, of Copey and of the Communist Party, will be to plunge into the election struggle with a party man, and I repeat, that man can be no other than Dr. Rafael Caldera. A desirable government would be one [composed] of Dr. Caldera as president of the Republic, with a Congress in which all political currents should be represented, and all ideologies, with able men who can represent and protect a constitution within and outside the Congress should anyone want to trample on it. In order to avoid confusion, I would like to make it clear to you that I have not [ever] belonged, nor do I now belong, to the Copey Party. My views are devoid of any personal interest, and I am guided only by my best wishes that Venezuela may, as soon as circumstances permit, have a government based on the lofty thinking of the father of our country: "The most perfect system of government is that which produces the greatest possible amount of happiness, the greatest amount of social security, and the greatest amount of political stability."

Please do not take this letter as a spontaneous and aggressive insult to your person as ex-President of the Revolutionary Government Board ["Junta"]; [but] accept it as the unshirkable duty, falling on every Venezuelan preoccupied with the problems of his country, to think about and scan closely the [roster of] persons of worth who, like yourself, are qualified to hold the office of President of the Republic. By unburdening myself to you I have only wished to avoid greater damage to the people of Venezuela.

Sincerely, your friend,

RAFAEL ZAMORA PÉREZ,
Ex-Governor of the State of Guárico.

Jim Farley and the Democratic Party Liberal Tradition

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. BOLAND. Mr. Speaker, the history of the Democratic Party envinces policies that have placed the power of Government in the hands of the people, and programs to protect the interests of all the people of the United States, from the era of Jefferson, through Jackson, Wilson, Roosevelt, and Truman.

This is what we Democrats proudly claim as the liberal tradition of our party. New life was injected into that liberal tradition with the inauguration of President Roosevelt on March 4, 1933, and during the subsequent famous "hundred days."

At the beginning of the "hundred days" the people of this Nation were fearful, discouraged, and in despair. The times called for leadership and hard work. President Roosevelt provided that leadership and his devoted and dedicated assistants produced the hard work as soon as the inaugural parade music faded away.

Office lights burned late in Washington during those "hundred days" as emergency and reform legislation was enacted by Congress. One of President Roosevelt's assistants who worked tirelessly to provide party leadership and guided legislation thorugh Congress was the Honorable James A. Farley, the new Postmaster General and chairman of the party. "Big Jim" expended every effort and long hours in assisting the Chief Executive to maintain and expand the liberal tradition of our party.

Mr. Speaker, under leave to extend my remarks, I include an address on the liberal traditions of the Democratic Party delivered by Jim Farley at the annual dinner of the Putnam County, N. Y., Democratic committee at Bear Mountain Inn on July 26:

ADDRESS BY HON. JAMES A. FARLEY, FORMER CHAIRMAN OF THE NATIONAL DEMOCRATIC COMMITTEE AND THE DEMOCRATIC STATE COMMITTEE, ANNUAL DINNER, PUTNAM COUNTY DEMOCRATIC COMMITTEE, BEAR MOUNTAIN INN, JULY 26, 1958

It is a sound navigational axiom that before you know where you are going you must know where you are at and to determine where you are at it is imperative to know where you have been. I have been a good many places in 48 years, as an active Democrat, and it often occurred to me that the basic maritime rules also applied to the ship of state.

Tonight I propose to briefly outline the history of the Democratic party, which I find, and oddly enough, causes me to rise to a point of personal privilege for the only time in my political career. Since I like to think that for 48 years I have always subordinated my own interests to the interest of the party I shall defer my claim of personal privilege to a last paragraph and address myself primarily to the business of our party.

Great issues are in process of being presented to the electorate of New York State and the word liberal has been used insistently enough to demand definition. Now, just what is a liberal? The United States Supreme Court relies upon the standard dictionaries and I see no reason why the dictionary is not equally acceptable, as objective authority, in this election. Far too often, the word liberal, at various times and in various countries, has been appropriated by small groups who use it confusingly to identify private dogma rather than broad political principles.

A liberal is defined as one who is liberal in thought or principles; one who favors greater freedom in political or religious matters, specifically in politics (Webster's New International Dictionary). It is further defined as favorable to reform or progress; not bound by orthodox or established politics (New Dictionary, Grosset & Dunlap).

Now it is my thesis that the only effective liberal party in American history is the Democratic party, and I want to tell you why.

If one who favors greater freedom in religion is accepted as a measuring mark of a liberal no man in American history, and few in any others, even remotely approaches the founder of this party, Thomas Jefferson. Just how much he regarded himself as a liberal can be gleaned from his own epitaph, written by himself. It may be assumed that the things he wished to be remembered by were those acts of his which he considered most important. Accordingly, it is of deepest significance that, omitting that he was President of the United States, he mentions himself as the founder of the University of Virginia, the author of the Declaration of Independence, and the author of Virginia's first statute of absolute religious freedom. This statute was as revolutionary, in its time, as his later Declaration of Independence. Europe was still soaking its fields in Christian fratricidal warfare when it was written. Jefferson's magnificiently liberal act was the very spark which lit the way to religious freedom in this country. Today few countries calling themselves civilized have failed to profit by Jefferson's foresight. Clearly, no other party in American history can claim such heritage.

Further, if we accept the definition of a liberal as one who is not bound by previous forms it is impossible to find a finer example of liberalism than the Declarations of Independence. It was more than written by the pen of Thomas Jefferson; it was underwritten by his very life. If there be any remaining doubt of the liberalism of the founder of this party one need merely read the transcript from his writings on the walls of his monument in Washington. There for the ages to see Mr. Jefferson wrote that man must adapt his growing civilization to growing institutions, casting off the old forms as a child discards his boyhood clothes to assume the garb of a man.

These writings are now the heritage of all mankind, but they are also the living dynamic charter of this party and again, parenthetically, I can tell you right now that it is not only the reason I entered this party it is the reason it has had and will have my unswerving allegiance, and why I consider,

UNIVERSITY OF MICHIGAN LIBRARIES

in all humility, the fact that I headed it as national chairman, as the one thing I want my grandchildren to know about me.

When, on that fateful July 4, 1826, 50 years afterward, to the day, that his Declaration of Independence gave birth to this Nation Jefferson died—the great torch he had lit did not flicker. It had already passed into the strong and capable hands of another giant of the Democratic Party, another liberal, Andrew Jackson.

Now Andrew Jackson interpreted the powers of the Presidency in such manner as to spin Alexander Hamilton around in his grave; a spinning long overdue. The old forms could no longer contain the growing Nation. To meet this Andrew Jackson promulgated the theory that the President was the only officer elected by all the people and that he, Andrew Jackson, proposed to act for all the people. Now, if a liberal is one who is favorable to reform or progress and not bound by orthodox or established politics it cannot be denied that the full effective pattern was set for the 19th century by President Andrew Jackson of the Democratic Party.

For example, when the great crisis of 1861 arrived, did Abraham Lincoln turn to the tenets of Hamilton? No inded. He took bodily Jackson's conception of the Presidency and applied it without consulting his own party. He knew what the answer would be. The fact is, his own party very nearly impeached President Andrew Johnson for following the Lincolnian application of the Jackson and Jefferson principles.

Down through Cleveland to Wilson came the irresistible force of the people of this Nation in expansion after expanison of reform enacted by the Democratic Party. The totally new Wilsonian concept of credit and regulation, all of which bore the imprint of our party, carried the impact of the 19th century into the 20th and, in the American vernacular, this is where I came in. I had been in the fight as a Democrat in all the reform legislation since my entrance in State politics including the repeal of prohibition plank, when F. D. R. asked me to head the campaign and the party in 1932.

There are few Presidents in American history who have had a more encyclopedic knowledge of it than President Roosevelt. I say this because I want to emphasize that he knew the liberal tradition of the Democratic Party and he knew that he was expanding it. He intended to put the power more in the hands of the people than even Jefferson, Jackson, or Wilson, and he intended and succeeded in using the Democratic Party to do so.

Now even his worst enemies never accused Mr. Roosevelt of being naive or inastute. He would have been both had he appointed a man to head the Democratic Party who did not believe in its liberal policies. Apparently he believed that 20 years in the ranks established me as more than a Johnny-come-lately liberal, because he expressed his preference for me as head of the party and he invited me into the Cabinet, credentials possessed by few of his subsequent followers, followers who appear to have adopted a policy of cutting up his coat tails into personal campaign ribbons.

His was the strategy but the tactics on the Hill were left to the party.

Now, if liberal legislation be favorable to reform and progress I challenge any party and any candidate to name any comparable period in United States history in which there was enacted into the law of the land as broad a base of reform and progress. To begin with, 7A of the National Recovery Act, for the first time elevated collective bargaining into an integral part of the functioning industrial life of this country. The same great and splendid unions which are thriving today were then in desperate shape. Their leaders told us at the time that 7A was more than a new charter of liberty that it was a matter of life and death. No miracle drug of modern times has ever revitalized a dying patient, as that one clause brought back the hard-won status of the organization of the American unions. However, the activities of the President and myself, as head of the party, in behalf of the people of America did very little indeed to gain us the reputations of conservatives.

Nor did our successful activities in behalf of the farmers through the AAA; nor the Wagner Act; nor the national employment system; nor the Wagner-Lewis emergency relief; nor WPA; nor PWA; nor the TVA; nor the CCC; nor the Farm Credit Act; nor the Bank Deposit Insurance Act; nor the State Relief Act; nor the Stock Exchange Act; nor the creation of the Federal Communications Committee; nor the Railroad, Corporation and Municipal Bankruptcy Act. All, all of these and they are but a few major acts of legislation were the acts of the liberal Democratic Party. It was upon them that we went to the country in 1936 and our party carried 46 out of 48 States in the Union. Very obviously, we had brought the Government back to the people and even more obviously they endorsed the progressive reforms.

Now, the point of this partial enumeration is to demonstrate the incontrovertible. No other party in American history by inheritance or action even remotely compares in effectiveness with the Democratic Party as the instrument of the lawful, broad, consistent, and liberal expansion of the American people. Historically and factually, to be a Democrat is to be a liberal, in the true American use of that term.

And now I rise to my point of personal privilege. If I am not a Democrat, what am I? If 48 years of glad and proud service in its ranks to the principles of this party do not speak for me, what else can? If the offices I have held, town and county chairman, State and National chairman, and the great public office of Cabinet member, do not attest that I carried the fight to the forces of reaction, as a Democrat, what other evidence is there?

But I am informed that at this late date there are some late arrivals who question, believe it or not, whether I am a liberal. I shall not be uncharitable and ask who these people are nor where they were when the battle was thickest.

By the very testimony of those whom they profess to follow, I welcome examination as warmly as I resent the inference. The great responsibility of the managing of the critical campaigns of President Roosevelt and Senator Robert F. Wagner these men placed upon me. I tell you proudly that these men trusted me even more deeply than as a devoted Democrat; they trusted me and I, if I may say so, know that they had reason to trust me as confident and friend. I doubt very much if those who have dared, in most cowardly fashion, to challenge my status as a liberal candidate could say as much.

Honor is the monopoly of no man, nor of any party. It is in the nature of personal property, the personal property of the soul.

I have risen to this point of personal privilege because I am about to make the harshest statement I have ever made in public life. I say to you that for 48 years I have served the Democratic Party because it is the liberal party. I say that my record proves I have always been the protagonist of liberal Democratic platforms.

Therefore, whoever says that I am not a liberal in effect states that 48 years I have lived the life of a hypocrite. To these persons, whomsoever they may be, I say you are either grossly and inexcusably ignorant or you are deliberately untruthful, or both. In any event, I accept the challenge. I meet all comers. I will not only match my private, I will match my public, liberal record with any man in this State, or for that matter, in this country. Furthermore, I intend to do so. I am a candidate for the United States Senate. And in the true, liberal, Democratic, and American tradition, let the people of New York State decide.

The Middle East Crisis

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 30, 1958

Mr. UDALL. Mr. Speaker, the ultimate goal of a good jounalist is to see things whole. Day in and day out one of the few news commentators who consistently attains this goal is Howard K. Smith, chief Washington correspondent for CBS News. Mr. Smith's forthright commentaries on the Middle East crisis have been notable both for their brilliant insight and objective balance. I believe our colleagues will profit from a reading of the broadcast Mr. Smith presented last Sunday on the CBS program The World Tonight. His remarks follow:

The second week of the new sharp crisis in the Middle East has produced few new events. But it has crystallized two longer range developments. One of those developments is bad from the American point of view; the other is good.

What is bad is—the crisis has revealed United States policy in the Middle East to be pretty threadbare. Our set of official assumptions and our array of potential initiatives to meet eventual situations have been shown to be inadequate, self-contradictory and out of touch with realities.

What is good is a crisis that was military has rapidly become diplomatic. Much of the danger of armed conflict has drained out of the situation. Where last week the air was full of military actions and threats of counteractions today the nations involved are talking entirely in terms of diplomatic conferences. This offers us a breathing spell to try to aline our policies with realities. The increased shooting last night in Lebanon, the threats of Lebanese rebel leaders not to come to settlement unless United States troops leave, the utterly prospectless situation of British troops caught in Jordan like flies on flypaper—all these things suggest that the breathing spell may be short. Military activity may soon resume its dominance over diplomacy. So the utmost and quickest advantage must be taken of it to analyze our situation, seek what is wrong and start thinking of alternative courses—to all of which any news analysis worth the name is obligated to make a contribution.

The crisis has revealed United States policy in regard to the Middle East to be in an unusually sorry plight. To substantiate that assessment consider what has happened in very days to Mr. Dulles' long husbanded strategy in foreign affairs.

The Secretary of State has long opposed a summit meeting unless there is long and careful previous preparation, and unless there is evidence the Russians mean business, not propaganda. We have been put in the position this week of calling a summit conference without preparation and with every evidence the Russians mean propaganda not business.

Mr. Dulles has steadfastly refused any kind of conference or action which would recognize Russia as having any decisive voice in

Middle East affairs. The coming conference will recognize Russia as having a decisive voice in Middle East affairs.

The Secretary has just as steadfastly resisted Khruschev's hints for an invitation to visit the United States. The coming conference will bring Khruschev on a visit to the United States.

With a bluntness sometimes characteristic of it, the Wall Street Journal this week summed up the situation in an editorial, saying, "The fact is we are no longer master of our own foreign policy."

Essential aspects of our policy for the Middle East have been shown to be extremely rickety. A keystone of the policy has been the Baghdad Pact. We face the near certainty Baghdad, capital of Iraq, will soon withdraw from the pact bearing its name.

The Secretary recommended the entry of our troops into Lebanon to sustain a pro-western government there. Most experts I have talked to believe that when we withdraw the result will be the coming to power of a non-pro-western government. We acted, to quote Time magazine, also in the faint chance that we might bolster resistance to the revolution in Iraq. That revolution in Iraq, however, has been wholly successful, and there is a suspicion that our action contributed to rather than hindered that success.

We supported the entry of the British into Jordan on the same reasoning—that it would bolster pro-Western government in Jordan and pro-westernism in general.

The fact is, the action puts the British in worse trouble than we are in. A good half of the people of Lebanon have been favorable to the United States. Those who are not have never seen us before, are curious about us and want to look awhile before shooting.

In Jordan, the percentage that is favorable to the British is very tiny indeed. And the British are well-known from a long unpleasant past and are intensely disliked. Where in Lebanon we have a bare chance of seeing stability return soon so we can get out, there is almost no chance of it in Jordan. An authoritative-sounding New York Times report yesterday gave Hussein 6 months of survival. He purged 150 of his army officers early this month, and the purge continues in the hope of eliminating disloyalty. But the effect has been, the report said, to demoralize utterly what used to be the most effective of Arab armies. The report gave Hussein 6 months of survival—unless there is all-out western support. All-out western support seemed to mean an imitation of the Russian satellite arrangement in Eastern Europe, that is, the sustaining of an unpopular regime against the people by means of foreign arms and occupation.

Results like these, in direct contradiction to the effects planned for, indicate something is very, very wrong indeed in our basic policies.

Lest the listener have a wrong impression let me make something clear parenthetically. This does not mean to suggest we should not have gone into Lebanon. Our basic prestige had been put into such a position that inaction might have been superdisastrous, while action was merely disastrous. So, perhaps we had to move into Lebanon for a little while. What this analysis does suggest is that a Middle East policy that puts us in a position of having to choose only between the disastrous and the superdisastrous is a very fallacious, not to say, derelict piece of planning, thinking, and acting indeed.

If the point that we have been very wrong indeed needs further substantiation, the state of our information about this vital area of the world, where war or peace may come from our intelligence will make the point.

We admit to being caught flat-footed by the outbreak of major revolution in a key country, Iraq. But even after that the state of our continuing intelligence has shocked the world.

A couple of days after the revolution, Mr. Lodge, our U. N. representative, caused emotional revulsion against the Iraqi revolutionaries in the Security Council by revealing our information that an Iraqi diplomat, known to all the members, had been murdered by the bloodthirsty Iraqi revolutionaries and his body dragged through the streets. Within hours, the new Iraqi Government was able to publish the photo of the allegedly murdered and battered diplomat—in good health and very much alive. It was to many diplomats, frightening that the world's greatest Nation should base its policy and actions on information so flagrantly false and utterly emotion-ridden as that.

Moreover, not many days after our scathing attacks on the bloodthirsty Iraqi revolutionaries whom we were close to going to war to oppose we are seriously considering granting them official diplomatic recognition—which undoubtedly we shall before long do. The foreigner looking to the United States for sober, wise leadership through the perils of the atomic missile age can be excused for not feeling reassured by policies that lead to extremes of that seeming volatility.

Again, parenthetically, this is not an argument against recognizing the new government in Iraq. It is a reflection on a policy so apparently uninformed about the most powerful forces in a key allied country and so unprepared for events as to operate in what appears to be a permanent state of astonishment at events that in fact were all predictable.

Current developments give little reassurance the situation has changed. Washington continues to be a chief, if not the chief capital in the crisis. Yet, getting guidance in this great Capital this week has been like trying to wring water from a stone. The President and the Secretary of State canceled their news conferences. No other important officials have given much of a lead to public opinion on these important developments.

The Wall Street Journal has commented pointedly on how more than a week after this crisis has dominated our lives, Washington remains wrapped in silence. And it remarked sharply, "In a country of free men it is essential to real unity that those who lead explain to people carefully and thoughtfully the course they pursue." Miss Doris Fleeson, an alert and usually fully informed columnist, had to open one of her reports this week, I quote, "Bootless Brutus who knelt to no avail to Julius Caesar had nothing on the earnest Washington reporter who decided to hunt hard news (in Washington) about Middle East policy." From Rome come reports that American private citizens returning from Baghdad, Iraq, were forbidden by the United States Government from exercising their free prerogative of talking to reporters, who are the mediums whereby the American public are kept informed.

Whatever the reasons for this silence, the suspicions are bound to arise (in many quarters) that it is in part meant to hide the fact that our leaders still do not know what to do or which direction to go into.

Bright spots in the dark have been evidences that Members of the Congress here and some of our good friends abroad are doing some positive thinking about the situation. The theme of most of these thoughts is that we ought to approach the coming summit meeting with less of the frustrated indignation and reluctance which the administration has so far displayed, and with more constructive plans which will channel it away from propaganda into useful fields that might produce good results.

Many, including visiting President Nkrumah, of the new African state of Ghana, have proposed the quarantining or neutralizing of the Middle East or at least of the Arab world. That is what the Arabs seem to want. Since it would keep the Russians out as well as us, objections to it are hard to understand.

Perhaps the most valuable piece of advice comes from a true friend of the United States who has proven it often, and whose wisdom in handling a past Middle East crisis won him the Nobel prize for peace. That is Mr. Lester Pearson, the former Foreign Minister of Canada.

In parts of a speech published here, Mr. Pearson dwelt on two realities that any Middle East policy will simply have to accept but which ours has not been willing to face. One is the existence of Arab nationalism as the overpowering, strongest urge of the Arab peoples. The suggestion is that we will have to live with it, so why not accept it and come to terms with it?

The other hard reality is a little more difficult for some to swallow. It is that Russia, having the Middle East on her southern frontier, has as legitimate a security interest in the area as we have in Central America. There is unlikely ever to be peace in the area as long as we persist in refusing to talk with Russia, negotiate with Russia and try to reach an agreement with Russia about it.

Those—the inevitability of Arab nationalism, the necessity of admitting Russian interest—are the two hard realities we have to take into account or else we will continue to get ourselves into contradictory positions which could lead one day to war.

In extenuation of the administration's policies in the area it must be said that both the two realities are tough ones. It is not easy either to get along with Arab nationalism or to negotiate successfully with Russia.

In criticism of administration's policy in the area there is the overriding thought that we have not really tried either and are in no position to judge whether it is possible until we do.

This is Howard K. Smith in Washington.

The Case for Modernizing Our Wiretapping Laws

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 14, 1958

Mr. KEATING. Mr. Speaker, one of the Nation's leading authorities on the practical aspects of widetapping and its need in crime detection recently delivered an outstanding address in which he effectively presented the case for modernizing our wiretap laws. The speaker was Paul W. Williams, who recently resigned as United States attorney for the southern district of New York—a post in which he had served with real distinction and a success which has made his name feared among the criminal elements in his jurisdiction.

In his searching, erudite and clear analysis of the problems inherent in the whole subject of wiretapping, Mr. Williams pointed up the need for changes in our communication law. He endorsed legislation substantially similar to that

UNIVERSITY OF MICHIGAN LIBRARIES

I have sponsored for a number of years, as well as two new bills I introduced in this session of Congress.

Mr. Speaker, the words of this experienced crimefighter should be studied by every Member of Congress. I am extremely hopeful before long we will have an opportunity to consider measures dealing with this great unresolved issue of wiretapping. Certainly the wise words of Paul Williams will aid in the passage of sound and realistic legislation. Under leave previously granted, I insert his remarks in the RECORD:

SHOULD WIRETAPPING BE LIBERALIZED?

(Remarks by Hon. Paul W. Williams, United States attorney for the southern district of New York, at the summer meeting of the New York State Bar Association at Saranac, N. Y., June 27, 1958)

Mr. Chairman, Mr. Gerhart, and fellow members of the bar, the question is, "Should wiretapping be liberalized?" My answer is "Yes."

In making this response, it is necessary to remind you that I speak from the perspective of the Federal prosecutor, and as a prosecutor I must frankly admit that I am confounded by the present state of affairs in reference to wiretapping. The situation is so chaotic that in order to present my position with some degree of clarity and precision it is necessary to reanalyze this question. Only after such reanalysis can all of us observe what objectives we seek to serve in reference to wiretapping, and what measures can best attain these objectives.

I shall attempt, first, to analyze the interests which I think are to be protected in considering the advisability of wiretapping; second, to describe the present legal picture in reference to wiretapping; and, third, to make to number of concrete suggestions concerning possible new legislation.

PART 1. WHAT ARE THE INTERESTS TO BE PROTECTED?

The most important question to be asked, in reference to wiretapping is, "What are the private and public interests affected by the existence or nonexistence of wiretapping, and what type of protection should society extend to them?"

In referring to an interest, I am referring to that set of facts which society endows with a value and which it is willing to protect either by a tort action for damages, or a suit for an injunction, or the sanction of the criminal law. The creation and the protection of any interest usually depends on the particular social and economic conditions of the times, and the relationship of these conditions to this set of facts. It has been the genius of the common law that it has developed rules of law which have defined each particular interest and the protection which society wishes to extend to it.

When one discusses wiretapping, I would suggest that the primary interest involved is the right of privacy. This term "right of privacy" is a relatively new term to the common law. Its earliest use appears to have been in 1902 in an article by Justice Brandeis and Samuel D. Warren in the Harvard Law Review. At that time, the rapid developments in photography and the growth of new trends in journalism were making inroads on the privacy of the ordinary citizen. Brandeis and Warren were primarily concerned with the right to be left alone, and argued that legal protection should be extended against the unauthorized publication of personal papers and photographs.

Today, when I refer to the right of privacy, I mean the right of the average citizen to express his emotions, ideas, thoughts, and plans with a reasonable degree of privacy, or, to define it in terms of the threat to this interest, the right to be reasonably secure from electronic eavesdropping.

Eavesdropping is not a new phenomenon in our society. Blackstone refers to the eavesdropper as follows: "Eavesdroppers, or such as listen under walls or windows, or the eaves of a house, to hearken after discourse, and thereupon to frame slanderous and mischievous tales, are a common nuisance, and presentable at the court-leet, or are indictable at the sessions and punishable by fine and finding sureties for their good behavior."

Today we are confronted by the danger of electronic eavesdropping. The development of modern electronics has developed machines with fantastic powers of picking up voices and recording them. Wiretapping has been so vastly improved as to make it nigh impossible to detect it. The advantages of this equipment have been quickly recognized by many, and thus private individuals and groups have tended to use this weapon to serve their own selfish ends and enhance their power. I need not refer to the many scandals which have been in the newspapers where groups involved in political, business, and labor rivalry, or individuals with marital difficulties, have resorted to the use of electronic eavesdropping by wiretapping or other electronic devices.

Let me make quite clear that I have no sympathy with this electronic eavesdropping. When a labor union cannot plan a strike; when a business man cannot plan an advertising campaign which requires secrecy in order to get the edge on his competitor; when a lawyer cannot talk to his client; when an individual cannot speak about his or her private affairs to another individual; when each one of these groups or individuals cannot perform these simple but fundamental acts without continual fear of electronic eavesdropping, then our society has no alternative except to give the injured a cause of action for damages and an injunction, and to impose criminal penalties.

This invasion of the right of privacy of the individual or group is a severe threat. It represents a degree of immorality and unfairness which no democratic society can tolerate. And, what is more, it suggests the possibility of thought control. At this point our fundamental right of freedom is threatened. This is the interest affected by electronic eavesdropping: the right of privacy.

I have taken this time to define this interest because some cases in referring to section 605 of title 47 have spoken of the integrity of the communications system as the interest to be protected. I have attempted to analyze the meaning of this term, and I must frankly admit that it is of little value to a legal analysis of this problem. To speak of the integrity of the communications system as an interest is really to refer to the right of privacy insofar as it is affected by the communications system. Indeed, I would strongly suggest that the phrase "integrity of a system of telephonic communication is either a catchword to describe "right of privacy," or else a term which describes the jurisdictional basis of section 605 rather than the interest to be protected. It is important to be clear concerning this distinction for reasons which will be apparent later.

Another interest which is equally important in any society is the maintenance of law and order. If one examines our present national scene, one is shocked by the growth of crime—in particular, organized crime. There is little doubt in my mind that organized crime has become a serious threat to this country. The crime syndicates and their subsidiaries in different parts of the country have become an invisible government with millions of dollars at their disposal, and with astounding power which extends not only into every State of the Union, but also into many countries of western Europe and the Middle East. The resources of organized crime are being used to finance expensive but lucrative ventures such as narcotics, and, even worse, to infiltrate legitimate business and labor unions to the detriment of the economic life of the country. The total effect of this growth of organized crime is a corrosion of the moral, ethical, and democratic standards of this country. To maintain law and order in this country means to attack and destroy the crime syndicate as an effective criminal group.

In discussing these interests I think it is clear that in a country such as ours there is no interest or right which enjoys an absolute protection. All rights and interests have to be seen in their relationship to each other. Even an important right as free speech does not enjoy an absolute protection. If a man's speech tends to create a clear and present danger to the community, that speech ceases to enjoy constitutional protection. If a man uses his private dwelling to sell narcotics, then agents armed with a search warrant can search his home.

Thus, to the extent that the exercise of rights and privileges are employed in such a manner as to constitute a threat to the community or the country, then to that extent the interest of law and order makes and requires inroads and limitations on the exercise of those rights and privileges.

This same reasoning applies to the right of privacy. It is a right to be cherished and protected, but it is not a right which can demand absolute protection, no more than any other right. And, equally, it appears to me that whenever a serious felony is in the process of being planned or committed, this right of privacy must yield to reasonable limitations so that law and order may be maintained.

If this analysis is sound, the next question is, To what extent does section 605 of title 47 and the case law interpreting this section protect the right of privacy and still ensure the maintenance of law and order.

PART 2. AN ANALYSIS OF SECTION 605

At this point I wish to analyze the present state of the law.

Section 605 of title 47 states, in brief, that it is illegal to intercept telephonic communications and to divulge or use them. Only the sender of the communication can authorize the interception and divulgence or use of his communication.

A series of Supreme Court decisions have severely limited the Federal investigating and prosecuting agencies. If the Federal Government commences a criminal prosecution and then discovers that there has been wiretapping, State or Federal, the Government is placed in the following position: First, the evidence resulting from the wiretaps is inadmissible. Second, if the defendant moves to dismiss the indictment on the ground of illegally obtained evidence from wiretapping, the defendant has the burden of proving that there was wiretapping. Having done this, the burden of going forward with the evidence rests on the Government concerning what evidence was directly procured from the wiretaps and what leads resulted from the wiretaps. By the time the Government has met this burden of going forward with the evidence, the entire case of the Government has been completely revealed. In a case involving leaders of organized crime, this revelation of the Government's case may be fatal.

Theoretically, evidence procured from wiretapping is inadmissible in the Federal courts; but permit me to list two qualifications which have developed: In *Goldman* v. *United States* the Supreme Court held that a detectophone can be placed against a partition in order to hear what is said into the telephone, assuming there was no trespass. In *On Lee* v. *United States* (343 U. S. 747 (1952)), it was held that if a portable radio transmitter is used to transmit the

conversation of the informer with the defendant to agents outside the apartment, this is not a violation of the act.

Another question which has arisen in the construction of section 605 is who can consent to the interception and divulgence of the telephonic communication. According to section 605, only the sender can authorize this interception and divulgence. However, Judge Hand, in the second circuit, held that both parties to the communication had to consent. If one construes section 605 strictly, the sender can authorize this, but if the interest to be protected is the right to privacy, then the decision of Judge Learned Hand is the more logical, for both parties are simultaneously receiver and sender, and have a right of privacy to be protected. However, in the recent case of *Rathbun* v. *United States*, the Supreme Court held that if the receiver of a telephonic communication invited police officers to listen in on the conversation on an extension, this is not a violation of 605.

Federal and State jurisdiction

The last question which I wish to discuss is that of Federal and State jurisdiction in reference to wiretapping.

In *Weiss* v. *United States*, the Supreme Court held that section 605 applied to both interstate and intrastate communication. In view of the fact that the two cannot really be distinguished, this is logical. However, in the recent Benanti decision, the Supreme Court carried the Weiss case to its logical conclusion by stating * * * we find that Congress, setting out a prohibition in plain terms, did not mean to allow State legislation which would contradict that system and that policy." In support of this statement, the Court cited *Pennsylvania* v. *Nelson* (350 U. S. 497), which I can only interpret to mean that Congress has preempted the field as to all wiretapping.

Let us assume that the present 36 States which authorize the police to wiretap, continue to allow such wiretapping—and I think this is a realistic assumption. If each of these States admits this illegally obtained evidence, and there is a conviction, what happens if the State conviction is appealed to the Supreme Court?

Under *Olmstead* v. *United States* (277 U. S. 438 (1928)), there is no constitutional question of search and seizure involved. What would be the question which the Court would face? If it is a question of evidence illegally obtained by State wiretapping, then will the Court say that in this area the State courts do not have the right to determine the admissibility of evidence illegally obtained? Or would the Court find some infringement of due process by the State officials? And, what is the relationship of this exercise of congressional power over interstate commerce to the exercise of the police power of the State?

After scanning each one of these problems arising from section 605, I must frankly ask whether 605 serves any valid purpose today, whether it is not unrealistic and outmoded, and whether the Federal Government does not need to repeal section 605 and pass new legislation.

PART 3. SUGGESTIONS FOR NEW LEGISLATION

I stated in the beginning that I was in favor of the liberalization of wiretapping. In order to describe precisely in what sense I favor this liberalization, I have attempted to analyze the interests involved and the inadequacy of section 605 today. What are the specific points at which I would urge liberalization?

1. I am convinced that the Federal Government should be granted the right to wiretap when there is probable cause to believe that a felony is being committed. The threat of organized crime is becoming so serious as to necessitate this step. The telephone is such an important channel of communication and is so essential in committing most crimes today, that to deny this right to the Federal Government is to handicap it severely. For example, it would be of immense aid to us in detecting espionage, narcotics violations, extortion and racketeering—if we had the right to tap phones.

After carefully weighing the right of privacy against the maintaining of law and order, I am convinced that to this extent there must be some reasonable limitations of the right of privacy.

2. I would revise the basis of jurisdiction in order that both the Federal and State agencies would have the power to wiretap. In reference to the Federal power to wiretap, the jurisdictional basis would arise from the power of Congress to regulate interstate commerce. The outermost limits of this Federal power would be defined by Federal criminal statutes. In other words, Federal authorities would have the power to wiretap only when a Federal crime was being planned or committed. Likewise, the State officials would have the power to wiretap only when State crimes were being committed. The scope of the Federal or State jurisdiction would depend on the crime being committed, not on whether intrastate or interstate commerce was involved.

3. In order to exercise this power, the United States attorney would have to apply to the Attorney General or to the district court for a warrant to wiretap a specific phone in a specific case for a specific period of time. Such an application would be supported by an affidavit showing probable cause.

4. There is one exception to this procedure which I would recommend. In any cases where treason, espionage, or subversive activity are involved, I would suggest that the Federal Government should be authorized to wiretap phones on the basis of a written authorization by the Attorney General himself, and only the Attorney General. The reason for this exception would be to maintain the maximum secrecy.

5. Any evidence procured pursuant to a warrant or written authorization by the Attorney General, which was relevant material and of substantial probative value in terms of the issues of the trial, would be admissible in evidence.

The effect of these recommendations would be to permit wiretapping by Federal authorities in serious criminal cases. This is a realistic and necessary step. Such a practice would not result in the infringement of basic rights. And to those who insist on foreseeing unutterable dangers, I can only reply in the words of Justice Frankfurter in *Federal Communications Commission* v. *Pottsville Broadcasting Co.*:

"It is always easy to conjure up extreme and even oppressive possibilities in the exertion of authority."

If my analysis up to this point has been sound, it appears to me that we cannot be satisfied alone with the above proposals. There is still the fundamental question—how to protect the right of privacy from electronic eavesdropping?

We must insure to the individual and the group the right to transact their personal and official affairs without rivals being able to intrude and eavesdrop. This can be assured only by Federal and State legislation. Indeed, I am of the opinion that as a result of the brilliant work performed by the New York State joint legislative committee to study illegal interception of communications, this State is further advanced in this type of legislation than any other State in the Union.

To insure this protection I would recommend that Federal legislation be passed which forbids any private party from either wiretapping a phone or picking up a telephone conversation by means of any electronic device without the consent of both the sender and the receiver; and, I would further recommend that a violator of this statute be subject to both Federal criminal prosecution and a civil action for damages.

In reference to State legislation, I would hope that there would be laws which forbid the use of any electronic device by private parties to pick up any conversation with intent to do injury or harm to any other party, the violator to be subject to both State criminal prosecution and a suit for damages.

Lastly, I would assume that with the above legislation any information procured by private eavesdropping would be inadmissible in any civil suit.

It is only by such legislation which is vigorously enforced that we can call a halt to the vicious practice of private electronic eavesdropping.

As you can observe, my analysis of this question causes me on the one hand to advocate liberalization of wiretapping in reference to criminal activity, and on the other hand to advocate stringent measures to protect the private citizen against electronic eavesdropping.

Conclusion

I have undertaken this analysis in order to determine in what sense our present statutes are valid, and what are the interests to be protected.

As a result of this analysis, I am convinced that the time has come for congressional and State reanalysis of this question in order that we may both protect the country from insidious elements and make more secure the citizens of our country in the enjoyment of their basic rights.

The Fallacy of Appeasement

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 23, 1958

Mr. JOHANSEN. Mr. Speaker, with so many voices of appeasement again being heard in the land, it is gratifying to have a courageous and discerning analysis of the fatal folly of this policy.

Such an analysis is given by Past National Commander Donald R. Wilson, of the American Legion, in the July 28 issue of Human Events.

Under leave to extend and revise my remarks, I include the article by Mr. Wilson:

AMERICA'S CALL TO HONOR—COMPROMISE WITH RED TYRANNY INVITES DEFEAT

(By Donald R. Wilson)

The world is caught in an atmosphere of expectancy. The hope for "peace" in the Middle Eastern tangle, says Comrade Khrushchev, lies in some kind of meeting of the world's leaders at "the summit." This new appeal is a variation on the overtures that the Communist chief has been making since last winter. His demands have goaded the leadership of the Western World into a fervent search for some way to lay the groundwork for a discussion of issues on which there is reasonable prospect of agreement.

Responsible leaders have been so preoccupied with the question of whether there can be a meeting at the summit that seemingly nobody has bothered to ask whether there should be such a meeting. We have

UNIVERSITY OF MICHIGAN LIBRARIES

frequently been told—indeed warned—that to refuse to negotiate differences with our enemy is to resolve to fight. This is a resolution that our political leadership has steadfastly refused to make with reference to the Soviet Union. But what is there to talk to the Soviet Union about?

All of the many specific prospective talking points advanced either by Russia or the United States are presumably calculated (a) to reduce international tensions, or (b) to diminish the possibility of war. Thus are justified proposals to talk about cessation of nuclear testing and production, creation of nuclear free zones, disarmament, cessation of war propaganda, strengthening of the U. N. the status of East European countries, devotion of outer space to peaceful purposes, reunification of Germany, elimination of Middle Eastern strife, etc.

It is true that if Russia and the United States could resolve all of these and many other issues to their mutual satisfaction and advantage, the world would indeed be closer to a state of peace. With or without a summit meeting, however, it must be apparent to all that these issues are not going to be so resolved.

These issues are not the real causes of international tensions. They are merely the outward signs of tensions. The true causes must be searched for and found in differences that are so fundamental for both the free world and the slave world that it is questionable that there can be room for negotiation.

These fundamental causes are rooted in the theory and practice of Soviet communism. The theory is that the non-Communist world is destined for extinction. The practice is to hasten this extinction by all means including, but not limited to, fraud, deceit, treachery, subversion and conquest without regard to human life and dignity and without regard to legal standards or values.

Our leaders keep asking the Soviet leadership to demonstrate its good faith. Unless the Soviet Union is prepared to renounce the very creed out of which it was born and by which it lives, such requests by our leadership are about as realistic as a mouse requesting a cat to give evidence of its good faith and friendly intentions before entering the well-known game of cat-and-mouse.

It may reasonably be asked how a question of such fundamental hostility can be negotiated. And if the basic issue is not resolved, if the root causes of tension are not removed, then what ultimate good is accomplished by negotiating or even reaching agreement on removing mere surface manifestations of the malignancy?

No compromise or appeasement regarding subjects such as the Middle East, disarmament, the status of Germany or Eastern Europe can possibly lead to peace while the Communists adhere to a belief in and furtherance of world dominion for the Soviets.

What reason do we have for relying on the sanctity of any agreements with the Soviets, on any subject? It is invariably admitted that we have very little other than the fact that there is always the possibility, however remote, that the Kremlin may actually honor its agreements, either by reason of "turning over a new leaf" or because the risk involved in breaking solemn agreements on crucial issues may be too great. As a clincher, the alternative to agreement is stated to be annihilation on a scale hitherto unknown.

Let us consider the argument about the Soviets' turning over a new leaf. Let us concede that anything is at least "remotely possible." Can we seriously bargain on life-or-death issues with no greater assurance than the "remote possibility" that our enemy will honor agreements made and entered into? What are the chances that the Soviets will abandon a strategy that has been winning steadily over the last generation?

What about possible Soviet unwillingness to run the risk of breaking such solemn and important agreements? The statements of our political leadership show clearly that this is a fanciful argument. When Russia announced the cessation of nuclear tests, not one of our leaders thought she was sincere. Not one of our leaders would seriously rely on the Soviet Union to keep her pledges on any disarmament agreement That's why we have had the steady insistence on an inspection system. Can our leaders believe that the Soviets would honor an agreement on the Middle East, or on Germany or East Europe?

Finally, what about the alternative to agreement—worldwide nuclear annihilation? We refuse to concede that we would take the initiative in launching such a human disaster. That leaves only the possibility that the Soviets might do so, at a time of their own choosing and on an issue of their own making. If the time should ever come when the Soviets felt they would have to resort to such a blow, it could only be because they felt the maneuver was both necessary and safe—necessary, to preserve themselves either internally or internationally, and safe because of the actual or prospective failure of retaliatory power. No mere agreement on any current issue would deter them under such circumstances. Only a major shift in their whole philosophy of life and government could protect us against such an eventuality under such circumstances.

We may be sure that the cold war will not be won at the conference table. The true issue is non-negotiable. The true issue involves the foundations of two utterly different and irreconcilable ways of life and philosophies of government. For either side seriously to compromise any of these fundamentals would be the beginning of the piecemeal destruction of its essential being.

There was a time when there was inspiration in the slogan, "Give me liberty or give me death." The issus was clear. There was no room for compromise or coexistence with tyranny. There was an unbending resolve to win. There was confidence in the triumph of right. There was no fear of death great enough to cause either a turning away from reality or a loss of belief in victory.

I cannot believe that this way of life and government of ours are only flashing meteors in the universe of man's political and personal aspirations. I believe they are stars of hope. I cannot believe that we are doomed to be eclipsed by depravity and bondage and moral and physical cowardice.

We have been victorious over the threat of tyranny before. We can be again. History teaches that peoples grow strong by responding to challenge. They grow weak only when they compromise or when they appease the challenger and avoid a determined response to the challenge.

What, then, is needed today?

First, there must be a recognition of the fact that the challenge which the Soviet Union has issued to us and the philosophy which has motivated its issuance have engaged us inevitably in a life-or-death struggle. There is no middle ground to be found and no compromise which can afford both life and victory to these antagonists. All efforts along these lines are doomed to failure. We can call this a cold war if we wish, but we must acknowledge it as a war.

Secondly, we must recognize that the threat of armed conflict is always with us so long as we continue the struggle. At one end of the spectrum of our struggle lies surrender. By surrender we could eliminate the threat of nuclear war. At the other end of the spectrum lies armed conflict. As we intensify our response to Rusisa's challenge we theoretically increase the risk of Russia's armed retaliation. As we grow more successful in the war of our different ways of life, we increase the possibility of forcing Russia to take the last desperate gamble. We must resolve to take this risk.

We must analyze Russia's strengths and sap them. Russia is not invincible—politically, economically, militarily, or ideologically. We must learn her vulnerable areas in each of these fields and exploit them to the fullest. This is precisely what Russia is trying to do to us. We keep temporizing and hoping that she will cease. While we hesitate and hope, we lose advantage after advantage. Until we plan as skillfully and effectively for the downfall of the Communists as they plan for our own, the tide of battle will continue to move against us.

Fear of open war will defeat us. Fear of failure will defeat us. Only courage, faith and inflexible responses to challenge will save us.

Why the Fight Goes On

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. ABBITT. Mr. Speaker, Virginia is now at the crossroads. We are facing a real crisis. Our actions will affect our State and Nation for generations to come. Virginians must decide in September the course they will pursue in attempting to work out the school problem which is so vital to all of us.

There are those in Virginia today who would capitulate and give up this fight for constitutional government in America and the rights and sovereignty of our State. We cannot afford to let this happen in Virginia. We cannot submit to usurpation of authority by a despotic Federal Government who has forgotten about the importance of preserving the rights and privileges of the people and the sovereignty of the States.

There appeared in the Richmond News Leader of Wednesday, July 30, 1958, an editorial which sums up the situation cogently and points out clearly the necessity that we not give up the fight. In the hope that more of the people of this country will realize the seriousness of our situation and understand why it is necessary that we make great sacrifices in a real effort to preserve our way of life and to retain the freedoms of our people and constitutional government, I desire to include with my remarks the editorial which is as follows:

WHY THE FIGHT GOES ON

Now and then, when it appears that everything has been said about school segregation that possibly could be said about school segregation, some events come along in the news and once again the necessity arises for a restatement of basic considerations.

Such a time is at hand now. A number of parents, who possibly have not pondered the problem wholly, are asking why the various Virginia localities are not permitted

to go their own way. Here in Richmond, it is termed absurd to risk the closing of Westhampton and Nathaniel Bacon Schools to prevent half a dozen Negro pupils from attending classes with a thousand white children. In the Arlington area, a few apostles of panic are protesting the possibility that even one child may lose as much as a single day from public school.

It may be useful, in view of the crisis now only a month away, to set down anew the reasons that underlie Virginia's policy of massive resistance. What is the State fighting for?

Three things:

1. To preserve a constitutional position that ought never to be voluntarily surrendered.

2. To preserve the ethnic and social structure of the South against forces that would destroy it.

3. To preserve the greatest possible educational opportunities for the greatest number of children, white and Negro alike.

Those are the State's aims. They are the only aims. But it should be understood that meeting these aims demands a great deal of the people of Virginia. We are asked to rise above those interests which are personal, concrete and immediate, and to dedicate ourselves instead to goals that, to a degree, are abstract and remote. We are asked to think earnestly upon the Constitution of the United States and the structure of the American Republic, and these are big things, hard to catch hold of. We will be asked, some of us, to accept temporary sacrifices that affect our own children, and this is hardest of all to understand.

But the fight is worth making. If Virginia quits now, we will repudiate the political heritage passed down to us, and we will leave to succeeding generations a shameful inheritance. It is no disgrace to be defeated, and in the end we may be defeated. This disgrace lies in failing to resist.

THE CONSTITUTION

The constitutional position taken by Virginia is simple, direct, unambiguous. Virginia entered the Union in 1788, at a time when she could have remained forever apart, upon certain clear understandings: This was to be a Federal Union of sovereign States, in which the States would delegate certain limited powers to the Federal Government they were creating; all other powers, apart from those prohibited to the States by the Constitution itself, were to be retained by the States individually. This structure of the Union was in no way altered by the war of 1861–65.

After the war, when the 14th amendment was forced upon the South, Northern legislators inquired what effect the amendment would have upon the maintenance by the States of racially separate schools. Proponents of the amendment agreed that the amendment was not intended to prohibit this power to the States; the power, therefore, was to be reserved to them. For a long period thereafter, pursuant to this explicit understanding of the correct meaning of the amendment, States both North and South continued to maintain segregated schools. Their power to do so was repeatedly reaffirmed by the highest State and Federal courts; this construction of the 14th amendment, directly and vitally affecting millions of people and enormous investments in school property, became in effect a part of the Constitution of the United States.

The South's position is that the Constitution may be amended in one way only: That is by the consent of not fewer than three-fourths of the States, expressed in the ratification of a specific amendment. The Constitution cannot be amended by mandate of the Supreme Court. The Court's function is to interpret the Constitution; and as the Court applies its interpretive powers to new situations, so the Court properly may shape the Constitution to changing times. But the States' power to maintain separate schools was not a new situation in May of 1954; it was an old situation, dating back to the adoption of the 14th amendment in 1868. And Virginia's position is that in the school cases, the Supreme Court usurped the amendatory power that is vested in the States alone.

Virginia's position is not limited to the school matter only. If the Court may usurp power so drastically in this instance, we have said, then, the Court may usurp power in every instance. The concept of a Federal union of States, held together by checks and balances, will be lost altogether.

If this trend is to be halted at all, it will be halted only because the States resist it—resist it dramatically, resist it steadfastly, resist it in every legal and honorable way that can be devised. If it takes a noise to arouse the rest of the country, then we must make that noise. If it requires a court fight to attract attention, then we will have to fight in court. Quiet submission to the Court's revolutionary demands would be an invitation to new judicial excesses. Stubborn and unyielding resistance, if it accomplishing nothing more, may deter the Court from fresh encroachments. This constitutional fight is of primary importance. It must not be abandoned.

THE SOCIETY

The second reason for Virginia's policy lies in subjective considerations that are most difficult for outsiders to understand—at least until they have exprienced, over a considerable time, the much mocked "southern way of life." Our entire socity is predicated on, and influenced by, the intimate coexistence of two races. This relationship has operated, until recently, upon well-understood rules—rules that were not static, rules that, in fact, were steadily undergoing change—and under these rules the Negro people were making astonishing progress. What the Supreme Court has attempted to do is not only to amend the Constitution, which it had no right to do, but to revolutionize the social structure of the South, which it has no power to do.

This is because the public schools are perceived not only as educational institutions, but as social institutions also. In rural areas, especially, the schools provide a center for all community life. Everywhere else, the two races may meet and pass—in business, in farming, in transportation, in employment. It is only in schools that both races would be thrown together, social equals, in a compulsory relationship intimate, personal, and prolonged.

The white South cannot accept the long-range prospect of such a relationship. We of Virginia know, in a hundred ways, that our distant critics cannot know, something of the differences that divide white and Negro in the South. These are ethnic differences, racial differences—differences in morals, in behavior, in language, in inhibitions, in aspirations. The South acknowledges, of course, the achievements of many Negro citizens of exceptional competence and ambition; and the South is ruefully aware of its "po' white trash." But we view the "classless society" as sheer fiction. In one way or another, all men are divided into classes. And what the South holds is that the harm done by segregating these classes in the public schools (and admittedly, there is harm done) is infinitely less than the social chaos and civil decline that would follow inexorably in the wake of massive race mixing.

We are not talking here of the consequences this year, or next year, or the year after that. These are consequences 20, 30, or 50 years hence. And Virginia has only to point to the dismal history of civilizations dominated by mixed blood to insist that such a fate must be resisted here.

THE SCHOOL SYSTEM

The least of the considerations, though it may seem the most important to distressed parents whose children are directly affected, is the aim of keeping every public school open every single day. Virginia does not need any lectures on the importance of public schools; everyone concedes the importance of public schools. But the ultimate goal is not necessarily public education, by which is meant tax-supported education in publicly owned buildings. The ultimate goal is simply education. In one fashion or another, satisfactory educational opportunities must be provided, and they must be provided for the children of both races.

Virginia's position is that the public school system, as a statewide system, can be preserved for the foreseeable future only as a racially separate system. A little integration will not preserve the system. A little integration will destroy the system. This is because integration anywhere means, inevitably, integration everywhere. And once a precedent is set, disruption follows. Talk of massive school closings. If Virginia were to accept integration in principle, in time Virginia truly would see massive school closings, county by county, city by city, in the wake of violence, bloodshed, and bitterness never known before. And instead of facing the problems of establishing a relatively few private schools, Virginians would face the problems of private education across the whole State. In the resulting atmosphere of hatred and resentment, education would be all but impossible.

It now seems likely that as a consequence of Federal court orders and unyielding State policy, some schools will not be opened in Virginia in September. That will be unfortunate, regrettable, and to the parents directly involved, damnably inconvenient. But this newspaper does not regard the immediate prospect as catastrophic. The resourcefulness of the people will not let any substantial number of children go long without some adequate educational opportunity.

Virginians have known sacrifice before, and they have met hard challenges before; they are not lacking in character or energy. We can meet the multiple emergencies of September calmly, without panic, without violence, without hysterical pleas to surrender. All that is required is that we hold to the long view, abide by the law (no law compels Virginia to operate any schools), and maintain a steadfast faith in the inherent rightness of Virginia's position.

The Goldfine Contempt Case

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. WOLVERTON. Mr. Speaker, considerable publicity has accompanied the testimony of Bernard Goldfine before the so-called oversight committee, and often referred to as the Harris committee, a subcommittee of the Committee on Interstate and Foreign Commerce of the House, of which the Honorable OREN HARRIS, of Arkansas, is chairman.

During the hearings the witness, Bernard Goldfine, had the benefit of the advice and counsel of a Mr. Sears, a

UNIVERSITY OF MICHIGAN LIBRARIES

Boston attorney, together with other attorneys, as to what questions propounded to him were within the jurisdiction of the committee. Mr. Goldfine answered frankly and fully many of the questions addressed to him. However, there were some 22 or 23 questions which he refused to answer on advice of his attorney as not being pertinent to the committee investigation.

The committee over a period of days and on several occasions sought to have Mr. Goldfine reconsider his refusal and answer the disputed questions. However, he refused to do so. In each instance he based his refusal on the advice of his counsel. Accordingly, it became necessary for the committee to consider the propriety of instituting contempt proceedings. The subcommittee and the full Committee on Interstate and Foreign Commerce thereupon, and, in accordance with established procedures, found that the questions asked of Mr. Goldfine were appropriate to the investigation and that his refusal to answer the same was not justified and as a result thereof he was in contempt of the committee which was acting as an agent of the House of Representatives.

The committee has now taken formal action and recommended that the House of Representatives take the necessary action to have Bernard Goldfine found in contempt of Congress by the appropriate Federal Court.

It is not my intention to recite in detail all that justifies the action, and, on the basis of which the House of Representatives is asked to act. Suffice it to say that a study of the resolution adopted by the House authorizing and directing the Committee on Interstate and Foreign Commerce, or subcommittee thereof, to make the investigation for the purposes set forth in the resolution, together with the testimony presented, leaves no doubt in my mind that Mr. Goldfine was wrongfully advised and that he should have answered the questions in question, and, accordingly, upon his refusal to do so he is clearly in contempt and should be held to full accountability. Failure to do so would greatly handicap all investigatory proceedings.

In connection with the above views I have expressed as to the relevancy of the questions that are the basis of the proposed contempt proceedings, it is interesting to note that in the issue of the Washington Post Times Herald, dated Thursday, July 31, 1958, appears a new article written by David Wise of the New York Herald-Tribune News Service, which I herewith include as part of these remarks. Of course, the information contained in the article has had no part in the consideration of the subject by the committee as it is not part of committee proceedings. However, it is of interest as a sidelight on the action taken by the committee. The article to which I have referred reads as follows:

LAWYER FEUD IN GOLDFINE CASE ERUPTS

(By David Wise)

On the eve of an expected contempt citation against Bernard Goldfine, his Washington attorney, Roger Robb, last night made available a sensational memorandum he sent to the industrialist's Boston lawyers on July 10 warning them not to tell the committee to go to hell.

The memo showed that Robb had warned Goldfine's attorneys almost 3 weeks ago that questions asked by House influence investigators were clearly relevant.

The document showed also that Robb disagreed with what he described as the Boston team's position that we should lightly dismiss the possibility that Goldfine would be cited for contempt.

A House subcommittee probing whether Goldfine got special treatment from Federal regulatory agencies—after they were contacted by Presidential Assistant Sherman Adams—voted Tuesday to cite the Boston textile magnate for refusal to answer 23 questions as not relevant. The parent House Interstate and Foreign Commerce Committee is expected to recommend contempt today. After that, it will go to the full House for a final vote.

Robb took the extraordinary step of releasing an internal, confidential memo prepared only for the eyes of lawyers after this reporter brought to his attention the fact that a portion of it was quoted over the weekend in the Boston Globe, together with excerpts from a blistering reply by one of Goldfine's Boston attorneys, Lawrence R. Cohen. Robb said his memo was addressed to Samuel P. Sears, who, with Cohen, comprises Goldfine's Boston legal team.

Existence of the memos for the first time revealed the substance of the smoldering feud reported between Robb and the Boston team.

Robb's memo said:

"From the beginning of our representation of Mr. Bernard Goldfine there have been fundamental differences of opinion between us and you with respect to the policy that should be followed by Mr. Goldfine in respect to questions from the committee and its counsel.

"On the one hand, it has been our position, and we have advised Mr. Goldfine, to answer all questions that he possibly could; that each question should be judged upon its merits with respect to pertinency and relevancy; that he should refuse to answer only those questions which were clearly irrelevant and beyond the scope of the committee's authority; and that, even in the case of irrelevant questions, he should answer if he could do so without damage to himself.

"On the other hand, you have argued that Mr. Goldfine should refuse to answer every question that he possibly could; that the test of irrelevancy should be applied with great strictness and that we should lightly dismiss the possibility that Mr. Goldfine would be cited for contempt.

"A fair summary of your position is your statement, which you have made several times, 'Tell the Committee to go to hell.' Notwithstanding our differences of opinion, we have done our best to work in harmony with you.

"This afternoon Mr. Goldfine, relying upon your advice, refused to answer a question which in our opinion was clearly relevant, and the answer to which could not reasonably be expected to damage him."

In answer to questions, Robb said Sears had specifically used the expression "tell the committee to go to hell" on more than one occasion in their private discussions.

He added:

"I don't think it's proper for an attorney to release documents affecting his client. Since Mr. Sears has seen fit to do so, I can say I think its the duty of a lawyer to give his client the best advice he can. That is why I sent the memo to Mr. Sears. Period."

Robb also confirmed that he received a "5- or 6-page" answering memo from Cohen in which the Boston attorney denied he used the specific expression "tell the committee to go to hell" and criticized Robb for employing public relations advisers, who Cohen said had proved more harmful to Goldfine than any charges by the subcommittee.

Robb also said that he wrote his memo after Goldfine refused to answer the first of 23 questions, for which he now faces contempt charges, dealing with the operations of two realty firms Goldfine controls, the East Bostoh Co. and the Boston Port Development Co.

Robert W. Lishman, subcommittee counsel, had asked Goldfine whether in 1946 he and his late business partner had withdrawn $20,000 apiece from Boston Port "allegedly as commissions" with supporting vouchers explaining the reason for the withdrawals.

Goldfine replied:

"I respectfully decline to answer the question because it is not pertinent or relevant to the matters which the subcommittee is investigating or about which it is authorized to inquire."

The next day, the witness declined to answer 22 more similar questions about his withdrawal of more than $100,000 from Boston Port. Lishman charged that Goldfine had "milked" the company of this amount during part of an 8-year period when he failed to file required reports with the Securities and Exchange Commission for the benefit of other stockholders in the company.

Robb's position, disclosed last night, is particularly significant since he is regarded as extremely close to the administration, which had a large political stake in the hearings because they involved the name of Adams, the Assistant to the President. It is now clear that Robb, at least, urged that Goldfine cooperate with the subcommittee.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert at this point in the RECORD the resolution unanimously adopted by the Detroit Common Council urging support of the legislation to appropriate $30 million for construction of the St. Lawrence seaway connecting channels:

Whereas the St. Lawrence seaway, after many years of effort upon the part of many, is slowly approaching a much anticipated reality; and

Whereas the St. Lawrence seaway cannot be brought to a necessary completion without the construction of the connecting channels; and

Whereas there is now pending before Congress a bill to appropriate $30 million for such construction of the connecting channels; and

Whereas any amount of appropriation smaller than the aforementioned sum would seriously hamper the progress of such construction and cause unnecessary and unwarranted delay: Now, therefore, be it

Resolved, That this common council hereby urges and requests the Honorable LOUIS G. RABAUT, acting chairman of the Public Works Appropriation Subcommittee, to give favorable consideration to this $30 million appropriation proposal and to use his good offices in expediting the enactment of it into law; and be it further

Resolved, That this common council urges and requests all of the honorable Members

of Congress, representing the people of the city of Detroit, to lend their full support to the above mentioned appropriation bill thereby insuring its prompt passage.

Adopted unanimously.

A Subject for Study: Old Age Pension Requirements

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 16, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an interesting editorial which was part of the newsletter issued by the Independent Editorial Services, Ltd., in Washington, D. C., whose editor is T. A. McInerny:

A SUBJECT FOR STUDY

When the social-security system was decided upon, the old-age pension requirements were based primarily on rent and food.

There was some talk of reducing drastically the amount pensioners would receive if they owned their own homes. It was therefore an act which could be construed as a relief measure for an industrial economy. The farmer and the self-employed were not seriously considered and they are pretty well out of the range of the act.

Twenty-five years have now passed since the act was first proposed, and as a whole it has operated very well. However, under a war economy from 1939 onward, the requirements of retired individuals have trebled and quadrupled with the trend in the economy. People are living longer and are living better. The currency has been inflated so that the dollar of the 1930's is worth only about one-third in terms of foodstuffs, one-half in terms of rent.

In the original compilations utilities such as gas and electricity were written off with the rent at absurdly low figures and were carried, as one source had it, at $2 per month each.

No account was taken of telephone or transportation.

Thus a retired couple today is not reasonably covered in the utility fields which have become necessities of daily living and not luxuries.

There are 12 million citizens who are receiving this pension currently. The average amount for the individual is $65.54 as of last May and the average per couple is $108.

The telephone and the automobile have become necessities in the United States economy. Likewise the household appliances which have jumped the use of electric power to astronomical proportions.

Take one appliance alone, the electric refrigerator. The iceman just doesn't come any more. And the household cost of running an electric refrigerator amounts to more than was originally calculated as sufficient for all utilities for pension purposes.

Without an automobile and money to operate it, most American families would be trapped in apartments or suburbs.

There just isn't transportation available in many communities. There are supermarkets and shopping centers across the Nation which are only available by automobile. After taking rent and food out of $65.54 or $108, where do the other necessities come in?

The customary, offhand, unthinking argument is that: Well, a couple should have saved enough to take care of these factors. A retirement home should have been purchased also.

Taxes during the past 15 years have sucked up United States savings. Union dues, and lack of a realistic approach to deductions for health, education, and necessities on the tax collectors' part, have caused many a retired couple to rely upon the good will of their relatives.

The Inescapable Liberation Policy

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. BENTLEY. Mr. Speaker, in these past few years the American people have been exposed to quite a number of slogans which are supposed to characterize new courses and directions in our foreign policy. According to Dr. Lev E. Dobriansky, who is a professor at Georgetown University and national chairman of the Ukrainian Congress Committee of America, despite this penchant for new slogans and forms, the American people are still confronted by the same fundamental issue which faced this Nation in 1952.

In an article entitled "The Inescapable Liberation Policy," which appears in the June issue of the Ukrainian Quarterly, Dr. Dobriansky develops this basic view in the simplest terms possible. He takes pains to demonstrate also the intrinsic flexibility of this policy by showing concretely what could be done in the course of its implementation. The writer maintains the basic conviction that the prime and fundamental area for American concentration of interest and plans is captive eastern Europe and central Asia. It is in this essential area rather than anywhere else that the global struggle of this century will be ultimately resolved.

Because of its timely thoughts and ideas on fundamental issues, I include this article on the inescapable liberation policy in the RECORD:

THE INESCAPABLE LIBERATION POLICY

(By Lev E. Dobriansky)

In this decade the American people have been exposed to a rapid succession of concepts dealing with our foreign affairs. The verbal parade has included "containment," "liberation," "peaceful liberation," "massive retaliation," "peaceful coexistence," "the Geneva spirit," "competitive coexistence," "deterrence," "evolution," and "disengagement." What the morrow will bring in verbal novelty is anyone's guess. Similar to the annual dress-fashion shows, old ideas seem to require new terms. Perhaps the title of this article should be in terms of a new policy of "expansive freedom" or something of like nature. But whatever the verbal dress, the structure of ideas would be the same. This holds true for the other so-called new concepts.

We Americans generally do not go in for rigorous conceptual analyses. The reasons for this condition are many. However, this very succession of conceptual constructs indicates that there is much confusion of thought and an inability to draw logically proper distinctions. Beyond containment and liberation the other concepts are essentially reducible to the one or the other. Careful reflection will show that the issue still is fundamentally between the continuance of containment or the projection of liberation. Yet it is amazing how few understand this. The apparent reason for this is that too many individuals don't seem to grasp the basic meaning of liberation and what it entails. To this writer the liberation policy is logical, sensible, and—assuming that we have the will to survive as an independent nation—inescapable. It is really the only alternative to either codestruction or peaceful surrender. Call it what you will, the ideas incorporated in it are nevertheless distinguishing.

Let us begin with the concrete question: "What are the prospects of liberation for the captive countries not only in eastern Europe but also in the Communist empire as a whole?" My answer to this question is in the affirmative: that the opportunities, the prospects are bright; that there are many opportunities for us if we have the knowledge, the understanding, the will, the courage, and the determination to plan for them and to seize them. Cast in the simplest possible terms, this article will attempt to conclusively justify this answer. One section will deal with the logic and reason of the liberation policy. The second section will briefly develop the history of liberation thought. And the third section will consider some concrete measures of implementation.

THE LOGIC AND REASON OF LIBERATION

Let us look first at the logic and reason of liberation. One may formulate it into some sort of syllogism. The first proposition is this: We are in a cold war with a Messianic enemy—a Messianic, dedicated, determined Russian Communist enemy. The second proposition is that war, whether cold or hot, is a situation which poses the question of victory or defeat. Then the third proposition is that as a nation, it is necessary for us, in fact we cannot but logically seek, to defeat the enemy, which also means political defeat, the political and decisive defeat of the Russian Communist enemy.

Just consider the first proposition. It really requires little elaboration. We read of it in the papers and hear it over the radio, time and time again. Individuals talk about the cold war and winning this cold war. So there is at least verbally a recognition of the fact that we are in a cold war. To support this particular proposition, it is obviously unnecessary to provide all the overwhelming evidence that easily substantiates it.

Let us take the second and third propositions. The second is that war, whether hot or cold, is something that poses victory or defeat. Being primarily concerned here with the cold war, there should be no question that victory is possible and achievable. And the third is that for survival as a nation we must logically seek victory or be ready to surrender even in a state of ignoble compromise to the enemy.

Now this third proposition certainly cannot be supported by present empirical evidence as such. Its support rests, instead, in common sense, in the ideals of freedom, and in our dedication to these ideals. Unfortunately, here in the United States we have to some extent lost that sense of patriotism. To be sure, it is explicable on numerous grounds. One need only recall that during the thirties many a professor referred to the flag as a colorful symbolic rag. This kind of negativism still manifests itself in the writings and addresses of many different individual. Nevertheless, this dedication is one

UNIVERSITY OF MICHIGAN LIBRARIES

of the very springs of our American democracy, going back to the Declaration of Independence and to our Constitution. It takes these documents seriously and inspires us to uphold the ideals of freedom. Still, much of this has been sapped and, as a consequence, we have anything within the range of the irrational excesses of a Kennan over to the insular Fortress America concept.

Knowing that this is war, albeit a cold war, if we are not dedicated to the defeat of the enemy, then it obviously follows that we are ready to compromise morally and politically. It is a compromise in the sense that we are willing to accept the status quo of slavery in a substantial part of the world. And as we develop that predicational position, we shall continue to compromise more and more. In the process we cannot but expose ourselves to perhaps ultimate defeat.

With our present position, really one that has been maintained since World War II, it seems that time clearly favors Moscow. In completing this logic of the liberation concept, let me point out that there are five factors which should be soberly considered. They constitute, in a sense, certain irreducible general abstracts.

The first factor is adequacy of arms. It can be firmly argued that it isn't necessary for Moscow to have a clear-cut superiority in all arms. For its purposes in the future, a sufficient adequacy of arms to achieve its ends is enough. At the beginning of this decade, we hid behind the fact that we had a distinct superiority in arms. We spoke effusively of physical deterrence, the great deterrence against the Russian Communist wave of the future. It plainly was a fact that we had overwhelming material and physical superiority. Now, however, since the sputniks, since the ICBM, etc., we have begun to doubt this. As a consequence, one could maintain that there is a relative decline in this power of physical deterrence. This also means that there will inevitably be, in the continuing arms race, Russian Communist superiority in many lines.

Take now the second factor in this calculus, also an asset in Moscow's position. By maintaining our present position, we, in effect, guarantee to the Russians the steady consolidation of their empire. In other words, by maintaining the narrow policy of containment, we, in effect say, "Let history do it." "Don't make any delicate decisions." "Let us see pragmatically—day by day, expediently—how things will work out, and let's shift accordingly—by all means, no long-range plans, no fixed and set objectives"; "We mustn't appear inflexible." In that case, then, we have unmistakably declared ourself. We will do nothing, nothing of serious import, to disturb the consolidating processes within this vast Russian Communist empire. As a result, we guarantee to them the consolidation of their empire so that they may become stronger and stronger.

A third point is the international conspiracy. We must not overlook this fact despite the political offensive fanning the pretensions of peace on the part of Moscow. The undercurrent of international conspiracy continues. Moscow persistently plans for sabotage when the appropriate time arrives. Without hazard one can postulate the thought that they far surpass us in this conspiratorial preparation. Widening of the network of subversion, conspiracy, and sabotage, which is a third asset, is a Russian stock in trade either in times of so-called peace or in times of war.

Now a fourth asset is the highly concentrated and very persistent political propaganda waged by Moscow. Historically, this has always been, and always will be so long as we have this kind of institutional setup in the Soviet Union. In this a typical case it is a faucet-like propaganda which many oftentimes overlook. Only 2 years ago there was a great political offensive for peace. Immediately thereafter Moscow prostituted everything that was said and done at Geneva. Now we are plunged again in another phase of summit fever. The same Moscow initiative is seen in the changing of directions. As under the Czars, sometimes it is political concentration in the East, other times in the West, then in the South. Without question, they will continue to use these traditional techniques. And again, as a result, Moscow will continue to breed confusion and debate and to sow the seeds of disunity in the United States and the free world.

A recent example of Russian propaganda flexibility even within their own empire deserves mention. This is about a truly Krokodil position in Ukraine. Issued in November right after sputnik, this Krokodil number aims to impress upon the people of Ukraine the worldwide superiority of Moscow. The periodical tries to persuade the captive Ukrainian people that they are really associated with the leaders of the future.

The fifth factor is the real advantage of the first shot which we also guarantee to Moscow. For various reasons we can't contemplate any sufficient action in terms of a preventive war. As a result, they are in a position to develop their arms and also to seize the real possibility of firing the first shot. The power of blackmail looms large here. Thus, when one considers these five factors, one cannot but arrive at the conclusion that there are two real frightening possibilities. One, it is patently within the realm of real possibility for the United States to suffer military defeat, given a peculiar complex of events and situations. But in my estimation the more important is the second. There is also the real possibility of the United States becoming in time psychologically isolated, and this, too, would mean disastrous defeat.

Obviously, no rational person would hold that a football team could possibly realize victory by constantly playing on its own side of the 50-yard line. This is precisely what the United States and free world are doing. We are playing on this side of the 50-yard line. Indeed, here is the crucial differentiating point between a policy of containment and a policy of liberation. Under the former, all the tensions are on this side of the Iron Curtain fence. In Africa, in Asia, in Europe, and here tensions are being created or aggravated, and we are led to disperse ourselves, tending to this tension today, that one tomorrow, and so on. In the meantime, as a functional correlate to our second factor above, we also guarantee that there will be no creation of disturbances or tensions within the Communist empire.

A BACKGROUND OF LIBERATION THOUGHT

Setting this crucial political distinction aside from certain moral and psychological distinctions that could also be drawn upon, we ought now to look at the background of liberation thought. In doing so, keep in mind that its main differentiating aspect is that it prepares us to carry the political offensive to the terrain of the enemy. Remember, too, that this is a cold war; that we are dedicated to freedom; and that, as a consequence, we wish to realize victory decisively by defeating the enemy.

Indeed, there is a background of thought on the liberation policy. No one can say—as do some editorial writers and people on TV and radio—that there is little, if anything, we can do about our relations to the Communist empire. On the contrary, there is a great deal of literature showing what can be done. What can be done is essentially determined by our awareness of the opportunities existing within the Russian Communist empire. Actually, such questions of skepticism and doubt usually reflect one's unfamiliarity with or ignorance of the facts, more than being the result of any painstaking absorption in the outstanding literature. Again, is there any accessible body of literature on this whole liberation matter? First, let me cite the passage of the Kersten amendment to the Mutual Security Act in August of 1951. This was the first concrete measure designed to produce our political offensive about 7 years ago—or 5 years before Hungary.

Briefly, what is the Kersten amendment? It means simply three things. Remember, it was during this time that many escapees were coming through the Iron Curtain. There was a great opportunity to have many more. Thus the first provision of the Kersten amendment was and is to attract escapees from behind the Iron Curtain. The second is to quickly rehabilitate these escapees and to form them into military units. In the amendment, the aim is to have, for example, several thousand Poles from behind the Iron Curtain, even those in England, Germany, Italy, Lebanon and elsewhere, forming military national battalions with their own commanders, their own insignia, own flag; in other words, constituting in western Europe, or Turkey, or elsewhere, the brilliant symbol of Polish freedom and liberty. The same is to be applied to Russian, Ukrainian, Slovak, and numerous other national units.

Not only are there to be these national military units, but the amendment's third provision also calls for the support of the existing undergrounds. There were and are a number of them. In Slovakia, Ukraine, Poland and elsewhere political undergrounds have existed. The amendment seeks to employ them as the means of conveying our political offensive.

In many quarters the Kersten amendment received very serious consideration. Significantly, when the United Nations Assembly convened in Paris in December 1951, right down to the end of that Assembly at the end of January, about three-quarters of the sessions were devoted to the Kerstein amendment. By this amendment Mr. Kersten himself was able to strike a highly sensitive note in Moscow. They were extremely sensitive to it. Mr. Vishinsky attacked it incessantly in Paris. And Mr. Truman found it necessary at the time to send Congressman MANSFIELD in order to explain that we had no intention of really interferring, mind you, in these captive nations.

There were some official and private criticisms of the amendment, to be sure. However, none of them stood up to the logical test and the general consensus was clearly in favor of the amendment's implementation. Why it has not been implemented is still a deep mystery. The Kersten idea continued, and there is much more to it. It was significant that at the beginning of 1957, immediately after the Hungarian crisis, Senator RUSSELL revived the idea and thought that the Armed Services Committee would sponsor it.

Now a second item in this background emerged before the Dulles liberation article appeared in Life magazine in May 1952. In the Republican national committee, as early as 1951, preparations were being made to advance the whole concept and idea of national liberation. During the Republican convention and the subsequent campaign this whole idea was presented to the country. One significant incident should be cited. It took place at the beginning of October in New York when Mr. Harriman met with Mr. Dulles on a TV show. Probably well primed by the Democratic national committee, Harriman challenged Dulles or any Republican to show where or when Mr. Acheson or Mr. Truman ever used the term "containment." This meant that by that time even the Democratic Party was disowning the very thought, or at least the wording of the policy of containment.

In 1956 the same thing was repeated. Witness this statement by President Eisenhower, "the peaceful liberation of the cap-

tive peoples has been, and will continue to be a goal of United States foreign policy." And again much material and several hundreds of thousands of pamphlets were circulated throughout the country. In a more formal way Prof. James Burnham systematically gave expression to this policy of liberation in his work on Containment or Liberation? In a sense you can say his work is the liberationist's bible. In May 1955 General Sarnoff felt that it was necessary to convince many in this country of the urgency of the Russian threat and presented a memorandum to President Eisenhower in which he likewise gives detailed expression to the liberation policy. In 1956 Senator DOUGLAS, of Illinois, took steps in the Senate to propose a freedom administration on the basis of a two-level concept. Moscow operates on two levels, the Communist Party with its subversive network and the conventional diplomatic level. Why can't we have a freedom administration, subverting, if you will, for freedom, with the other parts of Government remaining on the conventional level? This constitutes, in brief, the background of liberationist thought.

The logic of liberation teaches that the best way to prevent a hot war is to win a cold war. We hear of peaceful coexistence; we hear of Allen Dulles' naive notion of evolution. These are verbal variants of containment. Let it be emphasized that the liberation policy does not theoretically reject the concept of containment. On the contrary, it is necessarily founded on containment. Certainly we have to contain the forces of Russian expansion, but we also have to go beyond this in creating pressures and tensions behind the Iron Curtain and throughout the Russian Communist Empire. Our situation is as simple as this.

FLEXIBLE LINES OF IMPLEMENTATION

If we can indicate the flexible lines of implementation of the liberation policy, briefly show what could be done, perhaps the perennial question as to our ability to do something will in some degree be answered. First, by all means we should appreciate the nature of the enemy confronting us. This timely picture more than justifies the old, patriotic Chinese proverb that one picture is worth ten thousand words. In the middle you have a typically squat five by five Russian master, characteristically gripping his holster. This was taken in a street in Hungary during the 1956 revolution. It vividly typifies the enemy before us. What can we do? This question has been raised time and time again. In itself it indicates that we have not been acquainted with the growing literature on liberation to see what could possibly be done. Certain concrete measures of action have been advocated for years.

The first thing necessary is a general, comprehensive national policy. What do we want? What are our objectives? They have to be clearly stated and realistically well founded. Many have submitted that liberation, independence, and federation is the policy formula. A universalized Declaration of Independence would strongly reflect the general objectives of the United States in consonance with its institutions and its long-run national security interests.

The second urgent step is the creation of a Freedom Administration. This is what Senator DOUGLAS has proposed, an Administration that would exemplify the two-level concept. The Administration would not be affiliated with any existing power of the Government. However, it would be directly under the supervision and direction of the President. It could use counterpart funds, the $100 million appropriated in the Kersten amendment, and other sources. National freedom committees here and abroad would be in its network.

Furthermore, we must have guideposts of action. If we take the cold war seriously, the first of these is a moral commitment to all of the captive nations. Such a commitment means the certainty of liberation for all captive nations, including those in the U. S. S. R. Fundamentally crucial to all of our present issues and problems is eastern Europe. This is so because there is the very basis of the strength and power of the enemy. Instead of neglecting this basic area by being absorbed in what goes on in the fringe areas of Indonesia and parts of Asia and Africa, we should begin to concentrate on the enemy, find his weak spots, and begin to magnify and deepen these weak spots. As shown on this map, this can only mean the liberation and independence of all the captive non-Russian nations, both within and outside the U. S. S. R.

Our problem is in a real sense their problem for the basic reason that they have already been conquered. They are submerged as nations. This is, after all, our primary concern. We naturally fear being submerged as a nation. To prevent this tragedy, surely, should be the overriding passion of every American.

With regard to the Russian masses, for them it is not a matter of conserving and preserving their national unity. There hasn't been on record any genocide against the Russian nation. It hasn't been, as a national unit, submerged. Moscow is the capital of Russia, and the problem there is, and has for a long time been, one of liberation in terms of civil and personal political freedoms. We have to keep alive throughout the Communist empire the spirit of resistance, the hope of freedom, and the fiery spirit of nationalism. Also, we should have no qualms whatsoever about hailing freedom as the wave of the future, instead of permitting colonial and imperialist Russian communism to assume this role. In pursuing all this, we would have to sharpen by every device Moscow's fear of its own captives. This is another salient point in the policy of liberation. One of the greatest deterrents against a hot war is Moscow's own fear of its captive millions. And this is what we should support, broaden, and magnify.

Let us view now some examples of specific operations. For reasons of space the list has to be restricted at least alphabetically, going from "A" to "Z." The first was already mentioned—a full implementation of the Kersten amendment to the Mutual Security Act. Second, moral and material aid to opposition and resistance groups behind the Iron Curtain. We talk a great deal about giving them time to develop. Yet when Kersten presented a rough draft of what could be done in carrying on a political offensive, his opponents cried out, "Ah, but you can't do it." They preclude the possibility of a guided evolution in the unfolding of our liberation policy. If you will note the various other operations which can be effected: Passive resistance, for instance, has been found to be very effective in many areas, especially in several closed non-Russian areas within the U. S. S. R. Progressive infiltration of the armed forces of the U. S. S. R., particularly into its 43 percent non-Russian composition, has always borne great potentiality. One of the most glaring misconceptions is to equate the nature of these forces with that of the United States or any other true national entity.

During the Hungarian revolution, it was quite significant that several hundreds of officers and men deserted the U. S. S. R. Army. Testifying before the Senate Internal Security Subcommittee, one of the first Hungarian revolutionaries to appear in this country took pains to point out that these deserters were not Russians. They were Ukrainians, Byelorussians, and other non-Russians who deserted and joined the Hungarian freedom fighters.

With regard to mass communication, mobile broadcasting facilities about the Communist empire and special messages to respective nations and people will have to take prudent account of each targeted area. Aiding in this endeavor would be a Voice of America for liberation, independence, and justice. Mass-production achievements of various sorts, lightweight receivers, hand-operated photographic devices, literally millions of such instruments can be funneled into the empire.

Then there is the use of the facilities of friendly countries. One can be certain that not one of them would hesitate to aid us in this type of political offensive. Impressed by positive American leadership, the free Chinese, Koreans, Pakistani, Turks, and others would collaborate. This would have to be a sustained day-to-day offensive; not a thing to be won one day and then forgotten about until a week or a month later, but rather a persistent campaign against the enemy. And it can be used in vast, multiple ways.

Now, certainly, at this given time it would be unfeasible to embark upon one or two of these proposals. In the present climate it would be better to concentrate on a diplomatic political offensive and on economic warfare. With a change in climate new activity would be initiated with adequate preparation for follow-ups, such as the dislodgement of Albania from the empire. With changes in climate and organized, dedicated effort, there are many things that could be done, and with maximum flexibility and initiative. The main thing to bear in mind is that by just sitting and maintaining a policy of mere containment, we are allowing the enemy to build himself up militarily, psychologically, politically. It has been truly said that we can freeze to death as well as burn to death.

WHAT COULD BE DONE

1. General comprehensive policy: Liberation, independence, federation.

(a) A universalized declaration of independence.

2. A freedom administration: Unify political warfare conduct, overcome piecemeal efforts.

(a) Not affiliated with any existing part of Government.

(b) Under general direction and supervision of President.

(c) Funds: counterpart, MSA $100 million; appropriations.

(d) National freedom committees here and abroad.

3. Guideposts of action:

(a) Moral commitment: certainty of liberation of all nations, including those in U. S. S. R.

(1) Liberation, independence for all captive non-Russian nations in the entire Moscow-centered Communist empire.

(2) Civil and political freedoms for the unvested Russian masses.

(3) Keep alive throughout Communist empire spirit of resistance and hope of freedom and national independence.

(a) Break awful sense of isolation in which internal enemies of Moscow live.

(4) Support spirit of nationalism inside and outside U. S. S. R.

(b) Shatter wave of future aura of Russian communism.

(1) Instead, certain defeat of Moscow and complete victory of freedom.

(c) Inspire millions in free countries with feeling of moral dedication to enlargement of area of freedom.

(d) Sharpen by every device Moscow's fear of own captives.

4. Examples of operations:

(a) Full implementation of Kersten amendment to MSA.

UNIVERSITY OF MICHIGAN LIBRARIES

(1) Attraction of escapees; rehabilitation; national battalions; underground support.

(b) Moral and material aid, including trained leadership, to oppositions, resistance groups.

(c) Broadening of organized resistance—eventual cacophony of protests, riots, and then a symphony of revolts.

(d) Encouragement of passive resistance in every sphere of society.

(e) Infiltrations into chief areas—armed forces of U. S. S. R., national republic administrations, "satellite" administrations, etc.

(1) No means of communication overlooked: spoken and written word, radio and TV, films, balloons, missiles to distribute leaflets, secret printing and mimeographing presses on enemy terrain, wall scrawls, etc.

(g) Fixed and mobile broadcasting facilities about Communist empire. From each area:

(1) Far East: special messages to Siberyaks, non-Russians.

(2) Middle East: special messages to Turkestani, Caucasians, Ukrainians.

(3) Western Europe: special messages to Russians, Balts, Ukrainians, Poles, Slovaks, etc.

(h) Voice of America: For liberation, independence, justice.

(1) Appeal to universal emotions—love of family, country, God, humanity.

(i) Mass production of cheap and lightweight receivers.

(j) Production of hand-operated phonograph devices for millions in empire.

(k) Use of facilities of friendly countries—South Korea, Nationalist China, Philippines, Pakistan, Turkey, Italy, Spain.

(1) Training of Chinese, Koreans, etc., in political warfare.

(l) Make maximum use of fugitives from empire.

(m) Offset redefection operations of Moscow.

(n) Publicize names of former democratic leaders now in Communist jails, etc., for world to know their fate.

(o) Expand existing programs of correspondence—liberation stamps, etc.

(p) Indictment and condemnation in absentia persons guilty of Communist crimes—broadcast.

(q) Systematic execution of sabotage, assassination, confidence and bribery programs.

(r) Proposals, demands, exposés, publication of official documents carefully calculated to show true motives of Kremlin.

(s) Day-to-day and sustained publicity on Russian Communist genocide, slave labor, Hungary, etc., in U. N. and elsewhere.

(t) Utilization of labor unions, churches, veteran groups,,universities, etc.

(u) Cultural exchanges with political objective attunement.

(v) Diplomatic political offensive; e. g. American Ambassadors to non-Russian countries in U. S. S. R.; withdrawal of all, etc.

(w) Selected projects—reunify Korea, reunify Germany, etc.

(x) Economic warfare in empire—e. g. offers of surpluses to people via neutral channels.

(y) U. N. activity—continuous pressure on U. S. S. R., Ukraine, Byelorussia, "satellites."

(z) With adequate preparation for followups, dislodge Albania from empire.

These are only the guidelines. Each operation suggests a program in itself, providing endless opportunities for imagination, innovation, and cunning. Above all, they once and for all answer the question, "What could be done?"

Switzerland: A Land of Liberty and Fraternity

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 29, 1958

Mr. MULTER. Mr. Speaker, August 1 marks the anniversary of the first recorded act of the union of Swiss communities.

Switzerland's independence day is an occasion which deserves the attention and the congratulations of the United States. The anniversary of the founding of the Swiss Confederation is both a reminder of our sympathetic attachment to this brave country of the Alps and an inspiration to promote the values and characteristics which the Swiss have, throughout their history, perpetuated.

Their history is, indeed, a long one. The day we celebrate, August 1, carries us back nearly 700 years. On August 1, 1291, the men of Uri, Schwyz, and Lower Unterwalden entered into a defensive league. Three of the twenty-two cantons that make up Switzerland today bear the same names. The qualities which generated this union have been characteristic of the Swiss down through the centuries: independence, courage, mutual support.

Independence on a national level, on a community level, on a personal level is practiced in Switzerland as in few other places in the world. The other countries of Europe have respected the independence of the Swiss nation not only because it suits the self-interest of surrounding rival factions; not only because nature has erected almost insuperable barriers to invasion, but also they respect this island of neutrality because of its eminent self-respect. They know that special opprobrium would fall on the head of one that violated its stanchly defended frontiers, this natural fortress of freedom.

They honor, too, in recent years, the seat of international understanding. Geneva, the home of the League of Nations, the cornerstone of the International Labor Office, the site of the World Health Organization, and of various other monuments of worldwide cooperation, was, characteristically, the birthplace of that great humanitarian organization, the International Red Cross. Significantly, the flag of this organization is simply the reverse of the Swiss flag.

Where but in a country of independence, a country with freedom of speech, freedom of the press, freedom for the individual—where else could such international establishments spring up and flourish? Where else, too, could individuals fleeing oppression of mind or body find such a refuge and a home?

The world looks upon Switzerland as a haven for the escaped, the abandoned, the sick, the lost, the bewildered. It sees there too a host for the happy. Tourist, vacationer, son of intellectual freedom, seeker of spiritual uplift basks together with the weary in Switzerland's clean, clear atmosphere. He enjoys there the protection exemplified for us in our youth by the rescuing St. Bernard dog; the freedom we learned about from the happy, liberty-loving Heide; the independence that calls to us in the stirring strains of Rossini's William Tell. The very name of Switzerland has pleasant connotations. This is a nation which enjoys the utmost respect on an international scale. It merits the love of the world for its freedom-loving and humanitarian principles.

We in America take pride in a bond of kinship with this land of liberty and fraternity.

Art in Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article which appeared in the July 25, 1958, edition of the Roseburg, Oreg., News-Review:

ARTISTS, ARTWORK RISE SUBSTANTIALLY IN OREGON

(By Matt Kramer)

A solitary figure appeared on a dock at Astoria and began sketching the waterfront. Another was on a coastal headland, sketch pad in hand, and still another beside a highway in southern Oregon.

Gradually they appeared at places where none ever before had been noticed—beside airports, in rail yards and even on city streets.

By this time Oregon artists knew something was up, and the public should have suspected it, too.

But the artists said nothing, and, since they are not known for their reticence, it is probable they did not realize themselves how big the boom was in Oregon art.

Artists are not much given to keeping statistics anyway, and often seem able to pursue their work only in isolation, which sometimes is a place behind a clump of brush and sometimes is a state of mind.

EVERYTHING MEASURED

It is disturbing to minds other than artists, but in this age nearly everything can be measured—land by surveyors, health by insurance companies, and art by supply houses.

It isn't easy, however, to get the measurement of art in Oregon, for artists also have infiltrated behind sales counters. With their minds fixed firmly on other matters, they are vague about statistics.

"Sales of art supplies are up, all right. Maybe 10—no, maybe 30 or 40 percent in recent years. But there is no easy way for me to determine exactly how much," said one sales head, who instructs art classes in Portland at night.

It was the same story at another Portland supply house, where the increase was estimated at perhaps 50 percent in recent years.

But measurements creep in everywhere and a businessman knew how much the sale of art supplies had gone up in the last decade at the State's largest art supply house, Gill's in Portland:

Nine hundred percent.

TEN TO ONE RATIO

That means 10 artists behind the bush that used to hide one. No wonder they are beginning to push each other into the open.

Most of the new ones are Sunday artists, who have multiplied as income and leasure time have increased since World War II.

It is the Sunday artist you will find on the coast, squinting at a landscape and drawing lines on a canvas he later will entitle, "Vichysoisse."

But you also will find him, along with the full-time artist, at the art centers that have sprung up in Oregon communities, the Portland Art Museum, the State fair, and even the Portland rose festival.

The Oregon Society of Artists is an example of the increase in recent years. The society started with 15 members and no money in 1926. At first growth was slow. Then came the postwar boom. Four years ago the society acquired its present headquarters—a sleek building in Portland's West Hills. Today it has 660 members, 110 of them upstate.

CLASSES AND LECTURE

It offers classes and lectures for the amateur and the professional. It is one of the principal headquarters of the Sunday artist.

Art groups have bobbed up all over the State. To name a few of them: The art League of Grants Pass, the Coos Artists League, the Coquille Valley Art Association, Corvallis Arts Guild, Salem Art Association, Inc., Snake River Valley Art Association, Eugene Art Center, Lincoln County Art Center, Yaquina Art Association, and the Sage Brushers.

There are thriving art programs at Oregon State College, the University of Oregon and other colleges, but the biggest art center in the State is, as might be expected, in Portland.

It is the Portland Art Museum, which was the first art museum established in the Pacific Northwest. That was in 1892. It nearly went under in the depression, and the museum had to appeal to the public for $5,000 to save it.

Now the museum, occupying a square block beside the South Park blocks in downtown Portland, is on safer ground. It has nearly doubled its membership since World War II, to a total of about 2,000.

It is operated by the Portland Art Association, which holds to the purpose announced by the founders in 1892, "to make a collection of works of art and to erect and maintain a suitable building in which the same may be studied and exhibited; to develop and to encourage the study of art * * *."

MANY STUDYING ART

Some 85 persons study art in day classes and 300 in evening classes there. In addition, 1,200 persons visit the museum weekly. The building, located at SW. Park and Madison, is closed only on Monday. Wednesday it is open from noon until 10 p. m., and from noon to 5 p. m. on the other days.

Besides the extensive collection of paintings, statuary, and other objects the museum puts on display, the museum has been showing increasing interest in Oregon art.

Max W. Sullivan, director, estimates the museum singles out an Oregon artist for a one-man show on 4 or 5 occasions a year. In between, there are exhibitions of Oregon sculptors, print makers, and painters.

The next will be for painters and sculptors, October 18 to November 16.

Entries come from many unknowns. A panel of judges selects those considered worthy of exhibit. The aim is to reward talent with recognition, not to discourage it. Some years up to 75 percent of the entries reach the exhibit floor.

An example: An ex-shipyard worker took a line of poetry for his theme and with welding torch, a few pieces of metal, and 5-foot length of bamboo put together a piece that won recognition.

Not all Oregon art is so ingenious, but give it time. At the rate it is growing, it will capture half the population—and hence half the State's ingenuity—in the next few years.

Bishop Dagwell, Portland's First Citizen

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1958

Mrs. GREEN of Oregon. Mr. Speaker, a short time ago, there came across my desk a booklet two-hundred-odd pages in length, mysteriously entitled "Twenty and Five-tenths Percent: A Compilation of Public Records—1,411 Protestant Episcopal Rectors," published by a so-called publishing committee, giving as its address a post office box in Cincinnati, Ohio.

Listed inside the booklet were the names of many persons. Below the name of each person was set forth the names of various organizations and descriptions of public statements with which the individual had allegedly been affiliated.

No statement of purpose is contained in the booklet. All is left to innuendo, smear, and implied accusation that somehow the individual's connections with these organizations were inimical to the security of the United States.

These smear tactics, employing the well-known and equally well-discredited tactics of "guilt by association" should be roundly condemned.

Listed in the booklet was the name of a man whom I have known and respected for a long time. He is the bishop of the Episcopal Diocese of Oregon—a man loved and revered throughout my State—a man who has labored long and hard for causes which would be of maximum benefit to the people. His loyalty to his country has ever been beyond question.

The bishop of the Episcopal Diocese of Oregon does not need me to rise to his defense. He needs no defense. His life and his works speak eloquently of his character, his integrity, and his love of country.

When, in February 1957, the Right Rev. Benjamin Dunlap Dagwell, bishop of the Episcopal Diocese of Oregon, was awarded the B'nai B'rith brotherhood award, Rabbi Julius Nodel, of Portland, Oreg., had this to say to him:

No person in this community is better deserving of this award. Bishop Dagwell has literally practiced what he preached and never has limited his services to the sanctuary confines.

Last January 15, the Portland Realty Board of Portland, Oreg., honored Bishop Dagwell as Portland's "first citizen for 1957." The report of the realty board's committee, which selected Bishop Dagwell for this very much deserved award, is a testimonial to a man whose life has been dedicated to the good of his fellow man and whose deeds are eloquent tribute to a man whom all Oregonians honor, respect, and admire.

Vague innuendoes and smear tactics will not detract from the good which Bishop Dagwell's deeds have wrought in strengthening Oregon and the Nation.

Under unanimous consent, I include the report of the realty board's committee which selected Bishop Dagwell as Portland's first citizen for 1957 in full in the CONGRESSIONAL RECORD:

THIRTY-SECOND ANNUAL FIRST CITIZEN BANQUET HONORING THE RIGHT REVEREND BENJAMIN D. DAGWELL, D. D., PORTLAND'S FIRST CITIZEN FOR 1957

Sponsored by Portland Realty Board, Portland, Oreg.

1957 officers: A. A. Horsfeldt, president; Richard H. Lucke, first vice president; Stanley C. Wiley, second vice president; Charles K. Cummings, third vice president; Margaret Twerdal, secretary; Kenneth Murfree, treasurer.

1958 officers: Richard H. Lucke, president; Vance M. Sayles, first vice president; John G. Clarke, second vice president; Margaret Twerdal, third vice president; Ken Evans, secretary; Waldemar Spliid, treasurer.

Banquet committee: Charles K. Cummings, chairman; Lem P. Putnam; E. A. Jensen; Carolyn Bowles; Lamar Newkirk; R. J. Frank, Jr.; Ken Evans, Oscar Pederson; John L. Denny; Taylor Treece.

Portland's first citizens: Ben Selling, 1928; J. C. Ainsworth, 1929; Aaron M. Frank, 1930; Henry B. VanDuzer, 1931; Raymond B. Wilcox, 1932; George L. Baker, 1933; Hopkin Jenkins, 1934; Edward C. Sammons, 1935; Arthur L. Fields, 1936; Richard B. Dillehunt, M. D., 1937; Franklin T. Griffith, 1938; Charles H. Martin, 1939; Ross McIntyre, 1940; Mrs. Thomas D. Honeyman, 1941; Edgar F. Kaiser, 1942; Portland's Service Men and Women, 1943; Mrs. C. S. Jackson, 1944; Theodore R. Gamble, 1945; Chester A. Moores, 1946; Sid Woodbury, 1947; Hillman Lueddemann, 1948; Thomas Harry Banfield, 1949; David B. Simpson, 1950; Frank Erwin McCaslin, 1951; Edgar William Smith, 1952; C. B. Stephenson, 1953; Ben H. Hazen, 1954; Dr. Morgan S. Odell, 1955; Harold F. Wendel, 1956.

MENU

Crab legs and avocado supreme; iced relishes; barbecued sirloin steak; Rissole potatoes; French green beans amandine; hot Cafe Baron rolls; Napolean slice; coffee.

PROGRAM

A. A. Horsfeldt, presiding.
Hillman Lueddemann, toastmaster.
National anthem.
Invocation: The Right Reverend James W. F. Carman, D. D.
The Oswego Four.
Introduction of guests.
Presentation of former first citizens and welcome to the Right Reverend Benjamin D. Dagwell, D. D.
Felicitations: Charles A. Hart; the Reverend Lansing E. Kempton, D. D.; Dr. Blair Holcomb; Rabbi Julius Nodel.
Presentation of plaque to first citizen: The Right Reverend Benjamin D. Dagwell, D. D., by A. A. Horsfeldt.
Response: The Right Reverend Benjamin D. Dagwell, D. D.
Dinner music: Glenn Shelley at the organ.

UNIVERSITY OF MICHIGAN LIBRARIES

Oswego Four: Mark Beach, John VanLeeuwen, Lou Lavachek, Ted Corbett.

After several sessions where a considerable list of worthy names were considered, the seven members appointed to serve on the Portland Realty Board's secret committee voted unanimously, on the first formal ballot taken, to designate as Portland's first citizen of the year 1957, the Right Reverend Benjamin Dunlap Dagwell, who will retire next July after 22 years of distinguished service as Bishop of the Episcopal Diocese of Oregon.

This is the second award bestowed this year on Bishop Dagwell, he, in both instances, being the first cleric ever so honored in Portland.

Because of his outstanding record in the field of inter-faith work and for "his active influence and courage in making real the religious idea of the fatherhood of God and the brotherhood of man," Bishop Dagwell was last February declared winner of the annual B'nai B'rith Brotherhood award.

"No person in this community is better deserving of this award," said Rabbi Julius Nodel in conferring the honor. "Bishop Dagwell has literally practiced what he preached and never has limited his services to the sanctuary confines."

The clipping files of Portland's newspapers are bulging with accounts of Bishop Dagwell's long running fight for fair employment practices, better housing, civil rights and civic responsibiliites. His has truly been a voice of wisdom and human understanding in the community.

Bishop Dagwell has been referred to as the editor's dream who makes good newspaper copy by taking the "sacred cow" of public opinion and swinging it by the tail. The newspaper index file in the Portland Public Library contains 31 cards referring to interesting articles relating to Bishop Dagwell and his activities.

Known as the breaker of precedents, Benjamin Dagwell began his career in Portland by ignoring the custom that a new bishop should be consecrated in the field in which he had worked, being the first bishop in the history of the Oregon Diocese to take the solemn vows in Oregon. In explaining why he desired to part from the tradition established by his four predecessors, Bishop-elect Dagwell said, "I want to be in the presence of those with whom I am to labor when I take my vows and receive episcopal authority."

In 1940 while addressing the 52d annual diocesan convention, Bishop Dagwell again proved that he is not a man to let tradition stand in his way by advocating a streamlining of church services, contending that the sermons and prayers dragged out and were too long.

While he must soon retire from his official post in the church, Bishop Dagwell will not be lost to Portland. Last year a group of his admirers and friends formed a charitable organization to be known as the Benjamin Dagwell Foundation which was launched with contributions totaling $30,000. As additional sums accumulate in the foundation, funds may be used for a wide range of charitable, social, welfare, health (including mental health) or educational purposes. Knowing that Bishop Dagwell has been responsible for many acts of kindness and charity, the foundation was formed to honor him, and he has agreed to remain in Portland after his retirement, on his 68th birthday, to serve as administrator of the foundation.

Benjamin Dunlap Dagwell was born in Susquehanna, Pa., July 21, 1890. His parents being of modest means, he lived as a boy in a humble home in Cincinnati at a time when his lifetime friend and adviser, Rev. Paul Matthews, later to be bishop of New Jersey, was dean of the Cincinnati Cathedral. At the age of 14 years Benjamin Dagwell went to work, and, when his father died 3 years later, he became responsible for the support of his mother. For a time he had a responsible position with Standard Oil Co., but he gave up what seemed to promise a successful business career and returned to school in order to prepare for the ministry, his principal motive being a desire to work with young people, especially boys and young men.

Following attendance at the University of Cincinnati in 1912 and 1913, young Dagwell attended Seabury Divinity School where he was later, in 1932, awarded a D. D. degree, and took postgraduate work at the General Theological Seminary. He was ordained a deacon in 1916 and ordained a priest in the Protestant Episcopal Church in 1917.

Between the years 1917 and 1920 he served as rector in New Jersey and after 4 years' service in Pueblo, Colo., was in 1924 elected dean and rector of St. Johns Cathedral in Denver, Colo., where he remained for 12 years prior to his election as Episcopal bishop of the diocese of Oregon.

After his election to the bishopric he acted as rector of Trinity Church until the election of Rev. Lansing E. Kempton in April 1937. He was consecrated bishop by his lifelong friend, Bishop Matthews, who had encouraged him to enter the ministry, prepared him for confirmation, and also ordained him as deacon and priest.

When Bishop Dagwell was consecrated in Trinity Church, Portland, the diocese was at a low ebb, having 17 active clergy with 12 parishes and 8 missions. It now has 71 active clergy and 28 parishes and 40 missions. At that time pressure was being exerted by eastern church officials to combine this diocese with its eastern counterpart, the missionary district of eastern Oregon. After two decades under Bishop Dagwell's leadership a second bishop was required, and the Right Reverend James W. F. Carman was called from Phoenix, Ariz., to be consecreated as bishop coadjutor until Bishop Dagwell's retirement next July.

In the meantime, the communicant membership had more than trebled, and at the time of Bishop Carman's arrival in Portland there were 61 parishes and missions in the diocese with 27,000 baptized persons and 19,500 communicants. The diocese extends from the Columbia River to the California line and from the Pacific Ocean to the summit of the Cascade Mountains.

When Benjamin Dagwell became bishop, he said he did not intend to occupy the swivel chair in his office very much of the time and remarked that, being unmarried and not tied down with duties at home, it was his desire to travel over the diocese as extensively as possible in the hope that he might know every man, woman, and child in the diocese as a family. Recently it was reported that in 4 months' time he had traveled 12,000 miles, 2,200 by ship, 4,500 by air, and the rest by automobile, driving much of this distance himself. During that time he visited 61 churches, some of them several times, and confirmed 750 persons at 57 services. Bishop Dagwell has been especially effective in persuading a number of local churchmen to enter seminaries and holy orders and has helped many young seminarians through school.

In addition to his work over the diocese, Bishop Dagwell has served as president of the board of the Good Samaritan Hospital which has been greatly expanded and modernized under his leadership, as president of the board of St. Helen's Hall, the Good Samaritan Hospital in Corvallis and the Rogue River Valley Hospital in Medford. For 7 years Bishop Dagwell served on the National Council of Protestant Episcopal Churches.

For a number of years Bishop Dagwell served as chairman of the Portland Housing Code Commission, a responsibility he accepted because, he said, "I am interested in how my fellow man lives." He has also served as chairman of the Fair Practices Committee. Here in Portland our First Citizen has served on a number of boards and directorates including Reed College, Goodwill Industries, Oregon Tuberculosis Association, Portland Remedial Loan Association, Portland Council of Churches, Portland Chamber of Commerce and has served as a member of the Board of Overseers of Whitman College, and as a director of the Deaconess Training School in Berkeley, Calif.

He has served on the governing board of Willamette View Manor, which is sponsored by the Methodist Church, and has worked earnestly and effectively in the organization campaign for the Rogue Valley Manor, a 284-apartment structure to be erected in Medford as a Christian home for people of moderate means under the sponsorship of the Presbyterian, Methodist, and Episcopal Churches of Oregon. Bishop Dagwell is a member of the Newcomen Society and chaplain of the Oregon chapter of that distinguished organization.

In referring to Bishop Dagwell at the service commemorating the 10th anniversary of his consecration, the late Bishop Matthews said, "Without ever losing his characteristic quality as primarily a religious leader, Bishop Dagwell has nevertheless exercised his unusual gifts, mental, moral and spiritual, in matters of public concern. He is a Christian gentleman with never the breath of suspicion that he is a self-seeker in the tempting field of personal aggrandizement or publicity. He is indeed a leading citizen."

Though a man of great courage and deep convictions, Bishop Dagwell is essentially a quiet, gentle man with a shy, engaging smile and a delightful sense of humor. He is a capable leader and a highly efficient administrator, but even when he is busily engaged in handling a difficult problem, he can cheerfully endure an interruption and flash a twinkle in his eye as he grants some simple personal favor. Whenever he is called, be it at any hour of the day or night, he always responds promptly and graciously.

Such are but a few of the admirable personal traits of the modest yet eminent church leader who is loved throughout the west—Benjamin Dunlap Dagwell, whom we are proud to salute and acclaim as Portland's first citizen for the year 1957.

Evidence of their admiration for Rt. Rev. Benjamine D. Dagwell and their appreciation of his many civic achievements is expressed by the attendance of the following friends and associates:

Speaker's table: the Right Reverend Benjamin D. Dagwell, D. D.; Mr. and Mrs. Hillman Lueddemann; Mr. and Mrs. A. A. Horsfeldt; the Right Reverend James W. F. and Mrs. Carman; Mr. Charles A. Hart; the Reverend Lansing E. Kempton; Dr. and Mrs. Blair Holcomb; Rabbi and Mrs. Julius Nodel.

Past first citizens, tables 23–24: Mr. and Mrs. Aaron M. Frank, Mr. and Mrs. Edward C. Sammons, Mr. and Mrs. Arthur L. Fields, Mrs. Thomas D. Honeyman, Mr. Thomas H. Hindman, Mr. and Mrs. Chester A. Moores, Mr. and Mrs. Sid Woodbury, Mr. David B. Simpson, Mr. and Mrs. Frank E. McCaslin, Mr. and Mrs. Edgar W. Smith, Mr. and Mrs. Ben H. Hazen, Mr. and Mrs. Harold F. Wendell, Mr. and Mrs. C. B. Stephenson.

Table 10: Mr. Curtis J. Shady, Miss Willafred Dixon, Dr. and Mrs. Martin Howard, Mr. and Mrs. Clarence D. Phillips, Mr. and Mrs. Thaddeus B. Brunc, Col. Kenneth Hauser, Mr. A. G. Klostermann.

Table 11: Mr. and Mrs. Cyrus T. Walker; Mr. and Mrs. Adolphus Andrews, Jr.; Mr. and Mrs. Hillman Lueddemann, Jr.; Mr. and Mrs. Phillip W. Patterson, Jr.; Mrs. Erling Jacobsen; Mr. Gerald Frank.

Table 12: The Reverend Lewis B. and Mrs. Keiter, Mr. and Mrs. Laurence C. Mann, Mr. and Mrs. Milo K. McIver, Mr. and Mrs. Charles H. Reynolds, Mr. and Mrs. E. E. Henry.

Table 14: Mr. and Mrs. George N. Meyer; the Reverend George R. and Mrs. Turney;

Dr. and Mrs. John Raaf; Mr. and Mrs. Edward C. Sammons, Jr.; Mr. and Mrs. Douglas McIver.

Table 15: Mr. and Mrs. Jack E. Arndt, the Reverend John R. B. and Mrs. Vance, Mr. and Mrs. Donald E. Reger, the Reverend Robert F. and Mrs. Crafe, Mr. and Mrs. Robert M. Fletcher.

Puerto Rico

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1958

Mr. BOW. Mr. Speaker, we can number among some of our most loyal citizens the people of Puerto Rico.

Their progress during the last decade has been phenomenal. This has been brought about by the cooperation of various segments of their population and all political parties of the Island.

I have in the past addressed this House many times regarding these fine people, their patriotism, their loyalty and the great courage of their troops who have fought, bled and died under our flag and for the causes in which we and they, as Americans, believed.

I have in the past been interested in their political status and relationship with the mainland, and fought upon this floor for the adoption of the constitution under which they now operate. There are many thousands on the Island whose desire is to advance their present status to full citizenship with all the rights and prerequisites of citizens together with the responsibilities.

The newspaper El Mundo is well known throughout Latin America. It is one of the leading Spanish newspapers of the world and has always fought steadfastly for the advancement of the people of the Island. On July 20, 1958, El Mundo contained an editorial which I believe should be of interest to the Members of this House.

I, therefore, ask leave, Mr. Speaker, to insert herewith an English translation of that editorial:

WHAT ARE WE GOING TO DO?

The news echoes throughout the world. Alaska has just been admitted to the Union and another star shines in the glorious flag of the United States.

This news must be reverberating right now in the Puerto Rican consciousness. And it must be reverberating painfully.

Here we are, at the end of centuries, at a tragic crossroads.

We are, as we were yesterday, as we have always been, at the gloomy and humiliating crossroads of our old fears and doubts.

We don't know where we are going, nor have we wished to know.

Here we are with our queer and ridiculous straw puppet, facing the congregation of nations who knew what they wanted to be and became what they wanted. Because they wanted it. Here we are, fearful and

UNIVERSITY OF MICHIGAN LIBRARIES

hesitating, groping for our destiny like a blind man zigzaging through the haze of his tragic life.

Alaska, knowing always what it wanted, already has it. The greatest honor that can be bestowed upon a people.

Hawaii, also knowing what it wanted, will obtain it very soon because the doors of liberty have been opened to noncontiguous territories.

And here we are at the crossroads with our "Estado Libre Asociado," which pretends to be, but is not and cannot be, the summit of our destiny. Here we are with our miserable straw puppet at the very moment in history when the new stars begin to shine in the flag of the glorious Nation whose citizenship we enjoy only in part. Because we are and are not citizens.

And now, Puerto Ricans, what are we going to do?

The Senate of the United States, a few hours before granting statehood to Alaska, rejected the formula of the Estado Libre Asociado as unworthy to offer to a land that aspires to the full enjoyment of liberty. Are we to remain hanging on, like a shipwrecked person, to that rag of liberty just called a colonial experiment by Time magazine? Are we to continue to experiment with our destiny?

The historic determination of the Congress of the United States puts us at the crossroads with a responsibility that we cannot evade. Where are we going? What are we going to do?

The unavoidable responsibility falls upon the Popular Party with its overwhelming electoral majority. It falls principally upon its chief, Luis Muñoz-Marín, with his absolute control of the party and the government.

But the unavoidable responsibility does not fall only upon the Popular Party and its chief.

The unavoidable responsibility belongs to all, absolutely all Puerto Ricans. Those who vote and those who do not vote. Those who have been born and those yet unborn.

Are we going to continue with this half-citizenship, gambling with formulas of mere party and personal convenience, or are we going to set another star in the national flag to light our destiny and bring pride to our lives?

What are we going to do.

Tucker Sno-Cats in the Antarctic

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 28, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD I should like to call to the attention of my colleagues the article entitled "An Epic Journey Across the Antarctic" appearing in the August 4, 1958 edition of Life magazine.

In a series of beautiful color shots, the story is told of the first land crossing of the Antarctic Continent by a motorized British expedition. That expedition was lead by geologist Dr. Vivan Fuchs.

The stalwart Britishers traveled in Tucker Sno-Cats which are made in Medford, Oreg. I have on earlier occasions discussed these intrepid snow and mud tamers, but this is the first occasion I have had to see color pictures of the vehicles at work.

Snow, crevasse, ice were no deterrents. The Fuchs expedition ended—

Says Life—

as the triumphant finish is celebrated with flags as two fuel-laden sleds, drawn by a snow cat and flying Royal Navy flags, slide into Scott Base.

Statement on Labor Legislation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 31, 1958

Mr. DINGELL. Mr. Speaker, we have been hearing much about who opposes and who is blocking the two labor bills passed by the Senate during this session of Congress, S. 2888, the Kennedy-Douglas-Ives Welfare and Pension Fund Disclosure Act, and S. 3974, the Kennedy-Ives Labor-Management Reporting and Disclosure Act of 1958.

It is interesting to note that the National Association of Manufacturers, the United States Chamber of Commerce, insurance companies, and other employer groups have opposed S. 2888, the Welfare and Pension Fund Disclosure Act.

A spokesman of the National Association of Manufacturers was yesterday quoted in the newspapers as having said that they opposed the so-called labor reform bill, S. 3974, sponsored by Senators KENNEDY and IVES.

For comparison I am inserting into the RECORD a statement adopted by the industrial union department of the AFL–CIO at its executive committee meeting held in Denver, Colo., July 24 and 25, 1958, strongly and vigorously supporting both of these same bills.

If these bills, which have been passed by the Senate, are killed the blame should rest squarely on the shoulders of those who have opposed them, principally the National Association of Manufacturers and its allies.

STATEMENT ON LABOR LEGISLATION

In May 1958 the Senate passed S. 2888, the Kennedy-Douglas-Ives Welfare and Pension Fund Disclosure Act. Subsequently, in June 1958 the Senate passed S. 3974, the Kennedy-Ives Labor-Management Reporting and Disclosure Act of 1958. These bills were passed by unanimous and nearly unanimous votes. Together, they constitute two of the most important measures affecting the welfare of the Nation's wage earners to come before the Congress in recent years.

S. 2888 was approved by a unanimous Senate vote after more than 4 years of careful study, including exhaustive investigation and hearings. Similar bills also have been the subject of extensive consideration in the House.

S. 2888 provides for public disclosure of the financial operation of employee welfare and pension benefit plans, whether administered by unions, by employers, or jointly by labor and management. Its objectives have long had the active support of the Industrial Union Department, AFL–CIO, and the AFL–CIO generally.

Despite the fact that S. 2888 was passed by the Senate more than 2 months ago, it is not yet law largely as a result of the opposition of the National Association of Manufacturers, the United States Chamber of Commerce, insurance companies, and other employer groups. These groups would apparently prefer to have no legislation to reveal the financial operation of employee welfare and pension benefit plans at all if this means, as the bill provides, that the public is to have a look at the operations of employer-administered funds, as well as those administered by labor alone or by labor and management jointly. These groups oppose the pending legislation notwithstanding the fact that these employer-administered plans cover more than 90 percent of all workers protected by welfare and pension benefit plans.

The enactment of a bill containing the essential features of S. 2888 before the end of the present session of the Congress is of utmost importance to millions of wage earners throughout the United States. We welcome the fact that the House Committee on Education and Labor has now voted out a bill incorporating some of these features. We hope that on the floor of the House or in conference between the House and Senate a bill will be agreed upon and enacted by the Congress substantially incorporating the provisions of S. 2888. We regard the enactment of such a measure as of prime importance to the wage earners of the Nation.

While a welfare and pension plan disclosure bill should receive first consideration in the House of Representatives, the problems dealt with in S. 3974, the Kennedy-Ives Labor-Management Reporting and Disclosure Act of 1958 are likewise of great importance from the standpoint of enhancing ethics and democracy in the labor and management field and correcting acknowledged abuse in the Taft-Hartley Act. We therefore call upon the leadership of the House of Representatives to take all necessary steps, after action has been taken on the welfare and pension plan bill, to assure final congressional action on S. 3974 before the present session of the Congress comes to an end.

This bill deals with some of the major problems which have come to light in the labor and management field. It requires reports on union internal procedures and financial transactions, conflicts of interest involving union officers and employees, and antilabor arrangements participated in by employers and employer-middle men. It deals with the administration of trusteeships and safeguards union democracy by requiring secret ballot elections. It calls upon unions and employers to police their own activities by adopting effective ethical practice codes and provides for a tripartite advisory committee to assist the Secretary of Labor in administering the act. It provides for urgently needed amendments to correct acknowledged antilabor provisions of the Taft-Hartley Act.

S. 3974 was in a far more satisfactory form when it was reported from the Senate Labor and Public Welfare Committee than when it was passed by the Senate. Amendments were added to the bill on the floor of the Senate as a result of shameful maneuvering by the administration and by some antilabor Senators more desirous of hamstringing labor than curbing corruption. A number of these amendments were clearly unwise and unworkable. Some provisions were added which seemed to us clearly unfair and repressive. However, we agree with President Meany of the AFL–CIO that while S. 3974 was a better bill before the floor debate, it still retains enough substantive anticorruption sections to make it worthwhile.

It had been our hope that during the weeks intervening between the passage of the bill by the Senate and the adjournment of Congress, the House would be able to take action to improve S. 3974. It now appears that if any action is to be taken on the bill this session, such action will have to be taken by the House directly, without reference to committee.

This presents the question of whether the bill in its present form should be passed by the Congress. The National Association of Manufacturers, the United States Chamber of Commerce, American Retail Federation, and other employer groups have bitterly denounced the bill and have called for its rejection by the Congress. Despite their attempt to camouflage the fact, these antilabor groups are opposing the bill because, for the first time, they and their Sheffermantype representatives would be required to make public disclosure of their antilabor activities. The honest labor movement represented by the AFL–CIO stands ready and willing to make public disclosure of its operations. Employers and their representatives should be no less willing.

While there are provisions in the bill which we would like to see improved or eliminated, they do not, in our opinion, outweigh the worthwhile features of the bill. On balance, the good in the bill outweighs the bad. The industrial union department calls upon Members of the Congress of both parties to meet their responsibility by passing the Kennedy-Ives bill before the current congressional session comes to an end.

The 81st Annual Meeting of the American Bar Association

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1958

Mr. WILEY. Mr. President, I was pleased to receive this morning the very fine program which is planned by the American Bar Association for its 81st annual meeting, convening in Los Angeles commencing Monday, August 25.

This will mark one of the great assemblies of the practitioners of the American bar.

There will be as outstanding and diverse a series of reports and deliberations as has ever marked this great body of officers of the courts of our land.

I ask unanimous consent that the text of the schedule of events be printed in the Appendix of the RECORD, preceded by a list of the able 1957–58 officers and members of the board of governors of the bar.

There being no objection, the program and list were ordered to be printed in the RECORD, as follows:

OFFICERS OF THE AMERICAN BAR ASSOCIATION, 1957–58

President, Charles S. Rhyne, Hill Building, Washington, D. C.

Chairman, house of delegates, Jas. L. Shepherd, Jr., Esperson Building, Houston, Tex.

Secretary, Joseph D. Calhoun, 218 West Front Street, Media, Pa.

Treasurer, Harold H. Bredell, Circle Tower, Indianapolis, Ind.

Assistant secretary, Richard H. Bowerman, 205 Church Street, Box 1936, New Haven, Conn.

Board of governors:[1] The president, the chairman of the house of delegates, the secretary, the treasurer, David F. Maxwell, last retiring president, Packard Building, Philadephia, Pa., Tappan Gregory, editor-in-chief of the American Bar Association Journal, 105 South LaSalle Street, Chicago, Ill., ex officio; 1st circuit, Willoughby A. Colby, 18 School Street, Concord, N. H. (1960); 2d circuit, Whitney North Seymour, 120 Broadway, New York, N. Y. (1960); 3d circuit, Vincent P. McDevitt, 1000 Chestnut Street, Philadelphia, Pa. (1958); 4th circuit and District of Columbia circuit, Douglas McKay, Barringer Building, Columbus, S. C. (1959); 5th circuit, John C. Satterfield, Box 466, Yazoo City, Miss. (1958); 6th circuit, Glenn M. Coulter, Ford Building, Detroit, Mich. (1960); 7th circuit, George S. Geffs, Jackman Building, Janesville, Wis. (1959); 8th circuit, Richmond C. Coburn, 411 North Seventh Street, St. Louis, Mo. (1959); 9th circuit, John Shaw Field, 15 West Second Street, Box 1291, Reno, Nev. (1958); 10th circuit, Franklin Riter, Kearns Building, Salt Lake City, Utah (1960).

[1] Year shown in parentheses indicates expiration of term.

PROGRAM OF THE 81ST ANNUAL MEETING OF THE AMERICAN BAR ASSOCIATION, LOS ANGELES, CALIF., AUGUST 25–29, 1958

THE ASSEMBLY

First session, Monday, August 25, 10 a. m., Philharmonic Auditorium, the president presiding

Call to order.

Invocation, the Very Reverend David de L. Scovil, D. D., dean of St. Paul's Cathedral.

Addresses of welcome: The Honorable Goodwin J. Knight, Governor of the State of California; the Honorable Norris Poulson, mayor of the city of Los Angeles; E. Avery Crary, president of the Los Angeles Bar Association.

Response: Joseph N. Welch, Boston, Mass.

Introduction of distinguished guests.

Nomination of 5 assembly delegates for 3-year terms.

Nomination and election of assembly delegates to fill vacancies.

Annual address of the president, World Peace Through Law.

Address by the Chief Justice of the United States.

Presentation of awards of merit to bar associations.

Presentation of awards of merit to cities showing greatest improvement in traffic courts.

Presentation of resolutions.

Seventeenth annual meeting of the American Bar Association endowment, Jacob M. Lashly, president, St. Louis, Mo.

Second session, Wednesday, August 27, 10 a. m., Pacific Ballroom, the Hotel Statler, the president presiding

Invocation, the Reverend Carroll L. Shuster, D. D., executive secretary of the Synod of California, Southern Area of the Presbyterian Church of the United States of America.

Addresses by the Honorable Arthur Kelly, Q. C., president of the Canadian Bar Association, The Unimportance of Differences; the Honorable William P. Rogers, Attorney General of the United States.

Third session, Thursday, August 28, 2 p. m., Pacific Ballroom, the Hotel Statler, the president presiding

Invocation, Dr. Edgar F. Magnin, senior rabbi, Wilshire Boulevard Temple.

Presentation of Ross Bequest Award for 1958.

Rising memorial to former presidents of American Bar Association: Joseph W. Henderson, Philadelphia, Pa., 1943–44; Guy A. Thompson, St. Louis, Mo., 1931–32.

Addresses by the Honorable Leslie E. Peppiatt, M. C., president of the Law Society, London, England, Some Thoughts on the London Conference—and on English Solicitors; the Right Honorable Sir Harry Hylton-Foster, Q. C., M. P., Solicitor General of Great Britain, The Lawyer and Democracy.

Consideration of amendments to constitution and bylaws.

Report of committee on resolutions, Hale McCown, chairman, Beatrice, Nebr.

Fourth session, annual dinner, Thursday, August 28, 7:30 p. m., International Ballroom, the Beverly Hilton, the president presiding

Invocation, His Eminence James Francis Cardinal McIntyre, Archbishop of Los Angeles.

Address by speaker to be announced.

Presentation of American Bar Association medal.

Presentation of the First American Bar Association public service awards to the media of information and entertainment.

Introduction of incoming president.

Fifth session, Friday, August 29, Pacific Ballroom, the Hotel Statler (immediately following adjournment of the final session of the House of Delegates), the president presiding

Report by the chairman of the house of delegates of action upon resolutions previously adopted by the assembly.

Action by the assembly upon any resolutions previously adopted by the assembly but disapproved or modified by the House.

Unfinished business.

New business.

Introduction of new officers and members of board of governors.

Adjournment sine die.

PRELIMINARY CALENDAR FOR THE 23-D ANNUAL MEETING OF THE HOUSE OF DELEGATES, AUGUST 25–29, 1958 (PACIFIC BALLROOM, THE HOTEL STATLER)

Sessions convene promptly at 2 p. m. Monday, August 25, at 9:30 a. m. and 2 p. m. Tuesday; and at 9:30 a. m. Thursday and Friday. The afternoon session will recess at 5 p. m., and the morning sessions not later than 12:30 p. m.

The final calendar for the house of delegates, containing the final order of business and the text of all available resolutions to come to the attention of the house, will be distributed at the first session. Items on the calendar will be considered in the order in which they appear unless otherwise ordered by permission of the House.

The attention of committee and section chairmen is called to paragraph 5 of rule VII of the rules of procedure, which provides that "Reports * * * that are printed in the advance program * * * or otherwise * * * shall not be read orally * * * but shall be stated to the house in substance only."

The cooperation of all persons presenting reports in adhering to the order of business stated in the calendar is earnestly solicited, in order that those persons and the members of the house may rely upon the schedule as announced.

The chairman of the house of delegates, presiding.

Rollcall.

Report of the committee on credentials and admissions, Glenn M. Coulter, chairman, Detroit, Mich.

Approval of the record.

Statement by the chairman of the house of delegates, James L. Shepherd, Jr., Houston, Tex.

Approval of the calendar as orders of the day.

Offering of resolutions for reference to the committee on draft.

Report by the president, Charles S. Rhyne, Washington, D. C.

Election of officers of the association and members of the board of governors, as prescribed by the constitution, article VIII, section 1 and article IX, section 3.

Report of the board of elections, Walter V. Schaefer, chairman, Chicago, Ill.

Nomination of member of committee on scope and correlation of work, as prescribed by article X, section 7 (y) (2) of the bylaws.

Report of the treasurer, Harold H. Bredell, Indianapolis, Ind.

Report of the budget committee, Vincent P. McDevitt, chairman, Philadelphia, Pa.

UNIVERSITY OF MICHIGAN LIBRARIES

Report of the editor-in-chief of the Journal, Tappan Gregory, Chicago, Ill.

Presentation of any matters which any State or local bar association or any affiliated organization of the legal profession wishes to bring before the house.

Unfinished business: Report on Canon 35 of the Canons of Judicial Ethics.

Reports of standing and special committees

Reports expected with recommendation for action by the house:

Civil service, Fanney N. Litvin, chairman, Washington, D. C.

Commerce, Benjamin Wham, chairman, Chicago, Ill.

Judicial selection, tenure and compensation, Henry E. Foley, chairman, Boston, Mass.

Professional ethics and grievances, Henry S. Drinker, chairman, Philadelphia, Pa.

Customs law, J. Bradley Colburn, chairman, New York, N. Y.

Scope and correlation of work, Joe C. Barrett, chairman, Jonesboro, Ark., jointly with rules and calendar, Sylvester C. Smith, Jr., chairman, Newark, N. J.

Cooperation with the legal profession of friendly nations, Robert G. Storey, chairman, Dallas, Tex.

Economics of law practice, John C. Satterfield, chairman, Yazoo City, Miss.

Grievances, Cuthbert S. Baldwin, chairman, New Orleans, La.

Impact of atomic attack on legal and administrative processes, Hans A. Klagsbrunn, chairman, Washington, D. C.

Awards to media of public information, Richard P. Tinkham, chairman, Hammond, Ind.

Traffic court program, Albert B. Houghton, chairman, Milwaukee, Wis.

Uniform evidence rules for Federal courts, Ben R. Miller, chairman, Baton Rouge, La.

Administrative agency appointments, Clarence A. Davis, chairman, Washington, D. C.

Atomic energy law, Gordon E. Dean, chairman, New York, N. Y.

Communist tactics, strategy and objectives, Peter Campbell Brown, chairman, New York, N. Y.

Federal legislation, Robert W. Upton, chairman, Concord, N. H.

Federal liens, Laurens Williams, chairman, Washington, D. C.

Income tax—submission of amendment, Wm. Logan Martin, chairman, Birmingham, Ala.

Individual rights as affected by national security, Ross L. Malone, chairman, Roswell, N. Mex.

International law planning, Thomas E. Dewey, chairman, New York, N. Y.

International unification of private law, Joe C. Barrett, chairman, Jonesboro, Ark.

Jurisprudence and law reform, Henry M. Hogan, chairman, Detroit, Mich.

Lawyers in the Armed Forces, Osmer C. Fitts, chairman, Brattleboro, Vt.

Legal services and procedures, Charles A. Horsky, chairman, Washington, D. C.

Membership, Robert G. Storey, Jr., chairman, Dallas, Tex.

Professional relations, William J. Jameson, chairman, Billings, Mont.

Retirement benefits, F. Joseph Donohue, chairman, Washington, D. C.

Rights of the mentally ill, John Biggs, Jr., chairman, Wilmington, Del.

Unemployment and social security, Earl F. Morris, chairman, Columbus, Ohio.

Reports expected requiring no action by the house:

Board of Governors, Joheph D. Calhoun, secretary, Media, Pa.

Admiralty and maritime law, Henry C. Blackiston, chairman, New York, N. Y.

Aeronautical law, William S. Burton, chairman, Cleveland, Ohio.

American citizenship, Cecil E. Burney, chairman, Corpus Christi, Tex.

Communications, Fred W. Albertson, chairman, Washington, D. C.

Federal judiciary, Bernard G. Segal, chairman, Philadelphia, Pa.

Law lists, David J. A. Hayes, chairman, Chicago, Ill.

Lawyer referral service, Harry Gershenson, chairman, St. Louis, Mo.

Legal aid work, William T. Gossett, chairman, Dearborn, Mich.

Legal assistance for servicemen, Milton J. Blake, chairman, Denver, Colo.

Peace and Law through United Nations, Alfred J. Schweppe, chairman, Seattle, Wash.

Unauthorized Practice of the Law, Thomas J. Boodell, chairman, Chicago, Ill.

Report of sections following annual section meetings

Administrative Law, Donald C. Beelar, chairman, Washington, D. C.; John W. Cragun, delegate, Washington, D. C.

Antitrust Law, Herbert A. Bergson, chairman, Washington, D. C.; W. Glen Harlan, delegate, Atlanta, Ga.

Corporation, Banking and Business Law, Herbert F. Sturdy, chairman, Los Angeles, Calif.; Churchill Rodgers, delegate, New York, N. Y.

Criminal Law, Rufus King, chairman, Washington, D. C.; Arthur J. Freund, delegate, St. Louis, Mo.

Insurance, Negligence and Compensation Law, L. J. Carey, chairman, Detroit, Mich.; George E. Beechwood, delegate, Philadelphia, Pa.

International and Comparative Law, Homer G. Angelo, chairman, San Francisco, Calif.; Arthur H. Dean, delegate, New York, N. Y.

Judicial Administration, Tom Clark, chairman, Washington, D. C.; Douglas L. Edmonds, delegate, Los Angeles, Calif.

Junior Bar Conference, Bert H. Early, chairman, Huntington, W. Va.; William C. Farrer, delegate, Los Angeles, Calif.

Labor Relations Law, Gerard D. Reilly, chairman, Washington, D. C.; Theodore R. Iserman, delegate, New York, N. Y.

Legal Education and Admissions to the Bar, Herbert W. Clark, chairman, San Francisco, Calif.; John M. Allison, delegate, Tampa, Fla.

Mineral and Natural Resources Law, Raymond B. Holbrook, chairman, Salt Lake City, Utah; Harry D. Page, delegate, Tulsa, Okla.

Municipal Law, George F. B. Appel, chairman, Philadelphia, Pa.; David M. Wood, delegate, New York, N. Y.

Patent, trademark, and copyright law, Frank E. Foote, chairman, Pittsburgh, Pa.; James P. Hume, delegate, Chicago, Ill.

Public utility law, Randall J. LeBoeuf, Jr., chairman, New York, N. Y.; C. Oscar Berry, delegate, Washington, D. C.

Real property, probate, and trust law, Joseph Trachtman, chairman, New York, N. Y.; William A. Lane, delegate, Miami, Fla.

Taxation, Lee I. Park, chairman, Washington, D. C.; Thomas N. Tarleau, delegate, New York, N. Y.

Reports received too late to be calendared.

Other reports

National Conference of Commissioners on Uniform State Laws, James Dezendorf, president, Portland, Oreg.

ALI–ABA commitee on continuing legal education, Harrison Tweed, chairman, New York, N. Y.

American Law Student Association, Francis J. Larkin, president, Washington, D. C.

Report of the committee on rules and calendar on action taken by the assembly on amendments to the constitution and by-laws, Sylvester C. Smith, Jr., chairman, Newark, N. J.

Report to the house of delegates upon resolutions adopted by the assembly for action by the House.

Reports of house committees: Draft, Philip C. Ebeling, chairman, Dayton, Ohio; hearings, Edward L. Wright, chairman, Little Rock, Ark.; credentials and admissions, Glenn M. Coulter, chairman, Detroit, Mich.

Presentation of any matters which any section or standing or special commitee of the association wishes to bring before the house of delegates.

Unfinished business.

New business.

Adjournment.

The Middle East Crisis and the U. N.

EXTENSION OF REMARKS
OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 30, 1958

Mr. UDALL. Mr. Speaker, the Middle East crisis this month has, once again, focused world attention on the Security Council of the U. N. And once again the weaknesses—and strengths—of this organization were on exhibit for all to see.

An incisive report on these sessions of the U. N. was written by Richard Rovere and appeared last week in the New Yorker magazine. As Mr. Rovere points out, it is plain that the United States had rough going at the U. N. during these meetings. It is plain, too, that we still have much to learn about the function of the U. N. and our role in that institution. Mr. Rovere's article follows:

THE UNITED NATIONS

There are, as of this afternoon, no official responses to the Soviet proposal for a summit conference, except from the Swiss, who say that Geneva on Tuesday is altogether out of the question. It is being assumed here that the plans agreed upon by the Security Council a couple of nights ago will be carried forward. The Council will meet again tomorrow afternoon, and the first business before it will be a resolution that is now getting its last delicate touches from the clever Japanese, who said last week that they believed they had found a way to save face for themselves, for Dag Hammarskjold and the Secretariat, for Henry Cabot Lodge and the Marine Corps, for Arkady Sobolev, President Chamoun, and Colonel Nasser, and for the Iraqis, both republican and royalist. This seems a large order, but Ambassador Koto Matsudaira has explained that his plan is exceedingly simple: it is to send to Lebanon a lot more unarmed U. N. observers and to pull out all American troops—or, as someone here has said, "rubbernecks for leathernecks." The language is sure to be artful and soothing and peace-loving. There will be a clarifying debate in the afternoon, and the motion is expected to come to a vote before the day is over.

The passage of such a resolution would no doubt be a defeat of sorts for everyone except the authors and Mr. Hammarskjöld, but it would be a defeat that the Americans, certainly, would welcome at this point. We went into Lebanon not so much to gain any specific ends in that country as to forestall an epidemic of coups d'état, and to show Colonel Nasser that we are a force to be reckoned with east of Suez. There have been no coups d'état since last Tuesday, and we probably made our point with Nasser the first day. Whether we chose the most efficacious of means is another matter, but in view of all that has happened since, we would now be pleased to have our marines and paratroopers back and be spared any further embarrassment. The Russians may not allow us to get out so easily; indeed, the majority view of the old hands here is that the Russians will veto the Japanese resolution. But there are knowledgeable members of our delegation who are saying that Ambassador Matsudaira's hopes are well founded, and that if the West is able to resist the pressure

for an immediate summit conference, the Russians may find it expedient to buy themselves some international goodwill by going along with the Japanese and the U. N. Secretariat. These people point out that the Russians must surely realize that a strengthened U. N. team in Lebanon could bring no possible harm to any of their interests. The Iraqi regime seems now to be as safe as the Bank of England. If there was any threat to it last week, it came from Jordan, not Lebanon, and the British in Jordan are now pledged to leave Baghdad alone and to restrain Jordan's Arab Legion, which shouldn't be hard to do. United Nations observers might hinder the Lebanese rebellion, but the Communists seem to have regarded that as a rather footling affair from the start. (The Russians did not oppose the original U. N. observer force in Lebanon; on the vote that created it, Mr. Sobolev abstained.) The Russians, as a few hopeful Americans see things today, have had an excellent week and may very well—if their latest maneuver is not immediately successful—decide to bring it to a close with a show of deference to this worthy organization.

If the West agrees to an early summit meeting, that will of course change everything, and there will be nothing much doing here until the next crisis comes along. And if the Security Council fails to adopt the Japanese proposal, the prospect will be for a long, unpleasant wrangle in the General Assembly, which will have before it both the Russian and American resolutions that were rejected in the Security Council las week—the first calling for withdrawal of our troops and a condemnation of American aggression, the second for the replacement of our troops with an armed U. N. force. The Russian resolution would have no chance of passage, but the speeches in its favor would be blared over radio Cairo for weeks on end. In time, the American resolution might get the necessary two-thirds vote—our major allies are solidly behind us, and a combination of the great Western Powers and all their client states should be sufficient to carry the day against the Russians, their satellites, and those of the Bandung powers that would be ranged against us—but the victory would probably be meaningless in political terms; it would take so long to come that the situation in Lebanon would very likely bear slight resemblance to the one that the resolution was intended to deal with. Even if the situation remained the same, it is hard to see how the fruits of victory—an armed U. N. force between the feeble rebels in Beirut and their Syrian sympathizers—would be worth the price we would have to pay. Indeed, it is hard for anyone here to see any really satisfactory outcome for the present American policy in the U. N. Our friends and critics are agreed that neither our intervention in Lebanon nor the course of action we have been urging on the Security Council makes very much sence in United Nations terms.

This is not to say that it is unsound or immoral, or not in accord with international law; on the contrary, the difficulties we have been encountering may reveal more about what is wrong with this parliament of man next door to Tudor City than what is wrong with President Eisenhower's pursuit of the national interest at the far end of the Mediterranean. Under international law, one sovereign state may aid another whenever the party of the second part requests such aid. This covers the Lebanese situation nicely (it would also, to be sure, cover the loan of 50 or 60 Russian divisions to the United Arab Republic), but article 51 of the United Nations Charter, which President Eisenhower claimed as a sanction for the landings in Lebanon, says something else altogether. Article 51 says that "nothing in the present charter shall impair the inherent right of individual or collective self-defense, if an armed attack occurs against a member of the organization, until the Security Council has taken the measures necessary to maintain international peace and security." The U. N. was established to deter aggression, not revolution, and "armed attack" means an assault upon one power by another, not an armed uprising of the discontented. Ambassador Lodge's instructions last Tuesday morning were to square the President's decision with article 51. It was an impossible task. Quite apart from the fact that recent press reports out of Lebanon had been largely devoted to the happy intelligence that the revolt was petering out, there was the fact of the report of the U. N. observers on the scene, who said that the commotion was in the main a civil disturbance, with no signs of the "massive infiltration" that President Chamoun had been talking about. Mr. Hammarskjold, on his return from Beirut, confirmed this report.

The American mission here, aided by State Department dialecticians and hurriedly declassified reports from the Central Intelligence Agency, did as much as it could for Ambassador Lodge. Someone came up with the theory of indirect aggression, and the CIA provided enough instances of aid to the rebels from the United Arab Republic to demonstrate that Colonel Nasser had an interest in the outcome, and that the rebels were working with imported firearms. But there were very few people to whom the theory seemed either sound or applicable, and at least some of the CIA's findings were as close to hearsay as some of John Fox's stories about Sherman Adams and Bernard Goldfine. (Mr. Sobolev, according to the running translation of his comments, described them as "O. W. A. W.—or 'one woman told another woman'—stories.") In any case, the American argument relied on an unworldly concept of a civil war as a conflict altogether shielded from outside influences. There has never been such a civil war in modern times; in every struggle for power within a nation, both sides have appealed to friends in other countries. There was plenty of gunrunning and foreign financing in our own Civil War, and there would be great surprise in Washington if it could be shown that the very agency that provided Ambassador Lodge with such documentation as he had never did anything to aid or put down insurrections in other countries. The Ambassador may have been right in saying that if the U. N. can't take steps to deal with indirect aggression, it may fall to pieces, but the feeling here is that the dangers of the approach he has been taking are every bit as grave as those of the one he has argued against. For if the charter could justify our response in Lebanon, it could equally well justify the Russians in moving into Syria or Iraq.

It was not, of course, any defect of logic in our case that led to its defeat last week. Eight members of the Security Council voted with us, and we would have had our way if it hadn't been for the Soviet veto. In the General Assembly, we will have to make the same case all over again, and although the outcome will not hang on the quality of our reasoning, we will once more risk having our antagonists make the worse cause look like the better one. Substantially the same problem confronts the administration in Congress, where the intervention has to be justified—or so, at least, the administration appears to think—under the Eisenhower doctrine, which fits the facts even less well than article 51 of the Charter. (The Eisenhower doctrine empowers the President to take action against "armed aggression from any [Middle Eastern] country controlled by international communism.") The everlasting curse of American diplomacy is its way of becoming trapped by its own rhetoric. We need phrases and formulations and doctrines for everything we do, and these tend to obscure the essential realities. The essential reality in the Middle East right now is a pan-Arabism that we identify as nationalism but that actually is dissolving nations and forming a federation of peoples who inhabit territories that have resources essential to our allies. We can't do much to hinder its development without running the risk of bringing about a world war, and we can't ignore it without relinquishing our leadership of the Western democracies. Our choices are few; in fact, there may be only one, as all our policy-makers know, and that is to acknowledge the existence of pan-Arabism and seek a way of living with it. This we have not begun to do. Instead, we have worked ourselves into a position of apologizing in wholly irrelevant terms of our maiden effort in trying to slow the pace of the Arab revolution, and also into a position where we may be forced to negotiate with the Russians, not with the Arabs—Colonel Nasser, evidently, is not to be invited to the summit conference that Khrushchev has proposed—for recognition of our position in the Middle East.

No observation has been more frequently made throughout these last few exhausting and seemingly misspent days than that the United Nations has once again demonstrated its obsolescence. The Security Council, it is said, is incapable of dealing with anything that is really concerned with security. The veto power makes negotiation impossible here; even a summit meeting, where the participants are men of true power and are under heavy pressure to get something done, can produce solider results. It used to be said that at least the Security Council had great value as a forum for debate; nowadays, it is more often said that because of its peculiar composition and its cumbersome procedures it is inevitable that the questions of real substance—the things that are truly at issue in the world beyond this compound—will not be talked about here. Time is frittered away in discussing whether it would be a frittering away of time to allow delegates to explain their votes immediately upon casting them, and in soliciting the views of a delegate from a shadow government of China, and in debating whether or not a delegate from a shadow government of Iraq has the right to be seated. Not even the heat and passions of events are felt here; as one watches the delegates bantering in the corners, snoozing in their chairs, or sipping drinks in the Delegate's Lounge during the interminable French and English translations and the frequent seizures of protocol, it is difficult in the extreme to be convinced that any of this has anything to do with the making and breaking of nations, with kings being shot in their palaces and princes being torn to bits in the streets, with angry crowds, with marines in battle dress, or with the disposition of the basic fuel of the world's industry. Everything seems to be outside this sanctum; everyone seems intent on bypassing it. It makes an attempt to keep the peace in Lebanon, and the President of the United States, holding that the effort is inadequate, dispatches the marines. It shows signs of coming to life with something like the Japanese proposal, and the Premier of the Soviet Union demands a summit meeting in Geneva.

For all that, there is one accomplishment of the past week that cannot be denied the U. N. In a moment that appeared to hold the possibility of universal destruction, it focussed the world's attention on an effort, however forlorn, at a settlement. It is barely possible that a concentration on irrelevancies and trivialities, on fudged issues and procedural delays, is just the thing to keep the worst from coming to pass. It's just possible that if, upon the assassination of Archduke Ferdinand, the world's diplomats had been able to score debating points on one another before television cameras, catastrophe might have been averted.

Bills Introduced: 8 bills were introduced, as follows: S. 4207–4214. Page 14343

Bills Reported: Reports were made as follows:

H. R. 11722, providing compensation to the Crow Indians for certain lands required in connection with the Huntley reclamation project, Montana, with amendment (S. Rept. 2068);

S. 2905, providing a headquarters site for Mount Rainier National Park in the vicinity of Ashford, Wash. (S. Rept. 2069);

S. 3682, authorizing the sale or exchange of certain U. S. lands in Pima County, Ariz. (S. Rept. 2070);

S. 3882, providing for the procurement and supply of Government headstones and markers (S. Rept. 2071);

H. R. 1244, providing for the development of Independence National Historical Park, Philadelphia (S. Rept. 2072);

H. R. 2689, private bill (S. Rept. 2073);

H. R. 3402, providing for a display pasture for the bison herd on the Montana National Bison Range (S. Rept. 2074);

H. R. 4381, authorizing the furnishing of markers in memory of certain unknown Armed Forces deceased (S. Rept. 2075);

H. R. 4208, authorizing funds for construction of aeronautical and space research facilities for the National Aeronautics and Space Administration (S. Rept. 2076);

H. R. 4503, reconveyance of certain land situated in Franklin County, Ky. (S. Rept. 2077);

H. R. 5450, authorizing enlargement of the administrative headquarters site for Isle Royale National Park, Mich. (S. Rept. 2078);

H. R. 6038, to revise the boundary of Kings Canyon National Park, Calif. (S. Rept. 2079);

H. R. 6198, to exclude certain lands from the Sequoia National Park, Calif. (S. Rept. 2080);

H. R. 6274, providing that the Secretary of the Interior shall accept title to and maintain it as the General Grant National Memorial (S. Rept. 2081);

H. R. 7790 and 8211, private bills (S. Rept. 2082-2083);

H. R. 8842, to quitclaim interest of the U. S. to certain land in Smith County, Miss. (S. Rept. 2084);

H. R. 9792, private bill (S. Rept. 2085);

H. R. 11008, authorizing exchange of certain land at Vicksburg National Military Park, Miss. (S. Rept. 2086);

H. R. 11868, relative to the rehabilitation and preservation of historic properties in the New York City area (S. Rept. 2087);

H. R. 13026, private bill (S. Rept. 2088);

H. R. 8980, authorizing exchange of lands at Hot Springs National Park, Ark. (S. Rept. 2089); and

H. R. 7125, to make technical changes in the Federal excise tax laws, with amendments (S. Rept. 2090).

Page 14343

Bills Referred: Three House-passed bills were referred to appropriate committees. Pages 14341, 14388

Bill Placed on Calendar: H. R. 12728, to amend the Longshoremen's and Harbor Workers' Compensation Act, with respect to payment of compensation in cases where third persons are liable, was ordered to be placed on calendar. Page 14388

Military Construction—Correction: On page D758 of the DAILY DIGEST of July 30, 1958, in the account of Senate action on H. R. 13015, fiscal 1959 authorizations for military construction, it was incorrectly stated that Senate adopted amendment by Senator Martin (Pennsylvania) to include $375,000 for National Guard facilities at Johnstown, Pa. This amendment by Senator Martin was rejected rather than adopted.

Twelve Brothers in Texas Family Have Served in Armed Forces

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1958

Mr. JOHNSON of Texas. Mr. President, the Cleveland (Tex.) Advocate, one of the truly outstanding weekly newspapers in my State, recently published a feature story about a family that is remarkable, even for Texas.

This is the Ripkowski family, of Dayton, Tex.—a family of 12 brothers and 4 sisters. Every one of the brothers has seen active service in the Armed Forces.

The story of the Ripkowski family is one to bring a glow to the hearts of all patriotic Americans. It was written for the Cleveland Advocate by Tom Fatherree; and I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Tom Fatherree)

DAYTON.—When 22-year-old Stanley Ripkowski enlisted for 6 months' active duty in the Army last month, he became the 12th brother of the Dayton family to enter the Armed Forces.

As far as can be established, no other family in the United States can match this record. And only a handful can approach it.

Stanley, youngest of the 12 Ripkowski brothers, has followed in his brothers' footsteps, keeping the record 100 percent intact.

Of the 11 Ripp boys who already have seen their tours of duty, all served overseas and the first 9 to enlist saw action. They are Bernie, Felix, Alex, August, Leon, Bill, Raymond, Herman, and Franklin.

SIX AT ONCE

At one time during World War II, the brothers have established that six of them were in different combat zones at the same time. They put in an aggregate total of about 60 years in the service.

During that conflict, the Ripkowskis were scattered from Africa to Alaska, from the South Pacific to Europe.

Alex and Herman were in on the Normandy invasion and remained with the Allied Forces all the way through Germany.

Bernie, oldest of the Ripp offsprings, saw extended duty in Alaska and the Aleutian Islands. One of the brothers, Raymond, crashed in the South Pacific on his 45th Air Force mission.

ISLAND HOPPERS

August and Bill were Pacific island hoppers, and Felix and Leon followed the north Africa-Sicily-Italy-France route.

Franklin saw duty with Army Intelligence in the Mediterranean theater of war during World War II, then was called back in during the Korean war.

Of the two brothers immediately older than Stanley, John J. was stationed in Germany—Mike in Okinawa during the Korean war.

All the brothers were in the Army except August, the only Navy man of the group, and Raymond and Mike, Air Force men. Franklin was in the Army during World War II and joined the merchant marine when called back in the Korean war.

FOUR SISTERS

In addition to the 12 Ripkowski brothers, there are 4 sisters; Catherine (Mrs. Joe Machola), Virginia (Mrs. Mike Carter), Pearline (Mrs. Glenn Tilton), and Anna Lee (Mrs. Kenneth Campbell). And all the sisters' husbands except one have seen service, and the other worked in a defense plant during the war.

But the most remarkable phase of the Ripkowski record is the fact that the nine brothers who saw action were returned to Dayton safe and sound. War nerves and battle scars have healed and the 11 Ripps now in civilian life are shouldering their own responsibilities and taking active roles in community life.

Staying close to Dayton, where all but 2 members of the family still live, the 10 married brothers and 4 sisters all own their homes and paddle their own canoes.

They're all hard workers, and their jobs range from service station operator to refinery supervisor. They aren't afraid of sweat and toil.

FARMED 200 ACRES

This probably is due to their having lived on a farm near Eastgate for 14 years, farming 200 acres of highland.

Mr. and Mrs. Stash Ripkowski and their 13 oldest children moved to Liberty County in 1931 from New Waverly, Tex. With the exception of Bernie, who lives at Kountze, Catherine, who lives at Crosby, and Stanley, who is stationed at Fort Chaffee, Ark., all the brothers and sisters still live in and around Dayton.

Mr. Ripkowski died 12 years ago, but "Mrs. Ripp" has held the family together. Approaching 62 years of age, the mother of 16 is still active and keeps up with the goings-on of the Ripkowski brood.

The family has recently won two television sets at Houston Buff baseball games on family nights for having the biggest representation, and the Ripp brothers put on an exhibition with sports writers and announcers at Buff Stadium, winning 3 to 1.

MISSES HER "BABY"

Right now Mrs. Ripp is missing her "Baby" Stanley and spends a goodly amount of time corresponding with him. However, Mike, the only other unmarried offspring, is still at home with Mrs. Ripp. Too, there are the 22 grandchildren to keep her time occupied.

Outside of praying for the welfare of her boys when they were scattered to the four corners of the world during World War II, probably her biggest chore was writing them letters, keeping them posted on the rest of the Ripps.

Dayton postal employees well remember mail call for Mrs. Ripkowski when enough to fill a newspaper would come in.

ALL STILL LIVING

Another unsual side to the Ripkowskis is that all of the children—and grandchildren—are still living, and all enjoying healthful, normal lives.

Mr. Ripkowski came from a family of 6 brothers and 2 sisters, and all of them are still living except 1 brother. And Mrs. Ripp's mother and father, the John Olybriches, are still living at New Waverly.

The remarkable Ripkowskis in 1949 had no less than 12—all the Ripp boys—on a Dayton-Crosby softball team in the Crosby League. Called the Ripp Brothers, the team was a highly respected and capable nine, hustling, clean playing and hard to beat. From Stanley, then 13 and acting mascot, through Bernie, 35, all the Ripp brothers were carried in the lineup.

ARDENT SPORTS FANS

The Ripkowski boys have always been ardent sports fans. Between Herman, Raymond, John J., Mike and Stanley, the brothers won about 35 letters at Dayton High School.

They'll tell you real quick like that they're diehard St. Louis Cardinal, Houston Buff, and Dayton Broncho supporters and are solid Rice Institute backers in the Southwest Conference.

Franklin presently is cosponsor of the Dayton Little League Dodger team.

Ten of the Ripp boys are members of the growing Dayton American Legion Post 512 of which Herman is secretary-treasurer.

RUNDOWN GIVEN

The Ripkowski boys and girls range in age from 22 to 43 years. It would be easy to write a book on the family, but here's a rundown on the sons and daughters:

Bernie, aged 43, lives in Kountze where he has been working for Truck Line Gas Co. for 5 years. Married Olivia Eaton, of Dayton. They have two boys, the oldest a top Little League player.

Felix, 42, has been with General Crude Oil Co. at Dayton for 12 years. Married Ann Zaruba, of Dayton. They have 1 boy, 1 girl, boy plays pee wee baseball.

Alex, 41, is a rice farmer and cattle rancher at Eastgate. Married Daisy Hatcher and his stepdaughter has a son, making him the only grandfather of the Ripp brothers.

August, 40, runs Magnolia service station in Dayton. Married Naomi Miffin, of Dayton, and they have one son.

HOME BUILDERS

Leon, 38, Dayton farmer and carpenter, was first of the brothers to join service, entering Army in 1939. Married Mary Osbolt, of Liberty, and they have one son.

Bill, 37, is also a Dayton farmer and carpenter. He and Leon have built some of Dayton's most beautiful homes. Married Dorothy Etheridge of Crosby and they have two girls. Bill was the first of the Ripp brothers to marry.

Raymond, 36, lives in Dayton and has been working at Humble Oil refinery at Baytown for 5 years. Was made supervisor at Baytown in 4 years. Married Cornelia Damek of Dayton and they have one boy, one girl. Boy plays Pee Wee ball.

Herman, 35, is a Gulf service station operator in Dayton. He is married to the former Mary Jane Hartel of Liberty and they have two boys.

HOUSTON WELDER

Catherine, 34, is married to Joe Machala of Crosby, a Houston welder. They have 1 girl and 3 boys, 1 in Little League.

UNIVERSITY OF MICHIGAN LIBRARIES

Virginia, 32, is married to Alton Carter, owner of Dayton Barber Shop. They have a girl and 2 boys, 1 playing Pee Wee ball.

Franklin, 31, is a Dayton Humble service station agent and a member of the volunteer fire department. He married Mildred Damek of Dayton and they have one daughter.

John J., 28, lives in Dayton and has been a crane operator for Sheffield Steel of Houston for the past 4 years. He married Julia Ann Zaruba of Dayton.

Pearline, 27, is married to Glenn Tilton who has been working for Truck Line Gas Co. in Kountze for about 4 years. They have one daughter.

STAYS AT HOME

Mike, 26, the only unmarried member of the family besides Stanley, lives with Mrs. Ripp. He has been with Sheffield Steel for 4 years.

Anna Lee, 25, married Kenneth Campbell who also has been with Sheffield Steel for 4 years. They have one boy.

Stanley, 22, worked with Dow Chemical at Freeport for a year before enlisting for 6 months of active service in the Army at Fort Chaffee, Ark. He has been in active Reserves since February of this year. At Fort Chaffee, he was appointed platoon leader and has been selected neatest soldier of the week. After basic training he will attend 16 weeks of radio communication schooling at Fort Knox, Ky.

Fabulous, remarkable, extraordinary, eminent, special—it takes all that and a lot more to explain the Ripkowski family of Dayton.

Mining Claim Decisions Under Public Law 167

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1958

Mr. NEUBERGER. Mr. President, in July 1955, Congress adopted Public Law 167, the Multiple Surface Use Act, which initiated a system under which the United States Forest Service can manage the timber on mining claims in the national forests, while prospectors and miners pursue their development work on the claim. This law went a long way toward avoiding the "mining" of timber on mineral claims.

It did not, however, go far enough. As I pointed out in my individual statement in the report of the Senate Committee on Interior and Insular Affairs, it did not touch mining patents. A patentee may still receive, along with his mine—as a free bonus—a rich and luxuriant stand of national forest timber which may actually exceed the mine itself in value. It was this existing law of mining patents, rather than claims, which was involved in the Al Sarena case, and I have always regretted that Public Law 167 is invariably linked in public discussion with that unfortunate episode of resource mismanagement. The law with respect to mining patents in national forests still remains to be reformed, as suggested, for instance, in my bill S. 3247.

Meanwhile, however, some progress is being made with respect to claims under Public Law 167. The press in the Pacific Northwest has recently reported the decision in the first contest over the management of surface timber on a mining claim, under the new law. In the first contest, the United States Forest Service won the right to manage and dispose of timber on a series of arsenic mining claims in Snohomish County, Wash., which prior to Public Law 167 would have been wholly at the disposal of the claimants. I ask unanimous consent, Mr. President, that articles reporting this precedent-setting case under Public Law 167, published in the Portland Oregonian and the Oregon Journal of Portland on July 23, 1958, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian of July 23, 1958]

UNITED STATES WINS TIMBER RIGHTS FROM MINING CLAIM PAIR

The United States Forest Service has won timber rights on a Snohomish County, Wash., mining site in the first contest of a law adopted following the famed Al Sarena case.

Hearing Examiner Graydon E. Holt, Portland, ruled against Robert T. Curtiss, Monroe, Wash., and A. G. Brennan, Seattle, the owners of arsenic mining claims and a mill site near Stevens Pass.

Holt ruled an arsenic deposit on the claims "is not presently or prospectively marketable," and the mill site "is not being used or occupied for the purposes contemplated by the mining laws."

As a result, some $90,000 worth of timber on the mine site may be managed and disposed of by the Government instead of by the claim owners.

Frank Folsom, regional chief or recreation and lands of the Forest Service, said the new law gives a Government agency timber management authority over mining claims on its lands in most cases.

Authority for timber management on mining claims filed before the law became effective July 23, 1955, depends on several factors, including a ruling by a qualified mineral examiner on the validity of the mine in question.

The Snohomish mill claims—called June, June No. 1, Crow, Crow No. 1, Marie and Marie No. 1—were brought to hearing after the owners challenged the Forest Service charge that no valid discovery of a valuable mineral had been made and that the mill site was not being used or occupied for mining or milling purposes.

Mill claim owners had authority over timber disposal on their mill sites prior to passage of the new law. The new legislation had been in the process for some time, but was hastened after charges in the Al Sarena case were made.

In that controversy, mining claim owners in southern Oregon were accused of obtaining mining patents principally in order to gain ownership of valuable timber.

Senators WAYNE MORSE and RICHARD NEUBERGER, Democrats, of Oregon, since have said the Al Sarena Co. has sold thousands of dollars' worth of timber, but has not engaged in mining.

[From the Oregon Journal of July 23, 1958]

FOREST SERVICE WINS FIRST TRY UNDER NEW MINING CLAIM LAW

(By Jim Running)

The regional United States Forest Service office here has won its first contest brought under the new mining claim law which was adopted shortly after the famed Al Sarena mine patent was publicized.

Hearing Examiner Graydon E. Holt, of Portland, ruled against the owners of arsenic mining claims and a millsite in Snohomish County, Wash., near Stevens Pass.

Partners in the millsite and claims—called June, June No. 1, Crow, Crow No. 1, Marie and Marie No. 1—are Robert T. Curtiss, of Monroe, Wash., and A. G. Brennan, Seattle.

Holt ruled that the arsenic deposits on the claims is not presently or prospectively marketable and that the millsite is not being used or occupied for the purposes contemplated by the mining laws.

Consequently, some $90,000 in timber on the claims and millsite may be managed and disposed of by the Government instead of by the mining claim owners.

The controversy reached the hearing stage when Curtiss and Brennan challenged the Forest Service charge that no valid discovery of a valuable mineral had been made and that the millsite was not being used or occupied for mining or milling purposes.

Under the new law, according to Frank Folsom, Portland, chief of recreation and lands of the Forest Service in this region, the Government agency on whose land the claims are made has authority in most cases to manage the surface and dispose of the vegetation resources located thereon, insofar as such management and disposal do not materially interfere with mining operations.

Although the new law was in the making for some time, it apparently was hastened after charges were made regarding patenting of the Al Sarena mining claims near Trail. The owners were accused of getting the patents principally to obtain ownership of the valuable timber on the tract.

Authority to manage the surface of mining claims filed since the new law became effective July 23, 1955, is given to the Forest Service without further procedure.

On claims filed before that date, however, such as the Snohomish tracts on which Holt ruled, "the new law provides a procedure for classifying the status of the surface rights." Folsom explained. He continued:

"This procedure involved, among other things, examination by a qualified mineral examiner to determine validity of the claim in question.

"The Forest Service has initiated procedures to clarify the status of surface rights on all claims located prior to July 23, 1955. It is planned that this operation will be completed by 1965.

"It cannot be stressed too strongly that under (the new law) mining claims cannot be invalidated. The procedure is only to determine whether the Federal agency or the claimant possesses the right to manage the surface on unpatented mining claims."

Navy Certificate of Award to Richard Courant

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1958

Mr. JACKSON. Mr. President, Prof. Richard Courant, director of the Institute of Mathematical Sciences at New York University, was recently honored by the Navy with the Distinguished Public Service Award.

I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the citation that accompanied the award to Professor Courant. This award is further evidence of Professor

Courant's outstanding and continuing contribution to national security.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CERTIFICATE OF AWARD

In appreciation of distinguished public service to the Department of the Navy the Secretary of the Navy takes pleasure in presenting the Distinguished Public Service Award to Richard Courant for services set forth in the following citation:

"For oustanding contributions to the Department of the Navy in the field of mathematical sciences. As recognized leader in the field of applied mathematics and in his capacity as director of the Institute of Mathematical Sciences at New York University, Professor Courant has rendered exceptionally distinguished service to the scientific progress of the Navy by fashioning modern mathematical methods and tools, greatly enhancing the capabilities of the Navy, as well as of the National Defense Establishment generally, in dealing with its present and future technological problems. He has made these contributions personally as one of the great research mathematicians of our time and through a nationally unique research organization of his creation. With exceptional vision and indefatigability, Professor Courant has sought out and clarified major problems, confronting the Navy as well as the other armed services and the Atomic Energy Commission in their technical developments, whose solution could be furthered only by advancing current methods of mathematical analysis. He has been a major contributor to the scientific progress of applied mathematics as an integral part of the technology on which the Navy relied in the design and evaluation of its latest weapons. In recognition of and appreciation for his outstanding achievements this award is approved this 21st day of April 1958."

THOMAS S. GATES,
Secretary of the Navy.

Fate of the Kennedy-Ives Labor Reform Bill

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an article entitled "The Latest Political Murder Mystery," written by Mr. Arthur Krock, and published in this morning's issue of the New York Times. In the article Mr. Krock sizes up the impasse with which Senate bill 3974, sponsored by the Senator from Massachusetts [Mr. KENNEDY] and myself, is confronted.

I believe Mr. Krock's analysis is reasonably accurate. Therefore, I desire to call the attention of all the Members of the Congress to it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of August 1, 1958]

THE LATEST POLITICAL MURDER MYSTERY

(By Arthur Krock)

WASHINGTON, July 31.—A familiar political hunt is on for the doer of the deed which apparently has laid the Kennedy-Ives labor reform bill on its deathbed. As in a good many other murder mysteries (few believe the wounded legislation can survive), the suspects are accusing one another, and there are also insinuations that a policeman on the case may have been hired by the criminal.

The suspects thus far enumerated are: The National Association of Manufacturers, the Chamber of Commerce of the United States, Speaker SAM RAYBURN, some unnamed union labor leaders working under the cover of the endorsement of the Kennedy-Ives bill by George Meany, head of the AFL–CIO, and Secretary of Labor James P. Mitchell, the policeman. The only principals clearly innocent are the sponsors of the legislation—Senators KENNEDY, of Massachusetts, and IVES, of New York—which the Senate approved by a vote of 88 to 1.

These two could have no rational motives for wanting their bill to die in the House. They labored long and arduously for its passage through the Senate committee and on the floor. Whatever political damage they may have done to themselves among the labor groups which want no reform legislation at all is fait accompli. This applies also to the industrial groups opposed to this particular bill. The death of the legislation in the House would not repair the political damage, if any, suffered by the two Senators. And its passage by the House would clinch whatever political credit they may get for their activities among the groups which favor the bill's reform provisions. So in reason, KENNEDY and IVES must be eliminated from the quarry.

KENNNEDY has named the NAM as responsible for the plight of the legislation in the House. But the Republicans promptly retort that, if this were true, then the Senator has said in effect that a Democratic House, with a very powerful Speaker, does the bidding of the NAM. Thus to prove his charge KENNEDY would be obliged to rebut this point made by the Republicans. And this has confused the trail so far as KENNEDY is concerned.

THE POINTING FINGERS

Secretary Mitchell put the Kennedy-Ives bill at its birth in what its sponsors describe as "a bad light." He did this by his sudden blast from Geneva, uttering broad criticisms of the measure which were not removed by the subsequent amendments. Moreover, his attack fed Democratic suspicion that administration politicians would rather have a labor reform campaign issue than a labor reform bill. Nevertheless, Mitchell has assigned the responsibility for House inaction exclusively to Democrats—RAYBURN and Chairman BARDEN of the Labor Committee, the Speaker in particular.

As evidence he cited that RAYBURN kept the Senate bill on his desk "for 40 days and 40 nights" before sending it to the Barden committee, notoriously a sluggish legislative channel, at a point so late in the session that House action was extremely unlikely. Mitchell also criticized the NAM and the chamber for their opposition, but he placed the murder weapon in Democratic hands.

Speaker RAYBURN has rejected the charge or implication that he deliberately employed his desk as a death chamber for the legislation. His only purpose, he said, was to keep it from jeopardizing committee action on a welfare-pension labor bill on which the committee was deliberating. This, however, has not satisfied the sleuths who asked the Speaker this unanswered question: How and why would his prompt reference to committee of the Kennedy-Ives bill have jeopardized the other?

These interrogators are equally unsatisfied with an answer they did get to another question: What became of an understanding with the Democratic leadership that it would bring up the Kennedy-Ives bill under suspension of the rules if necessary for floor action at this session? (The answer made in behalf of the Democratic leaders was that they discovered they could not get the two-thirds vote necessary for suspension, and probably not even a majority.)

Those who administered the fatal stroke, therefore, are visible only through the binoculars of suspicion. There is not enough evidence to convict anyone. But on the other hand there is enough to require from all concerned, except KENNEDY and IVES, better proof of innocence than has been offered. And this includes some labor leaders whom no sleuth has been able to identify.

Where Do We Go Next?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Where Do We Go Next?" published in the Minneapolis Morning Tribune of July 29, 1958. This editorial relates to the proposal of our Government for a summit conference at the United Nations.

I believe, however, that it offers some very provocative thoughts. The concluding paragraph reads as follows:

If our Government is as cool to a summit conference as it appears to be, what is its alternative solution to the problem of getting our troops out of Lebanon? There still does not seem to be any clear answer as to where we go from here.

I am convinced that every thoughtful American is today asking the question, "What do we do? Where do we go?" Thoughtful Americans are looking for direction and guidance.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE DO WE GO NEXT?

Foot-dragging by the United States and the reluctance of Gen. Charles de Gaulle to attend a summit conference in New York have permitted Premier Khrushchev of the Soviet Union to score another propaganda victory in his latest letter to the western powers.

For Khrushchev now is offering to have the meeting in Moscow—or in Geneva, Vienna, Paris, or any other place in Europe—because, he says, "We do not want to make it difficult for the United States Government." Concern had been expressed by American officials over security arrangements for Khrushchev if the meeting were held in New York.

The Russian Premier's reply also made it clear that he is seeking an opportunity to bypass the United Nations even though in his earlier letter he said flatly that "the considerations concerning the convocation of the meetings of the heads of government within the framework of the Security Council are acceptable to us."

It still might be possible to convene the Security Council in Europe—perhaps even in Moscow—but it would seem more logical to have the session right at the U. N. Headquarters in New York. That would help dramatize the fact that the U. N. is an integral part of the world's peace machinery. And

UNIVERSITY OF MICHIGAN LIBRARIES

we don't think the security arrangements would be so difficult as to make the meeting impossible there.

In his reply, Khrushchev also found the opportunity to note the continuing buildup of American forces in Lebanon, and thus raised inferentially at least the question that must be occurring elsewhere in the world:

If the United States really is interested in a summit conference or any other solution to the crisis that might led to the withdrawal of American forces from Lebanon, why does the United States continue to pour troops into the Middle East?

Perhaps the purpose is to demonstrate to the Soviet Union that we do have the ability to move troops into the area in a hurry. The trouble is that our actions don't seem to match the words in which we offered to pull our troops out if a small U. N. force replaced them.

Nor does the situation in Lebanon so far as the rebels are concerned seem to warrant any further American buildup there, although the longer our forces remain in Lebanon the greater the prospect for incidents which might lead to renewed outbreaks of civil war and our own involvement in a shooting war.

If our Government is as cool to a summit conference as it appears to be, what is its alternative solution to the problem of getting our troops out of Lebanon? There still does not seem to be any clear answer as to where we go from here.

Impressions of China

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. FULBRIGHT. Mr. President, recently there has come to my attention a report entitled "Impressions of China," written by Mr. James Muir, chairman and president of the Royal Bank of Canada, the largest bank in Canada, with assets of nearly $4 billion.

My colleagues will find that many of Mr. Muir's observations are contrary to the ideas often disseminated in our country by official Government sources. Not having been in China myself, I cannot vouch for the accuracy of the report, which speaks for itself.

I ask unanimous consent to have the report printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

IMPRESSIONS OF CHINA

(By Mr. James Muir, chairman and president, the Royal Bank of Canada)

This is an attempt to report information on life and conditions in China as I saw them on a short visit. It is not meant to prove or disprove anything. If anyone is interested enough to read it, I ask that he read it all through before drawing any conclusions; and particularly I ask that he refrain from lifting any passage from context which, with an elaboration built thereon, might create quite a wrong impression of the whole.

The first question you would probably ask is, "Why did you go to China, what was the purpose of your visit?" Quest of knowledge, the desire to see how other people live and have their being, the desire to see how business, and more particularly how banking operations are conducted, were the main urges that prompted me to go, plus of course a fairly healthy measure of natural curiosity.

I went of my own accord, at my own expense, and received invaluable physical assistance from Bank of China officials in arranging such things as accommodations and travel facilities. From first to last their courtesy, assistance, kindness and general good humor under all circumstances were of infinite help. Their explanations of their system were naturally of the highest interest, and they showed not the slightest reluctance to answer questions, and plied me with queries in return. I have read that in visits to China one is put in the hands of Intourist, a Government agency, which in effect leads one around by the nose. I was not under such auspices. Actually, I saw but one Intourist official and that was in Canton. In many respects I would compare Intourist, as I saw glimpses of it functioning, as a sort of Chinese Thomas Cook & Son or American Express operating under Government auspices.

The cost of living is unbelievably low, probably about one-fourth to one-third of ours in many directions. In the main cities we had good and immaculately kept hotel accommodation; laundry was done and returned the same day and looked less war worn than is the case on our continent; clothes pressing was often and prompt—dry cleaning in a matter of hours in case of need.

I was told rats have been exterminated so bubonic plague has gone. I saw one fly and one mosquito and no sparrows in the cities. National campaigns were organized to get rid of these pests, and I believe were used as a test to see how successful or otherwise the authorities could be in organizing the populace to singleness of effort. From their point of view the results must have been astonishingly gratifying.

The growth in industry, the change in living standards, the modernization of everything and anything, the feats of human effort and the colossal impact of human labor are not within our power to describe and still give a worthwhile picture of the scene. All I can say is that it must be seen to be believed. It's truly stupendous. The effect is almost to bewilder one when he sees what has been accomplished in less than 10 years but, if he is a thinking person, to appall him and dumbfound him when he realizes what had not been done in the previous 4,000 years or even 100 years. There are 600 million people in the land—the net population is increasing 20 million per annum or 38 per minute. Take deaths into consideration, and births must be at something resembling machinegun speed—and we were freely told there is already a labor shortage. Twenty-five percent of the population of the world lives in China and in a score of years or less it will be nearer half the world's population. How one can fail to recognize this colossal scene is over my head.

I shall give but one example, an exceptional one perhaps, of the inexorable effect of human effort in terms of human labor. I saw the new irrigation and flood control dam in the Ming Tombs Valley. It was practically finished and had taken only 140 days to complete. It is over 2,000 feet long, about 95 feet high, 555 feet wide at the base and about 25 feet wide at the top. It has a concrete core, the upstream side is clay and the other is earth, gravel, and stone. One hundred thousand people were working in 3 shifts around the clock. All work was described as "voluntary"—certainly it was unpaid. About half of the work force was provided by the army, the rest by citizens from every walk of life who go and live and work at the site for days or weeks as circumstances, age, health, and physique permit. With little else than their bare hands, picks, and shovels, this colossal task has been accomplished. I stood on high ground and looked down upon this vast human anthill. I took photographs of the scene, a shift of 30,000 toiling people, and hope when developed these pictures will have caught something of the atmosphere of the drama.

The almost fanatical drive toward hygiene and physical culture by the people is a study in itself. At 10 a. m. and 4 p. m. all work must stop and physical exercise be indulged in—young and old, over and under weight alike. I saw few in the former category. Many people wear gauze masks as a protection against dirt and fumes. En route from Shanghai to Canton by air we stopped at an airstop for lunch. We were met at the plane by a girl wearing a white gauze mask, in white skirt and long white smock, spotless. She conducted us to the dining room and it was she who served our lunch. Part of the table dishes was a porcelain spoon, resting upon a piece of paper. As I was about to pick up the spoon, she nudged my elbow, pointed to the paper and made motions to show I should first thoroughly rub the spoon with it.

In many ways Peiping is a beautiful city and in and around it are vast historical buildings and relics. They have been maintained and repaired with the preponderance of Chinese red paint and offer a startling and pleasing appearance. To mention just a few, the Imperial Palace within the Forbidden City, the Summer Palace, the Ming Tombs in the Ming Valley and, of course, the Great Wall itself, all go to fulfill a sightseer's and photographer's dream.

I have been asked about the standard of living in China. It's difficult to give an understandable answer because for vast millions there is not such a thing as we know it. Man, woman and child have not risen much beyond the beast-of-burden stage. The sights one sees of the stresses, the strains, the unbelievable extent to which a human frame can be abused, leave one almost physically ill. And yet the lot of these people is better than it was, and improving. For millions more one sees contentment, happiness, and one would believe more freedom from oppression and civil strife than their previous generations have known. Corruption and graft we were told—and confirmed by people living outside the area—have disappeared. Petty theft is rare; one does not bother to lock his home. We did not bother to lock our hotel room doors. As an example of their apparently fanatical honesty, when leaving the hotel in Canton I failed to pick up some $2 or less in change. They followed me to the station and found me after I was seated on the train in order that they might deliver this change to me.

It cannot be that the present way of life is pleasing to everyone; there are many refugees constantly arriving in Hong Kong, for example, but they can be but a fleabite compared with the country's population of 600 million people, and we should think they are mostly small farmers who are still individualistic enough to resist being brought into the cooperative farm movement. Those in authority freely state that the aim is to add slowly and patiently, yet without interruption, to the standard of living, that to try too much too quickly would be fatal—lead to inflation and endanger their whole program.

Unless the whole scene is a dream or one's senses of observation and appraisement are less than useless, then we think the vast majority of the people of China have a government they want, a government which is improving their lot, a government in which they have confidence, a government which

stands no chance whatever of being supplanted. All this quite obviously indicates a political problem that will sear the very souls of some Western powers, and which at some stage is going to pose an overwhelming face-saving problem in more directions than one. It's difficult to believe that anything resembling war is desired in China if for no reason other than that such a development would have a disastrous effect upon the plans for improvement they are trying to bring about.

While in personal contacts we found individuals courteous, friendly, good natured, and prepared to go through a generous dose of good-natured ribbing, they are as a people exceedingly sensitive and touchy at the slightest implication of lack of confidence in their business undertakings or at sharp or belittling criticism of them as a nation or at the thought that there is or ever can be a divided China. We would caution those businessmen and men in public life who would have dealings with China to bear the foregoing ever in mind. Only undesirable results can ensue and nothing whatever can we hope to gain by ignoring these sensitive areas in the Chinese character.

The so-called strategic list of prohibited exports adopted by some nations has become in Chinese eyes almost ridiculous. So far as we can see (always with the exception of really strategic materials) about all that is happening so far as China is concerned is that annoyance is created, the goods are forthcoming from some other source, progress is not being seriously retarded, and ironically, a great long-run benefit may be conferred upon the Chinese by forcing them to make things for themselves.

One highly placed person, not resident in China but thoroughly familiar with Chinese people, made the statement to me that the capacity of the Chinese to learn and perform is governed entirely by the teaching capacity of others who would undertake to instruct them. Their thirst for knowledge is now great, and a visit to the University of Peking shows a lot of eager and enthusiastic students. A similar attitude, we were told, prevails in other seats of learning. As far as education of the masses is concerned, they have a long, long way to go. Steps are now afoot to change the Chinese characters to the Roman alphabet which is in general use in the Western world, and it is believed this will be a tremendous help in the educational process. There seem to be many professors of political economy around—and many students. We twitted one professor with the gibe that no doubt he found Adam Smith and John Stuart Mill among his mentors. Laughingly he replied, "Well, their theories are not exactly popular with us at present."

One innovation in economic organization has resulted from the liquidation of the Kuomintang. Businessmen who were clean or free from entanglement with this organization have been allowed to maintain their financial interest in the business and receive 5 percent on their capital, even though the enterprise may be managed by state appointed personnel. If the owner of the business is appointed manager he will, of course, receive the regular state salary for his type of managerial service plus the 5-percent return on his investment. Here we have joint private-state enterprises which should be of interest to all students of comparative economic organizations. How long this hybrid will persist, one cannot say. But I understand that the private rights involved may be bequeathed or transferred; and, if this is true, the joint private-state type of enterprise may last for generations to come.

The all-important matter of trade was constantly coming up, and listening to the Chinese side of the story and to the outside phase of it, none of which incidentally came from traders, we are frankly a little confused.

One thing is certain—China needs a multitude of things and is most desirous of trading. It would be a waste of time for us to try to cover this field in a report of this kind. Any Canadian exporter who wants to trade with China—and if he is conscious of his own interests and is farsighted enough to realize his responsibilities to our Canadian economy—can readily obtain from our Department of Trade and Commerce in Ottawa a good idea of what is wanted. The Trade Commissioners of our Government who cover that area are fully conversant with the picture, and we feel we should assume they keep Ottawa headquarters fully advised.

If we have anything to suggest here it is that our exporting fraternity shake themselves loose, get busy and visit China either individually or as a group, probably in the latter form initially, but keep at it. It was galling to meet and to talk with the selling forces of other Western powers, not only obviously getting business, but enthusiastic about it while our people seem to sit back and wait for a silver platter deal. Our exporters have got to learn to develop resourcefulness and to take reasonable business risks. Outside China we heard a good deal about the Chinese importing movement endeavoring to make one-sided deals, about their reneging on contracts and so on; but we were unable to uncover a substantiated case. Our people should make clear the deal they want, make it reasonable and orthodox, and have a full and complete understanding of the transaction before they start—documented, if necessary, throughout. If they do this, deliver on time, and do not deviate from the terms, we should be inclined to believe they won't experience undue difficulties. This opportunity, coupled with our need for export markets, should sound a clarion call to our Government to see to it that, if any Canadian enterprise should be induced by outside influence to deviate from its responsibility to the Canadian worker and to the Canadian economy by declining legitimate and clean business, drastic and immediate steps be taken to discipline any such Canadian corporation. Canada needs export trade, and it should be sought after everywhere with no interest other than the welfare of Canada involved.

We had some interesting discussions relative to the new Chinese Constitution, which provides for freedom of speech, right of assembly, and freedom in the practice of religion. Freedom of speech, we believe, can be followed in the criticism of how things are being done in a material way, or of the people who are charged with the responsibility of doing them—but the Chinese can't be "agin the Government" as we know it. Anything savouring of sedition would meet with the inevitable treatment: so perhaps freedom of speech could in our view be largely confined to the suggestion-box principle. In this highly restricted sense it might even be welcomed by the authorities.

Right of assembly exists in the sense that crowds can immediately assemble and listen to a speaker. We saw such crowds at street corners and at country crossroads. When we asked what the spouter was dispensing, it was always a harangue on the virtues of hygiene, on the desirability of continuing to swat flies and kill mosquitoes, or on some such subject. Theoretically, we suppose one could assemble a crowd and talk about anything—but for how long we don't know. There is no Chinese Hyde Park.

Regarding the freedom to practice religion, there could be a need for this—not perhaps out of regard for religion but because there is a political problem due to the large number of Moslem followers in addition to the Buddhists. I found Christian churches of many denominations—I also visited a Buddhist temple. On Sunday morning in Peiping we heard what sounded like church bells. At first we could not believe our ears. Persistently we went down a side street from which the sound was coming, and certainly it was the sound of church bells. We found the church, a large Roman Catholic edifice, within a walled enclosure. The front court was full of children playing, the front doors were closed and again children playing and squatting in front of them, but we proceeded to a side door and found a church which could accommodate a very large congregation. Mass was in progress; the church was not full but there was a large congregation of people, devout to all appearances, young and old—male and female—very small children crawling in the aisles—older ones moving around from pew to pew. The clergy were all Chinese. We stayed for part of the service. There are other authorities more competent than I am to discuss this phase, but so far as I could find out all clergy must be Chinese and, if this is so, then perhaps freedom is more apparent than real. This is only an observation. Someone else, I am sure, can give a positive answer.

Unquestionably there is some subtle difference in life between China and other nations of Marxian persuasion. One feels no sense of domination, no depression, no lack of freedom in moving around, and so on. Perhaps it is inspired by the courtesy, good nature, and natural politeness of the people. One goes shopping as he would in Montreal—big stores, little stores, all sorts of goods. Food is rationed on a seasonal basis, we were told. In hotels and restaurants there are no restrictions. One can go sightseeing, rubbernecking, and camera using at will—but must get an export permit for his undeveloped film which was a rather perfunctory procedure.

For those who have read so far no doubt a variety of impressions of life in China has been formed. Some may be favorable, even too much so, some skeptical and unbelieving. Both are wrong.

As I said at the beginning, one has to see what is going on with his own eyes before he can realize what the picture unfolds. Nobody can do so for him. China is a Socialist state, a managed economy adhering to the teachings of Karl Marx, with some modifications to meet Chinese reality. The state is supreme, man an instrument—therefore, he can't be really free. There is none of the comrade technique, there is no pretense that all are equal; on the contrary, the working class, the peasants, are freely refered to. One is rewarded in the material sense according to his talents and his responsibilities; but the plunder, the privilege, and corruption are said to be gone. One wonders what China would be like today if over the last 150 years it had moved along the lines of democratic progress instead of exploitation and corruption. The wind was sown, the whirlwind is being reaped.

As mentioned earlier, 25 percent of the world's population live in China; maybe in 20 years they will be one-half of the world. Their present rate of progress is beyond description—but they have, as we have said, a million miles to go before the masses have a semblance of a decent standard of living. They are moving fast, however. If one can picture a future nation of 1 billion people—skilled, educated, industrialized, and with a capacity for work that beggars description—the high cost economy of the West is eventually in for revision. We of the West want no part of the political and economic philosophy that governs such states—but I wonder if we had a similar experience as a people how we would feel about it. The answer seems to be clear.

Regarding the so-called recognition of China in the political sense, one just does not see how 600 million people, which may be a billion before too long, can be given myopic treatment. I am no prophet—but a "bonnie Prince Charlie" from across the sea from Taipan seems more than unlikely. Just how face is to be saved there presents a staggering problem. There is every indication that the people of China as a whole are satisfied with their Government. It seems to

UNIVERSITY OF MICHIGAN LIBRARIES

meet their needs and it seems to be conscious of a great job to be done to lift the standard of living and the general way of life of the masses out of the black hopelessness that has prevailed in the past.

I believe there is good and legitimate trade to be done. Other Western people are getting it. Canada will be negligent and unfair to herself if she does not get her share. She won't get it, however, without aggressive action.

Aid for Small Business

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the well known writer on economic affairs, Sylvia Porter, which appeared 2 or 3 days ago in the Washington Evening Star, entitled "Aid for Small Business."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AID FOR SMALL BUSINESS
(By Sylvia Porter)

For the first time in years, the small-business man is getting solid help from Congress—in the form of a new system of financing and tax relief.

To the 4 million business firms classified as small, this report has vital meaning. It is with pleasure that I submit the highlights of three separate moves on the small-business front.

1. The Small Business Administration has been made a permanent agency. The new law, signed by the President a fortnight ago, also raises the maximum loan the SBA can make to a single applicant under its regular program from $250,000 to $350,000 and cuts the interest rate on loans from 6 to 5½ percent.

2. A new bill which will become law any day will create a new system of financing small business, thus facing up to the little business firms most crucial need. Specifically:

Under the new law, the SBA will be voted $250 million of new money by Congress to promote the formation of local small business investment companies. An investment company can be formed voluntarily by a local group of at least 10 businessmen; it must have a minimum of $300,000 of capital to begin operations; half of this capital it can get from the SBA and the other half must be raised by local sources. When set up, the local investment company will decide whether to invest risk capital directly in any little firm or whether to extend to the firm a long-term loan of up to 20 years. The investment company can't put more than 20 percent of its capital and surplus into any one business but even on its initial capital, that means it could make a loan of $60,000 to a single firm—and many investment companies will have much bigger pools of funds.

3. A third bill which also will become law any day will give small business firms some welcome tax relief. Again, specifically:

Most important of the new tax bill's provisions is one allowing a small firm to write off for tax purposes 20 percent of the cost of machinery, equipment, other tangible personal property in the year of purchase. The property may be either new or used when bought. Farmers will be permitted to take advantage of the liberalized depreciation allowance. The fast writeoff will apply, though, only to the first $10,000 of investment purchases each year or $20,000 in the case of joint returns. Other limitations are that the property must have a useful life of 6 years or more and must have been acquired since December 31, 1957.

Another significant clause in the new tax bill will allow investors in stocks of small businesses to deduct, in certain cases, losses as ordinary losses instead of as capital losses—up to $25,000 for individuals and $50,000 in the case of joint returns. This is much more liberal tax treatment of losses and should stimulate investment in small businesses.

Still another significant clause will allow payment of estate taxes resulting from ownership in closely held businesses to be paid, under certain circumstances, in 10 annual installments—a move designed to help heirs to small businesses avoid forced liquidation because of estate taxes.

When you put it together, it's an impressive package of aid to small business and the most impressive part of it is the creation of the new small-business-financing system.

If the new financing system works—and I'm positive it will—the next Congress can refine and extend it. Meanwhile, the small-business man can say truthfully today that the 85th Congress not only has talked piously about his plight but also has done something great to ease it.

The Labor Reform Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. KENNEDY. Mr. President, several days ago I made a speech on the floor of the Senate pointing out what I considered to be highly irresponsible activity by several major business organizations in opposing enactment of S. 3974, the labor reform bill passed recently by the Senate. In connection with those remarks, I inserted a number of editorials commenting on this activity by business organizations, and inadvertently an article by Mr. John Herling was omitted from the RECORD. Therefore, Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD and note be made of the fact that it was a part of my previous remarks.

There being no objection, the article ordered to be printed in the RECORD, as follows:

[From the Washington News of July 29, 1958]

STRANGE LABOR MISALLIANCE
(By John Herling)

Teamsters President Jimmy Hoffa, like his predecessor, Dave Beck, has now become the political darling of spokesmen for organized business.

Teamster leader and business tycoon have set up legislative housekeeping together—but not in the same place. The objective of this strange roving misalliance on Capitol Hill is to abort the labor-reform bill in the House which passed the Senate more than a month ago by a vote of 88 to 1.

The United States Chamber of Commerce, the NAM, and the Retail Federation have combined forces to kill labor-reform legislation—a bipartisan measure sponsored by Senators JOHN F. KENNEDY, of Massachusetts, and IRVING IVES, of New York, Democrat and Republican, respectively. In April, the same employer groups had warned their members that organized labor was trying to knock off such reform legislation at all costs.

AFL–CIO President George Meany has made it plain that organized labor favors the Kennedy-Ives bill despite some objections. But Mr. Meany says that the AFL–CIO would much rather have such a bill as it is than see it run down the legislative drain.

This labor-reform measure is not to be confused with the Douglas disclosure bill which calls for governmental power over pension and welfare funds. The labor-reform bill is a product of the McClellan investigations of improper practices in the labor or management field.

The attitude of organized business last spring is illustrated by the Illinois Chamber of Commerce. Strongly opposed to the comprehensive pension and welfare disclosure bill because it would include one-party employer plans as well as joint plans under scrutiny. The employer spokesmen charged that the unions had an ulterior motive in supporting this disclosure legislation.

What was labor's ulterior motive, according to business spokesmen? It was, said the Illinois Chamber, "to quench the fires of public indignation which have been ignited by the McClellan committee investigation. Labor groups will claim that this legislation (the disclosure bill) has cleaned up the mess, thereby avoiding their responsibilities in other areas where reform-labor legislation is badly needed."

Repeatedly, during the Senate debate, Senators of both parties replied to such suspicions by insisting that two types of legislation—pension and welfare disclosures and labor reform—were to be part of the legislative picture.

This promise was made and kept. The labor-reform legislation was introduced, amended, passed, and sent on to the House. And then, the business spokesmen did a hairpin turn. Why the switch? Here's why:

This legislation goes after abuses the McClellan committee found prevalent in the Teamsters and some other unions. But it also aims at the elimination of management abuses. This, business spokesmen charge, will impose heavy penalties on employers. So the word has gone out from employer organizations to kill the labor-reform bill. The teamsters say kill the labor-reform bill.

Legislative murder is about to be committed to the hoarse sounds of this macabre harmony.

The Middle East Crisis as Related to Oil Resources

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. BARRETT. Mr. President, I was very much interested to note an article in the New York Herald Tribune under date of July 30 last, by P. C. Spencer, chairman of the board of the Sinclair Oil Corp. The financial editor of that paper is on vacation, and in his absence leaders in the business world have been filling in for him by writing articles for the Tribune. Mr. Spencer wrote a very informative article on the crisis in the Middle East and the possibility of the loss of the

oil resources of that area to the free world.

Percy Spencer is an oldtime resident of Wyoming and he has countless friends in our State. He started his career in the oil business about 35 years ago while still a citizen of Wyoming and is recognized today as one of the outstanding leaders in the oil industry of America.

In the event the free world is cut off from the Middle East oil, I am sure the oil industry of this country will cooperate in every way possible in order to provide for the fuel needs of the people of the United States and of Europe. I ask unanimous consent that the editorial by Mr. Spencer entitled "United States Oil Accord Urged in Crisis," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES OIL ACCORD URGED IN CRISIS

(By P. C. Spencer)

Once again the world is laboring nervously in a period of high international tension. All men of good will fervently hope the crisis can be peacefully resolved. But, even as we hope and pray, we must be prepared for adverse eventualities. Since the center of the crisis is again the Middle East, it is obvious that the American oil industry may be called upon again to make its vital contribution to our national security, as well as the security of our allies.

At this critical moment, it is timely to review the status of relations between Government and the oil industry, to see what kind of teamwork might be expected in case of urgent need.

Over a period of many years a unique and most effective working relationship between the oil industry and Government has existed under both Democratic and Republican regimes. It has served Government with outstanding success in both war and peace, particularly in World War I, World War II, the Korean episode, and the Suez Crisis. It is fair to say that, in performing its responsibilities on these occasions, the oil industry has contributed to the Government program without question the very best that it had in time, talents, and energy.

Some people close to Government and national affairs have observed in recent times what they term to be an alarming deterioration in these invaluable Government-oil-industry relations. And they are frankly disturbed. They cite, for examples, the increasing flood of congressional inquisitions on oil; the indictments at Alexandria as a special reward for its magnificent performance in the Suez crisis; the sad fate of the gas bill; the persistent demands to change the basic ground rules in the very effective national petroleum setup; the harassments in relation to the so-called consent decree in the pipeline cases; the attempts by some in the Department of Justice to influence other departments prejudicially against oil at home and abroad.

HELD BLOW TO ALL

It is not necessary for the purposes of this article to attempt to fix the blame for this condition. Suffice it to say that such a situation is deplorable—not only because it hurts the oil industry—and because it hurts America and it hurts every cause for the peace and the progress of mankind with which America is identified. Obviously, a change of attitude and a better understanding leading to a more favorable atmosphere of mutual confidence and respect is required on both sides. It is intended here to deal only with the oilman's side.

Oil people are human, too, and they would not have to be overly perceptive or sensitive to experience grievous disappointment and resentment over some of these wholly unwarranted acts of Government representatives.

Every intelligent oilman will remember, however, that his industry is absolutely essential to the welfare, strength, and survival of our great country. Our dynamic economy—yes, even our national security—depend upon an abundant supply of reasonably priced petroleum products. There is a continuing job of gigantic proportions to be done by oil for the American people. And the oilman has inescapable duties and responsibilities accordingly.

READY FOR EMERGENCY

In the future, as in the past, oilmen must not only be ready and able, but willing, to respond wholeheartedly to every call for help in case of need. They have never failed in any emergency and certainly they can be relied upon to meet any challenge in the future.

Even though he may feel that he has been badly treated, every responsible oilman knows that getting the job done comes first. No matter what the provocation, he must continue to do everything within his power to preserve and strengthen a live, vital industry. And most of all, he must not in any way contribute to a worsening of Government-oil industry relationships, while at the same time fighting forthrightly against any unwarranted charges or unfair attacks.

If oilmen will respond to current problems in this spirit, and I am certain they will, they may have every confidence that in the end the fundamental fairness and good sense of our American people, and our public servants as well, will recognize their performance, and that the fruits of effective teamwork will be restored to the high peak of efficiency which is so essential to our country and its welfare.

Convention of Jehovah's Witnesses in New York City

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, August 1, 1958

Mr. NEUBERGER. Mr. President, in recent years much publicity has been given to so-called rowdy and boisterous conventions of various organizations.

It is a pleasure to see a totally different kind of attention accorded in this respect. On August 1, 1958, America's leading daily newspaper, the New York Times, reported that the religious group known as Jehovah's Witnesses had just held in America's largest city, New York's best behaved convention. That is the description which the Times applied to the recent meeting of Jehovah's Witnesses in the city of New York.

And the Times has added:

Whatever New Yorkers may think of the Witnesses' theology, they are unanimous in agreeing that the Witnesses' conduct has been exemplary.

Many prominent hotel operators in New York are quoted as describing their patrons among Jehovah's Witnesses as orderly, considerate, and pleasant.

So that there may be a permanent recording and noting in the CONGRESSIONAL RECORD of the fact that a very large number of our citizens can meet in a great American metropolitan center in orderly, well behaved and thoroughly considerate fashion, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Witnesses Styled City's Best Guests," published in the New York Times of August 1, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WITNESSES STYLED CITY'S BEST GUESTS—180,000 AT WORLD ASSEMBLY WIN PRAISE FOR COURTESY, QUIETUDE, AND NEATNESS

(By George Dugan)

New York has been host for the last 6 days to its biggest and in all likelihood its best-behaved convention.

Since Sunday some 180,000 Jehovah's Witnesses have been eating, sleeping, and working in the metropolitan area. Their Divine Will International Assembly, in daily session at both the Yankee Stadium and the Polo Grounds, will end the day after tomorrow.

Whatever New Yorkers may think of the Witnesses' theology, they are unanimous in agreeing that the Witnesses' conduct has been exemplary.

A typical comment was voiced yesterday by Norbert P. Popper, reservation manager of the Dixie Hotel.

He reported that never in his career as a hotelman had he seen "a nicer bunch of people." He said the Dixie was "jammed" with Witnesses—every one of them orderly, considerate, and pleasant.

PARSIMONIOUS BUT CLEANLY

Equally glowing phrases were used by Mrs. Elizabeth Alonso. Mrs. Alonso is a cashier and waitress at Jiffy's Food Shop on the northwest corner of Eighth Avenue and 43d Street.

She observed that "the Witnesses never have given us any trouble and are considerate as well as cooperative." Asked about their tipping habits, she reluctantly said that they "could do better."

But this is a common complaint wherever most religious folk gather. A standard cab-driver joke from coast to coast goes like this: "Ah, they came here with the Ten Commandments and a 10-buck bill and haven't broken either."

Aside from their failure to tip in the New York manner, no serious gripes could be lodged against the Witnesses.

Their cleanliness is now almost legendary. A week ago a corps of volunteer Witnesses washed down every seat in Yankee Stadium. When they leave on Sunday night the ball park will be spotless. Three years ago Yankee maintenance men testified that when the Witnesses departed the arena had never been cleaner.

CONSIDERATE OF PASSERSBY

In the Times Square area where members of the movement have been passing out tracts, handbills, and periodicals, courtesy has been their watchword.

On the East Side paeans were also sung. Royal Ryan, executive vice president of the New York Convention and Visitors' Bureau, called the Witnesses "an asset to the community." He described their behavior as "out of this world."

Neil Lang, general manager of the Roosevelt Hotel, said about 750 Witnesses were staying in his hostelry. He characterized them as "very nice, not a bit demanding, and easy to do business with."

To Witnesses, the words of the Bible are not to be tampered with. They regard them as exact, true, and prophetic. Certain Biblical texts, they insist, predict in the not too distant future the end of the world, preceded

UNIVERSITY OF MICHIGAN LIBRARIES

by the battle of Armageddon, or the final conflict between good and evil.

Then 144,000 elect of the ages will reign with Jesus in heaven as the body of Christ. The wicked will be destroyed, and only Witnesses will remain on earth to live in eternal peace.

The figure 144,000 was arrived at through a combination of Biblical verses appearing in Revelation, Luke, and other books.

Our Middle East Policy in Lebanon

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Mission Unclear," written by Walter T. Ridder, and published in the St. Paul Pioneer of July 21, 1958. This article relates to our Middle East policy in Lebanon.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MISSION UNCLEAR

(By Walter T. Ridder)

WASHINGTON.—The Middle East crisis almost—almost—drove the Adams-Goldfine case off the front pages of Washington newspapers last week. As well it might, for the drama now being played out in Iraq and Jordan and Lebanon is among the more critical faced by this generation.

There is little use now in indulging in the might-have-beens about the Mideast situation. What if we had supported the French and British during the Suez invasion? What if we had not helped to shape the State of Israel? What if our policy had been more discernibly pro-Arab? These questions make for good dinner-table conversation, but under the conditions now prevailing they are, as Mr. Goldfine would say, irrelevant.

Taking stock of the United States position at the moment, it is not entirely clear what we do now. Our marines and paratroopers are in Lebanon and British soldiers are in Jordan. Thus we are physically present in two of smallest Middle East countries, but what good that does us is another matter somewhat obscure.

The mission of our troops in Lebanon is unclear. Who are they supposed to be protecting? What are they expected to do—sit for weeks or months now on the beaches of Beirut?

The confusion over what we are doing in Lebanon has spread to the Pentagon where a briefing officer managed recently to bewilder the press.

In explaining the situation, the officer made use of the word "rebels," then hastily corrected himself and substituted the words "the opposition." "The rebels," he shamefacedly told newspapermen, "don't like to be called rebels." Apparently we are afraid of hurting the sensibilities of the rebels, although it is beyond comprehension to figure out what we are in Lebanon for if it is not to oppose the rebels.

While we are busy saving the fringes—that is, Lebanon and Jordan—the real prizes, Iraq and Iran, are either gone or in mortal danger. While it is obviously better to have saved both Lebanon and Jordan from being overthrown, nevertheless, they can be considered only small fish in the big middle eastern sea. It will do us precious little good to hold on to those countries while fabulously wealthy and strategically important countries go the way of all flesh. At the present writing, the opportunity, if it ever existed, to save Iraq has apparently gone a-glimmering. The rebel government appears to be in full control and only a major invasion would seem to have a chance of dislocating the new regime. But as long as the oil flows out of Iraq—and it probably will continue to flow, because the new government no doubt needs the oil royalties—the western states are not likely to launch any such invasion. This leaves it up to King Hussein, of Jordan, whose spirit is certainly willing but whose arms are weak. Thus one can all but write off Iraq.

Iran poses another problem. Its government has been none too strong, and the same white heat of Arab nationalism must be searing that country as well as others of the Arabian group. On the Russian-Iranian border the Soviet Army is ostentatiously holding maneuvers and, through agitators, is no doubt prodding dissident elements in Iran. How we save Iran if a coup should be undertaken there is another of those perplexing questions the answer to which does not come readily to mind.

Golden Jubilee of the New York State Society

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, August 1, 1958

Mr. IVES. Mr. President, the New York State Society, of Washington, D. C., is celebrating its 50th anniversary. In connection with this important event, the historians of the society have prepared a letter to the president of that splendid organization, outlining some of the society's activities and history. I ask unanimous consent that the text of the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 29, 1958.

Re golden jubilee of the New York State Society.

Mr. JAMES E. M. BROWN,
President, New York State Society,
Washington, D. C.

DEAR MR. BROWN: This year the New York State Society of Washington, D. C., marks the 50th year of its existence. We are proud to be celebrating the golden jubilee of one of the oldest State societies in the Nation's Capital.

The Empire State has many close ties with Washington. It was George Washington who first named the broad reaches of New York an empire. New York City was the first Capital of the United States, and it was in Federal Hall, at Broad and Wall Streets, that our first President took his oath of office, on April 30, 1789. Since the 18th century numerous New York State Governors, from George Clinton to Averell Harriman, have served their country with distinction overseas and here in Washington. The roster of our State's national leaders in politics, business, religion, and the arts is a long and notable one, too familiar to need reciting here.

One of the enduring sources of strength of our great country is the fact that, although our institutions tend to become increasingly federalized, our democratic government must take into account the differing beliefs and needs of all sections of America. Although we are a highly mobile people, most of us maintain roots, sentimental or legal, in our home State. The State societies in Washington, besides their numerous good works, also serve a greater purpose—to activate this home-State patriotism and channel it into worthy and useful ends.

Among our various activities as a society we have during the past years contributed to the following organizations:

1. We have donated $2,000 to endow a room (No. 4080) at George Washington University Hospital, which has a door plaque reading "New York State Society."

2. We participate every Christmas in the charitable drives sponsored by the local radio stations.

3. We have donated to Children's Hospital, the Arlington General Hospital, the Tuberculosis Foundation in Denver, Colo., and numerous other worthy causes.

The main objective of our dances is to raise funds for any nonsectarian need that may arise. Servicemen in uniform are admitted to all our affairs gratis.

We are always represented in the annual Cherry Blossom Festival by having a New York princess and a float in the parade. We also send a delegate to the Conference of State Societies. We endeavor wholeheartedly to make New York the outstanding society in Washington. We number among our honorary members our most distinguished statesmen.

As we recall with pride our many achievements of the past, let us resolve that those who celebrate our centennial may be as proud of us as we are of our founders on this our golden jubilee.

Respectfully submitted.

DOROTHEA MACKAY,
ETHEL MAY NODEN,
Historians, New York State Society.

Neighbors Help Dravo Union Celebrate 15th Anniversary

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1958

Mr. FULTON. Mr. Speaker, I am calling the attention of the Congress to an excellent article appearing in the Pittsburgh Press for Sunday, July 27, 1958, concerning the Dravo Corp.'s Local 61, Marine and Shipbuilding Workers Union.

The well-run Dravo Corp., whose fine yards and plant are located near Pittsburgh, Pa., on Neville Island in my congressional district, is a successful construction company working on shipbuilding, yards, dams, docks, plants, and other large consrtuction both on Neville Island and throughout the world and whose officers and employees contribute to the fine progress that we in America are making.

The whole area around Neville Island has joined with Local 61, Marine and Shipbuilding Workers Union, in the celebration of their 15th anniversary.

I wish to compliment this union of 1,100 members, the Dravo Corp., and

President Carl Jansen and his fellow officers, as well as the fine industries and their employees on Neville Island for their wonderful spirit and cooperation in working together to make Neville Island the heart of the Pittsburgh workshop area.

The article follows:

NEIGHBORS HELP DRAVO UNION CELEBRATE 15TH ANNIVERSARY

(By Asa Atwater)

Allegheny County's wealthiest island will take time out today to join members of Dravo Corp.'s Local 61, Marine & Shipbuilding Workers, in the celebration of their 15th anniversary.

Tied in with the Neville Island ceremony is the formal dedication of the local's new $35,000 headquarters building.

Armand Palmerine is justly proud of the achievement of the local which he has headed for the last 6 years. Boasting a membership of 1,100, the local has come a long way since the earlier regimes of Richard Hastings, John Howard, Charles Gilman, and Jack Thornberg, former presidents.

LAUNCHED 145 LST'S

Local 61 reached its height during the hectic World War II years when, Mr. Palmerine estimates, more than 145 LST's (landing ship tanks) and a dozen PT's (Navy patrol boats) slid down the ways at the Dravo shipyards.

Many of these craft helped write history in landings on shores in the Pacific and the European theaters of war. Since then, the local has turned to peacetime efforts—building barges and tows. Mayor David L. Lawrence, Robert Marvin and W. G. Greer, Dravo officials, and Ross D. Blood and Charles Leone from the union's international office will find plenty to talk about today.

FLOATING FACTORY

For local 61 has become part of the life of the 860-acre island which one writer once referred to as "the floating factory anchored in the Ohio."

Mrs. Jeannette Wiley, secretary to the Neville Township commissioners, says the 6½ mile long island—which is all there is to the Neville Township—has an assessed valuation of $24 million.

More than 7,000 persons work in the island's 23 industries, producing such things as ships and barges, coke, chemicals, steel, cement, paint and concrete products. More than 2,500 live there.
